Java 8 Exception handling quiz by Mahavir DS Rathore. While every precaution has been taken in the preparation of this book the author assume No responsibility for errors or omissions, or for damages resulting from the use of the information contained herein.

About the author

I have has been programming & teaching Java for last 18 years. This book is an effort to document my knowledge to share with everyone across the world. I am available to do training on Java anywhere in the world. My email id is gurumahaveer@gmail.com

Who should read the book?

This book is for programmers who already know Core Java (Java Standard Edition).

</table>

<—Right Answer
Q.2: JRE stands for ………………

A  Java Robust Engine
B  Java Required Engine
C  Java Runtime Engine
D  Java Runnable Engine

<-Right Answer

Q. 3: JDK stands for …………………

A  Java Debugging Kit
B  Java Development Kit
C  Java Documentation Kit
D  Java Database Kit

<-Right Answer

Q. 4: To compile and execute Java application ……………. is needed

A  JDK
B  JRE
C  JME
D  JEE

<-Right Answer
Q.5: Which environment variable (Windows OS) is set for accessing java compiler and java interpreter at command line?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>CLASSPATH</td>
</tr>
<tr>
<td>B</td>
<td>JAVAHOME</td>
</tr>
<tr>
<td>C</td>
<td>PATH</td>
</tr>
<tr>
<td>D</td>
<td>HOME</td>
</tr>
</tbody>
</table>

<—Right Answer

Q.6: To just execute a Java application .................. is needed at the minimum.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>JME</td>
</tr>
<tr>
<td>B</td>
<td>JDK</td>
</tr>
<tr>
<td>C</td>
<td>JEE</td>
</tr>
<tr>
<td>D</td>
<td>JRE</td>
</tr>
</tbody>
</table>

<—Right Answer

Q.7: The command for java interpreter (Windows OS) is ............

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Javaip.exe</td>
</tr>
<tr>
<td>B</td>
<td>Javac.exe</td>
</tr>
</tbody>
</table>
Q.8: The command for Java compiler (Windows OS) is ………...

| A | Java.exe          |
| B | Javacompiler.exe |
| C | JavaComp.exe     |
| D | Javac.exe        |

<--Right Answer

Q.9: In which folder is 32-bit JDK (Windows OS) is installed by default?

| A | C:\Program Files\ |
| B | C:\Windows\     |
| C | C:\Java          |
| D | C:\Program Files (x86)\ |

<--Right Answer

Q.10: In which folder is 64-bit JDK (Windows OS) is installed by default?
<table>

Chapter 2
What is Exception?

Q.1: .......... Occur at Runtime.

A  Error
B  Exception
C  Trigger
D  None of the above

<—Right Answer
Q.2: Runtime error is also called as ............

A  Error
B  Compiler error
C  Exception
D  None of the above

<—Right Answer

Q.3: Syntax error yields into a ............

A  Runtime error
B  Exception
C  Compiler error
D  All of the above

<—Right Answer

Q.4: Dividing an integer by zero yields into a ............

A  Compiler error
B  JVM error
C  Nothing
D  Exception
Q.5: A missing semi-colon for an instruction yields into a ...........

A. Exception
B. Runtime error
C. Compiler error
D. JVM error

<--Right Answer

Q.6: What will be the output?

class Program {
    public static void main(String args[]) {
        String ar = new String[1];
        ar[2] = “Ram”;
        System.out.println(ar[0]);
    }
}

A. Compiler error
B. Exception
C. No error
D. JVM

<--Right Answer
Q.7: An exception can occur when ............

A  ‘throw’ is called
B  Abnormal code is executed
C  Asynchronous error happen
D  All of the above

<--Right Answer

Answers:

<table>

<td>An exception can occur</td>
</tr>
</tbody>
</table>
Chapter 3
What is Exception Handling?

Q.1: .......... helps in avoiding runtime crash of a program.

A  Error handling
B  Exception handling
C  Compiler handling
D  Database handling

<—Right Answer

Q.2: Which of the following is not a keyword?

A  Throw
| Q.3: Which of the following is not a keyword? |
|---|---|---|---|
| A | Try | ----Right Answer |
| B | Catch | |
| C | except | |
| D | Finally | |

| Q.4: How to raise an exception? |
|---|---|---|---|
| A | throws | ----Right Answer |
| B | Throw | |
| C | except | |
| D | Raise | |

| Q.5: Who handles unhandled exceptions? |
Answers:

<table>
<thead>
<tr>
<th>Q.No</th>
<th>Ans</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>B</td>
<td>Exception handling is used for avoiding crash of a program.</td>
</tr>
<tr>

<tr>
<td>3</td>
<td>C</td>
<td>‘except’ is not keyword in Java.</td>
</tr>
<tr>
<td>4</td>
<td>B</td>
<td>The ‘throw’ keyword is used for raising an exception.</td>
</tr>
<tr>
<td>5</td>
<td>A</td>
<td>JVM handles those exception that are not handled by a program.</td>
</tr>
</tbody>
</table>

Chapter 4
Java Exception Hierarchy

Q.1: ……………… class is the mother class of all exception classes (directly or indirectly).

| A | Throwable |
| B | Exception |
| C | Error |
| D | Object |

← Right Answer

Q.2: ……………… class is the mother class of “Exception” class.

| A | Object |
| B | Error |
| C | Compiler |
| D | Throwable |

← Right Answer

Q.3: …………. is the mother class of “Error” class.

| A | Object |

Q.4: ........................ Is the mother class of “RuntimeException” class?

| A | Error       |
| B | Exception   |
| C | Throwable   |
| D | Object      |

<--Right Answer

Q.5: Throwable class implements ........................ interface

| A | Cloneable |
| B | Serializable |
| C | Runnable |
| D | Comparable |

<--Right Answer

Q.6: ........................ is the mother class of “Throwable” class.
Q.7: ………… (And derived class) exception is not recoverable.

- A Error class
- B Throwable class
- C Exception class
- D Object class

<-Right Answer

Q.8: ……………….. (And derived class) exception is asynchronous.

- A Throwable class
- B Error class
- C Exception class
- D Object class

<-Right Answer
Q.9: Which of the following is/are derived from “Error class”?

A  StackoverflowError
B  OutOfMemoryError
C  VirtualMachineError
D  All of the above

<--Right Answer

Q.10: When does ThreadDeath exception occur?

A  Thread.abort()
B  Thread.stop()
C  Thread.exit()
D  Thread.quit()

<--Right Answer

Q.11: Which exception occur when a method is called recursively?

A  OutOfMemoryError
B  OutOfMemoryException
C  StackoverflowException
D  StackoverflowError
Q.12: …………… (Exception) is compiler checked.

A  Error class
B  RuntimeException class
C  Exception class
D  Object class
C  <--Right Answer

Q.13: …………… (Exception) is not compiler checked.

A  Exception class
B  Throwable class
C  Object class
D  RuntimeException

<--Right Answer

Q.14: Which of the following class is not derived from RuntimeException class?

A  NullPointerException
B  ArrayIndexOutOfBoundException
<table>
<thead>
<tr>
<th></th>
<th>ArithmeticException</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>IOException</td>
</tr>
</tbody>
</table>

<--Right Answer

**Q.15:** Which of the following interfaces does Exception class implement?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Serializable</td>
</tr>
<tr>
<td>B</td>
<td>Throwable</td>
</tr>
<tr>
<td>C</td>
<td>Attribute</td>
</tr>
<tr>
<td>D</td>
<td>None of the above</td>
</tr>
</tbody>
</table>

<--Right Answer

**Q.16:** Which of the following interfaces does Error class implement?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Serializable</td>
</tr>
<tr>
<td>B</td>
<td>Throwable</td>
</tr>
<tr>
<td>C</td>
<td>Attribute</td>
</tr>
<tr>
<td>D</td>
<td>None of the above</td>
</tr>
</tbody>
</table>

<--Right Answer

**Q.17:** ..................... exception is compiler checked.
### Answers:

</tr>
</tbody>
</table>

Chapter 5
Try and Catch Blocks

Q.1: For an unhandled exception ..................Is printed on the screen.
A  Call stack information
B  Assertion information
C  Debug information
D  None of the above
<--Right Answer

Q.2: Try block can be put inside a ............
A  Interface
B  Class
C  Method
D  Nested class
<--Right Answer

Q.3: An unhandled exception is handled by ..........
A  Compiler
Q.4: Catch block only exists for a given ............

A  Code block
B  Try block
C  Data block
D  Nested block

<--Right Answer

Q.5: Try block cannot be put in a ............

A  Class
B  Interface
C  Constructor
D  Method

<--Right Answer

Q.6: A static block can contain a try block.
Q.7: A constructor can contain a try block.

A | TRUE  
B | FALSE  
<--Right Answer

Answers:

<table>
<thead>
<tr>
<th>Q.No</th>
<th>Ans</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>A</td>
<td>Call stack (stacktrace) information is displayed on screen for an unhandled exception.</td>
</tr>
<tr>
<td>2</td>
<td>C</td>
<td>Try block can be put inside an application.</td>
</tr>
<tr>
<td>3</td>
<td>C</td>
<td>An unhandled exception is handled by JVM (which crashes an application).</td>
</tr>
<tr>
<td>4</td>
<td>B</td>
<td>Catch only exists for a try block.</td>
</tr>
</tbody>
</table>
Chapter 6
Exception Handling API

Q.1: What is a call stack?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Execution of main method.</td>
</tr>
<tr>
<td>B</td>
<td>Calling of a privileged method over regular method.</td>
</tr>
<tr>
<td>C</td>
<td>It is a stack data structure that store information about active methods.</td>
</tr>
<tr>
<td>D</td>
<td>Collection of functions.</td>
</tr>
</tbody>
</table>

<—Right Answer

Q.2: .......... method is used for printing call stack when an exception occur.
Q.3: ………….. Method is used for getting generic exception message.

A  message()
B  toString()
C  getInfo()
D  msgException()
    <—Right Answer

Q.4: printStackTrace() method belong to ………….. Class.

A  Throwable
B  Error
C  Exception
D  Object
    <—Right Answer
Q.5: `toString()` method belong to ............. class.

A  Throwable
B  Error
C  Exception
D  Object

←—Right Answer

Q.6: Return value of `printStackTrace()` method is .................

A  String
B  Char
C  Void
D  char[]

←—Right Answer

Answers:

<table>
<thead>
<tr>
<th>Q.No</th>
<th>Ans</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>C</td>
<td>Call stack is a stack data structure that store information about active methods.</td>
</tr>
</tbody>
</table>
Chapter 7
Multiple Catch

Q.1: How many catch blocks can be added for a given try block?

A  1
B  2
C  15
Q.2: In what order should the exceptions be caught using catch block?

A. In any order
B. In Top-Down order of inheritance hierarchy
C. In Bottom-Up order of inheritance hierarchy
D. Catch block does not handle exceptions

<--Right Answer

Q.3: What should be the order of catch blocks for the following exceptions?

`Throwable`, `Exception`, `RuntimeException`

A. Any order
B. `Throwable`, `Exception`, `RuntimeException`
C. `Exception`, `RuntimeException`, `Throwable`
D. `RuntimeException`, `Exception`, `Throwable`

<--Right Answer
Q.4: ‘try’ block cannot encapsulate?

A. Code within method
B. Code within constructor
C. Code within static block
D. Class

←—Right Answer

Q.5: If exceptions are not handled in bottom-up order of inheritance hierarchy, What error do we encounter?

A. Compiler Error
B. Runtime Exception
C. Nothing happens
D. JVM Exception

←—Right Answer

Answers:

<table>
<thead>
<tr>
<th>Q.No</th>
<th>Ans</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>D</td>
<td>A try block can have any</td>
</tr>
<tr>
<td></td>
<td></td>
<td>number of catch blocks.</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>-------------------------</td>
</tr>
<tr>
<td>2</td>
<td>C</td>
<td>The catch block should catch exceptions in the bottom-up(reverse) order of inheritance hierarchy.</td>
</tr>
<tr>
<td>3</td>
<td>D</td>
<td>The correct order is RuntimeException, Exception and Throwable class.</td>
</tr>
<tr>
<td>4</td>
<td>D</td>
<td>‘Try’ block cannot encapsulate a class.</td>
</tr>
<tr>
<td>5</td>
<td>A</td>
<td>If exception are not handled in the reverse order of their inheritance hierarchy compiler gives an error.</td>
</tr>
</tbody>
</table>

---

### Chapter 8

**Multiple Exceptions**

Q.1: In which version of Java was this (Multiple exceptions in a single catch) capability added?

<table>
<thead>
<tr>
<th></th>
<th></th>
<th>6</th>
</tr>
</thead>
</table>
Q.2: What is the delimiter used to identify multiple exceptions in a single catch?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td></td>
</tr>
<tr>
<td>B</td>
<td>&amp; (ampersand)</td>
</tr>
<tr>
<td>C</td>
<td>, (comma)</td>
</tr>
<tr>
<td>D</td>
<td>/ (slash)</td>
</tr>
</tbody>
</table>

<--Right Answer

Q.3: Identify the correct syntax

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>catch(Error</td>
</tr>
<tr>
<td>B</td>
<td>catch(Throw</td>
</tr>
<tr>
<td>C</td>
<td>catch(Throw</td>
</tr>
<tr>
<td>D</td>
<td>Catch (...) {}</td>
</tr>
</tbody>
</table>

<--Right Answer

Q.4: Mother and Child class exception cannot be caught in a single catch
A | TRUE
---|---
B | FALSE
<--Right Answer

Q.5: What happens when Mother and Child class exception is caught in a single catch block?

A | No error or exception
---|---
B | Compiler Error
C | JVM Error
D | Runtime Exception
<--Right Answer

Answers:

<table>
<thead>
<tr>
<th>Q.No</th>
<th>Ans</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>C</td>
<td>Multiple exception handling in a single catch was added in Java 7.</td>
</tr>
<tr>
<td>2</td>
<td>A</td>
<td>The delimiter used to segregate exceptions in a single catch is ‘</td>
</tr>
<tr>
<td>3</td>
<td>A</td>
<td>Correct syntax is : catch(Error</td>
</tr>
</tbody>
</table>
Chapter 9
Finally Block

Q.1: How many ‘finally’ blocks can be added to ‘try’ block?

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>1</td>
</tr>
<tr>
<td>B</td>
<td>2</td>
</tr>
<tr>
<td>C</td>
<td>3</td>
</tr>
<tr>
<td>D</td>
<td>Any number</td>
</tr>
</tbody>
</table>

<-- Right Answer

Q.2: The order of exception blocks is ……………
Q.3: ‘finally’ block does not execute when ………..

A  ‘return’ keyword is called
B  Program exits
C  ‘finally’ is guaranteed to be executed
D  None of the above

<---Right Answer

Q.4: Identify the correct statement

A  ‘Finally’ block is compulsory for a given try.
B  ‘Finally’ block is executed when an exception occurs.
C  ‘Finally’ block is executed when there is no exception.
D  None of the above.
### Q.5: For a given ‘try’ block ‘finally’ block is placed after ...........

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>‘try’ block</td>
</tr>
<tr>
<td>B</td>
<td>‘catch’ block</td>
</tr>
<tr>
<td>C</td>
<td>‘finally’ block</td>
</tr>
<tr>
<td>D</td>
<td>Constructor</td>
</tr>
</tbody>
</table>

←—Right Answer

### Q.6: A try block requires at least ............ Or ............

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>‘catch’ block</td>
</tr>
<tr>
<td>B</td>
<td>‘finally’ block</td>
</tr>
<tr>
<td>C</td>
<td>‘try’ block</td>
</tr>
<tr>
<td>D</td>
<td>Code block</td>
</tr>
</tbody>
</table>

←—Right Answer

### Q.7: If a ‘try’ block has both catch and finally blocks then ............ will be placed first

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>‘catch’ block</td>
</tr>
<tr>
<td>B</td>
<td>‘finally’ block</td>
</tr>
</tbody>
</table>
Q.8: What will happen if a try block only has finally block and an exception occurs?

A  Program crashes
B  Program continues without crashes
C  The outcome is not predictable
D  Compiler error

<—Right Answer

Answers:

<table>
<thead>
<tr>
<th>Q.No</th>
<th>Ans</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>A</td>
<td>Only one finally block can added for a given try block.</td>
</tr>
<tr>
<td>2</td>
<td>C</td>
<td>The order of exception blocks is – try, catch and finally.</td>
</tr>
<tr>
<td>3</td>
<td>B</td>
<td>‘Finally’ block is not executed when program exits.</td>
</tr>
<tr>
<td>4</td>
<td>B,C</td>
<td>‘Finally’ block is guaranteed to be executed</td>
</tr>
</tbody>
</table>
with or without exception occurrence.

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>B</td>
<td>‘Finally’ block is placed after ‘catch’ block.</td>
</tr>
</tbody>
</table>

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>A,B</td>
<td>A ‘try’ block should have at least ‘catch’ or ‘finally’ block.</td>
</tr>
</tbody>
</table>

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>A</td>
<td>A ‘try’ block is followed by ‘catch’ block and then ‘finally’ block.</td>
</tr>
</tbody>
</table>

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>A</td>
<td>Program will crash if there is no catch block to handle the exception.</td>
</tr>
</tbody>
</table>

**Chapter 10**

**Finally block & Return keyword**

**Q.1: How to abruptly stop an application execution?**

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>System.stop()</td>
</tr>
<tr>
<td>B</td>
<td>System.abort()</td>
</tr>
<tr>
<td>C</td>
<td>System.kill()</td>
</tr>
<tr>
<td>D</td>
<td>System.exit()</td>
</tr>
</tbody>
</table>
Q.2: ‘finally’ block is executed even if method encounter ‘return’ keyword.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>TRUE</td>
</tr>
<tr>
<td>B</td>
<td>FALSE</td>
</tr>
</tbody>
</table>

Q.3: ‘finally’ block is executed even if ‘return’ keyword is executed in ‘catch’ block.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>TRUE</td>
</tr>
<tr>
<td>B</td>
<td>FALSE</td>
</tr>
</tbody>
</table>

Q.4: ‘finally’ block is executed when a program execution is aborted.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>TRUE</td>
</tr>
<tr>
<td>B</td>
<td>FALSE</td>
</tr>
</tbody>
</table>

Q.5: ‘finally’ block is executed when a program encounters an exception in ‘catch’ block.
A | TRUE
B | FALSE

<— Right Answer

**Answers:**

<table>
<thead>
<tr>
<th>Q.No</th>
<th>Ans</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>D</td>
<td>System.exit() is used to abruptly stop a program.</td>
</tr>
<tr>
<td>2</td>
<td>A</td>

<tr>
<td>D</td>
<td>JVM</td>
</tr>
</tbody>
</table>

<--Right Answer

Q.3: ............... Exception has to be handled in a program.
A Compiler
B Checked
C Unchecked
D JVM

<—Right Answer

Q.4: ............ Exception need not be (compulsorily) handled in a program.

A Compiler
B Checked
C JVM
D Unchecked

<—Right Answer

Q.5: .............. keyword is used for declaring an exception for a method.

A Throw
B Throws
C Decl
D Finally

<—Right Answer

Q.6: Checked exception can derive
from .......... or ............. class

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Throwable</td>
</tr>
<tr>
<td>B</td>
<td>Exception</td>

Chapter 12
Nested Exception

Q.1: Java has support for nested exception handling.

A | TRUE
B | FALSE

<—Right Answer

Q.2: Upto what level of nesting of exception handling does Java support?

A | 1
B | 2
C | 3
D | Any Level

<—Right Answer
Q.3: What is the output?

class Program {
    static void performJob() {
        try {
            int j = 10/0;
        } catch (ArrayIndexOutOfBoundsException e) {
            System.out.println("Handle the array carefully");
        }
    }
    public static void main(String args[]) {
        try {
            performJob();
        } catch (Exception e) {
            System.out.println("There is some problem in the code");
        }
    }
}

A  No output
B  Handle the array carefully
C  There is some problem in the code
D  Division by zero

<-- Right Answer

Q.4: What is the output?

class Program {
static void performJob() {
    try {
        int j = 10/0;
    } catch (ArrayIndexOutOfBoundsException e) {
        System.out.println(“Handle the array carefully”);
    }
    finally {
        System.out.println(“finally - performJob”);
    }
}

public static void main(String args[]) {
    try {
        performJob();
    } catch (Exception e) {
        System.out.println(“There is some problem in the code”);
    }
    finally {
        System.out.println(“finally - main”);
    }
}
Q.5: What is the output?

class Program {
    public static void main(String args[]) {
        int ar[] = new int[1];
        try {
            ar[1] = 0;
        } catch (ArrayIndexOutOfBoundsException e) {
            System.out.println("There is some problem in the code");
            System.out.println("finally - main");
        } finally {
            System.out.println("finally - main");
        }
        try {  
            int i1 = 100;  
            int j = 10/0;  
            performJob();  
        } catch (Exception e) {
            System.out.println("Handle the array carefully");
            System.out.println("finally - performJob");
        } finally {
            System.out.println("finally - performJob");
        }  
    }  
    
    static void performJob() {
        try {
            int j = 10/0;  
            System.out.println("Handle the array carefully");
        } catch (ArrayIndexOutOfBoundsException e) {
            System.out.println("Handle the array carefully");
            System.out.println("finally - performJob");
        } finally {
            System.out.println("finally - performJob");
        }  
    }  
}

}
A  No output
B  There is some problem in the code
finally – main
C  finally - performJob
There is some problem in the code
finally – main
D  finally - performJob
There is some problem in the code

<--Right Answer

Chapter 13
‘Throw’ Keyword

Q.1: Class derived from ........... can only be thrown

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Object</td>
</tr>
<tr>
<td>B</td>
<td>Throwable</td>
</tr>
<tr>
<td>C</td>
<td>GC</td>
</tr>
<tr>
<td>D</td>
<td>All of the above</td>
</tr>
</tbody>
</table>

<--Right Answer

Q.2: ............... Keyword is used to raise an exception.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Throw</td>
</tr>
</tbody>
</table>
Q.3: What is the output?

```java
class Program {
    public static void main(String args[]) {
        try {
            throw new Exception();
        } catch (Exception e) {
            System.out.println(“There is some problem in the code”);
        }
        finally {
            System.out.println(“finally - main”);
        } 
    }
}
```

A. No output
B. There is some problem in the code
C. There is some problem in the code
D. finally – main

<-—Right Answer

Q.4: What is output?
class Program {
static void performJob() {
    try {
        throw new ArrayIndexOutOfBoundsException();
    } catch (ArrayIndexOutOfBoundsException e) {
        System.out.println("Handle the array carefully");
    }
    finally {
        System.out.println("finally - performJob");
    }
}
public static void main(String args[]) {
    try {
        performJob();
    } catch (Exception e) {
        System.out.println("There is some problem in the code");
    }
    finally {
        System.out.println("finally - main");
    }
}
A  finally - performJob
finally – main
B  No output
C  Handle the array carefully
finally - performJob
Q.5: What is the output?

class Program {
    static void performJob() {
        try {
            throw new ArrayIndexOutOfBoundsException();
        } catch (ArrayIndexOutOfBoundsException e) {
            throw new Exception();
            System.out.println("Handle the array carefully");
        }
        finally {
            System.out.println("finally - performJob");
        }
    }
    public static void main(String args[]) {
        try {
            performJob();
        } catch (Exception e) {
            System.out.println("There is some problem in the code");
        }
        finally {
            System.out.println("finally - main");
        }
    }
}
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>No output</td>
</tr>
<tr>
<td>B</td>
<td>Compiler Error</td>
</tr>
</tbody>
</table>
| C | Handle the array carefully  
finally - performJob  
finally - main |
| D | finally - performJob  
finally - main  
<--Right Answer |

Q.6: What is the output?

```java
class Program {
    static void performJob() {
        try {
            throw new ArrayIndexOutOfBoundsException();
        }
        catch(ArrayIndexOutOfBoundsException e) {
            throw new Exception();
            System.out.println("Handle the array carefully");
        }
        finally {
            System.out.println("finally - performJob");
        }
    }
    public static void main(String args[]) {
        try {
```
performJob();
} catch (Exception e) {
    System.out.println(“There is some problem in the code”);
}
finally {
    System.out.println(“finally - main”);
}
}

class Program {
    static void performJob() {
        try {
            throw new ArrayIndexOutOfBoundsException();
        } catch (ArrayIndexOutOfBoundsException e) {
            try {
                throw new Exception();
            } catch (Exception obj) {
            }
        }
    }
    public static void main(String args[]) {
        try {
            performJob();
        } catch (Exception e) {
            System.out.println(“This is inner exception”);
        }
    }
}
System.out.println(“There is some problem in the code”);
}
finally {
    System.out.println(“finally - main”);
}

A  No output
B  Compiler Error
C  This is inner exception
finally - performJob
finally - main
D  This is inner exception
Handle the array carefully
finally - performJob
finally - main

Chapter 14
Exception Chaining

Q.1: ................. class has infrastructure support for exception chaining.
Q.2: get cause() method is declared in ............... class

A  Object  
B  Error  
C  RuntimeException  
D  Throwable  

<--Right Answer

Q.3: Identify the correct constructor for ‘Throwable’ class.

A  Throwable(String, Throwable)  
B  Throwable(String[], Throwable)  
C  Throwable(char[], Throwable)  
D  Throwable(char, Throwable)  

<--Right Answer

Q.4: Which method initializes the cause
of an exception?

A  start Cause()
B  setCause()
C  setIssue()
D  initCause()
    <—Right Answer

Q.5: Identify the correct constructor for ‘Throwable’ class.

A  Throwable(int)
B  Throwable(String[])
C  Throwable(Throwable)
D  Throwable()
    <—Right Answer

Q.6: initCause() method is declared in ............... class

A  Object
B  Throwable
C  RuntimeException
D  Error
    <—Right Answer
Q.7: ………………. method return the cause of a ‘throwable’.

A  getMsg()  
B  getMessage()  
C  getCause()  
D  getReason()  

<—Right Answer

<tr>
<td>C</td>
<td>Closing</td>
</tr>
<tr>
<td>D</td>
<td>Closed</td>
</tr>
</tbody>
</table>

<--Right Answer
Q.5: Identify the method of Closeable interface?

A  closed()
B  closing()
C  close()
D  end()

←Right Answer

Q.6: The resources are closed in ............ order when created in ‘try with resource’.

A  Custom
B  Forward
C  Reverse
D  Conditional

←Right Answer

Q.7: What is the output

import java.io.*;

class Shape implements Closeable {
    public void close() {
        System.out.println("Shape object close is closed");
    }
}
```java
class Program {
    public static void main(String args[]) {
        try (Shape obj = new Shape()) {
        }
        catch (Exception e) {
            System.out.println("Exception happened");
        }
    }
}
```

Chapter 16
Overriding Exception

Q.1: What is the output?

class Shape {
    void draw () {
        System.out.println("Drawing shape");
    }
}

class Circle extends Shape{
    void draw() throws RuntimeException {
        System.out.println("Drawing

Circle”);
}
}

class Program {
public static void main(String args[]) {
    Circle obj = new Circle();
    obj.draw();
}
}

A  Compiler error
B  No output
C  Drawing shape
D  Drawing Circle
    ←– Right Answer

Q.2: What is the output?

class Shape {
void draw () {
    System.out.println(“Drawing shape”);
}
}

class Circle extends Shape{
    void draw() throws Exception {
        System.out.println(“Drawing Circle”);
    }
}
Q.3: What is the output?

class Shape {
    void draw () throws Exception {
        System.out.println("Drawing shape");
    }
}

class Circle extends Shape{
    void draw() throws Throwable {
        System.out.println("Drawing Circle");
    }
}
class Program {
    public static void main(String args[]) throws Exception{
        Circle obj = new Circle();
        obj.draw();
    }
}

A  Compiler error
B  No output
C  Drawing shape
D  Drawing Circle
    <---Right Answer

Q.4: What is the output?

class Shape {
    void draw() throws Exception {
        System.out.println("Drawing shape");
    }
}

class Circle extends Shape{
    void draw() throws Exception {
        System.out.println("Drawing Circle");
    }
}

class Program {
    public static void main(String args[]) throws Exception{
    }
Circle obj = new Circle();
obj.draw();

A  Compiler error
B  No output
C  Drawing shape
D  Drawing Circle

<--Right Answer

Q.5: What is the output?

class Shape {
    void draw () throws Exception {
        System.out.println("Drawing shape");
    }
}

class Circle extends Shape{
    void draw() throws RuntimeException {
        System.out.println("Drawing Circle");
    }
}

class Program {
    public static void main(String args[]) throws Exception{
        Circle obj = new Circle();
        obj.draw();
    }
}
Rules for exceptions in overridden methods:

1. If the super class method ‘throws’ an exception then child class can ‘throws’ the same exception or child class of that exception.

2. If super class method does not ‘throws’ any exception then the child class overridden method can ‘throws’ unchecked exception.

3. If checked exception is declared for a method then it should be raised (throw).

Answers:
Chapter 17
User Defined Exception

Q.1: How to create user defined checked exception?

A  Derive from Error class
B  Derive from Throwable class
C  Derive from RuntimeException class
D  Derive from Object class

<—Right Answer

Q.2: How to create user defined
unchecked exception?

A  Derive from Error class
B  Derive from Exception class
C  Derive from RuntimeException class
D  Derive from Object class
   <— Right Answer

Q.3: What is the output?

class MyException extends Object {
    MyException(String str) {
        super(str);
    }
}

class Program {
    public static void main(String args[]) {
        int i = 10;
        int j = 11;
        if (j > i)
            throw new MyException(“j is greater”);
    }
}

A  Compiler Error
B  Runtime Exception
C  J is greater
Q.4: What is the output?

class MyException extends Exception {
    MyException(String str) {
        super(str);
    } 
}

class Program {
    public static void main(String args[]) {
        int i = 10;
        int j = 11;
        if (j > i)
            throw new MyException("j is greater");
    }
}

A. Compiler Error
B. Runtime Exception
C. J is greater
D. None of the above

Q.5: What is the output?

class MyException extends RuntimeException {
    MyException(String str) {
        
    
}
class Program {
    public static void main(String args[]) throws Exception{
        int i=10;
        int j=11;
        if (j > i)
            throw new MyException("j is greater");
    }
}

Q.6: What is the output?

class MyException extends Exception {
    MyException(String str) {
        super(str);
    }
}

class Program {
    public static void main(String args[]) throws Exception{
        int i=10;
int j=11;
if (j> i)
    throw new MyException("j is greater");
}
}

A  Object Exception
B  JVM Error
C  RuntimeException
D  Compiler Error
