Who is the book for?
This book has been written for people whose first language is not English, and who use or are going to use computers and other information technology in an English-speaking environment. It covers the language needed to use information technology equipment, work with computer programs, discuss problems and plan projects. It does not cover advanced technical vocabulary for computer programmers or electronic engineers. All the language in the book is intended to be accessible to intermediate level students and above.

How can the book be used?
The vocabulary is arranged by topic. Choose the topics that interest you. The pages do not have to be completed in any particular order, and there is no need to complete all the pages if some are on topics which are not useful to you. It is better to complete one or two pages in a day, and remember the vocabulary, rather than completing as many pages as possible. The answers to the exercises can be found at the back of the book. There is also an index to help you find the pages which are most useful to you.

Write new words and phrases you learn in a notebook or file. Review this language regularly so that it becomes part of your active vocabulary.

A good general dictionary will be very helpful, providing pronunciation guides and more contexts. For vocabulary relating specifically to computers, Dictionary of Computing (A&C Black, ISBN 978 07475 6622 9) will be a useful reference source.

A. EPOS and EFTPOS

Cross out the incorrect word

EPOS (electronic point of sale) terminals are cash / money registers found in retail openings / outlets such as shops and restaurants. They are connected to a central / centre computer, and data about objects / goods and services sold is entered into the terminals via keyboards, barcode readers, touch / finger screens etc. They are useful for stock management, and can produce itemised bills and receipts / recipes. EFTPOS (electronic funds transfer point of sale) can also transfer cash / funds directly from the customer’s bank account via a debit / paying card. They are now more common than EPOS terminals.

Typewriters

The earliest recorded attempt to produce a mechanical writing device was in 1714, but the first usable typewriter was produced by Remington in 1873. It had most of the features of later machines, except that it typed only in capital letters. With the addition of lower case ("small") letters in 1878, the basic design was in place.

Portable typewriters appeared in 1912, and electric machines became available in 1925. By this time millions of typewriters were in use, and in countries using the Roman alphabet, very few official letters and documents were still being handwritten.

Although typewriters are still manufactured in small quantities, they have largely been replaced by computer word-processing applications. Some people remain nostalgic for the old-fashioned typewriter, though. It requires no electricity, no separate printer and no expensive ink cartridges (a single ribbon will type hundreds of pages, and is quick and cheap to replace). Most significantly, perhaps, with no easy correction, sentences have to be fully thought-out before they are committed to paper - an intellectual discipline perhaps in danger of being forgotten in the age of cut, copy, paste and delete.
A. Write the numbers next to the words.

Section 3: The Internet
3.1 The internet: the basics

A. Choose the best word from each pair in grey type.

What's the difference between the Web and the internet?

Some people think that the internet and the Web are the same thing, but in fact they are different. The internet (often called simply "the net") is a global network of interconnected computers. These computers communicate with each other over through existing telecommunications networks – principally, the telephone system. The Word Wide Web (usually known as just "the Web") is the billions of web pages that are stored on large computers called web servers.

To see access the web, you need a computer and a modem. You then connect over your telephone line to an internet service port provider (ISP), which sends your request to view a particular web page to the correct web server.

Websites are not the only service available on the internet. It is also used for many other functions, including sending and receiving email, and connecting to newsgroups and discussion talking groups.

You could say that the internet is a system of roads, and web pages and emails are types of traffic that travel on those roads.

B. Put these operations in the order that you do them (variations are possible).

- close down your browser
- connect to your ISP
- disconnect from the internet
- enter a web address (also known as a URL*) into the address field
- launch your browser (for example, Internet Explorer, Netscape Navigator or Mozilla Firefox)
- perhaps wait for a few seconds while the web-page downloads
- view the page

open  send  size

You can send almost any file as an attachment. 1________ through the folders on your computer until you find the file you want to attach. Click on "2________". The file will appear in the attachments 3________. Then click "4________", and wait while the file uploads. Add more files if you wish. When you have finished adding files, click "5________".

Some email 6________ will only receive attachments up to a certain 7________ with one email, for example 10MB. If you need to send a lot of very big attachments, it’s sometimes necessary to spread them over a number of separate emails.
3.9 Email comprehension 1

Hi Tony

Thanks for sending through that a/w so quickly. Just one problem – I couldn’t open the attachment. I’m not sure why. My inbox is virtually empty, so there’s plenty of room, and the attachment limit is 20MB, so there’s no problem there. Perhaps there was a glitch somewhere. Anyway, rather than trying to figure out what went wrong, could you just send it again?

Did we discuss file format? I don’t know much about TIFFs, JPEGs etc, but I meant to tell you that if you have any queries on this, you could get in touch with Steve, our designer. His email address is steve@stevegreendesign.co.uk.

One other thing. When you resend me the a/w, could you cc it to Angela? I’ve asked her to have a quick look at it before we put it in the brochure.

I’m looking forward very much to seeing those pics – fingers crossed that they’ll come through OK this time. However, if I still can’t download them, I’ll ask you to put them on a disk and mail them.

All the best

Jenny

A. Are these statements true or false?

1. Jenny didn’t receive the a/w because her inbox is too small.
2. The attached files came to less than 20MB in total.
3. Jenny has resolved a technical problem, and the attachment will come through without any problems next time.
4. Tony will have to resend the a/w.
5. Jenny is a graphic design expert
6. Tony is also going to put the files onto a disk and mail them.
7. Angela has already seen the a/w.
8. The style is too informal – business emails should always be more formal than this.

B. Find words or expressions in the email which mean the same as the phrases below.

1. artwork _____________________________________
2. a small technical problem _____________________________________
3. type of file _____________________________________
4. questions about this _____________________________________
5. send again _____________________________________
6. email a copy to _____________________________________
7. communicate with _____________________________________
8. with luck… _____________________________________
Dear Jenny

As requested, I’m attaching the a/w files again.

The technical problems you’ve been experiencing may be due to your email provider. I have to say, I’ve never heard of Whooypdudu.com. You might be better off switching to one of the big names, such as Gmail or Yahoo.

Regarding file formats, TIFFs should be OK. If necessary, your designer will be able to reformat them very easily, but in my experience most designers have no problem working with TIFFs.

As the file sizes are quite large, and I understand that Angela only has a dial-up connection, I’ve sent her low-res versions to look at. I hope that will be OK. They should be clear enough.

I’m just about to go on holiday, so if you need me to send these files on disk, please let me know by Friday afternoon. I probably won’t get the opportunity to check my email while I’m away, but if anything arises that won’t keep, my assistant Trevor may be able to deal with it.

Best regards

Tony

A. Are these statements true or false?
1. Tony thinks Jenny should change her email provider.
2. The designer will need to reformat the files.
3. Angela doesn’t have broadband.
4. Tony is sending resized versions of the a/w files to Angela.
5. These versions will look the same as the original versions.
6. Tony is going on holiday on Friday morning.
7. Trevor may be able to help with any problems that come up while Tony is away.
8. The style is neutral – neither formal nor informal.

B. Find words or expressions in the email which mean the same as the phrases below.
1. as you asked ___________________________
2. famous companies ___________________________
3. change the type of file ___________________________
4. I think, but I may be wrong… ___________________________
