FD&C Red No. 19. See Basic violet 10; D&C Red No. 19

FD&C Red No. 40
CAS 25956-17-6
INS129; E129

Synonyms: Allura red; Allura red AC; CI 16035; Curry red; Food red 17; 6-Hydroxy-5-[(2-methoxy-5-methyl-4-sulphonyl)azo]-2- naphthalenesulfonic acid disodium salt; 2-Naphthalenesulfonic acid, 6-hydroxy-5-(6- methoxy-4-sulfo-m-tolyl) azo)-, disodium salt; NT red; Red no. 40

Classification: Monoazo color

Empirical: C_{18}H_{16}N_{2}Na_{2}O_{8}S_{2}

Properties: Ylsh.-red powd., gran.; sol. (oz/gal): 26 oz dist. water, 4 oz glycerin, 2 oz propylene glycol; m.w. 498.46

Toxicology: LD_{50} (oral, rat) > 10 g/kg; experimental reproductive effects; mutagen; may cause lymph tumors; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of NO_{x} and SO_{x}

Uses: Colorant for pharmaceuticals, orals, topicals, eye use

Features: Exhibits orange-red hue in sol'n.

Regulatory: FDA 21CFR §74.340, 74.1340, 74.2340, subject to certification, permanently listed

FD&C Violet No. 1. See Acid violet 49

FD&C Yellow No. 5
CAS 1934-21-0; EINECS/ELINCS 217-699-5
INS102

Synonyms: Acid yellow 23 (INCI); Acid yellow
23 trisodium salt; 3-Carboxy-5-hydroxy-1-p-
sulphophenyl-4-p-sulphophenylazopyrazole
trisodium salt; Cl 19140; D&C Yellow No. 5;
4,5-Dihydro-5-oxo-1-(4-sulphophenyl)-4-[(4-
sulphophenyl)azo]-1H-pyrazole-3-carboxylic
acid trisodium salt; Food Yellow 4; 1H-
Pyrazole-3-carboxylic acid, 4,5-dihydro-5-
nox-1-(4-sulphophenyl)-4-[(4-sulphophenyl)
azo]-trisodium salt; Tartrazine; Tartrazine
yellow; Trisodium-3-carboxy-5-hydroxy-1-p-
sulphophenyl-4-p-sulphophenylazopyrazole
Classification: Pyrazole color
Empirical: C16H9N4Na3O9S2
Formula: C16H9N4O9Na3S2 • 3Na
Properties: Bright orange-yel. powd., gran.;
greenish-yel. in sol'n.; sol. in water, conc.
sulfuric acid; sol. (oz/gal): 28 oz glycerin, 12 oz
propylene glycol; m.w. 534.37
Toxicology: LD50 (oral, mouse) 12,750 mg/kg,
(IP, rat) 3800 mg/kg; mildly toxic by ing.;
allergen; those allergic to aspirin are often
allergic to tartrazine; may cause urticaria,
anaphylactoid reactions, angioedema,
rhinitis, bronchial asthma, contact
dermatitis, hyperactivity, thyroid tumors;
experimental teratogen, reproductive
effects; human mutagenic data; TSCA listed
Hazardous Decomp. Prods.: Heated to
decomp., emits very toxic fumes of NOx,
SOx, and Na2O
Storage: Hygroscopic

(-)-Fenchone. *See d-Fenchone*

d-Fenchone

CAS 1195-79-5; 4695-62-9; EINECS/ELINCS 214-804-6; 225-160-0

FEMA 2479

Synonyms: Bicyclo [2.2.1] heptan-2-one, 1,3,3-trimethyl-; 3,3-Dimethyl-8,9-dinorbornan-2-one; d-2-Fenchonane; Fenchone; (+)-Fenchone; 2-Norbornanone, 1,3,3-trimethyl-; 1,3,3-Trimethylbicyclo [2.2.1] heptan-2-one; (1S)-1,3,3-Trimethylbicyclo [2.2.1] heptan-2-one; 1,3,3-Trimethyl-2-norbornanone; d-1,3,3-Trimethyl-2-norbornanone; d-1,3,3-Trimethyl-2-norcamphanone; d-1,3,3-Trimethyl-2-norcamphanone

Definition: Isolated from cedarleaf oil

Empirical: C₁₀H₁₆O

Properties: Colorless oily liq., camphor-like odor; sol. in alcohol, ether; insol. in water; m.w. 152.23; dens. 0.9465 (19 C); b.p. 193 C

Toxicology: LD₅₀ (oral, rat) 6160 mg/kg; low toxicity by ing.; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

l-Fenchone

CAS 7787-20-4; EINECS/ELINCS 232-107-5

Synonyms: Bicyclo [2.2.1] heptan-2-one, 1,3,3-trimethyl-; (1R)-(-)-Fenchone; L(-)-1,3,3-Trimethylbicyclo [2.2.1] heptan-2-one; 1,3,3-TrimethylNorbornan-2-one; L(-)-1,3,3-Trimethyl-2-norbornanone

Empirical: C₁₀H₁₆O

Properties: Colorless liq.; camphoraceous odor; m.w. 152.24; dens. 0.948; m.p. 5-6 C; b.p. 192-194 C; flash pt. 52 C

HMIS: Health 2, Flammability 2, Reactivity 0

Storage: 24 mos. when stored in tight glass, aluminum, or double lined containers in a cool area away from direct heat

Uses: Synthetic flavor and fragrance for pharmaceuticals
Fennel (Foeniculum vulgare)
CAS 977001-13-0
FEMA 2481, 2482 (sweet)
Synonyms: Fennel; Fennel fruit; Fennel seed; Foeniculum; Foeniculum vulgare; Foeniculum vulgare fruit; Sweet fennel
Definition: Dried ripe fruit of cultivated varieties of Foeniculum vulgare
Storage: Protect from light
Uses: Natural flavor for pharmaceuticals, carminative; in herbal remedies for respiratory tract disorders
Regulatory: FDA 21CFR §182.10, GRAS; FEMA GRAS; JP compliance; Japan approved

Fennel oil (Foeniculum vulgare) oil
CAS 8006-84-6; EINECS/ELINCS 283-414-6
FEMA 2483
Synonyms: Bitter fennel oil; Fennel oil; Fennel oil, bitter; Fennel oil, sweet; Foeniculum vulgare; Foeniculum vulgare oil; Sweet fennel oil
Definition: Volatile oil from steam distillation of seeds of fennel, Foeniculum vulgare, contg. 50-60% anethole, 20% fenchone, pinene, limonene, dipentene, phellandrene
Properties: Colorless to pale yel. liq., fennel odor and taste; sol. in 1 vol 90% alcohol; very sol. in chloroform, ether; sl. sol. in water; dens. 0.953-0.973 (25/25 C); flash pt. (CC) 57 C; ref. index 1.5280-1.5380 (20 C); tenacity 6 hrs. on blotter
Toxicology: LD50 (oral, rat) 3120 mg/kg; mod. toxic by ing.; severe skin irritant; mutagenic data; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Keep cool, well closed; protect from light, heat
Uses: Natural flavor for pharmaceuticals;
aromatic carminative; in herbal remedies for respiratory tract disorders

**Ferric ammonium ferrocyanide**

- **CAS:** 25869-00-5; 12240-15-2; EINECS/ELINCS 247-304-1
- **Synonyms:** AFCF; Ammonium-ferric-cyanoferroferrate (II); Ammonium-ferric-ferrocyanide; CI 77520; Iron blue
- **Classification:** Inorganic salt
- **Formula:** C6FeN5 • Fe • H4N
- **Properties:** Blue; m.w. 285.87
- **Toxicology:** LD50 (unreported, mouse) > 5 g/kg; TSCA listed
- **Uses:** Colorant for external pharmaceuticals, eye use
- **Regulatory:**
  - FDA 21CFR §73.1298, 73.2298; exempt from certification, permanently listed for drug use; Canada DSL
Chemical Component Cross-Reference

**Ferric chloride**
CAS 7705-08-0; EINECS/ELINCS 231-729-4
UN 1773 (DOT); UN 2582 (DOT)
Synonyms: Ferric trichloride; Iron chloride; Iron (III) chloride; Iron chlorides; Iron trichloride
Classification: Inorganic salt
Empirical: Cl₃Fe
Formula: FeCl₃
Properties: Dk. grn. to black-brown cryst. powd.; sol. in water, alcohol, glycerol, methanol, ether, acetone; sl. sol. in CS₂; readily absorbs water in air to form hexahydrate; m.w. 162.21; dens. 2.898; vapor pressure 1 mm (194°C); m.p. 292°C; b.p. 319°C; pH 1
Toxicology: ACGIH TLV/TWA 1 mg (Fe)/m³; LD₅₀ (oral, rat) 450 mg/kg, (IV, mouse) 58 mg/kg; poison by ing., IV routes; corrosive to skin, eyes, mucous membranes; reproductive effector; mutagen; TSCA listed
Precaution: DOT: Corrosive; catalyzes potentially explosive polymerization of ethylene oxide, chlorine + monomers; violent reaction with allyl chloride; reacts violently with water to form toxic and corrosive fumes; reacts with moisture in air to form pungent hydrogen chloride
Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of HCl
Storage: Deliq.; very hygroscopic; store in cool, dry place; keep well closed
Uses: Catalyst in synthesis of pharmaceuticals; flavor in pharmaceuticals; prod. of surgical cotton wool
Regulatory: FDA 21 CFR §175.105, 176.170, 184.1297, GRAS; Japan approved; Canada DSL

**Ferric ferrocyanide**
CAS 14038-43-8; EINECS/ELINCS 237-875-5
Synonyms: Bronze blue; Chinese blue; CI 77510; CI 77520; Ferrate(4-), hexakis(cyano-C)-, iron(3+); Iron blue; Iron ferrocyanide; Milori blue; Non-bronze blue; Pigment blue 27; Potash blue; Prussian blue; Turnbull's blue
Classification: Inorganic salt
Formula: Fe₄[Fe(CN)₆]₃
Properties: Cubic crystals; sol. in acids, decomposes in alkali; m.w. 859.25; sp. gr. 1.83
Toxicology: May cause eye, skin, digestive tract irritation; low toxicity; nonmutagenic; TSCA listed
Precaution: Can emit highly toxic hydrogen cyanide fumes if exposed to acid, high heat, or strong ultraviolet radiation
Storage: Store in a tightly closed container in a cool, dry, well-ventilated area
Uses: Colorant for external pharmaceuticals, eye use
Regulatory: FDA 21 CFR §73.1299, 73.2299; exempt from certification, permanently listed for drug use
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Noveon†
http://www.carbopol.com; http://www.noveoncoatings.com

**Ferric ferrous oxide.** See Iron oxide black
**Ferric hexacyanoferrate (II).** See CI 77510
Chemical Component Cross-Reference

Ferric hydrate; Ferric hydroxide; Ferric hydroxide oxide. See Iron (III) oxide hydrated

Ferric oxide
CAS 1309-37-1 (anhyd.); EINECS/ELINCS 215-168-2
Synonyms: Anhydrous iron oxide; CI 77491; Colloidal ferric oxide; Ferric oxide red; Iron (III) oxide; Iron oxide red; Iron sesquioxide; Natural iron oxides; Natural red oxide; Pigment brown 6; Pigment brown 7; Pigment red 101; Pigment red 102; Red iron oxide; Red iron trioxide; Yellow ferric oxide
Classification: Inorganic color; synth. iron oxide
Empirical: Fe₂O₃
Properties: Red-brown to black cryst.; sol. in acids; insol. in water, alcohol, ether; m.w. 159.69; dens. 5.240; m.p. 1538 °C (dec.)
Toxicology: ACGIH TLV/TWA 5 mg (Fe)/m³ (vapor, dust); LD50 (IP, rat) 5500 mg/kg; LDLo (subcut., dog) 30 mg/kg; irritant; poison by subcut. route; avoid inhalation; suspected human carcinogen; experimental tumorigen; TSCA listed
Precaution: Catalyzes the potentially explosive polymerization of ethylene oxide; explosive and violent reactions possible
HMIS: Health 1, Flammability 0, Reactivity 1
Storage: Preserve in well-closed containers
Uses: Colorant for ingested pharmaceuticals
Regulatory: FDA 21CFR §73.200 (limitation 0.25%), 176.170, 178.3297, 186.1300, 186.1374, 522.940, GRAS as indirect food additive; FDA approved for orals; USP/NF compliance
Trade Names Containing: Cloisonné®

Ferric oxide hydrated. See Iron (III) oxide hydrated

Ferric oxide red. See Ferric oxide

Ferric pyrophosphate
CAS 10058-44-3 (anhyd.); EINECS/ELINCS 233-190-0
Synonyms: Iron (III) pyrophosphate
Empirical: Fe₄O₂₁P₆
Formula: Fe₄(P₂O₇)₃ • xH₂O
Properties: Tan or ylsh. wh. powd.; sol. in min. acids; pract. insol. in water, acetic acid; m.w. 745.25 (anhyd.)
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of POx
Uses: Nutrient, dietary supplement, iron source in iron supplement preps., infant formulas
Regulatory: FDA 21CFR §184.1304, 582.80, GRAS; Japan approved; Canada DSL

Ferric sodium edetate; Ferric edetate
See Sodium ferric EDTA

Ferric subsulfate
CAS 1310-45-8
Synonyms: Basic ferric sulfate sol'n.; Iron hydroxide sulfate; Monsel's solution

Ferric trichloride. See Ferric chloride

Ferrihexacyanoferrate; Ferrocin. See CI 77510

Ferrosferric oxide. See Iron oxide black

Ferrosulfate. See Ferrous sulfate anhydrous

Ferrous citrate

CAS 23383-11-1 (anhyd.); 22242-53-1; EINECS/ELINCS 245-625-1

Synonyms: Iron (II) citrate

Empirical: CsH₆FeO₇

Properties: Sl. colored powd. or wh. cryst.; sol. in water; insol. in alcohol; m.w. 245.96

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Intravenous pharmaceuticals; diagnostic aid, radiopharmaceutical for iron absorption/metabolism

Regulatory: FDA 21CFR §184.1307c, GRAS; FDA approved for intravenous

Manuf./Distrib.: Degussa AG/Health & Nutrition; Lohmann [http://www.lohmann-chemikalien.de]

Ferrous-ferric oxide. See CI 77499

Ferrous fumarate

CAS 141-01-5; EINECS/ELINCS 205-447-7

Synonyms: 2-Butenedioic acid ferrous salt; Iron (II) fumarate

Definition: A salt of ferrous iron combined with fumaric acid, contg. 31.3% min. total iron, ≤ 2% ferric iron

†=pharmaceutical grade
### Ferrous gluconate

**CAS**: 299-29-6; 6047-12-7; EINECS/ELINCS 206-076-3

**Synonyms**: Bis (D-gluconato-O\(^1\),O\(^2\))-iron; Iron gluconate; Iron (II) gluconate; Nionate

**Definition**: Ferrous salt of gluconic acid

**Empirical**: C\(_{12}\)H\(_{22}\)FeO\(_{14}\)

**Formula**: Fe(C\(_6\)H\(_{11}\)O\(_7\))\(_2\)

**Properties**: Ylsh.-gray or pale grnsh.-yel. powd.; sl. odor of burnt sugar; sol. in water, glycerol; insol. in alcohol; m.w. 446.19

**Toxicology**: ACGIH TLV/TWA 1 mg(Fe)/m\(^3\); LD\(_{50}\) (oral, rat) 2237 mg/kg, (IP, mouse) 160 mg/kg; poison by IP and IV routes; mod. toxic by ing.; human systemic effects by ing.; carcinojen; experimental tumorigen and teratogen; mutagen; TSCA listed

**Precaution**: Combustible

**Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating fumes

**Uses**: Nutrient, dietary supplement, mineral source for pharmaceuticals, vitamin tablets

**Regulatory**: FDA 21 CFR §73.160, 182.8308, 184.1308, 582.80, GRAS; Japan approved (0.15 g/kg max. as iron); BP, EP compliance; not permitted in food (EU); Canada DSL

---

### Ferrous gluconate dihydrate

**CAS**: 22830-45-1; EINECS/ELINCS 206-076-3

**Synonyms**: Bis (D-gluconato-O\(^1\),O\(^2\))-iron dihydrate; Gluconic acid, iron (II) salt, hydrate (2:1:2); Iron gluconate dihydrate; Iron (II) gluconate dihydrate

**Classification**: Nonaromatic acid salt

**Definition**: Ferrous salt of gluconic acid

**Empirical**: C\(_{12}\)H\(_{22}\)FeO\(_{14}\) • 2H\(_2\)O

**Formula**: Fe(C\(_6\)H\(_{11}\)O\(_7\))\(_2\) • 2H\(_2\)O

**Properties**: Ylsh.-gray or pale grnsh.-yel. powd.; sl. caramel odor; sol. in water; insol. in ethanol; m.w. 482.18; m.p. 188 C (dec.)

**Toxicology**: ACGIH TLV/TWA 1 mg(Fe)/m\(^3\); LD\(_{50}\) (oral, rat) 4500 mg/kg, (IV, mouse) 98 mg/kg; poison by IV route; mod. toxic by ing.; TSCA listed

**Precaution**: Combustible

**Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating fumes

**Uses**: Nutrient, dietary supplement, mineral source for pharmaceuticals, vitamin tablets

**Regulatory**: FDA 21 CFR §73.160, 182.8308, 184.1308, 582.80, GRAS; Japan approved (0.15 g/kg max. as iron); BP, EP compliance; not permitted in food (EU); Canada DSL

---

### Ferrous lactate

**CAS**: 5905-52-2; 85993-25-5; EINECS/ELINCS 227-608-0

**Synonyms**: Iron (II) lactate; Iron (2+) lactate;
Lactic acid iron (2+) salt (2:1)

**Definition:** Iron (II) salt of natural L(+)-lactic acid

**Empirical:** C₆H₁₀O₆ • Fe (anhyd.); C₆H₁₀FeO₆ • 3H₂O (trihydrate)

**Formula:** Fe(CH₃CHOHCOO)₂ • xH₂O

**Properties:** Anhyd.: m.w. 233.99; Trihydrate: Greenish-wh. powd., sl. char. odor, mild sweet ferruginous taste; deliq.; sol. in water, alkali citrates; almost insol. in alcohol; m.w. 287.97

**Toxicology:** ACGIH TLV/TWA 1 mg(Fe)/m³; LD₅₀ (oral, mouse) 147 mg/kg, (IV, rabbit) 287 mg/kg; poison by ing.; questionable carcinogen; experimental tumorigen

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Deliq.; keep well closed and protected from light

**Uses:** Nutrient, dietary supplement in pharmaceuticals

**Regulatory:** FDA 21CFR §73.165, 182.8311, 184.1311, GRAS; not permitted in food (EU); Japan approved

**Trade Names:** Puramex® FE

Ferrous oxide

**CAS:** 1345-25-1; EINECS/ELINCS 215-721-8

**Synonyms:** CI 77489 (INCI); Iron monoxide; Iron (II) oxide; Iron oxides; Red ochre

**Classification:** Inorganic color

**Empirical:** FeO

**Properties:** Blk. powd.; sol. in acid; insol. in water; m.w. 71.85; dens. 5.7; m.p. 1420 C; flash pt. >230 C

**Toxicology:** TSCA listed

**Precaution:** May ignite on contact with arsenic trioxide + sodium nitrate; potentially explosive reaction with methyl isocyanatoacetate

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of SOx

**HMIS:** Health 2, Flammability 0, Reactivity 0

**Storage:** Hygroscopic

**Uses:** Nutrient, dietary supplement, iron source in pharmaceuticals, iron supplements; astringent; deodorant

**Regulatory:** FDA 21CFR §184.1315, GRAS; SARA reportable; Japan approved; BP compliance; Canada DSL

Properties: Grayish-wh. to wh. cryst. powd.; slowly sol. in water; m.w. 169.96; bulk dens. 30 lb/ft³ (loose); m.p. loses water @ 300 C, dec. @ 671 C; pH 2.8-5 (10%) |

Toxicology: LD50 (oral, rat) 1480 mg/kg; corrosive to eyes, by ing.; irritating to skin, mucous membranes; poisoning may affect liver, kidneys, circulatory, cardiovascular, and central nervous systems |

Precaution: Incompat. with alkalies; arsenic trioxide and sodium nitrate (spontaneously combustible mixt.); methyl isocyanoacetate (may dec. violently at 25 C) |

Hazardous Decomp. Prods.: May produce toxic sulfur oxides |

Uses: Nutrient, dietary supplement, mineral supplement for pharmaceuticals |

Trade Names Containing: Descont® Ferrous Sulfate 60% |

Fish oil glycerides |

Properties: Mixture of mono, di and triglycerides expressed or extracted from menhaden, hake or similar oil-bearing fish |

Uses: Emollient in pharmaceutical waxes |

Flax oil glycerides |

Properties: Flax oil; Fish oil|

Uses: Fish oil glycerides |

Flavaxin |

Properties: Flavaxin |

Uses: Riboflavin |

Fish glcerides |

Properties: Fish glycerides |

Uses: Fish glycerides
Flav confisc acid sodium salt. See Cl 10316
Flaxseed extract. See Linseed (Linum usitatissimum) extract

Fluorane 114. See 1,2-Dichlorotetrafluoroethane

Fluorescein
CAS 2321-07-5; EINECS/ELINCS 219-031-8
Synonyms: 9-(o-Carboxyphenyl)-6-hydroxy-3-isoxanthone; 9-(o-Carboxyphenyl)-6-hydroxy-3H-xanthen-3-one; CI 45350; D&C Yellow No. 7; 3’,6’-Dihydroxyfluorophene; Dihydroxyfluorophene; 3’,6’-Dihydroxyspiro [isobenzofuran-1(3H),9’-[9H] xanthen]-3-one; Dioresorcinolphthalein; 3,6-Fluorandiol; Fluoresceine; Resorcinolphthalein; Solvent yellow 94
Empirical: C20H12O5
Properties: Orange-red cryst. powd.; sol. in water, ethanol; sol. in dil. alkali forming fluorescent sol’ns.; m.w. 332.32; m.p. 320°C (dec.)
Toxicology: LDLo (IP, rat) 600 mg/kg, (IV, rabbit) 300 mg/kg; poison by IV route; mod. toxic by IP route; mutagen; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Dye in medicine; diagnostic marker for viable tissue; diagnostic aid in ophthalmology; topical agent to detect corneal lacerations
Use Level: 15-30 mg/kg (IV dose)
Regulatory: BP, EP compliance

Fluoresceine. See Fluorescein

Fluorescein sodium
CAS 518-47-8; EINECS/ELINCS 208-253-0
Synonyms: Acid yellow 73 sodium salt (INCI); 9-o-Carboxyphenyl-6-hydroxy-3-isoxanthone, disodium salt; CI 45350; D&C Yellow No. 8; 3’,6’-Dihydroxyfluorophene [isobenzofuran-1(3H),9’-[9H] xanthen]-3-one; Dioresorcinolphthalein; 3,6-Fluorandiol; Fluoresceine; Resorcinolphthalein; Solvent yellow 94
Empirical: C20H10Na2O5
Formula: C20H12O5 • 2Na
Properties: Orange-red powd.; sol. in water; sl. sol. in alcohol; m.w. 376.28
Toxicology: LD50 (oral, rat) 6721 mg/kg, (IP, mouse) 1800 mg/kg; mod. toxic by IP route; mildly toxic by ing.; human systemic effects by IV route (arrhythmias, eye hemorrhage, nausea, vomiting); experimental reproductive effects, tumorigen; questionable carcinogen; mutagenic data; TSCA listed
Classification: Xanthene color
Empirical: C20H10Na2O5
Formula: C20H12O5 • 2Na
Properties: Orange-red powd.; sol. in water; sl. sol. in alcohol; m.w. 376.28
Toxicology: LD50 (oral, rat) 6721 mg/kg, (IP, mouse) 1800 mg/kg; mod. toxic by IP route; mildly toxic by ing.; human systemic effects by IV route (arrhythmias, eye hemorrhage, nausea, vomiting); experimental reproductive effects, tumorigen; questionable carcinogen; mutagenic data; TSCA listed
Storage: Hygroscopic
Uses: Colorant for external pharmaceuticals
Regulatory: BP, EP compliance; D&C Yellow No. 8: FDA 21CFR §74.1708, 74.2708,
Fluorescein sodium salt. See D&C Yellow No. 8; Fluorescein sodium
Fluorescein, 2',4',5',7'-tetraiodo-, disodium salt. See Acid red 51

Fluoroform. See Trifluoromethane
4-Fluorophenol. See p-Fluorophenol
p-Fluorophenol
CAS 371-41-5; EINECS/ELINCS 206-736-0
UN 1759
Synonyms: 4-Fluorophenol
Classification: Halogenated phenol
Empirical: C₆H₅FO
Formula: F₃C-H₂-Ö
Properties: Wh. to pale yel./pink cryst. solid; char. phenolic odor; sol. 6 g/100 ml in water; m.w. 112.10; dens. 1.1889; m.p. 46-48 C; b.p. 185 C; flash pt. 68 C
Toxicology: LD₅₀ (oral, rat) 360 mg/kg, (IP, mouse) 312 mg/kg, (skin, rat) 1072 mg/kg; poison by IP route; harmful by ing. and skin contact; corrosive to eyes, skin, mucous membranes; causes burns; inh. may cause sore throat, coughing, shortness of breath, nasal irritation; ing. may cause nausea, vomiting, abdominal pain, diarrhea;

Formaldehyde
CAS 50-00-0; EINECS/ELINCS 200-001-8
UN 1198 (DOT); UN 2209 (DOT); INS240
Synonyms: Aldehyde C1; Formalin; Formic aldehyde; Formol; HOCH; Methaldehyde; Methanal; Methylene oxide; Methyl aldehyde; Methylene glycol; Oxymethylene; Paraform; Polyoxymethylene glycols
Classification: Aldehyde
Empirical: CH2O
Formula: HCHO
Properties: Colorless gas; strong pungent odor; avail. commercially as aq. sol'ns. (37-50% in methanol); sol. in water, alcohol; m.w. 30.03; dens. 1.083; vapor pressure 3284 mm Hg (20 C); f.p. -118 C; b.p. -19 C; flash pt. 56 C; autoignition temp. 424 C; ref. index 1.3765
Toxicology: ACGIH TLV/TWA 1 ppm; LD50 (oral, rat) 800 mg/kg, (subcut., rat) 420 mg/kg, (IV, rat) 87 mg/kg; LC50 (inh., rat) 590 mg/m³; poison by ing., skin contact, inh., IV, IP, subcut. routes; human poison by ing., systemic effects, skin/eye irritant; vapor intensely irritating to mucous membranes; if ingested, causes violent vomiting and diarrhea and possible collapse; suspected human carcinogen; experimental tumorigen, teratogen; mutagenic data; common air contaminant; TSCA listed
Environmental: VOC; BOD5 0.74; ThOD 1.07
Precaution: Combustible when exposed to heat, or flame; mod. fire risk; mod. explosion hazard; explosive limits 7-73%; can react vigorously with oxidizers; violent reactions possible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
HMIS: Health 3, Flammability 2, Reactivity 1
Uses: Antimicrobial, preservative used in
Chemical Component Cross-Reference

Formamide
CAS 75-12-7; EINECS/ELINCS 200-842-0
Synonyms: Amide C1; Carbamaldehyde;
Methanamide; Methanoic acid, amide
Classification: Amide
Empirical: CH3NO
Formula: HCONH2

Properties: Colorless clear, sl. visc. oily liq.; sol.
in water, 95% ethanol, acetone, dimethyl
sulfoxide; misc. with methanol, acetic acid,
dioxane, phenol, ethylene glycol; very sl. sol. in
ether, benzene; m.w. 45.04; dens. 1.134 (20/4
C); vapor pressure 3 mm Hg (30 C); m.p. 2.6
C; b.p. 210 C (dec.); flash pt. (OC) 154 C; ref.
index 1.44754 (20 C); pH 7.3

Toxicology: ACGIH TLV/TWA 20 ppm (skin);
LD50 (oral, rat) 5577 mg/kg, (IP, rat) 5700
mg/kg. (subcut., rat) > 4 g/kg; poison by skin
contact, subcut., IV routes; mod. toxic
by ing., IP routes; mildly toxic by inh.;
primary irritant; skin and eye irritant; inh.
may cause mod. irritation to mucous
membranes of respiratory tract; suspected
carcinogen; tumorigen; mutagen;
experimental reproductive effects; TSCA
listed

Precaution: Combustible exposed to heat or
flame; incomp. with strong oxidizers,
acids, bases, iodine, pyridine, SO3; reacts
explosively with furfuryl alcohol, H2O2,
nitromethane; attacks copper and brass;
incomp. with Karl Fischer reagent
(toluene/pyridine/sulfur trioxide); reaction may
cause explosion of closed container

Hazardous Decomp. Prods.: Heated to
decomp., emits toxic fumes of NOx
NFPA: Health 2, Flammability 1

Storage: Store in cool, dry, well-ventilated area,
out of direct sunlight; inert atm. rec.; restrict
access; protect from moisture; avoid generating mists; hygroscopic; light-sensitive

†=pharmaceutical grade

Formic acid
CAS 64-18-6; EINECS/ELINCS 200-579-1
UN 1779 (DOT); FEMA 2487; INS236

Synonyms: Aminic acid; Formylic acid;
Hydrogen carboxylic acid; Methanoic acid

Classification: Organic acid

Empirical: CH$_2$O$_2$
Formula: HCOOH

Properties: Colorless fuming liq.; pungent penetrating odor; sol. in water, alcohol, ether;
m.w. 46.03; dens. 1.22 (20/4 °C); vapor pressure 42.6 mm Hg; m.p. 8.3 °C; b.p. 100.8 C;
flash pt. (OC) 69 °C; autoignition temp. 539 °C; ref. index 1.3714; surf. tens. 37.58 dynes/cm;
dielec. const. 58.5

Toxicology: ACGIH TLV/TWA 5 ppm; STEL 10 ppm; LD50 (oral, rat) 1100 mg/kg, (IP, mouse) 940 mg/kg; LC50 (inh., rat, 15 min) 15 g/m$^3$; poison by inh., IV, IP routes; mod. toxic by ing.; corrosive; skin and severe eye irritant; migrates to food from pkg.; mutagenic data; TSCA listed

Environmental: VOC; BOD5 0.20; COD 0.36; ThOD 0.35

Precaution: Flamm.; DOT: corrosive material; can react vigorously with oxidizers;
explosive with furfuryl alcohol,

†=pharmaceutical grade

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

NFPA: Health 3, Flammability 2, Reactivity 0

Uses: Solvent, synthetic flavor for pharmaceuticals

Regulatory: FDA 21 CFR §172.515, 172.723, 186.1316, GRAS as indirect additive, 573.480;
FEMA GRAS; CERCLA hazardous substance; Europe listed; prohibited in UK; Canada DSL

Fructose

CAS 57-48-7 (D-); 7660-25-5; 30237-26-4; EINECS/ELINCS 200-333-3 (D-)

Synonyms: Arabino-2-hexulose; β-D-Fructopyranose; D-Fructose; Fruit sugar; Laevosan; Laevulose; Levulose

Classification: Aliphatic polyhydric alcohol

Definition: Sugar occurring in fruit and honey

Empirical: C6H12O6

Properties: Colorless cryst. or wh. cryst. powd.; odorless; sweet taste; sol. in methanol, ethanol, water, pyridine, ethylamine, methylamine; m.w. 180.18; dens. 1.6; m.p. 103-105 C; pH almost neutral

Toxicology: ACGIH TLV/TWA 10 mg/m³ (inhalable particulate), 3 mg/m³ (respirable particulate); pract. nontoxic by ing.; very large doses may cause abdominal pain and diarrhea; some people are fructose intolerant; nuisance dust; probably not irritating to eyes except as 'foreign object;' experimental tumorigen

Precaution: At high temps., fructose in sol’n. rapidly browns and polymerizes to dianhydrides

Hazardous Decomp. Prods.: CO, CO₂; heated to decomp., emits acrid smoke and fumes

HMIS: Health 0, Flammability 1, Reactivity 0

Storage: Hygroscopic; store @ R.T.

Uses: Humectant, sweetener, and preservative in pharmaceuticals, orals; diluent for pharmaceutical tablets and capsules; parenteral nutrient ingred.

Features: Nutritive

Regulatory: FDA 21CFR §101.9, 131.111, 131.112, 131.170, 131.200, 131.203, 131.206, 133.179, 146.132, 155.170; FDA approved for orals; USP/NF, BP, EP compliance; Canada DSL

Chemical Component Cross-Reference

95; Isosweet 5500

D-Fructose; Fruit sugar. See Fructose
Fuller's earth. See Attapulgite
Fumarate, calcium. See Calcium fumarate

Fumaric acid
CAS 110-17-8; EINECS/ELINCS 203-743-0
UN 9126 (DOT); FEMA 2488; INS 2907

Synonyms: Allomalic acid; Boletic acid; 2-
Butenedioic acid; (E)-Butenedioic acid; trans-Butenedioic acid; trans-1,2-
Ethenedicarboxylic acid; 1,2-
Ethyleneedicarboxylic acid; trans-1,2-
Ethyleneedicarboxylic acid; Lichienic acid

Classification: Unsat. aliphatic dicarboxylic acid

Empirical: C4H4O4
Formula: HOOCCH:CHCOOH

Properties: Wh. cryst. powd. or gran.; odorless; acidic taste; mod. sol. in ethanol and acetone @ 30 C; sl. sol. in water, ether, oxygenated solvs.; very sl. sol. in chloroform; m.w. 116.08; dens. 1.635 (20/4 C); vapor pressure 1.7 mm Hg; m.p. 287 C; b.p. 290 C; flash pt. 230 C

Toxicology: LD50 (oral, male rat) 10,700 mg/kg, (IP, mouse) 587 mg/kg, (dermal, rabbit) > 20,000 mg/kg; poison by IP route; mildly toxic by ing. and skin contact; skin and eye irritant; mutagenic data; TSCA listed

Precaution: Combustible exposed to heat or flame; can react vigorously with oxidizers; incompat. with bases, amines, reducing agents; can form explosive dust-air mixts.; sol'ns. react with metals (Al, Fe, Zn) releasing flamm. hydrogen gas

Hazardous Decomp. Prods.: CO, CO2; heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 1, Flammability 0, Reactivity 0

Storage: Store in a cool, dry, well-ventilated area away from heat and ignition sources

Uses: Acidifier in pharmaceuticals, orals; antidandruff ingred.; cleaning agent for dentures

Regulatory: FDA 21CFR §131.44, 146.113, 150.141, 150.161, 172.350, 172.808, 172.810, 172.822, 175.105, 175.300, 175.320, 176.170, 177.1200, 177.2420; Canada DSL; USDA 9CFR §318.7, 381.147; BATF 27CFR §240.1051, limitation 25 lb/1000 gal wine; FEMA GRAS; Japan approved; Europe listed; UK approved; FDA approved for orals; USP/NF compliance

### UN 2389

**Synonyms:** Axole; Divinylene oxide; 1,4-Epoxy-1,3-butadiene; Furane; Furfuran; Oxacyclopentadiene; Oxole; Tetrole

**Classification:** 5-Membered aromatic heterocyclic compd.

**Empirical:** C₄H₄O

**Properties:** Colorless volatile liq.; strong ethereal odor; turns brn. on standing; sol. in alcohol, ether; misc. with most org. solvs.; insol. in water; m.w. 68.08; dens. 0.936 (20/4 C); vapor pressure 670 mbar (20 C); f.p. -86 C; b.p. 31-33 C; flash pt. (CC) -35 C; ref. index 1.4216 (20 C)

**Toxicology:** LD₅₀ (IP, mouse) 7 mg/kg; LD₅₀ (oral, rabbit) 234 mg/kg; LC₅₀ (inh., mouse, 1 h) 120 mg/m³; highly toxic; poison by inh., IP routes; mod. toxic by ing. and skin contact; readily absorbed through skin; narcotic; vapors are anesthetic; may cause ptosis, somnolence, dyspnea, acute pulmonary edema, nausea, vomiting, hemorrhage, convulsions, wt. loss, renal failure; carcinogen, tumorigen, mutagen, reproductive effector; target organs: GI system, liver; TSCA listed

**Precaution:** Extremely flamm.; dangerous fire risk; flamm. limits 2-24%; forms peroxides on exposure to air; can react with oxidizers, acids, peroxides, oxygen; violent exothermic reaction on contact with acids; avoid dust generation, excess heat

**Hazardous Decomp. Prods.:** CO, CO₂; heated to decomp., emits acute smoke and irritating fumes

**NFPA:** Health 1, Flammability 4, Reactivity 1

**Storage:** Sensitive to heat; photosensitive; store refrigerated; keep container tightly closed under an inert atmosphere; keep away from ignition sources

**Uses:** Pharmaceutical intermediate

**Regulatory:** Canada DSL

**Handbook of Pharmaceutical Additives, Third Edition**

2-Furanmethanol, tetrahydro-, acetate.
See Tetrahydrofurfuryl acetate
2(3H)-Furanone, dihydro-5-octyl-.
See γ-Dodecalactone
3(2H)-Furanone, 2,5-dimethyl-4-hydroxy-.
See 4-Hydroxy-2,5-dimethyl-3(2H) furanone
2(3H)-Furanone, 5-ethyldihydro-.
See γ-Hexalactone
2-Furan propanoic acid ethyl ester.
See Ethyl-2-furanpropionate
Furan, tetrahydro-.
See Tetrahydrofuran
3-(2-Furanyl)-2-furan acrylic acid propyl ester.
See Propyl 2-furanacrylate
1-(2-Furanyl)-1-hexanone.
See Pentyl 2-furyl ketone

**Furcelleran gum.**

**Furcelleran**

CAS 9800-21-9; EINECS/ELINCS 232-531-0
INS 407

**Synonyms:** Danish agar; Furcelleran gum

**Definition:** Refined hydrocolloid obtained by aq. extraction of Furcellaria fastigiata of the class of red seaweed, Rodophyceae

**Properties:** Wh. powd., odorless; sol. in warm water

**Toxicology:** LD50 (oral, rat) 5000 mg/kg, (oral, mouse) 6 mg/kg; mod. toxic by ingestion; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Emulsifier, gellant, stabilizer, thickener in toothpaste, pharmaceuticals; bacterial culture media

**Regulatory:** FDA 21CFR §172.655, 172.660, 176.170; Japan approved

**Manuf./Distrib.:** Frutarom
http://www.frutarom.com; P.L. Thomas
http://www.pthomas.com

**Furfural**

CAS 98-01-1; EINECS/ELINCS 202-627-7
UN 1199 (DOT); FEMA 2545

**Synonyms:** Artificial ant oil; Artificial oil of ants; Fural; 2-Furaldehyde; Furale; 2-Furanaldehyde; 2-Furancarbonal; 2-Furancarboxaldehyde; 2-Furfural; Furfuraldehyde; Furfurol; Furole; α-Furole; 2-Furialdehyde; Pyromucic aldehyde

**Classification:** Cyclic aldehyde

**Empirical:** C₅H₄O₂

**Formula:** C₄H₃OCHO

**Properties:** Colorless liq. (pure); reddish-brown (on exposure to air and light); almond-like odor; sol. in alcohol, ether, benzene, 8.3% in water; m.w. 96.08; dens. 1.1598 (20/4 C); f.p. -36.5 C; b.p. 161.7 C; flash pt. 60 C; ref. index 1.5260 (20 C)

**Toxicology:** ACGIH TLV/TWA 2 ppm (skin);
LD50 (oral, rat) 65 mg/kg, (IP, rat) 20 mg/kg, (subcut., rat) 148 mg/kg; LCLo (inh., rat, 4 h) 153 ppm; poison by inq., IP, subcut., IV, IM routes; mod. toxic by inq., skin contact; skin and eye irritant; irritates mucous membranes, acts on CNS; human mutagenic data; TSCA listed

**Environmental:** VOC; BOD5 0.77; ThOD 1.67

**Precaution:** Flamm. or combustible; can react with oxidizing materials; mod. explosion hazard exposed to heat or flame or by chem. reaction; incompat. with strong min. acids or alkalis; violent exothermic polymerization on contact with strong min. acids/alkalis

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**NFPA:** Health 3, Flammability 2, Reactivity 0

**Storage:** Refrigerate; light-sensitive

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Sweet flavor
### Furfuraldehyde

**Formula:** C₄H₃OCH₂OOCCH₃  
**Properties:** Colorless liq.; turns brn. on exposure to light and air; pungent odor; sol. in alcohol, ether; insol. in water; m.w. 140.14; dens. 1.118; vapor dens. 4.8; b.p. 175-177 C; flash pt. 150 F; ref. index 1.4627  
**Toxicology:** Mutagen; skin, eye, respiratory system irritant; TSCA listed  
**Environmental:** Do not contaminate water sources, sewers

### Furfural

**Classification:** FEMA GRAS; Canada DSL  
**Uses:** Synthetic flavor, flavor enhancer for pharmaceuticals

### Furfural alcohol

**Formula:** C₃H₆O₂  
**Properties:** Fruity banana-like flavor

### Furfuryl alcohol

**Formula:** C₄H₃OCH₂OOCCH₃

### Furfurole

**Formula:** C₅H₆O₂

### Properties:

- Colorless mobile liq., brn.-dk. red (air/lt. exposed), low odor, cooked sugar taste; sol. in alcohol, ether, chloroform, benzene; misc. with water but unstable; misc. with oxygenated solvs.; insol. in petrol.
- Hydrocarbons, most oils; m.w. 98.10; dens. 1.1285 (20/4 C); vapor pressure 1 mm (31.8 C); m.p. -29 C; b.p. 170 C; flash pt. (OC) 75 C; ref. index 1.485

### Toxicology:

ACGIH TLV/TWA 10 ppm (skin); STEL 15 ppm (skin); LD₅₀ (oral, rat) 275 mg/kg, (dermal, rabbit) 450 mg/kg; poison

---

**Handbook of Pharmaceutical Additives, Third Edition**
Furfuryl butyrate
CAS 623-21-2; EINECS/ELINCS 210-779-0
Synonyms: Butanoic acid, 2-furanylmethyl ester; 2-Furylethyl butanoate
Empirical: C₉H₁₂O₃
Properties: Yel. to amber oily liq.; green butyric rancid odor; insol. in water; misc. in ethanol; m.w. 168.19; dens. 1.053; b.p. 212 C; acid no. 1 max.; flash pt. 195 F
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity grape-like flavor
Regulatory: Canada DSL
Furfuryl methyl ketone. See (2-Furyl)-2-propanone
2-Furoic acid, methyl ester. See Methyl 2-furoate
Furole; α-Furole. See Furfural
Furly acetone. See (2-Furyl)-2-propanone
Furly alcohol; 2-Furylethanol; α-Furylethanol. See Furfuryl alcohol
1-(2-Furyl) hexanone; 1-(2-Furyl)-1-hexanone. See Pentyl 2-furyl ketone
2-Furylethanol. See Furfural (2-Furyl) methanol. See Furfuryl alcohol
2-Furylethanone. See Furfuryl butyrate
1-(2-Furyl)-propan-2-one. See (2-Furyl)-2-propanone
(2-Furyl)-2-propanone
CAS 6975-60-6
FEMA 2496
Synonyms: Furfuryl methyl ketone; Furfuryl acetone; 1-(2-Furyl)-propan-2-one; Methyl furfuryl ketone
Classification: aliphatic ketone
Empirical: C₉H₁₀O₂
Properties: Liq.; radish odor; sol. in ether, triacetin; m.w. 124.14; sp. gr. 1.074-1.080; acid
Chemical Component Cross-Reference

no. 1 max.; ref. index 1.499-1.505

Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Fusel oil. See Fusel oil refined

Fusel oil refined
CAS 8013-75-0; EINECS/ELINCS 232-395-2
UN 1201 (DOT); FEMA 2497
Synonyms: Amyl alcohol, commercial; Amyl alcohols, mixed; Fusel oil; Whiskey fusel oil; Wine fuel oil
Definition: Mixed amyl alcohols, contg. isoamyl alcohol, methanol, ethanol, acetaldehyde, and other alcohols
Properties: Water-wh. to pale yel. oily liq.; disagreeable odor; sol. in water, alcohol, ether; dens. 0.807-0.813; b.p. 120-140 C; flash pt. 123 F; ref. index 1.405-1.410
Toxicology: Mutagenic data; suspected of containing carcinogens; experimental reproductive effects; TSCA listed
Precaution: Flamm. liq. exposed to heat or flame; reacts with oxidizing materials
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 0, Flammability 1, Reactivity 0
Storage: Hygroscopic; store @ R.T.
Uses: Sweetener in pharmaceutical orals; diagnostic aid in medicine
Regulatory: NF, BP, EP compliance; FDA approved for orals; Canada DSL

β-Galactosidase
CAS 9031-11-2; EINECS/ELINCS 232-864-1
Synonyms: Lactase
Definition: Derived from E. coli
Properties: M.w. 35,000
Toxicology: LD50 (oral, rat) > 20 mg/kg, (subcut, rat) 4090 mg/kg; mod. toxic by subcut., IP routes; TSCA listed
Storage: Store frozen (-15 to -22 C); hygroscopic; keep under argon
Uses: Enzyme for hydrolyzing lactose in pharmaceuticals, digestive aids, lactose intolerant prods.; enzyme-linked immunoassay; biochemical research
Regulatory: FDA GRAS; Canada, Japan approved
Manuf./Distrib.: AMRESCO http://www.amresco-inc.com; Degussa AG/Health & Nutrition; Fluka
Galangal; Galangal root. See Galanga
Galipea officinalis; Galipea officinalis extract. See Angostura (Galipea officinalis) extract

Gallic acid
CAS 149-91-7; 5995-86-8 (monohydrate);
EINECS/ELINCS 205-749-9
Synonyms: 3,4,5-Trihydroxybenzoic acid
Empirical: C₇H₆O₅ (anhyd.); C₇H₅O₅ • H₂O
(mono hydrate)
Formula: C₆H₂(OH)₃CO₂H (anhyd.) or
C₆H₂(OH)₃CO₂H • H₂O (mono hydrate)
Properties: Wh. to pale fawn-colored crys. or
need.; odorless; sol. (1 g/ml): 87 ml water, 6 ml
alcohol, 100 ml ether, 10 ml glycerin, 5 ml
acetone; pract. insol. in benzene, chloroform,
petroleum ether; m.w. 170.12 (anhyd.), 188.14
(mono hydrate); dens. 1.694; m.p. 258-265 C
(dec.)
Toxicology: LD₅₀ (oral, rabbit) 5 g/kg, (IP,
mouse) 4300 mg/kg, (IV, mouse) 320 mg/kg;
poison by IV route; mod. toxic by IP route;
irritant; mutagenic data; experimental
reproductive effector; TSCA listed
Hazardous Decomp. Prods.: Heated to
decomp., emits acrid smoke and irritating
fumes
HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Hygroscopic; protect from light
Uses: Astringent and antioxidant in
pharmaceuticals

Garlic (Allium sativum) oil
CAS 8000-78-0
FEMA 2503
Synonyms: Allium sativum oil; Garlic oil
Definition: Volatile oil from bulb or entire plant
Chemical Component Cross-Reference

**Allium sativum**

*Properties:* Clear to yel. liq., strong garlic odor and taste; sol. in fixed oils, min. oil; insol. in glycerin, alcohol, propylene glycol; dens. 1.046-1.057 (15/15 C); flash pt. 47.8 C; ref. index 1.5750

*Toxicology:* LD50 (oral, rat) 1360 mg/kg; may be harmful by ing., inh., skin absorp.; may be irritating to eyes, skin, mucous membranes, upper respiratory tract; TSCA listed

*Precaution:* Combustible liq.; incompat. with strong oxidizing agents

*Hazardous Decomp. Prods.:* CO, CO2; heated to decomp., emits acrid smoke and irritating fumes; emits toxic fumes under fire conditions

*Storage:* Store in cool, dry place; keep tightly closed; keep away from heat, sparks, open flame

*Uses:* Natural flavor for pharmaceuticals

*Regulatory:* FDA 21CFR §184.1317, GRAS; FEMA GRAS; Europe listed, no restrictions; Canada DSL

*Garlic oil.* See Garlic (Allium sativum) oil

*Garnet lac.* See Shellac

*Gaultheria procumbens; Gaultheria procumbens extract.* See Wintergreen (Gaultheria procumbens) extract

*Gaultheria procumbens oil.* See Wintergreen (Gaultheria procumbens) oil

*GBL.* See Butyrolactone

---

GDL. See Gluconolactone

GDO. See Glyceryl dioleate

**Gelatin**

*CAS 9000-70-8; EINECS/ELINCS 232-554-6*

*Synonyms:* Gelatine; Gelatins; White gelatin

*Definition:* Complex combination of proteins obtained from partial hydrolysis of collagen derived from animal skin, connective tissues, and bones; Type A is derived from acid-treated precursor, Type B from alkali-treated precursor

*Properties:* Faint yel. or amber flake or powd., sl. char. bouillon-like odor in sol’n., tasteless; sol. in warm water, glycerol, acetic acid; insol. in org. solvs., alcohol, chloroform, ether, fixed and volatile oils; amphoteric

*Toxicology:* LD50 (oral, rat) 5 g/kg; may cause anaphylactoid reactions; experimental teratogen, reproductive effector; TSCA listed

*Precaution:* Stable in air when dry, but subject to microbial decomp. when moist or in sol’n.

*Hazardous Decomp. Prods.:* Heated to decomp., emits acrid smoke and irritating fumes

*Uses:* Emulsifier, vehicle, binder, suspending agent in pharmaceuticals, ointments, suppositories, dentals, inhalants, IM injectables, intravenous, orals, topicals, vaginals; tablet binder, coating agent (hard/soft capsules, microencapsulation); wound/burn healing; surgical sponges

*Regulatory:* FDA 21CFR §133.133, 133.134, 133.162, 133.178, 133.197, 172.230, 172.255, 172.280, 182.70; GRAS; Canada DSL; Japan approved; FDA approved for dentals, inhalants, intramuscular injectables, intravenous, IV (infusion), orals, topicals, USP/NF, BP, EP compliance

**Gentiana lutea; Gentiana lutea extract.** See Gentian (Gentiana lutea) extract

**Gentiana lutea rhizome and roots.** See Gentian (Gentiana lutea)

**Gentian extract.** See Gentian (Gentiana lutea) extract

**Gentian (Gentiana lutea)**

Synonyms: Bitter root; Gentian; Gentiana; Gentiana lutea; Gentiana lutea rhizome and roots; Gentian root

Definition: Dried rhizome and roots of Gentiana lutea

Storage: Protect from light

Uses: Bitter in pharmaceuticals, tonics, alcoholic infusions, bitter mixts., homeopathic medicine for digestive disorders

**Gentian (Gentiana lutea) extract**

CAS 72968-42-4; EINECS/ELINCS 277-139-0

FEMA 2506

Synonyms: Gentiana lutea; Gentiana lutea extract; Gentian extract; Gentian root extract

Classification: Resinoid

Definition: Extract of rhizomes and roots of Gentiana lutea

Uses: Natural flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.510; not listed as approved colorant for cosmetics under FDA 21CFR §73 and 74; FEMA GRAS; Japan approved

Manuf./Distrib.: Bio-Botanica

**Gentian root.** See Gentian (Gentiana lutea)

**Gentian root extract.** See Gentian (Gentiana lutea) extract

**Gentian violet.** See Basic violet 3

**Gentiobiose**

CAS 554-91-6

Synonyms: Amygdalose; β-Gentiobiose; 6-O-β-D-Glucopyranosyl-D-glucose

Definition: A disaccharide consisting of two molecules of glucose joined 1,6-β

Empirical: C₁₂H₂₂O₁₁

Properties: Bitter taste; sol. in water; insol. in methanol; m.w. 342.3; m.p.197 C (dec.)

Storage: Hygroscopic; keep under argon

Manuf./Distrib.: Ferro Pfanstiehl Europe; Fluka
  - http://www.sigma-aldrich.com
  - Sigma
  - http://www.sigma-aldrich.com/belgium

Trade Names Containing: Emdex®

**β-Gentiobiose.** See Gentiobiose

**Gentisate.** See Gentisic acid

**Gentisic acid**

CAS 490-79-9; EINECS/ELINCS 207-718-5

Synonyms: Benzoic acid, 2,5-dihydroxy-; 2,5-DHBA; 2,5-Dihydroxybenzoic acid; Gentisate; Hydroquinoncarboxylic acid; 5-Hydroxysalicylic acid; Salicylic acid, 5-hydroxy-
Gentisic acid ethanolamide
CAS 7491-35-2
Uses: Used in intravenous, IV (infusion)
Regulatory: FDA approved for intravenous, IV (infusion)

Geranium oil bourbon. See Geranium maculatum oil
Geraniol. See Citral

Gentisic acid ethanolamine
CAS 7491-35-2
Uses: Used in intravenous, IV (infusion)
Regulatory: FDA approved for intravenous, IV (infusion)

Geranium oil bourbon. See Geranium maculatum oil
Geraniol. See Citral
Geraniol acetate. See Geranyl acetate
Geraniol butyrate. See Geranyl butyrate
β-Geraniolene. See Myrcene
Geraniol formate. See Geranyl formate
Geraniol isobutyrate. See Geranyl isobutyrate
Geraniol isovalerate. See Geranyl isovalerate
Geraniol propionate. See Geranyl propionate
Geraniol tetrahydride. See 3,7-Dimethyl-1-octanol
Geranium crystals. See Diphenyl oxide
Geranium, East Indian, oil. See Palmarosa (Cymbopogon martini) oil
Geranium maculatum. See Geranium maculatum oil
Geranium maculatum oil
CAS 8000-46-2; EINECS/ELINCS 290-140-0
FEMA 2508
Synonyms: Algerian geranium oil; Geraniun oil bourbon; Geranium maculatum; Geranium oil; Geranium oil Algerian type
Definition: Volatile oil from Geranium maculatum; contains geraniol and geranyl tiglate
Properties: Greenish-yel. to brn. liq; rose and geraniol odor; sol. in fixed oils, min. oil, oxygenated and chlorinated solvs.; sol. sol. in water; insol. in glycerin; dens. 0.886-0.898; flash pt. 185 F; ref. index 1.454-1.472 (20 C)
Toxicology: Skin irritant; sensitizer; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Keep cool, well closed; protect from light
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS; Canada DSL

Geranium oil; Geranium oil Algerian type. See Geranium maculatum oil
Geranium oil, East Indian; Geranium oil, Turkish. See Palmarosa (Cymbopogon martini) oil
Geranium, rose, oil. See Rose geranium (Pelargonium graveolens) oil
Geranyl acetate
CAS 105-87-3; 16409-44-2 (mixt. of isomers); EINECS/ELINCS 203-341-5; 240-458-0 (mixt. of isomers)
FEMA 2509
Synonyms: Acetic acid geraniol ester; (E)-3,7-Dimethyl-2,6-octadien-1-ol acetate; trans-3,7-Dimethyl-2,6-octadien-1-ol acetate; 3,7-Dimethyl-2-trans-6-octadienyl acetate; trans-2,6-Dimethyl-2,6-octadien-8-yl ethanoate; Geraniol acetate; 2,6-Octadien-1-ol, 3,7-dimethyl-, acetate; 2,6-Octadien-1-ol, 3,7-dimethyl-, acetate, (E)-
Geranylvl acetoacetate
CAS 10032-00-5; EINECS/ELINCS 233-101-5
FEMA 2510
Synonyms: (E)-3,7-Dimethyl-2,6-octadienyl acetoacetate; trans-3,7-Dimethyl-2,6-octadien-1-yl acetoacetate
Classification: floral ester
Empirical: C14H22O3
Properties: Liq.; m.w. 238.33; dens. 0.9625; ref. index 1.4670
Toxicology: Primary irritant
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Advanced Synthesis Tech.
http://www.advancedsynthesis.com
Geranyl acetone
CAS 689-67-8; 3796-70-1; EINECS/ELINCS 211-711-2; 223-269-8
FEMA 3542
Synonyms: Dihydrosedoionone; α,β-Dihydrosedoionone; 6,10-Dimethyl-5,9-undecadien-2-one; 6,10-Dimethyl-undeca-5,9-dien-2-one; (E)-6,10-Dimethylundeca-5,9-dien-2-one; trans-6,10-Dimethyl-5,9-undecadien-2-one; 5,9-Undecadien-2-one, 6,10-dimethyl-
Classification: Nonaromatic ketone
Empirical: C13H22O
Chemical Component Cross-Reference

†=pharmaceutical grade

Geranyl butanoate. See Geranyl butyrate

Geranyl butyrate
CAS 106-29-6; EINECS/ELINCS 203-381-3
FEMA 2512

Synonyms: Butanoic acid, 3,7-dimethyl-2,6-octadienyl ester; Butyric acid, 3,7-dimethyl-2,6-octadienyl ester; (E)-3,7-Dimethyl-2,6-octadienyl butanoate; 3,7-Dimethyl-2,6-octadien-1-yl butyrate; trans-3,7-Dimethyl-2,6-octadien-1-yl butyrate; Geraniol butyrate; Geranyl butanoate; Geranyl n-butyrate

Classification: floral ester

Empirical: \( C_{14}H_{24}O_2 \)
Formula: \( C_3H_7COOC_10H_{17} \)

Properties: Colorless liq.; char. floral odor; sol. in alcohol, ether; almost insol. in water; m.w. 224.34; dens. 0.901 (17/4 C); vapor dens. 7.7; b.p. 198 C (18 mm); flash pt. 93 C; ref. index 1.455 (20 C)

Toxicology: LD50 (oral, rat) 10,660 mg/kg, (skin, rabbit) 5 g/kg; mildly toxic by ing. and skin contact; irritating to eyes, skin, respiratory tract; TSCA listed

Precaution: Combustible; incompat. with strong oxidizers, acids

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors

Uses: Synthetic flavor for pharmaceuticals

Geranyl alcohol. See Geraniol

Geranyl benzoate
CAS 94-48-4; EINECS/ELINCS 202-337-0
FEMA 2511

Synonyms: Benzoic acid geraniol ester; Benzoic acid geranyl ester; 3,7-Dimethyl-2,6-octadien-1-yl benzoate; (E)-3,7-Dimethyl-2,6-octadienyl benzoate

Classification: floral ester

Empirical: \( C_{17}H_{22}O_2 \)

Formulas: CH3-C(CH3)=CH-[CH2]2-C(CH3)=CH-CH2-OCO-C6H5

Properties: Ylsh. oily liq.; rosy, amber, ylang-ylang-like odor; misc. with alcohol, chloroform; insol. in water; m.w. 194.32; dens. 0.869 (20/4 C); b.p. 92-93 C; flash pt. 65 C; ref. index 1.467 (20 C); tenacity > 7 days

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary irritant; irritating to eyes, skin, and respiratory system; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21 CFR §172.515; FEMA GRAS; Canada DSL

Geranyl n-butyrate. See Geranyl butyrate
Geranyl caproate. See Geranyl hexanoate

Geranyl formate
CAS 105-86-2; EINECS/ELINCS 203-339-4
FEMA 2514

Synonyms: trans-3,7-Dimethyl-2,6-octadien-1-ol formate; 3,7-Dimethyl-2,6-octadien-1-yl formate; (E)-3,7-Dimethyl-2,6-octadienyl formate; trans-3,7-Dimethyl-2,6-octadien-1-yl formate; Formic acid, geraniol ester; Geraniol formate

Classification: floral ester; acrylic terpene

Empirical: C_{11}H_{18}O_{2}

Formula: HCOOC_{10}H_{17}

Properties: Colorless to sl. yel. liq. or oil; rose/green rose leaf odor; sol. in alcohol, fixed oils; pract. insol. in ether; insol. in water, glycerin, propylene glycol; m.w. 182.26; dens. 0.927 (20/4 C); b.p. 113-114 C (15 mm); flash pt. 205 F; ref. index 1.4580-1.4660

Toxicology: LD_{50} (oral, rat) > 6 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; primary skin and eye irritant; human skin irritant; TSCA listed

Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Geranyl hexanoate. See Geranyl hexanoate

Geranyl hexylate

Geranyl isobutyrate
CAS 2345-26-8; EINECS/ELINCS 219-062-7
FEMA 2513

Synonyms: trans-3,7-Dimethyl-2,6-octadien-1-ol isobutyrate; trans-3,7-Dimethyl-2,6-octadienyl isobutyrate; Geraniol isobutyrate

Classification: floral ester; acrylic terpene

Empirical: C_{14}H_{24}O_{2}

Properties: Colorless liq.; lt. rose odor; sweet apricot-like taste; sol. in alcohol, most org. solvs.; insol. in water; m.w. 224.34; dens. 0.8997 (15 C); ref. index 1.4576

Toxicology: LD_{50} (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Bell Flavors & Fragrances http://www.bellff.com; Chr. Hansen Inc http://www.chr-hansen.com; Citrus and Allied Essences http://www.citrusandallied.com; Grau
Geranyl isovalerate

CAS 109-20-6; EINECS/ELINCS 203-655-2
FEMA 2518

Synonyms: trans-3,7-Dimethyl-2,6-octadienyl isopentanoate; (E)-3,7-Dimethyl-2,6-octadienyl 3-methylbutanoate; Geraniol isovalerate; (E)-Isovaleric acid-3,7-dimethyl-2,6-octadienyl ester; 3-Methylbutyric acid, 3,7-dimethyl-octa-2,6-dienyl ester; 2,6-Octadien-1-ol, 3,7-dimethyl-1, isovalerate

Classification: Nonaromatic ester; acylic terpene

Empirical: C_{15}H_{26}O

Properties: Colorless liq.; rose odor; sweet apple taste; sol. in alcohol, most org. solvs.; insol. in water; m.w. 238.37; dens. 0.890; vapor dens. 8.2; b.p. 279 C; flash pt. (CC) > 99 C; ref. index 1.4538

Toxicology: Primary skin irritant; TSCA listed

Precaution: Wear protective gloves, splash-proof goggles; incompat. with strong oxidizers

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Geranyl phenylacetate

CAS 105-90-8; EINECS/ELINCS 203-344-1
FEMA 2517

Synonyms: (E)-3,7-Dimethyl-2,6-octadien-1-ol propionate; (E)-3,7-Dimethyl-2,6-octadienyl propanoate; 3,7-Dimethyl-2,6-octadien-1-yl propionate; trans-3,7-Dimethyl-2,6-octadien-1-yl propionate; Geraniol propionate; 2,6-Octadien-1-ol, 3,7-dimethyl-, propionate, (E)-; Propionic acid, geranyl ester

Classification: Floral ester; acylic terpene

Definition: Ester of geraniol and propionic acid

Empirical: C_{13}H_{22}O_2

Formula: C_9H_{16}COOC_{10}H_{17}

Properties: Colorless liq.; fruity flowery odor; bitter taste; sol. in fixed oils, alcohol; insol. in water, glycerol, propylene glycol; m.w. 210.31; sp.gr. 0.896-0.913; vapor dens. 7.2; b.p. 253 C; flash pt. 99 C; ref. index 1.4570-1.4650

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; TSCA listed

Precaution: Combustible liq.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Chemical Component Cross-Reference

†=pharmaceutical grade

oil
GLA. See γ-Linolenic acid
Glacial acetic acid. See Acetic acid, glacial
Glassy sodium. See Sodium hexametaphosphate
Glauber's salt. See Sodium sulfate
Glaze, pharmaceutical. See Pharmaceutical glaze
Glicerol. See Glycerin
Glidyl phenyl ether. See Phenyl glycidyl ether
GLn. See L-Glutamine
Glu. See L-Glutamic acid
Glucal. See Calcium gluconate
Glucan. See β-Glucan

β-Glucan
CAS 9012-72-0; 160872-27-5; EINECS/ELINCS 232-739-1
Synonyms: Betaglucan (INCI); Glucan; β-1,3-Glucan; β-d-Glucose homopolymer
Definition: Polysaccharide consisting of β(1-3) linked glucose chains carrying β(1-6) linked glucose side chains
Properties: Solid; insol. in cold water, sol. in alkaline sol'n.
Toxicology: May be harmful by inh., ing., or skin absorp.; may cause irritation
Hazardous Decomp. Prods.: Toxic fumes of CO, CO₂
Storage: Store and use with adequate ventilation
Uses: Moisturizer, emollient for pharmaceuticals; biological defense modifier that nutritionally activates immune response for therapeutic apps.; antioxidant; free radical scavenger; anti-aging supplement
Manuf./Distrib.: CarboMer
Kaden Biochems.
http://www.kadenbio.com

β-1,3-Glucan. See β-Glucan
1,4-D-Glucan glucanohydrolase. See Amylase

α-Glucan oligosaccharide
Synonyms: α-d-Glucose homopolymer
Classification: Glucose oligomer
Uses: Skin protectant
Trade Names: Bioecolia®

D-Gluconic acid, calcium salt (1:1) tetrahydrate. See Calcium saccharate
Glucosate, sodium. See Sodium

Handbook of Pharmaceutical Additives, Third Edition 1375
Gluconic acid calcium salt; D-Gluconic acid calcium salt; d-Gluconic acid, calcium salt (2:1).  See Calcium gluconate

Glucocic acid, cobalt salt.  See Cobalt gluconate

D-Gluconic acid, compd. with N,N’-bis (4-chlorophenyl)-3,12-diimino-2,4,11,13-tetraazaatetradecanediimidine (2:1).  See Chlorhexidine digluconate

D-Gluconic acid cyclic 4,5-ester with boric acid calcium salt.  See Calcium borogluconate

Gluconic acid, iron (II) salt, hydrate (2:1:2).  See Ferrous gluconate dihydrate

Gluconic acid δ-lactone; D-Gluconic acid δ-lactone.  See Gluconolactone

D-Gluconic acid magnesium salt; D-Gluconic acid, magnesium salt (2:1).  See Magnesium gluconate

Glucocic acid, manganese salt (2:1).  See Manganese gluconate

D-Gluconic acid monopotassium salt.  See Potassium D-gluconate

D-Gluconic acid monosodium salt.  See Sodium gluconate

Glucocic acid potassium salt; D-Gluconic acid potassium salt.  See Potassium D-gluconate

Glucocic acid sodium salt.  See Sodium gluconate

Gluconolactone

CAS 90-80-2; EINECS/ELINCS 202-016-5
α-D-Glucopyranose. See Glucose

α-D-Glucopyranoside, methyl octadecanoate (2:3). See Methyl glucose sesquisteareate

α-D-Glucopyranoside, 1,3,4,6-tetra-O-acetyl-β-D-fructofuranosyl-, tetraacetate. See Sucrose octaacetate

4-(α-d-Glucopyranosido)-α-glucopyranose. See Maltose

α-D-Glucopyranosiduronic acid, (3β,20β)-20-carboxy-11-oxo-30-norlean-12-en-3-yl-2-O-β-D-glucopyranuronosyl-, ammoniate. See Ammonium glycyrrhizinate

α-D-Glucopyranosiduronic acid, (3β,20β)-20-carboxy-11-oxo-30-norlean-12-en-3-yl-2-O-β-D-glucopyranuronosyl-, monoammonium salt. See Dipotassium glycyrrhizinate

7-α-D-Glucopyranosyl-9,10-dihydro-3,5,6,8-tetrahydroxy-1-methyl-9,10-dioxo-2-anthracene carboxylic acid. See Carminic acid

α-D-Glucopyranosyl β-D-fructofuranoside. See Sucrose

4-O-α-D-Glucopyranosyl-D-glucitol; 4-O-β-D-Glucopyranosyl-D-glucitol. See Maltitol

α-D-Glucopyranosyl-α-D-glucopyranoside. See Trehalose

α-D-Glucopyranosyl-1,6-α-D-glucopyranosyl-1,4-D-glucose. See D-Panose

O-α-D-Glucopyranosyl- (1→4)-O-α-D-gluco-pyranosyl-(1→4)-D-glucose. See Maltotriose

4-O-α-D-Glucopyranosyl-D-glucose. See Maltose

6-O-β-D-Glucopyranosyl-D-glucose. See Gentiobiose

4-O-α-Glucopyranosyl-D-sorbitol. See Maltitol

7-Glucopyranosyl 3,4,5,8-tetrahydroxy-1-methylantraquinone-2-carboxylic acid. See Carminic acid

Glucosaccharonic acid. See Erythorbic acid

Glucosamine

CAS 3416-24-8; EINECS/ELINCS 222-311-2

Synonyms: 2-Amino-2-deoxy-β-D-glucopyranose; 2-Amino-2-deoxyglucose; Chitosamine; D-Glucose, 2-amino-2-deoxy-

Classification: Organic compd.

Empirical: C₆H₁₃NO₅
Formula: $\text{CH}_2\text{OH}(\text{CH}_2\text{O})_3\text{CHNH}_2\text{CHO}$

Properties: Colorless needles; sol. in water; sl. sol. in methanol, ethanol; insol. in ether, chloroform; m.w. 179.20; m.p. 110 C (dec.)

Toxicology: Mutagen; TSCA listed

Uses: In treatment of rheumatic disorders, osteoarthritis, sports-related trauma; to treat joint pain, degenerative cartilage and connective tissue damage; dermatology; ophthalmology; veterinary medicine; nutritional supplements

Regulatory: Japan approved

Manuf./Distrib.: George Uhe http://www.uhe.com

Trade Names Containing: Seanamin BD LS 8460

Glucose
CAS 50-99-7 (anhyd.); 492-62-6 (anhyd.)
EINECS/ELINCS 200-075-1; 207-757-8

Synonyms: Blood sugar; Corn sugar; Dextrose; α-Dextrose; Dextrosol; Glucolin; α-D-Glucopyranose; D-Glucose; Grape sugar

Definition: Sugar obtained from the hydrolysis of starch; commercial prod. is the natural D(+) enantiomer monohydrate

Empirical: C$_6$H$_{12}$O$_6$

Formula: CHO(CH$_2$OH)$_4$CH$_2$OH

Properties: Colorless cryst. or wh. gran. powd., odorless, sweet taste; sol. in water, hot glacial acetic acid, pyridine, aniline; sl. sol. in alcohol, ether, acetone; m.w. 180.18 (anhyd.); dens. 1.544; m.p. 146-158 C

Toxicology: LD$_{50}$ (oral, rat) 25,800 mg/kg, (IV, mouse) 9 g/kg; LDLo (IP, mouse) 18 g/kg; mildly toxic by ing.; large doses can cause diabetes; experimental reproductive effects; questionable carcinogen; mutagenic data; TSCA listed

Precaution: Potentially explosive reaction with potassium nitrate + sodium peroxide on heating

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes; mixts. with alkali release CO on heating

Uses: Dietary supplement, flavor, nutritive sweetener for pharmaceuticals; excipient, sweetener, colorant, tonicity agent, tablet diluent/filler for pharmaceuticals

Regulatory: FDA 21CFR §73.85, 101.9, 133.124, 133.178, 133.179, 145.3, 145.134, 145.180, 145.181, 146.3, 146.132, 146.140,

### Glucose

**See D-(+)-Glucose monohydrate**

**D-Glucose. See Glucose**

**D-Glucose, 2-amino-2-deoxy-. See Glucosamine**

**α-d-Glucose homopolymer. See α-Glucan oligosaccharide**

**β-d-Glucose homopolymer. See β-Glucan**

### Glucose, liquid

**CAS 8027-56-3; 8029-43-4**

**Synonyms:** Corn syrup; Glucose syrup; Starch syrup

**Definition:** Obtained by the incomplete hydrolysis of starch, contg. principally dextrose, dextrins, maltose, and water

**Properties:** Colorless or ylsh. thick syrupy liq., odorless, sweet taste; misc. with water; sparingly sol. in alcohol

**HMIS:** Health 0, Flammability 1, Reactivity 0

**Uses:** Tablet binder, coating agent, diluent in pharmaceuticals, orals; nutrient in microbial fermentation

**Regulatory:** FDA approved for orals; NF compliance

**Manuf./Dist.:** Adept Sol'ns.; CarboMer†

**Trade Names:** Glucidex® IT21; Glucidex® IT29; Glucidex® IT33; Glucidex® IT38; Glucidex® IT47

### α-D-Glucose monohydrate

**See D-(+)-Glucose monohydrate**

### D-Glucose monohydrate

**CAS 5996-10-1; EINECS/ELINCS 200-075-1**

**Synonyms:** Bread sugar; Dextrose monohydrate

**Empirical:** C₆H₁₂O₆ • H₂O

**Properties:** Cryst.; m.w. 198.17; m.p. 83 C

**Toxicology:** LD₅₀ (IV, rabbit) 35 g/kg

**Hazardous Decomp. Prods.:** COₓ

**Storage:** Store @ R.T.

**Uses:** Sweetener, tonicity agent in pharmaceuticals, injectables (IM, IV), inhalers, orals

**Regulatory:** FDA 21CFR §184.1857, GRAS; FDA approved for injectables (IM, IV), inhalers, orals; BP, EP compliance

**Manuf./Dist.:** AMRESCO

**Trade Names:** Adept Sol'ns.; CarboMer†

**Trade Names Containing:** CarboMer†

**Pfanstiehl Europe†; Flukat†**

**Roquette† [http://www.roquette.fr](http://www.roquette.fr); Ruger†**

Quality Prods.†
http://www.spectrumchemical.com; Voigt
Global Distrib.† http://www.vgdllc.com

Trade Names: C*PharmDex 02010; C*PharmDex 02011; Lycadex® PF; Meritose 100; Meritose 200; Meritose 220; Meritose 300

D-(+)-Glucose monohydrate
CAS 14431-43-7
Synonyms: Dextrose monohydrate; α-D-Glucopyranose, monohydrate; Glucose; α-D-Glucose monohydrate
Definition: Sugar obtained from the hydrolysis of starch; commercial prod. is the natural D(+)-enantiomer monohydrate
Empirical: C6H12O6• H2O
Formula: CHO(CHOH)4CH2OH• H2O
Properties: Wh. cryst. powd., odorless, sweet taste; freely sol. in water; m.w. 198.17; sp. gr. 1.54; pH 5-7
Toxicology: Dust may cause eye and skin irritation; TSCA listed
Precaution: Avoid dust generation; emits toxic fumes under fire conditions
Hazardous Decomp. Prods.: COx
NFPA: Health 0, Flammability 1, Reactivity 0
Storage: Store in a cool, dry, well-ventilated area away from incompatible substances
Uses: Energy source for parenteral nutrition; osmotic agent in injectable solutions and dialysis solutions; treatment of hypoglycaemia
Regulatory: USP
Manuf./Distrib.: Aldrich† http://www.sigma-aldrich.com

Glucose oxidase
CAS 9001-37-0; EINECS/ELINCS 232-601-0
INS 1102
Synonyms: β-d-Glucose oxidase; Oxidase glucose
Definition: Enzyme which catalyzes the oxidation of glucose to gluconic acid; derived from Aspergillus niger
Properties: Amorphous powd. or crystal; sol. in water; m.w. = 186,000
Toxicology: LD50 (IP, mouse) 3 mg/kg, (IV, mouse) 13 mg/kg, (subcut., mouse) 4500 µg/kg; poison by subcut., IV, IP routes; TSCA listed
Storage: Store frozen (-15 to -22 C); hygroscopic; keep under argon
Uses: Enzyme, preservative in pharmaceuticals; stabilizer for Vitamins C and B12; mfg. of fertility and diabetic tests; ingred. in toothpaste for dental caries prophylaxis
Regulatory: FDA GRAS; Canada, UK, Japan approved
Manuf./Distrib.: AMRESCO
http://www.amresco-inc.com; Fluka
http://www.sigma-aldrich.com; Pangaea Sciences
http://www.pangaeasciences.com; Sigma
http://www.sigma-aldrich.com/belgium
Trade Names Containing: Sebomine SB12

β-d-Glucose oxidase. See Glucose oxidase
Glucose pentaacetate. See α-D-Glucose pentaacetate

α-D-Glucose pentaacetate
CAS 83-87-4; 604-68-2; EINECS/ELINCS 210-073-2
FEMA 2524
Synonyms: Glucopyranose pentaacetate; α-D-Glucopyranose, pentaacetate; Glucose pentaacetate; 1,2,3,4,6-Penta-O-acetyl-α-D-glucopyranose
Empirical: C16H22O11
Properties: M.w. 390.35; m.p. 111-113 C
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS
Manuf./Distrib.: Acros Org.
http://www.acros.com; Fluka
Indofine http://www.indofinechemical.com;

**Sucrose**

4-(α-D-Glucosido)-d-glucose. See Maltose

**Glucuronic acid, sodium salt.** See Sodium glucuronate

**Glumin.** See L-Glutamine

Glusate; Glutacid; Glutamic acid; α-Glutamic acid. See L-Glutamic acid

**L-Glutamic acid**

CAS 56-86-0; EINECS/ELINCS 200-293-7

FEMA 3285; INS620; E620

**Synonyms:** α-Aminoglutaric acid; L-2-Aminoglutaric acid; 2-Aminopentanedioc acid; L-2-Aminopentanedioc acid; 1- Aminopropane-1,3-dicarboxylic acid; Glu; Glusate; Glutacid; Glutamic acid; α-Glutamic acid; Glutaminic acid; L-Glutaminic acid; Glutaminol; Glutaton

**Classification:** Amino acid

**Definition:** Commercially avail. as the naturally occurring L(+)-enantiomer in the form of the free base or hydrochloride salt

**Empirical:** C5H9NO4

**Properties:** Wh. free-flowing cryst. or cryst. powd., odorless; sl. sol. in water; m.w. 147.15; dens. 1.538 (20/4 C); m.p. 224-225 C; sublimes heated to 200 C

**Toxicology:** Human systemic effects by ing. and IV route (headache, vomiting); TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of NOx

**HMIS:** Health 0, Flammability 1, Reactivity 0

**Storage:** Store @ R.T.

**Uses:** Flavor enhancer, nutrient in pharmaceuticals; biochemical research; gastric medicine; infusion sol'ns.; diagnostic aids; raw material in peptide drugs

**Regulatory:** FDA 21CFR §172.320, 182.1047, max.), 182.1045, GRAS; FEMA GRAS; Japan approved; Europe listed; UK approved; BP, EP compliance; Canada DSL

Glutaminol. See L-Glutamic acid
γ-Glutamylcysteineglycine. See Glutathione

Glutaral
CAS 111-30-8; EINECS/ELINCS 203-856-5
Synonyms: Glutaraldehyde; Glutaric dialdehyde; Pentanodial; 1,5-Pentanedial; Pentane-1,5-dial; 1,5-Pentanedione
Classification: Aliphatic dialdehyde
Empirical: C5H8O2
Formula: OHC(CH2)3CHO
Properties: Colorless oily liq.; pungent aldehyde odor; sol. in water, alcohol, benzene; m.w. 100.12; dens. 0.72; b.p. 188 C (dec.); f.p. -14 C; flash pt. none
Toxicology: ACGIH TLV/CL 0.2 ppm; LD50 (oral, rat) 468 mg/kg, (IP, rat) 17,900 µg/kg,
Chemical Component Cross-Reference

(subcut., rat) 2390 mg/kg, (dermal, rabbit) 795 mg/kg; poison by ing., IV, IP routes; mod. toxic by inh., skin contact, subcut. routes; severe eye and human skin irritant; experimental teratogen, reproductive effects; mutagenic data; TSCA listed

Precaution: Corrosive
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Disinfectant; sterilant for medical and dental equip., fiberoptic endoscopes; bactericidal, fungicidal, sporicidal, and virucidal activity; fixing agent in immobilization of enzyme preps.

Regulatory: FDA 21 CFR §172.230 (250 ppm max.), 173.320, 173.357, 175.105, 176.170, 176.180, 176.300; EPA reg. 10352-39; Japan MITI; Europe provisional list 0.1% max.; Canada DSL; TSCA listed

Storage: Refrigerate
Uses: Nutritional and metabolic research; pharmaceutical intramuscular injectables

Regulatory: FDA approved for intramuscular injectables; Canada DSL

Glutaraldehyde; Glutaric dialdehyde. See Glutaral

Glutaronitrile, 2-bromo-2-(bromomethyl). See Methyl dibromo glutaronitrile

Gluthathione
CAS 70-18-8; EINECS/ELINCS 200-725-4
Synonyms: Delthionine; γ-
Glutamylcysteinylglycine; L-Glutathione; Glutatiol; Glutatione; Glutide; Glutinal
Classification: Nonaromatic amide
Definition: A universal component of the living cell, contg. glutamic acid, cysteine, and glycine
Empirical: C_{10}H_{17}N_{3}O_{6}S
Properties: Wh. cryst. powd.; odorless; mild sour taste; sol. in water, dilute alcohol; m.w. 307.33; m.p. 192-195 C (dec.)
Toxicology: LD50 (oral, mouse) 5 g/kg, (IP, mouse) 4020 mg/kg, (subcut., mouse) 5 g/kg, (IV, mouse) 2238 mg/kg; mod. toxic by IV route; mutagen; experimental reproductive effector; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of SOx and NOx

Storage: Refrigerate
Uses: Nutritional and metabolic research; pharmaceutical intramuscular injectables

Regulatory: FDA approved for intramuscular injectables; Canada DSL

L-Glutathione; Glutathione. See Glutathione

Glutaton. See L-Glutamic acid

Gluten. See Wheat (Triticum vulgare) gluten

Glutens, corn, hydrolyzed. See Corn gluten amino acids

Glutide; Glutinal. See Glutathione

Gly. See Glycine

Glycamil. See Ammonium glycyrrhizate

Glycyrrhiza. See Licorice (Glycyrrhiza glabra)

Glyceran esters of condensed castor oil fatty acids. See Polyglyceryl polyricinoleate

Glycereth-7
CAS 31694-55-0 (generic)
Synonyms: PEG-7 glyceryl ether; POE (7) glyceryl ether
Definition: PEG ether of glycerin with avg. ethoxylation value of 7
Properties: Nonionic
Uses: Humectant
Glycereth-26
CAS 31694-55-0 (generic)
Synonyms: PEG-26 glycercyel ether; POE (26) glycercyel ether
Definition: PEG ether of glycercin with avg. ethoxylation value of 26
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, humectant, lubricant for pharmaceuticals
Regulatory: FDA 21CFR §175.105
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
Trade Names: DeTHOX GLG-7

Glycereth-7 triacetate
CAS 57569-76-3
Synonyms: PEG-7 glycercyel ether triacetate; POE (7) glycercyel ether triacetate
Definition: Triester of acetic acid with a PEG ether of glycercin containing an avg. 7 moles ethylene oxide
Empirical: C_{23}H_{42}O_{13}
Properties: Clear pale yel. liq., mild typ. odor; sol. in water; m.w. 526; sp.gr. 1.15; b.p. > 200 C
Toxicology: May cause mild skin and eye irritation on prolonged contact
Precaution: Incompat. with oxidizing agents
Storage: Store away from strong oxidizing agents; avoid excessive heat
Uses: Emollient
Trade Names: Pelemol® G7A

Glycerides. See Fish glycerides
Glycerides, C8-10. See Caprylic/capric glycerides
Glycerides, C18-36. See C18-36 acid triglyceride
Glycerides, coco; Glycerides, coconut, mono-, di-, and tri-. See Cocoglycerides

Glycerides, tallow mono-, hydrogenated. See Hydrogenated tallow glyceride
Glycerides, tallow mono-, hydrogenated, lactates. See Hydrogenated tallow glyceride lactate
Glycerides, wheat germ oil mono-, di- and tri-. See Wheat germ glycerides

Glycerin
CAS 56-81-5; EINECS/ELINCS 200-289-5
FEMA 2525; INS422; E422
Synonyms: Glicerol; Glycerine; Glycerol; Glycol alcohol, 1,2,3-Propanetriol; Propane-1,2,3-triol; Trihydroxypropane; 1,2,3-Trihydroxypropane; Trihydroxypropane glycerol
Classification: Polyhydric alcohol
Empirical: C3H8O3
Formula: HOCH2COHHCH2OH
Properties: Clear colorless syrupy liq., odorless, sweet taste; sol. in water, alcohol; insol. in ether, benzene, chloroform; m.w. 92.09; dens. 1.26201 (25/25 C); m.p. 17.8 C; b.p. 290 C (dec.); flash pt. (OC) 176 C; ref. index 1.4730 (25 C)

Toxicology: LD50 (oral, rat) > 20 ml/kg, (IV, rat) 4.4 ml/kg; poison by subcut. route; mildly toxic by ing.; human systemic and GI effects by ing.; skin and eye irritant; nuisance dust; human mutagenic data; TSCA listed
Precaution: Combustible liq. exposed to heat, flame, strong oxidizers; highly explosive with hydrogen peroxide; ignites on contact with calcium hypochlorite; explosive mixts. and violent reactions possible with many chems.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
NFPA: Health 1, Flammability 1, Reactivity 0
Storage: Hygroscopic
Uses: Plasticizer, solvent, solubilizer; preservative, emollient, humectant, tonicity agent in pharmaceuticals, topicals, orals, parenterals, ophthalmics, IM injectables, rectals, dentifrices; prod. of antibiotics; ear wax softener; vehicle solvent for antimicrobials; sweetener; preservative @ > 20% conc.
Use Level: 0.2-65.7% (topicals), 1-50% (liq. orals), 50% (parenterals), 7-10% (dentifrices), 0.5-3.0% (ophthalmics)
Regulatory: FDA 21CFR §169.175, 169.176, 169.177, 169.178, 169.180, 169.181, 172.811, 172.866, 175.300, 175.320, 176.210, 177.1390, 177.2420, 177.2800, 182.90, 182.1320, GRAS; FEMA GRAS; 177.1390, 177.2420, 177.2800, 178.3500, 172.811, 172.866, 175.300, 175.320, 176.210, 177.1390, 177.2420, 177.2800, 182.90, 182.1320, GRAS; Canada DSL; FDA approved for orals, parenterals, ophthalmics, dentifrices, preservative, emollient, humectant, tonicity agent in pharmaceuticals, topicals, orals), 50% (parenterals), 7-10% (dentifrices), 0.2-65.7% (topicals), 1-50% (liq. orals), 50% (parenterals), 7-10% (dentifrices), 0.5-3.0% (ophthalmics)

### Glycerophosphocholine

**CAS:** 28319-77-9  
**Synonyms:** Choline alfosphcerate; D-Choline hydroxide 2,3-dihydroxypropyl hydrogen phosphate inner salt; (R)-2-[[2-(2,3-Dihydroxypropoxy)hydroxyphosphinyl]oxy]-N,N,N-trimethylthanolaminium hydroxide inner salt; L-α-Glycerophosphorylcholine; sn-Glycero-3-phosphorylcholine; L-α-Glycerylphosphorylcholine  
**Empirical:** C₃H₂₀NO₅P  
**Properties:** Wh. cryst.; sol. in water; m.w. 257.22; m.p. 142.5-143 C; sinters @ 141 C  
**Toxicology:** LD₅₀ (oral, mouse) > 13 g/kg, (IV, mouse) > 650 mg/kg  
**Storage:** Extremely hygroscopic  
**Uses:** Natural raw material for pharmaceuticals  
**Manuf./Distrib.:** Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)  
**L-α-Glycerophosphorylcholine; sn-Glycero-3-phosphorylcholine. See Glycerophosphocholine**  
**Glyceryl acrylate/acrylic acid copolymer**  
**CAS:** 9003-01-4 (generic)  
**Uses:** Ingrid. in pharmaceutical topicals  
**Trade Names Containing:** Lubrajel® DV Free; Lubrajel® MS  
**Glyceryl alginate**  
**Synonyms:** Alginic acid, glyceryl ester  
**Definition:** Ester of glycerin and alginic acid  
**Uses:** Film-former, moisturizer, carrier in
**Glyceryl behenate**

CAS: 6916-74-1; 30233-64-8; 77538-19-3
EINECS/ELINCS: 250-097-0

**Synonyms:** 2,3-Dihydroxypropyl docosanoate; Docosanoic acid, 2,3-dihydroxypropyl ester; Glyceryl monobehenate

**Definition:** Monoester of glycerin and behenic acid

**Empirical:** C_{25}H_{50}O_{4}

**Formula:** \( \text{CH}_3(\text{CH}_2)_{20}\text{COOCH}_2\text{CHOHCH}_2\text{OH} \)

**Properties:**
- Fine powd., faint odor; sol. in chloroform; pract. insol. in water and alcohol; m.p. 70 C; acid no. 4 max.; iodine no. 3 max.; sapon. no. 145-165

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Excipient, lubricant, binder for pharmaceutical tablets and capsules

**Regulatory:** FDA 21CFR §184.1328, GRAS; USP/NF compliance

**Manuf./Distrib.:** Degussa AG/Health & Nutrition; Zetapharm†

http://www.zetapharm.com

**Glyceryl caprate**

CAS: 26402-22-2; EINECS/ELINCS: 247-667-6

**Synonyms:** Decanoic acid, monoester with 1,2,3-propanetriol; Glyceryl monocaprate; Glyceryl monodecanoate

**Definition:** Monoester of glycerin and capric acid

**Empirical:** C_{11}H_{22}O_{4}

**Formula:** \( \text{CH}_3(\text{CH}_2)_{8}\text{COOCH}_2\text{COHHCH}_2\text{OH} \)

**Properties:**
- Nonionic
- Crystals; m.p. 39.5-40.5 C
- Toxology: TSCA listed
- Uses: Solubilizer, emulsifier, solvent, dispersant, solubilizer, vehicle, carrier, penetrant for pharmaceuticals; dispersant for drugs in capsules; solvent, solubilizer for active ingreds.
- Regulatory: FDA 21CFR §176.210, 177.2800

**Manuf./Distrib.:** A&E Connock
http://www.connock.co.uk; ABITEC†

http://www.abiteccorp.com

**Glyceryl caprylate/caprate**

**Synonyms:** Glyceryl mono(caprylate/caprate)

**Definition:** Mixture of monoglycerides of caprylic and capric acids

**Properties:** Nonionic

**Uses:** Emulsifier, emollient, solvent, dispersant, solubilizer, vehicle, carrier, penetrant for pharmaceuticals

**Regulatory:** FDA 21CFR §176.210, 177.2800

**Manuf./Distrib.:** A&E Connock

http://www.connock.co.uk

**Glyceryl cocoonate**

**Definition:** Monoester of glycerin and coconut fatty acids

**Formula:** \( \text{RCO–OCH}_2\text{COHHCH}_2\text{OH} \), \( \text{RCO–} \) represents the fatty acids derived from coconut oil

**Properties:** Nonionic
Glyceryl coconate. See Glyceryl cocoate

Glyceryl dicaprate
CAS 53988-07-1; EINECS/ELINCS 258-903-2
Synonyms: Decanoic acid, diester with 1,2,3-propanetriol; Dicaprin; Didecanoic acid, diester with glycerol
Classification: Saturated glyceride
Empirical: C23H44O5
Uses: Used in vitamin and mineral preps
Trade Names Containing: DREWMULSE® GMC-810

Glyceryl dicaprylate
CAS 36354-80-0; EINECS/ELINCS 252-992-1
Synonyms: Dicaprylin; Octanoic acid, diester with 1,2,3-propanetriol
Uses: Used in vitamin and mineral preps
Trade Names Containing: DREWMULSE® GMC-810

Glyceryl dilaurate
CAS 27638-00-2; EINECS/ELINCS 248-586-9
Synonyms: Dilaurin; Dodecanoic acid, diester with 1,2,3-propanetriol
Definition: Diester of glycerin and lauric acid
Empirical: C27H52O5
Formula: C11H23COOCH2CHCH2OHOCOC11H23
Properties: Wh. to off-wh. solid; sol. in min. oil, 95% ethanol, IPM, oleyl alcohol, castor oil; insol. in water, glycerin, propylene glycol; sapon. no. 219-229; ref. index 1.4520-1.4560 (35 C); nonionic
Toxicology: LD50 (oral, rat) > 5 g/kg; nonirritating to eyes and skin; TSCA listed
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Emulsifier, emollient, solubilizer, dispersant in pharmaceuticals
Features: Lipid
Regulatory: FDA 21CFR §175.105, 1876.210; Canada DSL

Glyceryl dioleate
CAS 25637-84-7; EINECS/ELINCS 247-144-2
Synonyms: GDO; Glycerol dioleate; 9-Octadecenoic acid, diester with 1,2,3-propanetriol
Definition: Diester of glycerin and oleic acid
Empirical: C39H72O5
Properties: Pale yel. liq.; HLB 1.8; nonionic
Toxicology: TSCA listed
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Surfactant, emulsifier, emollient, stabilizer, lubricant for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 176.210, 177.2800; Canada DSL
Trade Names: Cithrol GDO N/E; Nofable GO-902; Nofable GO-992

Glyceryl distearate
INS471
Synonyms: Octadecanoic acid, diester with 1,2,3-propanetriol
Definition: Diester of glycerin and stearic acid
Empirical: C39H76O5
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant in pharmaceuticals
Trade Names: Cithrol GDO S/E

Glyceryl dioleate SE
Properties: Anionic
Uses: W/o emulsifier, dispersant in pharmaceuticals
Trade Names: Capmul® GDL; Glicopol 2-G

Glyceryl distearate SE
EINECS/ELINCS 248-586-9
Uses: Surfactant, emulsifier, emollient, stabilizer, lubricant in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 1876.210, 177.2800; Canada DSL
Trade Names: Cithrol GDO S/E

Glyceryl distearate
CAS 1323-83-7; EINECS/ELINCS 215-359-0
Synonyms: Octadecanoic acid, diester with 1,2,3-propanetriol
Definition: Diester of glycerin and stearic acid
Empirical: C39H76O5
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant in pharmaceuticals, orals
Trade Names: Cithrol GDO S/E

Glyceryl distearate SE
Properties: Anionic
Uses: Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant in pharmaceuticals
Trade Names: Cithrol GDO S/E
### Chemical Component Cross-Reference

**Regulatory:** USP/NF compliance; FDA 21CFR §175.105, 176.210, 177.2800; Europe listed; FDA approved for orals; Canada DSL

**Manuf./Distrib.:** A&E Connock

**Trade Names Containing:** STEPAN® GMS 63F

---

### Glyceryl distearate SE

**Properties:** Anionic

**Uses:** Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant for pharmaceuticals

**Trade Names:** Cithrol GDS S/E

### Glyceryl di/tripalmitostearate

**Uses:** Binder, lubricant in pharmaceutical tablets

### Glyceryl di/tristearate

**CAS:** 8067-32-1

**Synonyms:** Precirol

**Uses:** Excipient, coating agent, matrix agent for sustained-release pharmaceutical tablets

### Glyceryl formal

**CAS:** 4740-78-7; EINECS/ELINCS 225-248-9

**UN 1993**

**Synonyms:** 1,3-Dioxolane-4-methanol; Glycerin formal; Glycerol formal; 1,2-(Methylene) glycerol; Methyldinoglycerol

**Definition:** Mixt. of 5-hydroxy-1,3-dioxane and 4-hydroxymethyl-1,3-dioxolane

**Empirical:** C₄H₈O₃

**Properties:** Colorless clear liq., low odor; misc. with water; m.w. 104.11; dens. 1.218 (20/4 C); b.p. 95-97 C (20 mm); flash pt. 97 C; autoignition temp. 400 C; ref. index 1.451 (20 C); pH 4-7 (10%)

**Toxicology:** LD50 (oral, rat) 8.6 ml/kg; low toxicity

**NFPA:** Health 1, Flammability 1, Reactivity 0

**Storage:** Hygroscopic

**Uses:** Solvent for pharmaceuticals; vehicle for veterinary injectables (sulphadiazine and trimethoprin)

**Manuf./Distrib.:** DSM Chem. N. Am.; DSM Fine Chems. Austria  
[http://www.dsmfinechemicals.com](http://www.dsmfinechemicals.com); Degussa AG

### Glyceryl hydroxystearate

**CAS:** 1323-42-8; EINECS/ELINCS 215-355-9

**Synonyms:** Glyceryl 12-hydroxystearate; Glyceryl mono-12-hydroxystearate; Hydroxystearic acid, monoester with glycerol

**Definition:** Monoester of glycerin and hydroxystearic acid

**Empirical:** C₂₁H₄₂O₅

**Properties:** Nonionic

**Toxicology:** TSCA listed

**Uses:** Emulsifier, emollient, opacifier, bodying agent, thickener for pharmaceuticals

**Regulatory:** FDA 21CFR §175.105, 176.170, 176.200, 177.1210, 177.2800; Canada DSL

**Manuf./Distrib.:** A&E Connock  
[http://www.connock.co.uk](http://www.connock.co.uk)

**Trade Names:** Naturechem® GMHS

### Glyceryl isostearate

**CAS:** 32057-14-0; 66085-00-5; 61332-02-3; EINECS/ELINCS 262-710-9; 266-124-4

**Synonyms:** Glycerol monoisostearate; Glyceryl monoisostearate; Isooctadecanoic acid, monoester with 1,2,3-propanetriol

**Definition:** Monoester of glycerin and isostearic acid

**Empirical:** C₂₁H₄₂O₄

**Properties:** Pale yel. paste or clear liq.; HLB 3.0; nonionic

**Toxicology:** Lethal when injected in large doses in mice; TSCA listed

**Uses:** Surfactant, emulsifier, dispersant, excipient for pharmaceuticals; emollient, lubricant, pearlescent, and w/o emulsifier for creams and lotions

**Manuf./Distrib.:** A&E Connock  
[http://www.connock.co.uk](http://www.connock.co.uk)

**Trade Names:** Emalex GWIS-100EX; Peceol Isostearique

**Trade Names Containing:** Protegin® W; Protegin® WX

### Glyceryl-lacto esters of fatty acids

**See** Lactic acid esters of mono- and diglycerides of fatty acids

---

†=pharmaceutical grade
Chemical Component Cross-Reference

Glyceryl laurate
CAS 142-18-7; EINECS/ELINCS 205-526-6
Synonyms: Dodecanoic acid, 2,3-dihydroxypropyl ester; Dodecanoic acid, monoester with 1,2,3-propanetriol; Glycerol monolaurate; Glyceryl monolaurate; 1-Monolaurin
Definition: Monoester of glycerin and lauric acid
Empirical: C15H30O4
Formula: CH3(CH2)10COOCH2COHHCH2OH
Properties: Cream-colored paste, faint odor; disp. in water; sol. in methanol, ethanol, toluene, naphtha, min. oil; dens. 0.98; m.p. 23-27 C; HLB 5.2; pH 8-8.6; nonionic
Toxicology: LD50 (oral, rat) 53 g/kg; mildly toxic by ing.; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Emulsifier, emollient, stabilizer, solubilizer, carrier in pharmaceuticals; stabilizer, thickener, opacifier for creams and lotions
Regulatory: FDA 21CFR §175.105, 176.210, 177.2800, GRAS; Japan approved; Europe listed; Canada DSL

Glyceryl laurate SE
CAS 27215-38-9
Definition: Self-emulsifying grade of glyceryl laurate containing some sodium and/or potassium laurate
Uses: Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant for pharmaceuticals
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
Trade Names: Cithrol GML S/E; Lumulse® GML K

Glyceryl linoleate
CAS 2277-28-3; EINECS/ELINCS 218-901-4
Synonyms: Monolinolein; 9,12-Octadecadienoic acid, 2,3-dihydroxypropyl ester; 9,12-Octadecadienoic acid, monoester with 1,2,3-propanetriol
Definition: Monoester of glycerin and linoleic acid
Empirical: C21H38O4
Properties: Nonionic
Uses: Emollient, emulsifier in pharmaceuticals; matrix material for sustained-release formulations, gelatin capsules
Regulatory: USP/NF compliance
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Sigma
http://www.sigma-aldrich.com/belgium
Trade Names: Maisine® 35-1

Glyceryl monobehenate. See Glyceryl behenate

**Glyceryl mono/diisostearate**

CAS: 68958-48-5

**Synonyms:** Glycerol diisostearate; Isooctadecanoic acid, diester with 1,2,3-propanetriol

**Empirical:** C_{39}H_{76}O_{5}

**Properties:** M.w. 625.03

**Uses:** Surfactant for medical pharmaceuticals

**Trade Names:** Emalex GWIS-200EX

---

**Glyceryl mono/dioleate**

CAS: 25496-72-4 (generic); 68424-61-3 (generic)

**Synonyms:** 9-Octadecenoic acid (Z)-, monoester with 1,2,3-propanetriol

**Empirical:** C_{21}H_{40}O_{4}

**Properties:** Yel. oil or soft solid; m.w. 356.61; dens. 0.95; m.p. 14-19 C; nonionic

**Toxicology:** Primary irritant; TSCA listed

**Precaution:** Combustible

**Uses:** Emulsifier, solubilizer for pharmaceuticals

**Regulatory:** Canada DSL

---

**Glyceryl 1-mono-12-hydroxy-cis-9-octadecenoate.** See Glyceryl ricinoleate

Glyceryl palmitate/stearate
CAS 8067-32-1

Synonyms: Glyceryl palmitostearate; Glyceryl stearate palmitate
Classification: Triester
Definition: Monoester of glycerin and a blend of palmitic and stearic acids
Empirical: C_{63}H_{116}O_{12}
Properties: Nonionic
Uses: Excipient, emollient, lubricant, binder, suspending agent, thickener in
Chemical Component Cross-Reference

pharmaceuticals
Regulatory: FDA 21CFR §176.210, 177.2800, 184.1329, GRAS
Manuf./Distrib.: A&E Connock†

Gluceryl palmitostearate. See Glycerol palmitate/stearate

L-α-Glycerylphosphorylcholine. See Glycerophosphocholine

Glyceryl polyacrylate
Definition: Ester of glycerin and polyacrylic acid
Uses: Film-former in pharmaceutical topicals
Trade Names Containing: Hispagel® 100; Hispagel® 200

Glyceryl polymethacrylate
CAS 37310-95-5
Synonyms: Polyglycerylmethacrylate
Definition: Ester of glycerin and polymethacrylic acid
Uses: Autoclavable lubricant, moisturizer for medical/surgical use, for pre-lubricating catheters, thermometers, enema tips
Trade Names: Norgel
Trade Names Containing: Aloe-Moist™; Lubrajan® CG; Lubrajan® Oil; Lubrajan® TW; Lubrajan® WA; Lubrasil® DS

Glyceryl ricinoleate
CAS 141-08-2; EINECS/ELINCS 205-455-0
Synonyms: Glycerol monoricinoleate; Glycerol 1-monoricinoleate; Glycerol ricinoleate; Glycerol 1-mono-12-hydroxy-cis-9-octadecenoate; Glycerol monoricinoleate; Glycerol 1-monoricinoleate; GMRO: 12-Hydroxy-9-octadecenoic acid 2,3-dihydroxypropyl ester; 12-Hydroxy-9-octadecenoic acid, monoester with 1,2,3-propanetriol; Monoricinolein; α-Monoricinolein

GLyceryl ricinoleate SE
Synonyms: Glycerol triricinoleate SE
Properties: Anionic
Uses: Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant in pharmaceuticals

Glyceryl rosinate
CAS 8050-31-5; 977035-48-5; EINECS/ELINCS 232-482-5
INS915
**Chemical Component Cross-Reference**

**Synonyms:** Glycerol ester of rosin; Glycerol ester of wood rosin; Glycerol monorosinate; Rosin, glyceryl ester; Rosin, gum, glycerol ester; Rosin gum, glyceryl ester

**Classification:** Thermoplastic resin gum

**Definition:** Monoester of glycerin and mixed long chain acids derived from rosin

**Properties:** Drop soften. pt. 88-96 C

**Hazardous Decomp. Prods.:** Heated to decox., emits acrid smoke and irritating fumes

**Uses:** Film-former in pharmaceuticals

**Regulatory:** FDA 21CFR §172.615, 172.735, limitation 100 ppm in finished beverage, 175.105, 175.300, 175.320, 178.3120, 178.3800, 178.3870; Canada DSL

**Manuf./Distrib.:** Marlin Chems. Ltd

http://www.marlinchemicals.co.uk

**Glycerol stearate**

CAS 123-94-4 (pure grade); 11099-07-3 (crude grade); 31566-31-1 (generic); 85666-92-8 (generic); 85251-77-0; EINECS/ELINCS 240-664-4; 234-325-6; 250-705-4; 286-490-9

FEMA 2527; INS471

**Synonyms:** 2,3-Dihydroxypropyl octadecanoate; Glycerin monostearate; Glycerol monostearate; Glycerol stearate; Glycerol monostearate; GMS; Monostearin; Octadecanoic acid, monoester with 1,2,3-Propanetriol; 1,2,3-Propanetriol octadecanoate; Stearic acid, monoester with glycerol; Stearic monoglyceride

**Classification:** Aliphatic carboxylic acid ester

**Definition:** Monoester of glycerin and stearic acid

**Empirical:** C21H42O4

**Formula:** CH3(CH2)16COOCH2COHHCH2OH

**Properties:** Wh. to cream wax-like flakes, sl. fatty odor and taste; sol. in hot org. solvs.; insol. in water, ethanol, glycerin, propylene glycol; disp. in min. oil; m.w. 358.57; sp.gr. 0.97; m.p. 56-59 C; b.p. 238-240 C; HLB 3.8; acid no. 6 max.; iodine no. 3 max.; sapon. no. 162-175; hyd. no. 300-330; flash pt. (OC) 230 C; pH 9.3 (3%); nonionic

**Toxicology:** ACGIH TLV/TWA 10 mg/l (stearates); LD50 (IP, mouse) 200 mg/kg; poison by IP route; TSCA listed

**Precaution:** Combustible dust; incomp. with oxidizing materials (increased risk of fire and explosion)

**Hazardous Decomp. Prods.:** Heated to decox., emits acrid smoke and irritating

Glyceryl stearate
citrate
CAS 39175-72-9; 58840-13-6; 86418-55-5;
EINECS/ELINCS 259-855-5
Synonyms: 2-Hydroxy-1,2,3-
propanetricarboxylic acid, monoester with
1,2,3-propanetriol monoocadecanoate;
1,2,3-Propanetricarboxylic acid, 2-hydroxy-
ester with 1,2,3-propanetriol
monooctadecanoate; Stearyl glyceridyl
citrate; Stearyl monoglyceridyl citrate

Definition: Citric acid ester of glyceryl stearate
Empirical: C_{27}H_{48}O_{10}
Properties: Off-wh. to tan soft waxy solid, pract.
tasteless; sol. in chloroform, ethylene glycol;
insol. in water; acid no. 40-52; sapon. no. 215-
tasteless; sol. in chloroform, ethylene glycol;

Hazardous Decomp. Prods.: Heated to
decom., emits acrid smoke and irritating
fumes
Uses: Emollient, emulsifier, stabilizer,
consistency agent, solubilizer for
pharmaceuticals

Trade Names: Aldo® MS KFG; Animal GMS;
Capmul® GMS-50; Capmul® GMS-50K;
Cerasynt® GMS

Glycol ethyl ether. See Diethylene glycol; Ethoxyethanol

Glycol hydroxystearate
CAS 33907-46-9; EINECS/ELINCS 251-732-4
Synonyms: Ethylene glycol monohydroxystearate; Glycol monohydroxystearate; 2-Hydroxyethyl hydroxyoctadecanoate; Hydroxyoctadecanoic acid, 2-hydroxyethyl ester
Chemical Component Cross-Reference

Definition: Ester of ethylene glycol and hydroxystearic acid
Empirical: C_{20}H_{40}O_{3}
Formula: CH_{3}(CH_{2})_{16}COOCH_{2}CH_{2}OH
Properties: Wh. to yel. waxy solid; sol. in alcohol, hot ether, toluene, acetone; insol. in water, hexane; m.w. 328.60; dens. 0.96 (25 C); m.p. 55-60 C; b.p. 149 C; HLB 2.9; nonionic

Toxicology: LD50 (IP, mouse) 200 mg/kg; poison by IP route; primary skin irritant; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 1, Flammability 0, Reactivity 0
Uses: Excipient, surfactant, opacifier, pearlescent, emollient, emulsifier, visc. control agent, solubilizer in pharmaceuticals; base in topicals
Regulatory: FDA 21CFR §176.210; FDA approved for topicals; Canada DSL

Manuf./Distrib.: A&E Connock

Glycol stearate
CAS 111-60-4; 9004-99-3 (generic); 97281-23-7
EINECS/ELINCS 203-886-9; 306-522-8

Synonyms: EGMS; Ethylene glycol monostearate; Ethylene glycol stearate; Glycol monostearate; 2-Hydroxyethyl ester stearic acid; 2-Hydroxyethyl octadecanoate; 2-Hydroxyethyl stearate; Octadecanoic acid, 2-hydroxyethyl ester; PEG-1 stearate; POE (1) stearic acid; Stearic acid, monooester with ethylene glycol

Definition: Ester of ethylene glycol and stearic acid
Empirical: C_{20}H_{40}O_{4}
Formula: CH_{3}(CH_{2})_{16}COOHCH_{2}CH_{2}OH
Properties: Wh. to yel. waxy solid; sol. in alcohol, hot ether, toluene, acetone; insol. in water, hexane; m.w. 328.60; dens. 0.96 (25 C); m.p. 55-60 C; b.p. 149 C; HLB 2.9; nonionic

†=pharmaceutical grade
### Trade Names Containing: Cerasynt® IP; Sabowax GF; Sedefos 75®; STEPANOL® PB; Tefose® 63

#### Glycol stearate SE

**Synonyms:** Ethylene glycol monostearate SE  
**Definition:** Self-emulsifying grade of glycol stearate contg. some sodium and/or potassium stearate  
**Properties:** Wh. to cream flakes; disp. in water, peanut oil, oleyl alcohol; insol. in min. oil, ethanol, glycerin, propylene glycol, IPM; m.p. 57-60°C; sapon. no. 181-191; anionic  
**Uses:** Emulsifier, visc. builder, base in topical pharmaceuticals  
**Manuf./Distrib.:** A&E Connock  
http://www.connock.co.uk  
**Trade Names:** Cerasynt® MN; Tegin® G

#### Glycyrrhetic acid

**Synonyms:** Enoxolone; Glycyrrhetic acid; 18-β-Glycyrrhetic acid; Glycyrrhetin; 18-β-Glycyrrhetic acid; 3-β-Hydroxy-11-o xoolean-12-en-30-oic acid; Olean-12-en-30-oic acid, 3-β-hydroxy-11-oxo-; Uralenic acid  
**Classification:** Steroid  
**Empirical:** C$_{30}$H$_{46}$O$_{4}$  
**Properties:** Wh. cryst. powd.; strong sweet taste; sol. in hot water, alcohol; pract. insol. in ether; m.w. 823.04; m.p. 220°C  
**Toxicology:** LDL (oral, rat) 3 g/kg, (IP, rat) 2 g/kg, (IV, mouse) 300 mg/kg; poison by IV route; mod. toxic by ing. and IP routes; human systemic effects by ing.; TSCA listed  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**Uses:** Anti-inflammatory, anti-allergenic surfactant for pharmaceuticals  
**Manuf./Distrib.:** ADA Int’l.  
http://www.sigma-aldrich.com/belgium

#### Glycyrrhizic acid

**Synonyms:** Glycyron; Glycyrrhetic acid glycoside; Glycyrrhetic acid glycoside; 18-β-Glycyrrhizin acid; Glycyrrhizin; β-Glycyrrhizin; Glycyrrhizic acid  
**Definition:** Natural material extracted from Glycyrrhiza glabra; the active component of licorice  
**Empirical:** C$_{42}$H$_{62}$O$_{16}$  
**Properties:** Wh. cryst. powd.; strong sweet taste; sol. in hot water, alcohol; pract. insol. in ether; m.w. 823.04; m.p. 220°C  
**Toxicology:** LDL (oral, rat) 3 g/kg, (IP, rat) 2 g/kg, (IV, mouse) 300 mg/kg; poison by IV route; mod. toxic by ing. and IP routes; human systemic effects by ing.; TSCA listed  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**Storage:** Hygroscopic  
**Uses:** Anti-inflammatory, anti-allergenic, surfactant for pharmaceuticals  
**Regulatory:** Canada DSL  
**Manuf./Distrib.:** ADA Int’l.  
http://www.sigma-aldrich.com/belgium

**Trade Names:** Nikkol Glycyrrhizic Acid

#### Glycyrrhizic acid, monoammonium salt

**Synonyms:** Glycyron; Glycyrrhetic acid glycoside; Glycyrrhetic acid glycoside; 18-β-Glycyrrhizin acid; Glycyrrhizin; β-Glycyrrhizin; Glycyrrhizic acid  
**Definition:** Natural material extracted from Glycyrrhiza glabra; the active component of licorice  
**Empirical:** C$_{42}$H$_{62}$O$_{16}$  
**Properties:** Wh. cryst. powd.; strong sweet taste; sol. in hot water, alcohol; pract. insol. in ether; m.w. 823.04; m.p. 220°C  
**Toxicology:** LDL (oral, rat) 3 g/kg, (IP, rat) 2 g/kg, (IV, mouse) 300 mg/kg; poison by IV route; mod. toxic by ing. and IP routes; human systemic effects by ing.; TSCA listed  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**Storage:** Hygroscopic  
**Uses:** Anti-inflammatory, anti-allergenic, surfactant for pharmaceuticals  
**Regulatory:** Canada DSL  
**Manuf./Distrib.:** ADA Int’l.  
http://www.sigma-aldrich.com/belgium

**Trade Names:** Nikkol Glycyrrhizic Acid

**18-β-Glycyrrhizin acid.** See Glycyrrhizin acid

**Glycyrrhizic acid, ammonium salt.**  
Glycyrrhizic acid, monoammonium salt.  
See Ammonium glycyrrhizate  
Glycyrrhizin; β-Glycyrrhizin.  
See Glycyrrhizin

**Gold.**

**CAS.** 7440-57-5; EINECS/ELINCS 231-165-9

**INS.** 77480; Colloidal gold; Gold flake; Gold leaf; Gold powder; Pigment metal 3

**Classification:** Metallic element

**Empirical:** Au

**Properties:** Yel. soft metal; sol. in aqua regia; insol. in acids; a.w. 196.9665; dens. 19.3; m.p. 1063 C; b.p. 2800 C; high light, infrared, and heat reflectivity

**Toxicology:** LDLo (IV, rat) 58 mg/kg; poison by IV route; metallic gold may cause hypersensitivity reactions; questionable carcinogen; experimental tumorigen; mutagenic data; TSCA listed

**Precaution:** Chemically nonreactive; attacked by chlorine and cyanide sol'ns. in presence of oxygen; tarnished by sulfur; can form explosive compds. with NH₃, NH₄OH + aqua regia, H₂O₂; incompat. with chlorides, bromides, iodides, some oxidants

**Uses:** Dental alloys; specialized medical treatments; treatment of rheumatoid arthritis; radiopharmacy

**Regulatory:** UK approved; Canada DSL

**CAS.** 8016-20-4

**UN.** 2319; FEMA 2530

**Synonyms:** Citrus grandis oil; Citrus paradisi peel oil; Grapefruit oil; Shaddock oil

**Definition:** Volatile oil from the fresh peel of Citrus grandis or. C. paradisi

**Properties:** Yel. liq.; sol. in fixed oils, min. oil; sl. sol. in propylene glycol; insol. in glycerin; sp.gr. 0.851-0.859; flash pt. (CC) 44 C; ref. index 1.475-1.478

**Toxicology:** TDLo (skin, mouse, 33 wks intermittent) 280 g/kg; skin irritant; questionable carcinogen; experimental tumorigen; mutagenic data; TSCA listed

**Precaution:** Flamm. liq.

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**HMIS:** Health 1, Flammability 2, Reactivity 0

**Storage:** 12 mos. when stored in tight glass, aluminum, or double lined containers in a cool area away from direct heat

**Uses:** Natural flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §182.20, GRAS; FEMA GRAS; Europe listed, no restrictions; Canada DSL

Cold Pressed Grapefruit Oil

Trade Names: Cold Pressed Grapefruit Oil

Grapefruit oil. See Grapefruit (Citrus grandis) oil

Grape skin extract

CAS 11029-12-2

INS163(ii)

Synonyms: Enocianina; Enocyanin

Classification: Anthocyanin

Definition: From aq. extraction of fresh deseeded marc remaining after grapes are pressed to produce wine or juice; contains anthocyanins, tartaric acid, tannins, sugars, minerals

Properties: Deep purple; sol. in water

Uses: Colorant for pharmaceuticals

Regulatory: FDA 21CFR §73.169, 73.170; Japan restricted; not permitted in food (EU); Canada DSL

Manuf./Distrib.: Adept Sol'ns.; Alfa Chem; Amerol; Anmar Int'l.; Atomergic Chemetals; Barrington; CarboMer; Charles Bowman; Degussa AG/Health & Nutrition Functional Foods; George Uhe; H&A (Canada); Ind.†; http://www.hacanada.com; Marcor Development†; Natra US†; Penta Mfg.; Pharmrite N. Am.; RIA Int'l.†; RTD Hallstar†; Sensient Pharm. Tech.; Triple Crown Am.

Guaiac (Guaiacum officinale) extract

CAS 84650-13-5; EINECS/ELINCS 283-494-2

FEMA 2531, 2533

Synonyms: Guaiac extract; Guaiac gum extract; Guaiacum; Guaiacum officinale; Guaiacum officinale extract; Guaiacum officinalis extract; Guaiac wood extract

Definition: Extract of wood of the guaiacum tree, Guaiacum officinale

Properties: Pleasant rose-like odor

Uses: Antioxidant, natural flavor in pharmaceuticals

Regulatory: FDA 21CFR §172.510; FEMA GRAS

Guaiac gum extract. See Guaiac (Guaiacum officinale) extract

Guaiacol

CAS 90-05-1; EINECS/ELINCS 201-964-7

FEMA 2532

Synonyms: Guaiicol; 2-Hydroxyanisole; o-Hydroxyanisole; 1-Hydroxy-2-methoxybenzene; 2-Methoxyphenol; o-Methoxyphenol; Methylcatechol; o-Methylcatechol; Pyrocatechol methyl ether; Pyroguaic acid

Classification: Aromatic organic compd.

Definition: Obtained from hardwood tar

Empirical: C7H8O2

Formula: OHC6H4OCH3

Properties: Wh. to sl. yel. crystall. or colorless to ylsh. liq.; char. odor; discolored by light and air; sol. (1 g/ml): 60-70 ml water, 1 ml glycerin; misc. with alcohol, chloroform, ether, oils, glac.
acetic acid, oxygenated and chlorinated solvs.; m.w. 124.14; dens. 1.129 (cryst.), 1.112 (liq.); m.p. 26-29 C; b.p. 204-206 C

Toxicology: LD50 (oral, rat) 725 mg/kg, (IV, mouse) 170 mg/kg, (skin, rabbit) 4600 mg/kg; poison by IV route; mildly toxic by skin contact., inh.; human poison by ing.; eye and severe skin irritant; ing. causes irritation of intestinal tract and heart failure; penetrates the skin; when applied to mucous membranes, produces pain, burning, and then loss of sensitivity; human mutagenic data; TSCA listed

Precaution: Combustible; can react with oxidizers

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 2, Flammability 2, Reactivity 1

Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air

Uses: Synthetic flavor for pharmaceuticals; expectorant; counter-irritant in external analgesic prods.

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL; Japan MITI

Guaicol. See Guaiacol

Guanidine chloride. See Guanidine hydrochloride

†=pharmaceutical grade

Guaiacum officinale extract; Guaiacum officinalis extract; Guaiac wood extract. See Guaiac (Guaiacum officinale) extract

Guaiac acetate
CAS 613-70-7; EINECS/ELINCS 210-350-8
FEMA 3687
Synonyms: Acetyl guaiacol; Guaiacol acetate; 2-Methoxyphenyl acetate; o-Methoxyphenyl acetate
Empirical: C9H10O3
Properties: Colorless liq.; smoky taste; misc. with alcohol, ether; insol. in water; m.w. 166.18; b.p. 235-240 C; flash pt. > 230 F
Uses: Synthetic flavor and fragrance for pharmaceuticals
Features: Woody, musty, walnut
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Guaiac phenylacetate
CAS 4112-89-4; EINECS/ELINCS 223-898-8
FEMA 2535
Synonyms: Guaiacol phenylacetate; 2-Methoxyphenyl phenylacetate; o-Methoxyphenyl phenylacetate
Empirical: C15H14O3
Properties: Amber visc. liq. or off-wh. solid; woody herbaceous spicy medicinal odor; spicy flavor; sol. in alcohol, most org. solvs.; insol. in water; m.w. 242.28
Toxicology: Irritating to eyes, skin, respiratory system; defats skin; ing. may cause stomach pain, vomiting
Precaution: Incompat. with strong oxidizing agents

Guaiacol phenylacetate
CAS 613-70-7; EINECS/ELINCS 210-350-8
FEMA 3687
Synonyms: Guaiacol acetate; 2-Methoxyphenyl acetate; o-Methoxyphenyl acetate
Empirical: C9H10O3
Properties: Colorless liq.; smoky taste; misc. with alcohol, ether; insol. in water; m.w. 166.18; b.p. 235-240 C; flash pt. > 230 F
Uses: Synthetic flavor and fragrance for pharmaceuticals
Features: Woody, musty, walnut
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Fleurchem

Guaiacum; Guaiacum officinale; Guaiacum officinale extract; Guaiac wood extract. See Guaiac (Guaiacum officinale) extract

p-Guaiacol. See Hydroquinone monomethyl ether

Guaicol. See Guaiacol

Guanidine chloride. See Guanidine hydrochloride
Guanidine hydrochloride
CAS 50-01-1; EINECS/ELINCS 200-002-3
Synonyms: Aminoformamidine hydrochloride; Aminomethanamide hydrochloride; Carbamidine hydrochloride; Guadidium chloride; Guanidine chloride; Guanidine monohydrochloride; Guanidinium chloride; Guanidinium hydrochloride; Iminourea hydrochloride
Classification: Aliphatic organic compd.
Empirical: CH6ClN3
Formula: NH2C(:NH)NH2 • HCl
Properties: Wh. powd.; sol. in water, alcohol; m.w. 95.53; dens. 1.187; m.p. 181-183 C; ref. index 1.465; pH 6.2 (10% aq.)
Toxicology: LD50 (oral, rat) 475 mg/kg, (IP, mouse) 500 mg/kg; LDLo (subcut., rat) 404 mg/kg; poison by subcut. route; mod. toxic by ing., IP route; harmful; eye and severe skin irritant; irritant to respiratory tract; can cause nausea, diarrhea, neurological disturbances; mutagen; target organs: bone marrow, nerves; TSCA listed
Hazardous Decomp. Prods.: Heated to decom., emits highly toxic fumes of HCl and NOx
NFPA: Health 2, Flammability 1, Reactivity 0
Storage: Hygroscopic; store @ R.T.
Uses: Intravenous pharmaceuticals; microbial protein extraction agent
Regulatory: FDA approved for intravenous; Canada DSL
†=pharmaceutical grade
http://www.riausa.com
Xinchem† http://www.finechemnet.com
Guanidine monohydrochloride; Guanidinium chloride; Guanidinium hydrochloride. See Guanidine hydrochloride
Guanine
CAS 73-40-5; EINECS/ELINCS 200-799-8
Synonyms: 2-Amino-1,7-dihydro-6H-purin-6-one; 2-Amino-6-hydroxypurine; 2-Aminohypoxanthine; 2-Amino-6-oxypurine; CI 75170; Natural pearl essence; Natural white 1; Pearl essence
Classification: Natural purine
Definition: Crystalline material obtained from fish scales, consisting of 75-97% guanine and 3-25% hypoxanthine (CAS 68-94-0)
Empirical: C5H5N5O
Properties: Colorless rhombic crystals; odorless; freely sol. in ammonium hydroxide, dilute acids; sparingly sol. in alcohol, ether; insol. in water; m.w. 151.15; m.p. 300 C min.; dec. > 360 C
Toxicology: TDLo (subcut., rat, 26 wks, intermittent) 1300 mg/kg; questionable carcinogen; suspected tumorigen; human mutagenic data; TSCA listed
Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of NOx
Uses: Colorant for external pharmaceuticals, eye use
Regulatory: FDA 21CFR §73.1329, 73.2329; exempt from certification, permanently listed for drug use; Canada DSL
Chemical Component Cross-Reference

Guaran. See Guar (Cyanopsis tetragonoloba) gum

Guar (Cyanopsis tetragonoloba) gum

CAS 9000-30-0; EINECS/ELINCS 232-536-8
FEMA 2537; INS412; E412

Synonyms: Cyanopsis gum; Cyanopsis tetragonoloba; Cyanopsis tetragonoloba gum; Galactasol; Guar; Guaran; Guar flour; Gum cyanopsis; Gum guar; Jaguar gum

Classification: Nonaromatic alcohol

Definition: Natural material derived from the ground endosperms of Cyanopsis tetragonolobus; consists of high m.w. hydrocolloidal polysaccharide composed of galactomannan units

Properties: Ylsh.-wh. free-flowing powd.; aq. sol'sns. tasteless, odorless; sol. in hot or cold water; insol. in oil, greases, hydrocarbons, ketones, esters; m.w. ≈ 220,000

Toxicology: LD50 (oral, rat) 8100 mg/kg; mildly toxic by ing.; may cause contact dermatitis; tumorigen; mutagen; experimental reproductive effects: TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 0, Flammability 1, Reactivity 0

Uses: Binder in tablets; protective colloid, stabilizer, thickener, emulsifier, suspending agent, visc. builder in pharmaceuticals, buccals, oral, lotions, creams, toothpaste; bulk laxative; appetite suppressant; treatment of peptic ulcers

Regulatory: FDA 21CFR §133.124, 133.133, 133.134, 133.162, 133.178, 133.179, 150.141, 150.161, 184.1339, GRAS; FEMA GRAS; FDA approved for buccals, orals; USP/NF, BP, EP compliance; Canada DSL; Japan approved; Europe listed; UK approved; ADI not specified (WHO)

See Cassia gum

### Gum cyanosis.

See Guar (Cyanopsis tetragonoloba) gum

### Gum dragon.

See Tragacanth (Astragalus gummifer) gum

### Gum gelllan.

See Gellan gum

### Gum guar.

See Guar (Cyanopsis tetragonoloba) gum

### Gum hashab.

See Acacia

### Gum karaya.

See Karaya (Sterculia urens) gum

### Gum lac.

See Shellac

### Gum ovaline.

See Acacia

### Gum rosin.

See Rosin

### Gum senegal.

See Acacia

### Gum sterculia.

See Karaya (Sterculia urens) gum

### Gum storax.

See Storax (Liquidambar orientalis)

### Gum Styrax benzoin; Gum sumatra.

See Gum benzoin

### Gum tara.

See Tara gum

### Gum tragacanth.

See Tragacanth (Astragalus gummifer) gum

### Gum turpentine.

See Turpentine

### Guncotton.

See Nitrocellulose

### Gutens, wheat.

See Wheat (Triticum vulgare) gluten

### Gutta percha.

CAS 9000-32-2; EINECS/ELINCS 232-537-3

### Gutta percha.

Synonyms: trans-Polyisoprene

### Gutta percha.

Definition: Geometric isomer of natural rubber; purified, coagulated, milky exudate of various trees of the genus *Palaguium*

### Gutta percha.

Properties: Brn. to gray lumps or blocks, sl. char.
Chemical Component Cross-Reference

odor; insol. in water; partly sol. in CS₂, turpentine oil, hot alcohol, petrol. ether; 90% sol. in chloroform; m.p.100 C

Precaution: On exposure to air and sunlight, absorbs oxygen and becomes brittle

Storage: Protect from light; keep under water

Uses: Film-former in pharmaceutical dressings; filling for dental impression compds.; dental cement; in orthopedics for fracture splints

Regulatory: FDA 21CFR §177.1210; Japan approved

Gypsum. See Calcium sulfate dihydrate; Calcium sulfate

Gypsum hemihydrate. See Calcium sulfate hemihydrate

Gypsum stone. See Calcium sulfate dihydrate

HA. See Hydroquinone monomethyl ether

Haematoxylon campechianum; Haematoxylon campechianum extract. See Logwood (Haematoxylon campechianum) extract

Halane. See 1,3-Dichloro-5,5-dimethyl hydantoin

Halite. See Sodium chloride

Halocarbon 11. See Trichlorofluoromethane

Halocarbon 23. See Trifluoromethane

Halocarbon 113. See Trichlorotrifluoroethane

Halocarbon 114. See 1,2-Dichlorotetrafluoroethane

Halocarbon 116. See Hexafluoroethane

Halon. See Dichlorodifluoromethane

Hamamelis; Hamamelis extract; Hamamelis virginiana. See Witch hazel (Hamamelis virginiana) extract

2-HAP. See o-Hydroxyacetophenone

Hard paraffin. See Paraffin

Hartshorn. See Ammonium carbonate

Hawthorne berries extract; Hawthorn extract. See Crataegus monogina extract

Hazel (Corylus avellana) nut oil

CAS 84012-21-5; EINECS/ELINCS 281-667-7

Synonyms: Corylus avellana; Corylus avellana nut oil; Hazel nut oil

Definition: Oil obtained from the nuts of the hazelnut tree, Corylus avellana

Properties: Amber yel. oil; dens. 0.911-0.917; iodine no. 85-100; sapon. no. 189-196; ref. index 1.4615-1.4725

Uses: Emollient in pharmaceuticals

Manuf./Distrib.: Aldivia

http://www.aldivia.com; Alzo

http://www.alzointernational.com; Anglia

†=pharmaceutical grade

Oils† http://www.angliaoil.co.uk; Arista

Ind.† http://www.aristaindustries.com; Desert Whale Jojoba

http://www.desertwhale.com

Trade Names: Lipovol HNO

Hazelnut oil. See Hazel (Corylus avellana) nut oil

HCFC 21. See Dichlorofluoromethane

HCFC 23. See Trifluoromethane

HCl. See Hydrochloric acid

HDPE. See Polyethylene, high-density

HEAR. See Rapeseed (Brassica campestris) oil

Heather (Calluna vulgaris) extract

CAS 84603-54-3; EINECS/ELINCS 283-255-2

Synonyms: Calluna vulgaris; Calluna vulgaris extract; Heather extract; Ling extract

Definition: Extract of the flowering shoots of Calluna vulgaris

Uses: Anti-inflammatory for urinary tract

Manuf./Distrib.: Carrubba

http://www.carrubba.com

Trade Names Containing: Heather Extract BG

Heather extract. See Heather (Calluna vulgaris) extract

Heavy hydrotreated naphtha (petroleum). See Naphtha, hydrotreated heavy

Heavy mineral oil. See Mineral oil

Heavy spar. See Barium sulfate

HEC, HE cellulose. See Hydroxyethylcellulose

Hectorite. See Hectorite

Hectorite

CAS 12173-47-6; EINECS/ELINCS 235-340-0

Synonyms: Hector clay; Hectorite clay

Definition: One of the montmorillonite minerals that are the principal constituent of bentonite clay

Formula: Na₀.₆₇(Mg,Li)₀.₃₃Si₈O₂₀(OH,F)₄

Toxicology: No known toxicity to skin; dust can be irritating to respiratory tract

Uses: Emulsifier, extender, absorbent, visc. control agent, stabilizer, suspending agent, thickener in pharmaceuticals

Features: VOC-free

Manuf./Distrib.: Am. Colloid†

Lipo† http://www.lipochemicals.com;

MPS† http://www.mp-solutionsinc.com

Aldivia

http://www.aldivia.com; Alzo

http://www.alzointernational.com; Anglia

†=pharmaceutical grade
Southern Clay Prods.
http://www.scprod.com

Trade Names: Bentone® MA; Hectabrite® AW; Hectabrite® DP; Hectalite® 200 S; Hectorite BC 840

Trade Names Containing: Bentone® EW

Hectorite clay. See Hectorite
HEDP; HEDPA. See Etidronic acid
HEDTAna3; HEDTA, trisodium salt; HEEDTAna3; HEEDTA, trisodium salt. See Trisodium HEDTA

Helianthus annuus; Helianthus annuus oil. See Sunflower (Helianthus annuus) seed oil
Helindone pink CN. See D&C Red No. 30; Vat red 1
Heliotropyl isobutyrate. See Piperonyl isobutyrate
Heliotropin. See Heliotropine

Heliotropine
CAS 120-57-0; EINECS/ELINCS 204-409-7
FEMA 2911

Synonyms: 1,3-Benzodioxole-5-carboxaldehyde; 3,4-Benzodioxole-5-carboxaldehyde; 3,4-Dihydroxybenzaldehyde methylene ketal; Dioxymethyleneprotocatechuic aldehyde; Formaldehyde protocatechuic acid-3,4-cyclic acetal; Heliotropin; 3,4-Methylene dihydroxybenzaldehyde; 3,4-Methylenedioxybenzaldehyde; 3,4-Methylene protocatechuic aldehyde; Piperonal; Piperonaldehyde; Piperonyl aldehyde; Protocatechuic aldehyde methylene ether

Classification: Diazio dye; organic compd.

Empirical: C₉H₉O₃

Properties: Colorless lustrous cryst., floral heliotrope odor; very sol. in alcohol, ether; sol. in propylene glycol, fixed oils, oxygenated solvs.; insol. in water, glycerin; m.w. 150.14; vapor pressure 1 mm (87 C); m.p. 37 C; b.p. 263 C; flash pt. > 230 F; tenacity 36 hrs. on blotter

Toxicology: LD50 (oral, rat) 2700 mg/kg; LDLo (IP, rat) 1500 mg/kg; mod. toxic by ing. and IP routes; can cause CNS depression; human skin irritant; may cause allergic skin reactions; mutagenic data; TSCA listed

Precaution: Combustible when exposed to heat, flame; reactive with oxidizers

HMIS: Health 1, Flammability 1, Reactivity 0

Storage: Keep in cool place; photosensitive; protect from light, heat

†=pharmaceutical grade

Uses: Synthetic flavor for pharmaceuticals, orals
Features: Cherry and vanilla flavor
Use Level: < 10%

Regulatory: FDA 21CFR §182.60, GRAS; FEMA; FDA approved for orals; Australia; Canada DSL; Japan ENCS (no. 5-514); Philippines PICCS

Manuf./Distrib.: AMC Chems.; Advanced Synthesis Tech.

Heliotropin isobutyrate. See Piperonyl isobutyrate

Heliotropine acetate. See Piperonyl acetate

Hemicellulase
CAS 9025-56-3

Toxicology: TSCA listed

Uses: Enzyme for pharmaceuticals, for extraction of essential oils and plant extracts, biomass conversion, carbohydrate research

Manuf./Distrib.: Pangaea Sciences

http://www.pangaeasciences.com; Sigma
http://www.sigma-aldrich.com/belgium

Hemlock oil. See Spruce oil

Hendecanal; Hendecanaldehyde. See Undecanal

Hendecanoic alcohol; 1-Hendecanol. See Undecyl alcohol

2-Hendecanone. See 2-Undecanone

Hendecenal. See 10-Undecenal

Hendecen-9-al. See 9-Undecenal
10-Hendecenoic acid. See Undecylenic acid
10-Hendecenyl acetate; 10-Hendecen-1-yl acetate. See Undecenyl alcohol
Hendecyl alcohol; n-Hendecenyl alcohol. See Undecylenic acid
10-Hendecenoic acid. See Undecylenic acid
Henna. See Lawsone
Hepacholine. See Choline chloride

Heparin ammonium
CAS 60800-63-7; EINECS/ELINCS 232-681-7
Synonyms: Heparin ammonium salt
Uses: Anticoagulant; laboratory reagent; forms complexes with antithrombin; stimulates cell division of cultured mammalian cells
Manuf./Distrib.: CarboMer† http://www.carbomer.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Heparin ammonium salt. See Heparin ammonium

Heparin lithium
CAS 9045-22-1; EINECS/ELINCS 232-681-7
Definition: Lithium salt of heparinic acid
Properties: Wh. powd.; sol. in water
Uses: Anticoagulant; in medical devices; laboratory reagent
Manuf./Distrib.: CarboMer† http://www.carbomer.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Trade Names: SPL Heparin Lithium

Heparin sodium
CAS 9041-08-1 (generic); EINECS/ELINCS 232-681-7
Synonyms: Heparin sodium salt; Sodium acid heparin; Sodium heparin (INCI); Sodium heparinate
Definition: Sodium salt of a sulfated glycosaminoglycan of mixed mucopolysaccharides
Properties: Wh. powd.; sol. in water; pH 5.0-7.5 (1%)
Toxicology: LD50 (IV, rat) 354 mg/kg; poison by IV route; human systemic effects; possible hemorrhage, irritation, mild pain; hypersensitive reactions incl. chills, fever, itching, runny nose, burning of feet, red eyes, tearing, joint pain, and hives; TSCA listed
Hazardous Decomp. Pros.: Heated to decomp., emits toxic fumes of NOx and Na2O

Storage: Hygroscopic
Uses: Pharmaceutical agent; anticoagulant to prevent and treat deep vein blood clots, and to flush and maintain catheters
Regulatory: BP, EP compliance; Canada DSL

Trade Names: SPL Heparin Sodium USP

Heparin sodium salt. See Heparin sodium

HEPPS. See 3-[4-(Hydroxyethyl)-1-piperazinyl]-propanesulfonic acid

1-Heptacosanol
CAS 2004-39-9
Classification: Fatty alcohol
Empirical: C27H56O
Properties: M.w. 396.8; m.p. 141 C; b.p. 82 C
Manuf./Distrib.: Sasol Germany http://www.sasol.com; http://www.sasololefinssurfactants.com

Trade Names Containing: Lessstanol™ Natural Policosanol 60

1-Heptadecanecarboxylic acid. See Stearic acid

Heptadecanoic acid, compd. with stearic acid
Heptadecanoic acid, 16-methyl-. See Isostearic acid
Chemical Component Cross-Reference

1,1,1,2,3,3,3-Heptafluoropropane
CAS 431-89-0
Synonyms: Apaflurane; HFC 227ea
Classification: Fluorinated hydrocarbon
Empirical: C3HF7
Formula: CF3CHFCF3
Properties: Colorless clear liq.; m.w. 170.03; dens. 1.4 g/cm³; vapor pressure 0.45 MPa; f.p. -131 °C; b.p. -16.36 °C
Environmental: Replacement for CFC but characterized as global warming gas by the Kyoto Conference on Climate Change
Uses: Propellant for pharmaceuticals (asthma sprays)
Features: Zero ODP; environmentally friendly
Manuf./Distrib.: Zhejiang Sanhuan Chems. Co. Ltd
http://www.sanhuanchemicals.com
Trade Names: Dymel® 227ea/P; Solkane® 227pharma; Solkane® 227ea
†=pharmaceutical grade

γ-Heptalactone
CAS 105-21-5; EINECS/ELINCS 203-279-9
FEMA 2539
Synonyms: Heptanolide-1,4; Heptan-4-olide; Heptanolide-4,1; 4-Hydroxyheptanoic acid lactone; 4-Hydroxyheptanoic acid, γ-lactone; γ-Propiobutyrolactone
Classification: Nonaromatic lactone
Empirical: C7H12O2
Properties: Colorless sl. oily liq., sweet nut-like caramel odor; sol. in alcohol; misc. with fixed oils; sl. sol. in water; m.w. 114.19; dens. 0.80902 (30/4 °C); visc. 0.977 cp (15 °C); m.p. -43.3 °C; b.p. 152.8 °C (760 mm); acid no. < 5; flash pt. 95 °F; ref. index 1.42571 (20 °C)
Toxicology: LD50 (oral, rat) 14 g/kg; mildly toxic by ing.; irritant; TSCA listed
Precaution: Flamm. liq.; incompat. with oxidizers, reducers
Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO2, acrid smoke
Storage: Hygroscopic; store under nitrogen; 6 mos. when stored at 40-70 °F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI
Manuf./Distrib.: Advanced BioTech

Heptanal
CAS 111-71-7; EINECS/ELINCS 203-898-4
UN 3056 (DOT); FEMA 2540
Synonyms: Aldehyde C-7; Enanthal; Enanthaldehyde; Enanthic aldehyde; Enanthole; Heptaldehyde; 1-Heptaldehyde; n-Heptaldehyde; 1-Heptanal; n-Heptanal; Heptanaldehyde; Heptylaldehyde; n-Heptylaldehyde; Oenanthal; Oenanthaldehyde; Oenanthic aldehyde; Oenanthol
Classification: Nonaromatic aldehyde
Empirical: C7H12O
Formula: CH3(CH2)5CHO
Properties: Colorless oily liq., penetrating fruity odor; misc. with alcohol, ether, most org. solvs.; sl. sol. in water; m.w. 114.19; dens. 0.80902 (30/4 °C); visc. 0.977 cp (15 °C); m.p. -43.3 °C; b.p. 152.8 °C (760 mm); acid no. < 5; flash pt. 95 °F; ref. index 1.42571 (20 °C)
Toxicology: LD50 (oral, rat) 14 g/kg; mildly toxic by ing.; irritant; TSCA listed
Precaution: Flamm. liq.; incompat. with oxidizers, reducers
Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO2, acrid smoke
Storage: Hygroscopic; store under nitrogen; 6 mos. when stored at 40-70 °F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI
Manuf./Distrib.: Advanced BioTech
Heptanal dimethyl acetal
CAS 10032-05-0; EINECS/ELINCS 233-103-6
FEMA 2541
Synonyms: Aldehyde C-7 dimethyl acetal; 1,1-Dimethoxy heptane
Empirical: C9H20O2
Formula: CH3(CH2)5CH(OCH3)2
Properties: Oily liq., walnut cognac odor; m.w. 160.26; dens. 0.849 (20/20 C); b.p. 164-183 C; flash pt. 136 F; ref. index 1.4130
Toxicology: Irritating to eyes, skin, mucous membranes, upper respiratory tract; may be harmful by ing., inh., skin absorp.; TSCA listed
Precaution: Combustible liq.; incompat. with strong oxidizing agents, acids
Hazardous Decomp. Prods.: CO, CO2; emits toxic fumes under fire conditons
Storage: Store in cool, dry place; keep tightly closed; keep away from heat, open flame
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Heptanal glyceryl acetal (mixed 1,2 and 1,3 acetals)
CAS 977043-66-5
FEMA 2542
Synonyms: Heptanal 1,2-glyceryl acetal
Empirical: C10H20O3
Properties: Colorless visc. liq., fungus-like sweet odor, mushroom taste; sol. in alcohol; sl. sol. in water; m.w. 188.27
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS
Manuf./Distrib.: Degussa AG/Health & Nutrition

Hep-tanal 1,2-glyceryl acetal. See Heptanal glyceryl acetal (mixed 1,2 and 1,3 acetals)
Heptanal, 2-(phenylmethylene). See α-Amylicinnamaldehyde
**n-Heptane.** See Heptane  
1-Heptanecarboxylic acid. See Caprylic acid

**Heptanoic acid**

CAS **111-14-8**; EINECS/ELINCS **203-838-7**  
UN 3265; FEMA **3348**

**Synonyms:** Carboxylic acid C7; Enanthic acid; Enanthic anhydride; Enanthylactic acid; n-Heptanoic acid; Heptolic acid; Heptoic acid; n-Heptoic acid; Heptylic acid; n-Heptylic acid; Hexacid C-7; 1-Hexanecarboxylic acid; Oenanthonic acid; Oenanthylic acid  
**Classification:** Aliphatic carboxylic acid

**Empirical:** C7H14O2

**Formula:** [CH3(CH2)5CO]2O

**Properties:** Colorless oily liq.; disagreeable rancid odor; sol. in ether, ethanol, dimethylformamide, dimethylsulfoxide, acetone, nitric acid; sol. 0.25 g/l water; m.w. 130.19; dens. 0.918; f.p. -10.5 C; m.p. -9 C; b.p. 223 C; acid no. 427 min.; flash pt. 107 C; ref. index 1.4221

**Toxicology:** LD50 (oral, rat) 7 g/kg, (IV, mouse) 1200 mg/kg; mod. toxic by IV route; mildly toxic by ing.; may cause sore throat, abdominal pain, nausea, vomiting; corrosive; mod. to severe skin irritant; may cause skin burns; inh. of mists may cause mild to mod. irritation to nose/throat; liq. or mist may cause severe eye irritation or corrosive injury; TSCA listed  
**Precaution:** Incompat. with strong oxidizers, alkalies

**Hazardous Decomp. Prods.:** CO, CO2; heated to decom., emits acrid smoke and fumes

**Storage:** Keep away from heat, sparks, open flame; keep in original, tightly closed container

**Uses:** Synthetic flavor for pharmaceuticals  
**Regulatory:** FDA 21CFR §172.515, 173.315; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

**Manuf./Distrib.:** Advanced BioTech

- **CAS:** 589-82-2; EINECS/ELINCS 209-661-1
- **UN 1993; FEMA 3547**
- **Synonyms:** Butyl ethyl carbinol; Ethyl butyl carbinol; Heptan-3-ol; Heptanol, 3-Heptan-3-ol
- **Classification:** Aliphatic ketone
- **Empirical:** C\(_7\)H\(_{14}\)O
- **Formula:** CH\(_3\)(CH\(_2\))\(_3\)CO\(_2\)H
- **Properties:** Colorless liquid; powerful green fatty odor; melon banana flavor; sol. in alcohol, ether; misc. with ether; pract. insol. in water; sol. in water; m.w. 116.20; sp.gr. 0.820 (20/4 C); vapor pressure 0.5 mm Hg (20 C); m.p. -70 C; b.p. 155-157 C; flash pt. (CC) 60 C; ref. index 1.422 (20 C)
- **Toxicology:** LD\(_{50}\) (oral, rat) 1870 mg/kg, (skin, rabbit) 4360 mg/kg; mod. toxic by ing. and skin contact; skin and severe eye irritant; can be absorb through skin inh. may cause nose/throat irritation; high concs. of vapor may cause CNS depression; ing. may cause severe lung damage, respiratory arrest; possibly death if aspirated into lungs; TSCA listed
- **Environmental:** Do not discharge to lakes, streams, ponds, or public waters
- **Precaution:** Flamm. exposed to heat or flame; incompat. with oxidizing agents (increase fire/explosion risk); wear safety glasses or goggles, rubber gloves, apron

**Hazardous Decomp. Prods.:** Heated to decomp., emits CO, CO\(_2\), acrid smoke and fumes

**NFPA:** Health 0, Flammability 2, Reactivity 0

**Storage:** 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space in cool, dry, well-ventilated area; avoid prolonged exposure to light, heat and air

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

**Heptan-3-ol.** See 3-Heptanol

**n-Heptanol.** See Heptyl alcohol

Heptan-3-one. See 3-Heptanone

4-Heptanone
CAS 123-19-3; EINECS/ELINCS 204-608-9
UN 2710 (DOT); FEMA 2546
Synonyms: Butyron; Dipropyl ketone; Heptan-4-one; Propyl ketone
Classification: aliphatic ketone
Empirical: C7H14O
Formula: (CH3CH2CH2)2CO
Properties: Colorless liq., penetrating, fruity, pineapple-like odor, burning taste; misc. with alcohol, ether; insol. in water; m.w. 114.19; dens. 0.814 (20/4 C); vapor pressure 5.2 mm Hg (20 C); m.p. -32.6 C; b.p. 142-144 C; flash pt. 49 C; ref. index 1.4073 (22 C); surf. tens. 25.2 dynes/cm

Toxicology: ACGIH TLV/TWA 50 ppm in air; LD50 (oral, rat) 3730 mg/kg, (skin, rabbit) 5660 mg/kg; LCLo (inh., rat, 4 h) 4000 ppm; mod. toxic by ing., inh., and skin contact; skin and eye irritant; TSCA listed
Precaution: Flamm.; mod. fire risk; can react with oxidizing, reducing materials
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Pineapple-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

(Z)-Hept-4-enal. See cis-4-Hepten-1-al
5-Hepten-2,6-dimethyl-. See 2,6-Dimethyl-5-hepten

5-Hepten-2-one, 6-methyl-. See Methyl heptenone

Heptyl acetate
CAS 112-06-1; EINECS/ELINCS 227-526-5
FEMA 2547
Synonyms: Acetate C-7; Acetic acid heptyl ester; Heptanyl acetate; 1-Heptyl acetate; n-Heptyl acetate; Heptyl ethanoate
Empirical: C9H18O2
Formula: C7H15OOCCH3
Properties: Colorless liq., pear-like odor, apricot-like taste; sol. in alcohol, ether; pract. insol. in water; m.w. 158.24; dens. 0.87505 (15 C); vapor dens. 5.5; m.p. -50 C; b.p. 192-193 C; flash pt. (CC) 67.8 C; ref. index 1.4150

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and
Chemical Component Cross-Reference

**1-Heptyl alcohol**. See Heptyl alcohol

**3-Heptyl alcohol**. See 3-Heptanol

**Heptyl alcohol**

CAS 111-70-6; EINECS/ELINCS 203-897-9

FEMA 2548

**Synonyms:** Alcohol C7; Enanthic alcohol; Enanthyl alcohol; 1-Heptanol; n-Heptanol; 1-Heptyl alcohol; n-Heptyl alcohol; pri-Heptyl alcohol; Hydroxyheptane; 1-Hydroxyheptane

**Classification:** Primary aliphatic alcohol

**Empirical:** C₇H₁₆O

**Formula:** CH₃(CH₂)₆OH

**Properties:** Colorless liq.; pleasant citrus odor; sol. in oxygenated solvs.; misc. with alcohol, fixed oils, ether; sl. sol. in water @ 175 C; m.w. 116.23; dens. 0.824 (20/4 C); vapor pressure 1 mm Hg (42 C); m.p. -34.6 C; b.p. 175.8 C; flash pt. 70 C; ref. index 1.423-.1427; surf.

†=pharmaceutical grade

Toxicology: LD₅₀ (oral, rat) 500 mg/kg, (skin, rabbit) 2 g/kg; mod. toxic by ing., skin contact; mildly toxic by inh.; probably an eye irritant; inh. can probably cause nose/throat irritation; high concs. may cause headache, nausea, dizziness; ing. may cause 'alcohol' intoxication symptoms; may cause severe lung damage, respiratory failure, and death if aspirated into lungs; TSCA listed

Environmental: VOC; BOD₅ 1.63; ThOD 2.90

**Precaution:** Flamm. exposed to heat, flames; reactive with oxidizing materials

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and fumes

**Storage:** Store in cool, dry, well-ventilated area

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Citrus flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL; Japan MITI

Heptyl carbinol. See Caprylic alcohol

Heptyl cinnamate
CAS 10032-08-3
FEMA 2551
Synonyms: Cinnamic acid heptyl ester; n-Heptyl cinnamate; Heptyl-β-phenylacrylate; Heptyl-3-phenyl propenoate
Definition: Ester of n-heptanol with cinnamic acid
Empirical: C16H22O2
Properties: Colorless to pale straw-yel. liq., green leafy odor; sol. in alcohol; insol. in water; m.w. 246.36; ref. index 1.52900
Uses: Synthetic flavor for pharmaceuticals
Features: Green leafy hyacinth odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Degussa AG/Health & Nutrition

n-Heptyl methanoate. See Heptyl formate
5-Heptylidihydrofuran-2-one. See γ-Undecalactone
n-Heptyl dimethylacetate. See Heptyl isobutyrate
Heptyl ethanoate. See Heptyl acetate

Heptyl formate
CAS 112-23-2; EINECS/ELINCS 203-949-0
FEMA 2552
Synonyms: Formic acid, heptyl ester; Heptanol, formate; n-Heptyl methanoate

| Chemical Component Cross-Reference | Classification: Nonaromatic ester
Empirical: C8H16O2
Formula: HCOOC7H15
Properties: Colorless liq., fruity floral odor, plum-like taste; sol. in ether; insol. in water; m.w. 144.24; dens. 0.882; b.p. 178 C; flash pt. 60 C; ref. index 1.4130
Toxicology: Primary skin irritant; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Apple, plum-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

n-Heptyl isobutyrate
CAS 2349-13-5; EINECS/ELINCS 219-076-3
FEMA 2550
Synonyms: n-Heptyl dimethylacetate; n-Heptyl isobutyrate
Definition: Ester of n-heptanol and isobutyric acid
Empirical: C11H22O2
Formula: (CH3)2CHCO2(CH2)6CH3
Properties: Colorless liq., woody odor; sol. in most org. solvs.; insol. in water; m.w. 186.30; b.p. 98 C (10 mm); flash pt. 85 C; ref. index 1.4190
Toxicology: TSCA listed
Uses: Synthetic flavor for pharmaceuticals
Features: Sweet green fruity warm floral apple cherry apricot; raspberry, pineapple fruity with citrus orange and green winey nuances taste
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

n-Heptyl isobutyrate
CAS 2349-13-5; EINECS/ELINCS 219-076-3
FEMA 2550
Synonyms: n-Heptyl dimethylacetate; n-Heptyl isobutyrate
Definition: Ester of n-heptanol and isobutyric acid
Empirical: C11H22O2
Formula: (CH3)2CHCO2(CH2)6CH3
Properties: Colorless liq., woody odor; sol. in most org. solvs.; insol. in water; m.w. 186.30; b.p. 98 C (10 mm); flash pt. 85 C; ref. index 1.4190
Toxicology: TSCA listed
Uses: Synthetic flavor for pharmaceuticals
Features: Sweet green fruity warm floral apple cherry apricot; raspberry, pineapple fruity with citrus orange and green winey nuances taste
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

n-Heptyl methanoate. See Heptyl formate
n-Heptyl methyl carbinol. See 2-Nonanol
Heptyl methyl ketone. See 2-Nonanone

Heptyl octanoate
CAS 4265-97-8; EINECS/ELINCS 224-252-8
FEMA 2553
Synonyms: Heptyl caprylate; n-Heptyl octanoate; Heptyl octylate
Definition: Ester of n-heptanol and n-octanoic acid
Empirical: C\textsubscript{15}H\textsubscript{30}O\textsubscript{2}
Properties: Colorless oily liq.; waxy, oily, green odor and flavor; insol. in water; m.w. 242.41; dens. 0.8520 (30°C); m.p. 14°C; b.p. 291°C; flash pt. > 130°C; ref. index 1.4340
Uses: Synthetic flavor for pharmaceuticals
Features: Waxy oily green fresh odor; waxy, fatty with a tropical fruity nuance taste
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

n-Heptyl octanoate; Heptyl octylate. See Heptyl octanoate

Heptyl-\beta\textendash phenylacrylate; Heptyl-3-phenyl propenoate. See Heptyl cinnamate

Hetastarch. See Hydroxyethylcellulose

Hexachlorophene
2,2',3,3',5,5',6,6'-Hexachloro-6,6'-dihydroxydiphenylmethane; Hexachlorophane; Hexachlorophen. See Hexachlorophene

Hexachloro-6,6'-dihydroxydiphenylmethane; Hexachlorophane; Hexachlorophen; 2,2'-Methylenebis (3,4,6-trichlorophenol); Trichlorophene

Classification: Halogenated phenolic compd.
Empirical: C\textsubscript{13}H\textsubscript{6}Cl\textsubscript{6}O\textsubscript{2}
Formula: CH\textsubscript{2}[C\textsubscript{6}H\textsubscript{3}(Cl)\textsubscript{3}O]H\textsubscript{2}
Properties: Wh. free-flowing powd., odorless or sl. phenolic odor; sol. in acetone, alcohol,

†=pharmaceutical grade
ether, oxygenated solvs.; insol. in water; m.w. 406.91; m.p. 163-165°C
Toxicology: LD\textsubscript{50} (oral, rat) 56 mg/kg, (skin, rat) 1840 mg/kg, (IP, rat) 22 mg/kg, (IV rat) 7500 µg/kg; poison by ing., IP, IV routes; mod. toxic by skin contact; human poison by ing.; may be fatal if swallowed; human systemic effects; eye and human skin irritant; human reproductive effects; experimental teratogen; questionable carcinogen; TSCA listed
Precaution: DOT: Poisonous material
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Cl\textsuperscript{-}
Uses: Antibacterial for pharmaceutical topicals; topical anti-infective (restricted); veterinary medicine
Features: Broad spectrum
Use Level: Up to 0.75%
Regulatory: FDA approved for topicals; SARA reportable; BP compliance; Canada DSL

Hexacid C-7. See Heptanoic acid
Hexacid C9. See Nonanoic acid
Hexacosanol. See 1-Hexacosanol

1-Hexacosanol
CAS 506-52-5
Synonyms: Ceryl alcohol; Hexacosanol
Classification: Fatty alcohol
Empirical: C\textsubscript{26}H\textsubscript{54}O
Properties: M.w. 382.71; m.p. 79-81°C; b.p. 240°C (1 mm Hg)
Trade Names Containing: Lesstanol™ Natural Octacosanol 30%; Lesstanol™ Natural Policosanol 60

Hexadecanamine hydrofluoride. See Cetylamine hydrofluoride

1-Hexadecanaminium, N-(carboxymethyl)-N,N-dimethyl-, hydroxide, inner salt. See Cetyl betaine

Hexadecylbetaeine. See Cetyl betaine
Hexadecyl dihydrogen phosphate. See Cetyl phosphate
Hexadecyl dimethylamine oxide. See Palmitamine oxide
N-Hexadecyl-N,N-
2,4-Hexadienoic acid, calcium salt. See Calcium sorbate
2,4-Hexadienoic acid potassium salt. See Potassium sorbate
Hexaethylene glycol. See PEG-6
Hexafluoroethane
CAS 76-16-4; EINECS/ELINCS 200-939-8
UN 2193 (DOT)
Synonyms: CFC-116; Ethane, hexafluoro-; F 116; Freon 116; Halocarbon 116; 1,1,2,2,2-Hexafluoroethane; Perfluoroethane; R 116; Refrigerant 116
Classification: Nonaromatic halogenated hydrocarbon
Empirical: C₂F₆
Formula: F₃CCF₃
Properties: Colorless liquefiable gas; odorless; tasteless; sl. sol. in alcohol; insol. in water; m.w. 138.02; dens. 1.59; vapor pressure 23,028 mm Hg (21 C); f.p. -94 C; m.p. -100 C; b.p. -78 C; highly stable; nonflamm.
Toxicology: LC (inh., rat, 2 h) > 20 pph
asphyxiant; inh. may cause nausea, vomiting, disorientation, narcosis, tingling, suffocation, convulsions, coma; skin exposure may cause blisters, frostbite; eye exposure may cause frostbite; target organ: heart; TSCA listed
Precaution: Fire and explosion hazard; incompat. with strong oxidizers; containers may rupture or explode if exposed to heat
Hazardous Decomp. Prods.: Thermal decomp. prods.: halogenated compds., COₓ
NFPA: Health 1, Flammability 0, Reactivity 0
Storage: Store away from heat
Uses: Aerosol propellant; refrigerant
Regulatory: Canada DSL
Trade Names Containing: KLEA 508A
1,1,2,2,2-Hexafluoroethane. See Hexafluoroethane
1,1,1,3,3,3-Hexafluoropropene
CAS 690-39-1
Synonyms: 2,2-Diiodoperfluoropropane; Hexafluoropropene HFC-236fa; Hydrochlorofluorocarbon 236
Classification: Fluorinated hydrocarbon
Empirical: C₃H₂F₆
Formula: CF₃CH₂CF₃
Properties: M.w. 152.04; f.p. -93.6 C; b.p. -1.4 C

1422

Handbook of Pharmaceutical Additives, Third Edition
**Chemical Component Cross-Reference**

**FEMA 2556**  
**Synonyms:** γ-Caprolactone; Ethyl butyrolactone; γ-Ethylbutyrolactone; 2(3H)-Furanone, 5-ethylidihydro-γ-Hexanolactone; Hexanolide-1,4; Hexan-4-olide; 4-Hydroxyhexanoic acid lactone; 4-Hydroxyhexanoic acid γ-lactone; Tonkalide  
**Classification:** Nonaromatic lactone  
**Empirical:** C₆H₁₀O₂  
**Properties:** Colorless liq., herbaceous sweet odor, sweet coumarin-caramel taste; sol. in alcohol, propylene glycol; sl. sol. in water; m.w. 114.15; dens. 1.023; m.p. -18 C; b.p. 220 C; flash pt. 209 F; ref. index 1.4390  
**Toxicology:** LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary skin irritant; TSCA listed  
**Hazardous Decomp. Prods.:** Heated to decomps., emits acrid smoke and irritating vapors  
**Uses:** Synthetic flavor for pharmaceuticals  
**Features:** Sweet flavor  
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL  
**Trade Names:** Dynasylan® HMDS; Cab-O-Sil® TS-530  
**Trade Names Containing:** Hexamethyldisilazane

**Hexamethyldisilazane**  
**CAS 999-97-3; EINECS/ELINCS 213-668-5**  
**Synonyms:** Bis (trimethylsilyl) amine; Di(trimethylsilyl) amine; Hexamethyldisilazane; HMDS; OAP; 1,1,1-Trimethyl-N-(trimethylsilyl) silanamine  
**Empirical:** C₆H₁₉NSi₂  
**Formula:** (CH₃)₃SiNHSi(CH₃)₃

†=pharmaceutical grade

**Properties:** Colorless liq.; ammonia-like odor; sol. in acetone, benzene, ethyl ether, heptane, perchloroethylene; insol. in water, reacts slowly; m.w. 161.44; dens. 0.77; vapor pressure 79 mm (50 C); b.p. 125 C; flash pt. (CC) 27 C; ref. index 1.4057; dielec. const. 2.27 (1000 Hz)  
**Toxicology:** PEL 6 mg/m³; LD₅₀ (oral, rat) 850 mg/kg, (skin, rabbit) 1350 mg/kg; LDLo (IP, mouse) 650 mg/kg; mod. toxic by ing. and IP route; corrosive; causes severe burns to eyes and irritation of skin; experimental tumorigen; questionable carcinogen; TSCA listed  
**Environmental:** VOC  
**Precaution:** Flamm.; dangerous fire hazard exposed to heat or flame; can react vigorously with oxidizers  
**Hazardous Decomp. Prods.:** Heated to decomps., emits toxic fumes of NOₓ  
**Uses:** Silylating agent in pharmaceuticals  
**Regulatory:** Canada DSL  
**Trade Names:** Dynasylan® HMDS; Cab-O-Sil® TS-530  
**Trade Names Containing:** Hexamethyldisiloxane

**Hexamethyldisiloxane**  
**CAS 107-46-0; EINECS/ELINCS 203-492-7**  
**UN UN 1993**  
**Synonyms:** Bis (trimethylsilyl) ether; Bis(trimethylsilyl) oxide; Disiloxane, hexamethyl-; HMDS; Oxybis

| Chemical Component Cross-Reference | Handbuch der pharmazeutischen Hilfsstoffe, dritte Auflage | 1423 |
**Chemical Component Cross-Reference**

(trimethylsilane); Silane, oxybis (trimethyl-
Classification: Linear siloxane
Empirical: $C_6H_{18}OSi_2$
Formula: $(CH_3)_3SiOSi(CH_3)_3$
Properties: Visc. liq.; sol. 930 ppm in water; m.w. 162.42; dens. 0.764; vapor pressure 55 mm (30 C); m.p. -68 C; b.p. 99-101 C; flash pt. -2 C; ref. index 1.3774; surf. tens. 15.9 dynes/cm; dielec. const. 2.17
Toxicology: LD50 (IP, mouse) 4500 mg/kg, (skin, rabbit) 16 ml/kg; LC50 (inh., rat, 4 h) 15,956 ppm; mildly toxic by ing., IP routes; skin/eye irritant; may cause mucous membrane/upper respiratory tract irritation; may be harmful by inh., ing., skin absorp.; prolonged/repeated exposure causes skin defatting, dermatitis; can cause dizziness; target organs: nerves; may be harmful by inh., ing., skin absorp.; prolonged/repeated exposure causes skin defatting, dermatitis; can cause dizziness; target organs: nerves; TSCA listed
Precaution: Flamm.; vapor may flash back; incompat. with strong acids/bases/oxidizers; container explosion may occur under fire conditions; may dec. to form flamm./explosive mixts. in air; generates formaldehyde in presence of air @ > 150 C
Hazardous Decomp. Prods.: CO, CO2, silicon oxide; emits toxic fumes under fire conditions
HMIS: Health 1, Flammability 4, Reactivity 0
Storage: Store under nitrogen; hygroscopic; keep tightly closed; keep away from heat, sparks, open flame
Uses: Volatile excipient in spray pump systems for pharmaceutical topicals
Regulatory: Canada DSL
Trade Names: Dytek® HMI
Hexamethylenetetramine hippurate. See Methenamine hippurate
Hexamethylenimine. See Hexamethylenimine
Hexamethylpararosaniline chloride. See Basic violet 3

Hexamidine disethionate

CAS 659-40-5; EINECS/ELINCS 211-533-5
Synonyms: 2-Hydroxyethanesulfonic acid, compd. with 4,4'-[hexane-1,6-diylbis (oxy)] bis [benzenecarboxamidine] (2:1)
Classification: Organic salt
Formula: C$_{20}$H$_{38}$N$_4$O$_2$ • (C$_2$H$_6$O$_4$S)$_2$
Properties: {Wh. powd.}
Uses: Antimicrobial, preservative for pharmaceuticals; cutaneous asepticizer; topical antiseptic
Use Level: 0.1%
Regulatory: BP, EP compliance; USA not restricted; Europe listed; Canada DSL
Trade Names: Elestab® HP 100

Hexanal

CAS 66-25-1; EINECS/ELINCS 200-624-5
UN 1207 (DOT); FEMA 2557
Synonyms: Aldehyde C-6; Caproaldehyde; Capronic aldehyde; Capronaldehyde; n-Hexanal; n-Hexyl aldehyde
Empirical: C$_8$H$_{12}$O
Formula: CH$_3$(CH$_2$)$_4$CHO
Properties: Colorless liq., powerful fatty-green odor; sol. in alcohol, fixed oils, propylene glycol, oxygenated solvs.; very sl. sol. in water; m.w. 100.18; dens. 0.808-0.812; m.p. -56.3 C; b.p. 128.7 C; flash pt. (OC) 90 F; ref. index 1.402-1.407
Toxicology: LD$_{50}$ (oral, rat) 4890 mg/kg; LC$_{L0}$ (inh., rat, 4 h) 2000 ppm; mildly toxic by ing., inh.; skin and eye irritant; TSCA listed
Precaution: Flamm.; dangerous fire hazard exposed to heat or flame; can react vigorously with oxidizing materials
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Storage: 6 mos. when stored at 40 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
Uses: Synthetic flavor and fragrance for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Synonyms: β-γ-Hexenol; cis-3-Hexenol-1; cis-3-Hexen-3-ol-1; Leaf alcohol

Classification: Organic compd.; aliphatic alcohol

Definition: Commercial prod. is the cis-isomer

Empirical: CsH12O

Formula: CH3CH2CH=CHCH2CH2OH

Hex-2-en-1-ol, 2-Hexen-1-ol, and cis-3-Hexenol are chemical components with various properties and uses. They are colorless liquids with strong odors and flavors, and are commonly used in the pharmaceutical and fragrance industries. The properties of these compounds include boiling points, flash points, and densities, as well as toxicological information, such as LD50 values and irritation potential. Precautions for handling these compounds include wearing protective gear and avoiding contact with strong oxidizers. They are typically stored under nitrogen and refrigerated to prevent degradation. Uses for these compounds include synthetic flavors for pharmaceuticals and other applications. Regulatory information includes listing under TSCA and FDA regulations.

Definition: Commercial prod. is the trans-isomer
Empirical: C₈H₁₄O₂
Formula: CH₃COOCH₂CH=CH(CH₂)₂CH₃
Properties: Colorless liq., pleasant fruity odor and taste; insol. in water; sol. in most org. solvs.; m.w. 142.19; dens. 0.898; b.p. 165-166 C; flash pt. 58 C; ref. index 1.4270
Toxicology: LD₅₀ (oral, rat) > 5 g/kg, (dermal, rabbit) > 5 g/kg; eye, skin, respiratory system irritant; ing. may cause stomach pain, vomiting; TSCA listed
Precaution: Combustible liq.; incompat. with strong oxidizers, reducers
Hazardous Decomp. Prods.: CO₂; heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 1, Flammability 2, Reactivity 0
Storage: Keep away from heat, sparks, open flame; keep in original, tightly closed container
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; EINECS, AICS, Canada DSL, ECL, ENCS, PICCS listed

Hexyl isovalerate

1-Hexyl isobutyrate; n-Hexyl isobutyrate. See Hexyl isobutyrate

n-Hexyl isopentanoate. See Hexyl isovalerate

†=pharmaceutical grade
Hexyl methylbutyrate. See Hexyl 2-methylbutyrate

Hexyl 2-methylbutyrate
CAS 10032-15-2; EINECS/ELINCS 233-106-2
FEMA 3499
Synonyms: Hexyl 2-methylbutanoate; Hexyl methylbutyrate; 2-Methylbutanoic acid n-hexyl ester
Classification: Nonaromatic ester
Definition: Ester of n-hexanol and 2-methylbutanoic acid
Empirical: C11H22O2
Properties: Colorless liq., strong green fruity odor, unripe strawberry taste; sol. in alcohol, fixed oils; insol. in water; m.w. 186.30; dens. 0.858; flash pt. 183 F; ref. index 1.4185; acid value 2.0 max.
Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; mildly toxic by ing. and skin contact; primary skin irritant; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
HMIS: Health 1, Flammability 1, Reactivity 0
Uses: Synthetic flavor for pharmaceuticals
Features: Apple, strawberry-like, fruity flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

n-Hexyl-n-octanoate. See Hexyl octanoate

2-Hexyl-1-octanol
CAS 19780-79-1
Synonyms: Isomyristyl alcohol; 12-Methyl-1-tridecanol
Empirical: C14H30O
Toxicology: TSCA listed
Uses: Ingred. in pharmaceuticals
Manuf./Distrib.: Chemsampco http://www.chemsampco.com
Trade Names Containing: Jarcol™ I-14T

n-Hexyl octylate. See Hexyl octanoate

Hexyl phenylacetate
CAS 5421-17-0; EINECS/ELINCS 226-537-2
FEMA 3457
Synonyms: n-Hexyl phenylacetate; Hexyl α-toluate; Phenylacetic acid hexyl ester
Classification: Aromatic ester
Empirical: C14H20O2
Properties: Colorless liq.; fruity odor; insol. in water; sol. in most org. solvs.; m.w. 220.31; dens. 0.970; vapor dens. 7.5; b.p. 264-265 C; flash pt. > 130 C; ref. index 1.4850
Toxicology: Skin, eye irritant; TSCA listed
Precaution: Incompat. with strong oxidizers
Storage: Keep away from heat, sparks, open
α-Hexyl propanoate. See Hexyl propanoate

Hexyl propanoate; 1-Hexyl propanoate; n-Hexyl propanoate. See Hexyl propanoate

Hexyl propanoate
CAS 2445-76-3; EINECS/ELINCS 219-495-1
FEMA 2576
Synonyms: Hexyl propanoate; 1-Hexyl propanoate; n-Hexyl propanoate; 1-Hexyl propionate; Propionic acid, hexyl ester; Propionic acid, hexyl ester
Classification: Nonaromatic ester
Definition: Ester of n-hexanol and propionic acid
Empirical: C9H18O2
Properties: Liq., earthy acrid odor, sweet metallic-fruity taste; sol. in alcohol, propylene glycol; insol. in water; m.w. 158.24; dens. 0.871; b.p. 180 C; flash pt. 149 F; ref. index 1.4105
Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Synthetic flavor for pharmaceuticals
Features: Pear-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Advanced BioTech
http://www.adv-bio.com; Advanced Synthesis Tech.
http://www.advancedsynthesis.com; Bell Flavors & Fragrances
http://www.bellff.com; Grau Aromatics

1-Hexyl propionate. See Hexyl propionate

4-Hexylresorcinol; Hexylresorcinol. See 4-Hexylresorcinol

4-Hexylresorcinol
CAS 136-77-6; EINECS/ELINCS 205-257-4
INS586
Synonyms: 1,3-Dihydroxy-4-hexylbenzene; 4-Hexyl-1,3-benzenediol; 4-Hexyl-1,3-dihydroxybenzene; 4-Hexylresorcinol; Hexylresorcinol; 4-n-Hexylresorcinol; p-Hexylresorcinol
Empirical: C12H18O2
Formula: C6H13C6H13(OH)2
Properties: Colorless to pale yel. heavy liq. which solidifies on standing or need.; pungent odor; sharp astringent taste; sl. sol. in water; sol. in benzene, ether, acetone, chloroform, alcohol, glycerol, veg. oils; m.w. 194.30; m.p. 67.5-69 C; b.p. 179 C
Toxicology: LD50 (oral, rat) 550 mg/kg; LDLo (IP, mouse) 50 mg/kg, (subcut., mouse) 750 mg/kg; poisonous by ing., IP routes; mod. toxic by subcut. route; may irritate eyes, skin, respiratory tract; conc. sol'ns. can burn skin and mucous membranes; questionable carcinogen with mutagenic data; experimental reproductive effects; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Anthelmintic; topical antiseptic
Regulatory: BP, EP compliance; Canada DSL
Manuf./Distrib.: Advanced Synthesis Tech.

L-Histidine hydrochloride hydrate. See Histidine hydrochloride monohydrate

Histidine hydrochloride monohydrate
CAS 6341-24-8 (D-); 5934-29-2 (L-);
EINECS/ELINCS 228-733-3 (D-); 211-438-9 (L-)
Synonyms: 1α-Amino-4 (or 5)-imidazolepropionic acid monohydrochloride; Glyoxaline-5-alanine monohydrochloride; L-Histidine hydrochloride hydrate; Histidine monohydrochloride monohydrate
Classification: Aminic salt
Empirical: C6H12ClN3O3
Formula: C6H9N3O2 • ClH • H2O
Properties: Wat. need., plates, or cryst. powd., sl.
   bitter taste; sol. in water; insol. in alcohol, ether; m.w. 209.63; decomp. 250 C
Toxicology: LD50 (IP, mouse) > 1677 mg/kg
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx
HMIS: Health 1, Flammability 1, Reactivity 1
Uses: Flavor, nutrient, dietary supplement in pharmaceuticals
Regulatory: FDA 21 CFR §172.310, limitation
2.4%; Japan approved

Honey
CAS 8028-66-8; EINECS/ELINCS 310-127-6
Synonyms: Clarified honey; Mel; Strained honey
Definition: Saccharic secretion gathered by honey bees, Apis mellifera
Properties: Lt. ylsh. to reddish brn. thick syrupy liq., char. odor, sweet faintly acrid taste
Uses: Sweetener, flavor in pharmaceuticals; emollient; humectant
Regulatory: BP, EP compliance (purified); Canada DSL

Hops extract. See Hops (Humulus lupulus) extract

Hops (Humulus lupulus) extract
CAS 8016-25-9; 8060-28-4; EINECS/ELINCS 232-504-3
FEMA 2578
Synonyms: Hops extract; Humulus lupulus; Humulus lupulus extract
Definition: Extract derived from Humulus lupulus
Properties: Bitter tonic, aromatic flavor
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Hops (Humulus lupulus) oil
CAS 8007-04-3
FEMA 2580
Synonyms: Hops oil; Humulus americanus; Humulus americanus oil; Humulus lupulus; Humulus lupulus oil
Definition: Volatile oil derived from freshly dried membranous cones of female plants of Humulus lupulus, containing lupulin, alkaloids, valerianic acid
Properties: Lt. yel. to brnsh. liq., aromatic odor; sol. in fixed oils, min. oil; sl. sol. in alcohol; insol. in glycerin, propylene glycol, water; dens. 0.855-0.880 (15/15 C); ref. index 1.1470-1.494 (20 C)
Toxicology: LD50 (oral, rat) 2700 mg/kg; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Keep cool, well closed; protect from light
Uses: Natural flavor for pharmaceuticals
Features: Sharp green spicy sweet beer herbal odor
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS; Japan approved; Canada DSL
Hops oil. See Hops (Humulus lupulus) oil
Hordeum distichon extract. See Barley

†=pharmaceutical grade

Horehound (Marrubium vulgare) extract
CAS 84696-20-8; EINECS/ELINCS 283-638-4
FEMA 2581
Synonyms: Hoarhound extract; Horehound extract; Marrubium vulgare; Marrubium vulgare extract
Definition: Extract of the herb of the horehound, Marrubium vulgare
Properties: Bitter tonic, balsamic
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS
Horse chestnut (Aesculus hippocastanum) extract
CAS 8053-39-2; 90045-79-7; EINECS/ELINCS 232-497-7; 289-943-9
Synonyms: Aesculus hippocastanum; Aesculus hippocastanum extract; Horse chestnut extract
Definition: Extract of the horse chestnut, Aesculus hippocastanum
Uses: Botanical in sun care and eye care prods.
Chemical Component Cross-Reference

**Thornley**

**Horse chestnut extract.** See Horse chestnut (Aesculus hippocastanum) extract

**Horsemint extract; Horsemint leaves extract.** See Horsemint (Monarda punctata) extract

**Horsemint (Monarda punctata) extract**
CAS 8006-85-7
FEMA 2582
Synonyms: Horsemint extract; Horsemint leaves extract; Monarda; Monarda punctata; Monarda punctata extract; Wild bergamot
Definition: Extract derived from leaves of Monarda punctata or other spp.
Properties: Thymol-like odor, harsh burning aromatic flavor; dens. 0.923-0.933
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS

**Horsetail (Equisetum arvense) extract**
CAS 71011-23-9; EINECS/ELINCS 275-123-8
Synonyms: Dutch rush extract; Equisetum arvense; Equisetum arvense extract; Horsetail extract; Scouring rush extract
Definition: Extract of the sterile caules of Equisetum arvense
Properties: Brown fine powd.; particle size < 300 µm; dens. (tapped) 0.5 g/ml
Uses: Diuretic; astringent to stop bleeding and stimulate healing; an antitubercular drug
Manuf./Distrib.: Carrubba
http://www.carrubba.com; Grau Aromatics
http://www.grau-aromatics.de
Trade Names Containing: Hair Complex Aquosum

**Horsetail extract.** See Horsetail (Equisetum arvense) extract

**Hydriodic acid**

**CAS 10034-85-2; EINECS/ELINCS 233-109-9**

**UN 1787 (DOT); 2197 (anhyd.; UN DOT)**

**Synonyms:**  Anhydrous hydroiodic acid; Hydrogen iodide; Hydroiodic acid

**Classification:**  Acid

**Empirical:**  HI

**Properties:**  Colorless to pale yel. liq., odorless; misc. with water, alcohol; m.w. 127.91; dens. 1.7; b.p. 127 C; m.p. 133-135 C; flash pt. none

**Toxicology:**  Poison by ing. and inh.; corrosive; eye, skin, and mucous membrane irritant; TSCA listed

**Precaution:**  Explodes on contact with ethyl hydroperoxide; ignites on contact with magnesiam; perchloric acid; potassium + heat; potassium chlorate + heat; oxidants; violent reactions possible; attacks natural rubber

**Hazardous Decomp. Prods.:**  Reacts with water or steam to produce toxic and corrosive fumes; heated to decomp., emits highly toxic fumes of I–

**Storage:**  Light- and air-sensitive; refrigerate

**Uses:**  Prep. of iodine salts, org. preps.; analytical reagent; expectorant

**Regulatory:**  Canada DSL

**Hydroabietyl alcohol**

**CAS 1333-89-7; 26266-77-3; 13393-93-6;**

**EINECS/ELINCS 247-574-0**

**Synonyms:**  Dihydroabietyl alcohol; Dodecahydro-1,4a-dimethyl-7-(1-methylethyl)-1-phenanthrenemethanol; 1-Phenanthrenemethanol, tetradecahydro-1,4a-dimethyl-7-(1-methylethyl)-1-
**Definition:** Organic alcohol derived from wood rosin

**Empirical:** C_{20}H_{34}O

**Formula:** C_{19}H_{31}CH_{2}OH

**Properties:** Colorless visc. liq. to solid; insol. in water; m.w. 290.49; dens. 1.007-1.008; m.p. 32-33 C; flash pt. (COC) 185 C; ref. index 1.526 (20 C)

**Toxicology:** TSCA listed

**Precaution:** Combustible

**Uses:** Excipient in pharmaceuticals

**Regulatory:** FDA 21CFR §175.105, 176.180

**Manuf./Distrib.:** ChemService [link], Hercules [link], J.H. Calo† [link]

**Hydrobis (2-methylpropyl) aluminum. See Diisobutylaluminum hydride**

**Hydrocarbon 40**

**CAS:** 8041-63-2

**Uses:** Water repellent in pharmaceutical topicals

**Regulatory:** FDA approved for topicals

**Hydrochloric acid**

**CAS:** 7647-01-0; EINECS/ELINCS 231-595-7

**UN:** 1050 (DOT); UN 1789 (DOT); UN 2186 (DOT); INS507; E507

**Synonyms:** Aqueous hydrogen chloride; Chlorhydric acid; HCl; Hydrogen chloride; Muriatic acid; Spirits of salt

**Classification:** Inorganic acid

**Empirical:** ClH

**Formula:** HCl

**Properties:** Colorless fuming gas or liq., pungent odor; sol. in water, alcohol, ether, benzene; insol. in hydrocarbons; m.w. 36.46; dens. 1.639 g/l (gas, 0 C), 1.194 (liq., -26 C); m.p. -114.3 C; b.p. -84.8 C; pH 1.1 (0.1 N sol'n.); nonflamm. gas

**Toxicology:** ACGIH TLV/CL 5 ppm; mod. toxic by ing.; human poison; mildly toxic to humans by inh.; corrosive irritant to skin, eyes, mucous membranes; mutagenic data; experimental teratogen; 35 ppm causes throat irritation on short exposure; TSCA listed

**Precaution:** DOT: Corrosive material; explosive reaction with many chems.; potentially dangerous reaction with sulfuric acid releases HCl gas; strongly corrosive; incompat. with metals, bases, oxidizing/reducing agents, etc.

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of Cl–

**NFPA:** Health 3, Flammability 0, Reactivity 1

**Storage:** Store in cool, dry, well-ventilated area out of direct sunlight; prevent release of vapor or mist

**Uses:** Acidifier, buffer and neutralizer for pharmaceuticals, injectables, parenterals, inhalants, intravenous, ophthalmics, orals, otics, topicals; preservative for soft contact lens

**Regulatory:** FDA 21CFR §131.144, 131.129, 155.191, 155.194, 160.105, 160.185, 172, 172.560, 172.892, 182.1057, GRAS; HAP; Canada DSL; Japan restricted; Europe listed; UK approved; FDA approved for injectables, parenterals, inhalants, intravenous, ophthalmics, orals, otics, topicals; USP/NF, BP, EP, JP compliance

1-Hydrochloride arginine. See L-Arginine monohydrochloride
Hydrochlorofluorocarbon 236. See 1,1,1,3,3,3-Hexafluoropropane
Hydrochlorothiazide
CAS 58-93-5
Synonyms: 6-Chloro-3,4-dihydro-2H-1,2,4-
benzothiadiazine-7-sulfonamide-1,1-
dioxide; Chlorosulthiadil; Chlorzide;

†=pharmaceutical grade

Dihydrochlorothiazide
Empirical: C7H8ClN3O4S2
Properties: Wh. or pract. wh. cryst. powd., odorless; sol. in sodium hydroxide sol’n., dimethylformamide, dil. ammonia, NaOH; insol. in water, chloroform, ether, dil. min. acids; m.w. 297.75; m.p. 273-275 C
Toxicology: LD50 (oral, mouse) 2830 mg/kg; poison by IP and IV routes; mod. toxic by ing. and subcutaneous routes; mutagenic data; diuretic; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of SOx, Cl-, and NOx
Uses: Pharmaceutical orals; diuretic drug
Regulatory: FDA approved for orals; BP, Ph.Eur. compliance; Canada DSL

Hydrocinnamaldehyde
CAS 104-53-0; EINECS/ELINCS 203-211-8
FEMA 2887
Synonyms: Benzenepropanal;
Benzylacetaldehyde;
Dihydrocinnamaldehyde; Dihydrocinnamic
aldehyde; Hydrocinnamic aldehyde;
Hydrocinnamide; 3-Phenylpropanal; 3-
Phenyl-1-propanal; 3-
Phenylpropionaldehyde; β-
Phenylpropionaldehyde; Phenylpropionic
aldehyde; Phenylpropyl aldehyde; 3-
Phenylpropyl aldehyde
Classification: aromatic compd.
Empirical: C9H10O
Chemical Component Cross-Reference

**Formula:** C₆H₅CH₂CH₂CHO

**Properties:** Colorless to sl. yel. liq., strong floral hyacinth odor; misc. with alcohol, ether; insol. in water; m.w. 134.19; dens. 1.010-1.020; b.p. 221-224 C; flash pt. 203 F; ref. index 1.520-1.532

**Toxicology:** LD₅₀ (IV, mouse) 56 mg/kg; poison by IV route; human skin irritant; eye irritant; TSCA listed

**Precaution:** Combustible liq.

**Hazardous Decomp. Prods.:** Heated to decomp. emits acrid smoke and irritating fumes

**Storage:** Store in tightly closed containers in dry, well-ventilated area away from direct sunlight.

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Hydrocinnamic acid**

**Synonyms:** Benzenepropanoic acid; 3-Benzenepropanol; Benzylethyl alcohol; Dihydrocinnamic alcohol; Dihydrocinnamyl alcohol; Hydrocinnamyl alcohol; 1-Hydroxy-3-phenylpropane; (3-Hydroxypropyl)benzene; Phenethyl carbinol; Phenethyl carbinol; Phenyl-1-propanol; 3-Phenylpropanol; 3-Phenylpropanol-1-ol; 3-Phenyl-n-propanol; γ-Phenylpropanol; Phenylpropyl alcohol; 3-Phenylpropyl alcohol; γ-Phenylpropyl alcohol; 1-Propanol, 3-phenyl-

**Classification:** Aromatic alcohol

**Empirical:** C₆H₅O

**Formula:** C₆H₅(CH₂)₃OH

**Properties:** Colorless sl. visc. oily liq., sweet hyacinth-mignonette balsamic odor; sol. in fixed oils, propylene glycol, ethanol; misc. with oxygenated solvs.; sl. sol. in water; insol. in glycerin, paraffin oil; m.w. 136.21; sp.gr. 0.998-1.002; m.p. -18 C; b.p. 235 C; flash pt. (TCC) 109 C; ref. index 1.524-1.528

**Toxicology:** LD₅₀ (oral, rat) 2300 mg/kg, (skin, rabbit) 5000 mg/kg; mod. toxic by ing.; mildly toxic by skin contact; irritating to eyes, skin, mucous membranes, upper respiratory tract; may be harmful by inh.; TSCA listed

**Environmental:** Prevent contamination of soil, ground- and surf. water; do not discharge into environment

**Precaution:** Combustible liq.; incompat. with strong oxidizing agents, strong reducing agents

**Hazardous Decomp. Prods.:** CO, CO₂; heated
Chemical Component Cross-Reference †=pharmaceutical grade

Handbook of Pharmaceutical Additives, Third Edition

Hydrocinnamic aldehyde. See Hydrocinnamaldehyde

Hydrocinnamic isobutyrate. See 3-Phenylpropyl isobutyrate

Hydrocinnamyl acetate

CAS 122-72-5; EINECS/ELINCS 204-569-8

FEMA 2890

Synonyms: Hydrocinnamic acid; 3-Phenyl-
1-propanol acetate; Phenylpropyl acetate;
3-Phenylpropyl acetate

Empirical: C_{11}H_{14}O_{2}

Formula: C_{6}H_{5}CH_{2}CH_{2}OOCCH_{3}

Properties: Colorless liq., spicy floral odor; sol. in
alcohol; insol. in water; m.w. 178.25; dens.
1.012; flash pt. > 212 F; ref. index 1.494

Toxicology: LD_{50} (oral, rat) 4700 mg/kg; mildly
toxic by ing.; TSCA listed

Precaution: Combustible liq.

Hazardous Decomp. Prods.: Heated to
decom, emits acrid smoke and fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA
Chemical Component Cross-Reference

Hydrodisobutylaluminum. See Diisobutylaluminum hydride
Hydroessential anissette. See Anise (Pimpinella anisum) oil
Hydrofluorocarbon 23. See Trifluoromethane
Hydrofuran. See Tetrahydrofuran

Hydrogenated butylene/ethylene/styrene copolymer
Definition: Polymer of butylene, ethylene, and styrene that has been hydrogenated
Uses: Emollient, visc. control agent in pharmaceuticals

Hydrogenated castor oil
CAS 8001-78-3; EINECS/ELINCS 232-292-2
Synonyms: Castor oil, hydrogenated; Castorwax; Opalwax
Definition: End prod. of controlled hydrogenation of castor oil, consisting mainly of the triglyceride of hydroxystearic acid
Properties: Wh. hard wax; very insol. in water and in the more common org. solvs.; m.w. ≈ 932; m.p. 86-88 C; iodine no. 5 max.; sapon. no. 176-182; hyd. no. 154-162
Toxicology: LD50 (oral, rat) > 10 g/kg; ingestion of large amts. may cause pelvic congestion; TSCA listed
Uses: Surfactant, emollient, emulsifier, visc. control agent for pharmaceuticals, orals, topicals; stiffener, wax for ointments; lubricant, tableting aid for tablet coatings; solvent for intramuscular injectables; laxative
Regulatory: FDA 21CFR §175.105, 175.300, 176.170, 176.210, 177.1200, 177.1210, 177.2420, 177.2800, 178.3280; USP/NF compliance; Canada DSL

Hydrogenated coco-glycerides
Definition: Mixture of mono, di, and triglycerides of hydrogenated coconut oil
Uses: Emollient, ointment base, consistency agent for pharmaceuticals; suppository base
Trade Names: Akosoft 36; Massa Estarinum® 299; Massa Estarinum® B; Massa Estarinum® C; Softisan® 100; Softisan® 133; Softisan® 134; Softisan® 138; Softisan® 142; Witepsol® E76; Witepsol® E85; Witepsol® H5; Witepsol® H12; Witepsol® H15; Witepsol® H32; Witepsol® H35; Witepsol® H37; Witepsol® H185; Witepsol® W25; Witepsol® W31
Chemical Component Cross-Reference

**Witepsol® W32; Witepsol® W35; Witepsol® W45; Witocan® 42/44**

Trade Names Containing: **Massa Estarinum® BC; Massa Estarinum® E; Witepsol® E75; Witepsol® H175; Witepsol® H19 Witepsol® S51; Witepsol® S52; Witepsol® S55; Witepsol® S58**

Hydrogenated coconut acid
CAS **68938-15-8; EINECS/ELINCS 273-118-5**

Synonyms: Acids, coconut, hydrogenated; Coconut acid, hydrogenated; Coconut oil fatty acids, hydrogenated; Fatty acids, coco, hydrogenated

**Definition:** End prod. of controlled hydrogenation of coconut acid

**Uses:** Emulsifier for pharmaceuticals; pharmaceutical intermediate

**Regulatory:** FDA 21CFR §175.105, 176.210, 177.2600, 177.2800, 178.3570

Manuf./Distrib.: **Nottingham**
http://www.ppiinc.com; Rhodia HPCI1I
http://www.rhodia-hpcii.com

**Trade Names:** Hystrene® 5012; Industrene® 223

Hydrogenated coconut oil
CAS **84836-98-6; EINECS/ELINCS 284-283-8**

Synonyms: Coconut oil, hydrogenated

**Definition:** End prod. of controlled hydrogenation of coconut oil

**Uses:** Lubricant, moisturizer, base in pharmaceutical coatings, gelatin capsules, suppositories

**Regulatory:** FDA 21CFR §175.105, 176.210, 177.2600, 177.2800; Canada DSL

Manuf./Distrib.: **Aarhus Karlshamn A/S†**
http://www.aak.com; Alnor Oil
http://www.alnoroil.com; Nottingham
http://www.ppiinc.com; Sea-Land

**Trade Names:** Sabowax HCO

Hydrogenated C6-14 olefin polymers
CAS **163149-29-9 (generic)**

**Definition:** Series of low m.w. polymers of olefin monomers, each contg. 6-14 carbon atoms

**Uses:** Viscosity control agent, emollient

**Trade Names:** PureSyn™ 100

Hydrogenated corn syrup. See Hydrogenated starch hydrolysate
### Supersat

**Hydrogenated lard**

CAS: 73138-67-7

*Synonyms:* **Lard, hydrogenated**

*Definition:* End prod. of controlled hydrogenation of lard

*Uses:* **Emollient**

*Trade Names Containing:* **Fattylan**

**Hydrogenated lard glyceride**

CAS: 8040-05-9; 91744-55-7; EINECS/ELINCS 294-619-5

*Synonyms:* **Glycerides, hydrogenated lard mono-; Glycerides, lard mono-, hydrogenated**

*Definition:* End prod. of controlled hydrogenation of lard glycerides

*Properties:* Nonionic

*Uses:* **Emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals**

*Regulatory:* FDA 21CFR §175.105, 176.210

*Trade Names Containing:* **Dimodan® HA**

**Hydrogenated lard mono-, di- and tri-glycerides.** See Hydrogenated lard glycerides

**Hydrogenated lecithin**

CAS: 92128-87-5; 97281-48-6; EINECS/ELINCS 295-786-7; 306-549-5

*Synonyms:* **Cholinphosphoric acid diglyceride ester; 1,2-Diacyl-sn-glycero-3-phosphocholine; Hydrogenated soya phosphatidylcholine; Lecithin, hydrogenated; (3-sn-Phosphatidyl) choline, soya, hydrogenated**

*Definition:* End prod. of controlled hydrogenation of lecithin

*Empirical:* **C₄₄H₈₂NO₉P**

*Properties:* M.w. 783; amphoteric

*Uses:* **Emulsifier, moisturizer, solubilizer, stabilizer, o/w surfactant, refatting agent for pharmaceuticals; prep. of liposomes for pharmaceuticals**

### Hydrogenated menhaden acid

*Synonyms:* **Acids, menhaden, hydrogenated; Fatty acids, menhaden oil, hydrogenated; Menhaden acid, hydrogenated**

*Definition:* End prod. of controlled hydrogenation of fatty acids obtained from menhaden oil

*Uses:* **Surfactant, emulsifier, lubricant, mold release agent for pharmaceuticals; chemical intermediate**

*Regulatory:* FDA 21CFR §175.105, 176.210, 177.2800, 178.3570

*Trade Names:* **Hystrene® 3022**

**Hydrogenated menhaden oil**

CAS: 93572-53-3; 68002-72-2; EINECS/ELINCS 297-485-6

*Synonyms:* **Menhaden oil, hydrogenated**

*Definition:* End prod. of controlled hydrogenation of menhaden oil

*Properties:* Wh. opaque solid, odorless; iodine no. 10 max.; sapon. no. 180-200

*Uses:* **Pharmaceutical intermediate**

*Regulatory:* FDA 21CFR §175.105, 176.170, 176.210, 177.2800, 184.1472, 186.1551, GRAS

**Hydrogenated microcrystalline wax**

CAS: 92045-76-6; EINECS/ELINCS 295-458-3

*Synonyms:* **Microcrystalline wax, hydrogenated; Paraffin waxes and hydrocarbon waxes, microcrystalline, hydrotreated**

*Definition:* Complex combination of hydrocarbons obtained from residual oils by solvent crystallization, and treated with hydrogen in presence of a catalyst; consists predominantly of sat. hydrocarbons with > C25

*Uses:* **Viscosity control agent in pharmaceuticals**

*Trade Names Containing:* **Pionier® 1730; Pionier® 3476; Pionier® 17106**

**Hydrogenated palatinose.** See **Isomalt**

**Hydrogenated palm glyceride**

CAS: 67784-87-6; 91744-73-9; 97593-29-8; EINECS/ELINCS 294-638-9

*Synonyms:* **Glycerides, palm oil mono-, hydrogenated; Palm oil glyceride, hydrogenated**

*Definition:* End prod. of controlled hydrogenation of palm glyceride

*Features:* Increases skin humidity

*Trade Names: Phospholipon® 80 H; Phospholipon® 90 H; Phospholipon® 100 H*

*Trade Names Containing:* **Melarrest™ L**
Chemical Component Cross-Reference

Properties: Nonionic
Uses: Emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals
Regulatory: FDA 21CFR §176.210, 177.2800
Trade Names: Monomuls® 90-35

Hydrogenated palm glycerides
CAS 91744-66-0; EINECS/ELINCS 294-631-0
Synonyms: Glycerides, palm oil mono-, di- and tri, hydrogenated; Hydrogenated palm mono-, di- and tri-glycerides
Definition: End prod. of controlled hydrogenation of palm oil glycerides
Properties: Nonionic
Uses: Emollient, emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals
Trade Names: Monomuls® 90-35
Trade Names Containing: Suppocire® CM

Hydrogenated palm kernel glycerides
CAS 93334-20-4; EINECS/ELINCS 297-094-0
Synonyms: Glycerides, palm kernel, mono-, di- and tri-, hydrogenated
Definition: End prod. of controlled hydrogenation of palm kernel glycerides
Uses: Emollient, visc. control agent for pharmaceuticals
Trade Names: Monomuls® 60-35
Trade Names Containing: Suppocire® CM

Hydrogenated palm kernel oil
CAS 68990-82-9; 84540-04-5; EINECS/ELINCS 273-627-2; 283-093-2
Synonyms: Oils, palm kernel, hydrogenated; Palm kernel oil, hydrogenated
Definition: End prod. of controlled hydrogenation of palm kernel oil
Uses: Emollient, visc. control agent, fat for pharmaceutical ointments

Hydrogenated palm mono-, di- and triglycerides. See Hydrogenated palm glycerides

Hydrogenated palm oil
CAS 8033-29-2; 68514-74-9; EINECS/ELINCS 271-056-3
Synonyms: Oils, palm, hydrogenated; Palm oil, hydrogenated
Definition: End prod. of controlled hydrogenation of palm oil
Uses: Hard wax, emollient, consistency agent, crystallization promoter, m.p. modifier, bodying agent, moisturizer for pharmaceuticals; filler, binder, lubricant, disintegrant, solubilizer, carrier, emulsifier, emollient in tablets, capsules, suppositories
Regulatory: FDA 21CFR §175.105, 176.210, 177.2800
Trade Names: Dynasan® P60; Softisan® 154

Hydrogenated palm/palm kernel oil PEG-6 complex. See Hydrogenated palm/palm kernel oil PEG-6 esters

Hydrogenated palm/palm kernel oil PEG-6 esters
Synonyms: Hydrogenated palm/palm kernel oil PEG-6 complex
Definition: Complex mixture formed from transesterification of hydrog. palm kernel oil, hydrog. palm oil, and PEG-6
Uses: Emollient for pharmaceuticals; amphiphilic agent to improve drug delivery
Features: Hydrophilic
Trade Names Containing: Labrafil® M 2130 CS

Hydrogenated polybutene
CAS 68937-10-0
Synonyms: But-1-ene compd. with but-2-ene; Polybutene, hydrogenated
Classification: Polymer
Properties: Colorless, odorless, and tasteless; dens. 0.830; flash pt. 235 C; ref. index 1.4581
Toxicology: TSCA listed
Uses: Emollient and occlusivity agent in lip balms and pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
Trade Names: Versagel™ RE 750

Hydrogenated poly-1-decen; Hydrogenated polydecene. See 1-Decene, homopolymer, hydrogenated

Hydrogenated polyisobutene
CAS 40921-86-6; 61693-08-1
Synonyms: Polyisobutane; Propane, 2-methyl-, homopolymer
Classification: Branched chain aliphatic hydrocarbon
Formula: \([\text{CH}_2\text{C(CH}_3\text{)}_2]_n\), avg. \(n = 6-8\)
Toxicology: Nonirritating to eyes and skin, noncomedogenic, nontoxic when ingested
Uses: Emollient, spreading agent, penetrant for pharmaceuticals
Chemical Component Cross-Reference

Regulatory: FDA 21CFR §175.105, 175.300, 178.3740
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; CoKEM Assoc.; Engelhard http://www.engelhard.com

Hydrogenated soya phosphatidylcholine. See Hydrogenated lecithin

Hydrogenated soybean glyceride. See Hydrogenated soy glyceride

Hydrogenated soybean glycerides. See Hydrogenated soy glycerides

Hydrogenated soybean oil
CAS 8016-70-4; EINECS/ELINCS 232-410-2
Synonyms: Soybean oil hydrogenated
Definition: End prod. of controlled hydrogenation of soybean oil
Toxicology: TSCA listed
Uses: Crystallization promoter, m.p. modifier, bodying agent, lubricant, moisturizer, diluent in pharmaceuticals; filler in capsules, tablets, suppositories; pharmaceutical intermediate
Regulatory: FDA 21CFR §175.105, 176.180, 176.210, 177.2800, 182.70, 182.170; USP/NF, BP, EP compliance; Canada DSL
Trade Names: Clarity; Dritex S; Sterotex® HM NF
Trade Names Containing: Sterotex® K, NF; Sterotex® K

Hydrogenated soybean oil glycerides;
Hydrogenated soybean oil mono-, di- and tri- glycerides. See Hydrogenated soy glycerides

Hydrogenated soybean oil monoglyceride. See Hydrogenated soy glyceride

Hydrogenated soy glyceride
CAS 61789-08-0; EINECS/ELINCS 263-030-5
Synonyms: Glycerides, soya mono-, hydrogenated; Glycerides, soybean oil hydrogenated, mono; Hydrogenated soybean glyceride; Hydrogenated soybean oil monoglyceride

†=pharmaceutical grade

Definition: End prod. of controlled hydrogenation of soybean monoglycerides
Properties: Nonionic
Uses: Emulsifier, emollient, stabilizer, dispersant, opacifier for pharmaceuticals
Regulatory: FDA 21CFR §176.210, 177.2800
Trade Names: Dimodan® H SK-A

Hydrogenated soy glycerides
CAS 68201-48-9; 91745-04-9; EINECS/ELINCS 294-672-4
Synonyms: Glycerides, soya mono-, di- and tri-, hydrogenated; Hydrogenated soybean glycerides; Hydrogenated soybean oil glycerides; Hydrogenated soybean oil mono-, di- and tri- glycerides
Definition: End prod. of controlled hydrogenation of a mixture of mono, di and triglycerides derived from soybean oil
Properties: Nonionic
Uses: Emollient, emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals
Regulatory: FDA 21CFR §176.210, 177.2800

Hydrogenated starch hydrolysate
CAS 68425-17-2
Synonyms: Corn syrup, hydrogenated; Hydrogenated corn syrup; Hydrogenated starch hydrolysates
Definition: End prod. of controlled hydrogenation of corn syrup
Uses: Lubricant, humectant for dentifrices; sweetener
Regulatory: Canada DSL
Manuf./Distrib.: Lonza http://www.lonza.com
Trade Names: Hystar® 3375; Hystar® 4075; Hystar® 5875; Hystar® 6075; Hystar® CG; Hystar® HM-75; Hystar® TPF
Hydrogenated starch hydrolysates. See Hydrogenated starch hydrolysate

Hydrogenated tallow
CAS 8030-12-4; EINECS/ELINCS 232-442-7
Synonyms: Tallow, hardened; Tallow, hydrogenated
Definition: End prod. of controlled hydrogenation of tallow
Uses: Emollient, emulsifier, raw material for pharmaceuticals; hydrophobing agent
Regulatory: FDA 21CFR §173.340, 175.105, 176.170, 176.180, 176.210, 177.2800, 182.70; Canada DSL
Manuf./Distrib.: Acme-Hardesty http://www.acme-hardesty.com
Trade Names: Dervafac 3760; Special Fat
Hydrogenated tallow glyceride
CAS 61789-09-1; EINECS/ELINCS 263-031-0
Synonyms: Glycerides, hydrogenated tallow mono-; Glycerides, tallow mono-, hydrogenated; Hydrogenated tallow monoglyceride
Definition: Monoglyceride of hydrogenated tallow
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emollient, emulsifier, stabilizer, thickener, dispersant, opacifier for pharmaceuticals
Regulatory: FDA 21 CFR §176.210, 177.2800; Canada DSL
Trade Names Containing: Dimodan® HA

Hydrogenated tallow glyceride lactate
CAS 68990-06-7; EINECS/ELINCS 273-576-6
Synonyms: Glycerides, tallow mono-, hydrogenated, lactates
Definition: Lactic acid ester of hydrogenated tallow glyceride
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, plasticizer for pharmaceuticals

Hydrogenated tallow glycerides
CAS 67701-27-3; 68308-54-3; 92128-50-2; EINECS/ELINCS 266-945-8; 269-658-6; 295-745-3
Synonyms: Glycerides, tallow, hydrogenated; Glycerides, tallow mono-, di- and tri-, hydrogenated; Hydrogenated tallow mono-, di- and tri-glycerides
Definition: Mixture of mono, di and triglycerides of hydrogenated tallow acid
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emollient, emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals
Regulatory: FDA 21 CFR §176.210, 177.2800; Canada DSL
Manuf./Distrib.: Anar
Trade Names: Neustrene® 060
Trade Names Containing: Ross Beeswax Substitute No. 628/5

Hydrogenated tallow mono-, di- and triglycerides. See Hydrogenated tallow glycerides

Hydrogenated tallow monoglyceride. See Hydrogenated tallow glyceride

Hydrogenated tallow trimethyl ammonium chloride. See Hydrogenated tallowtrimonium chloride

### Hydrogen iodide
- See Hydriodic acid

### Hydrogen nitrate
- See Nitric acid

### Hydrogen peroxide
- CAS 7722-84-1; EINECS/ELINCS 231-765-0
  - UN 2014 (DOT); 2984
- Synonyms: Hydrogen dioxide; Hydrogen peroxide solution; Hydroperoxide
- Classification: Inorganic oxide
- Empirical: \( \text{H}_2\text{O}_2 \)
- Formula: HOOH
- Properties: Colorless visc. liq., cryst. solid at low temp.; sl. pungent irritating odor; bitter taste; sol. in ether, alcohol; misc. with water; dec. by many org. solvs.; m.w. 34.02; dens. (liq.) 1.450 g/cc (20 C); f.p. -0.41 C; b.p. 150.2 C; nonflamm.

### Toxicology:
- ACGIH TLV/TWA 1 ppm; LD50 (oral, mouse) 2 g/kg, (skin, rat) 4060 mg/kg; mod. toxic by inh., ing., skin contact; corrosive irritant to skin, eyes, mucous membranes; tumorigenic; human mutagenic data

### Environmental:
- LC50 (fish, 96 h) 16.4 mg/l; nonbioaccumulative

### Precaution:
- Dangerous fire hazard by chem. reaction with flamm. materials; explosion hazard; strong oxidizer; incompat. with acids, bases, metals, reducing agents, org. materials

### Uses:
- Antiseptic to cleanse wounds, skin ulcers, local infections, in topicals, in oral rinse prods.; treatment of inflammatory conditions of the external ear canal; foaming agent in dentifrices, mouthwash gargles

### Regulatory:
- FDA 21CFR §133.113, 133.118, 133.13, 133.144, 133.195, 160.105, 160.145, 160.185, 172.723, 172.814, 172.892, 173.315, 175.105, 178.1005, 178.1005 (35% sol'n. max.), 178.1010, 184.1366, GRAS; Canada DSL; BATF 27CFR §240.1051 (3 ppm max. in wine), 240.1051a (200 ppm max. in distilling materials); Japan restricted; FDA approved for topicals; BP, EP compliance (sol'n.)

†=pharmaceutical grade

Definition: Hydrolysate of actin derived by acid, enzyme, or other method of hydrolysis
Toxicology: May be harmful by inh., ing., or skin absorption; may cause eye/skin irritation
Precaution: Incompat. with strong oxidizers
Storage: Store in cool, dry place; keep tightly closed
Uses: Biological additive
Regulatory: Canada DSL
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/
Trade Names Containing: Seanamin BD LS 8460

Hydrolyzed animal protein. See Hydrolyzed collagen

Hydrolyzed casein
CAS 65072-00-6; EINECS/ELINCS 265-363-1
Synonyms: Casein hydrolysate; Proteins, milk, hydrolysates
Definition: Hydrolysate of casein derived by acid, enzyme, or other method of hydrolysis
Toxicology: TSCA listed
Uses: Binder, emulsifier, film-former, emollient, protective colloid, chelating agent in pharmaceuticals, nutritional prods.; stabilizer for colloids and emulsions
Manuf./Distrib.: Adept Sol’ns.; Alfa Chem; Am. Casein
http://www.americancasein.com; DMV Int’l.

Trade Names: HCA-411; Hy Case SF
See also Hydrolyzed milk protein

Hydrolyzed collagen
CAS 92113-31-0; 100085-61-8
Synonyms: Collagen hydrolysates; Hydrolyzed animal protein; Protein, animal, hydrolyzed; Protein hydrolysate; Proteins, collagen, hydrolysate
Definition: Hydrolysate of animal collagen derived by acid, enzyme or other method of hydrolysis
Properties: Brn. liq.; anionic
Toxicology: TSCA listed
Chemical Component Cross-Reference

**Uses:** Conditioner and emollient for pharmaceuticals, orals, topicals, creams and lotions

**Regulatory:** FDA 21CFR §161.190, 170.60, 176.170, 573.200; FDA approved for orals, topicals; Canada DSL

**Trade Names:** Byco M; Byco 1500; Byco A; Byco C; Byco O; Great Lakes 0-Bloom Gelatin™; Vee Gee Beef Hide Hydrolysate Gelatin; Vee Gee Bone Hydrolysate Gelatin; Vee Gee Fish Hydrolysate Gelatin; Vee Gee Porkskin Hydrolysate Gelatin

**Trade Names Containing:** Dry Vitamin E Acetate 50% SD

**Hydrolyzed milk protein**

CAS 8049-98-7; 92797-39-2; EINECS/ELINCS 296-575-2

**Synonyms:** Protein hydrolysates, milk; Proteins, milk, hydrolysate

**Definition:** Hydrolysate of milk protein derived by acid, enzyme or other method of hydrolysis

**Properties:** Sol. in water

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Binder, emulsifier, film-former in pharmaceuticals, nutritional prods.

**Regulatory:** USDA 9CFR §318.7

**Manuf./Distrib.:** Am. Casein

**Hydrolyzed protein**

CAS 73049-73-7 INS429

---

*†=pharmaceutical grade*
Chemical Component Cross-Reference

Synonyms: Casamino acid; Peptone; Peptone enzymatic hydrolysate; Peptones; Protein hydrolysates; Tryptones

Definition: Mixt. of amino acids and peptides with varying composition

Properties: Amphoteric

Uses: Nutritive supplement, flavor enhancer in pharmaceuticals; surfactant aid; emulsion stabilizer; film-former

Regulatory: FDA 21CFR §184.1553, GRAS

Manufacturers/Distributors:

Hydrolyzed rice peptides

Uses: Collagenase inhibitor

Trade Names: Colhibin

Hydrolyzed vegetable protein

CAS 100209-45-8; 977059-33-8; EINECS/ELINCS 309-353-8

Synonyms: HVP; Protein hydrolysates, vegetable; Proteins, vegetable, hydrolysate; Protein, vegetable, hydrolyzed; Vegetable protein hydrolysate; Vegetable protein, hydrolyzed

Definition: Hydrolysate of vegetable protein derived by acid, enzyme or other method of hydrolysis

Properties: Sol. in water

Hazardous Decomposition Products: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Flavor, flavor enhancer, skin protectant, film-former, moisture-binder for pharmaceuticals

Regulatory: FDA 21CFR §139.117, 155.120, 155.170, 155.130, 155.200, 155.201, 170.60; USDA 9CFR §318.7

Hydrolyzed wheat protein

CAS 70084-87-6; 94350-06-8; EINECS/ELINCS 305-225-0; 309-696-3

Synonyms: Protein hydrolysates, wheat germ; Proteins, wheat, hydrolyzed; Wheat protein hydrolysate

Definition: Hydrolysate of wheat protein derived by acid, enzyme or other method of hydrolysis

Properties: Amber liq., char. proteinaceous odor; sol. in water; sp.gr. 1.1; b.p. 215-230 F

Toxicology: Nontoxic

Precaution: Avoid strong oxidizing agents; burning may produce oxides of carbon and nitrogen

Uses: Anti-irritant, moisturizer

Trade Names: Proteinvit; Protelan AG 11

Hydrolyzed wheat protein/dimethicone copolyol phosphate copolymer

Synonyms: Hydrolyzed wheat protein/polydimethylsiloxeypropyl polyethoxy phosphate

Classification: Vegetable protein/silicone compd.

Definition: Polymer of hydrolyzed wheat protein and dimethicone copolyol phosphate monomers

Properties: Amber liq.

Uses: Humectant in pharmaceutical topicals

Features: Substantive

Hydrolyzed whey protein

Uses: Binder, emulsifier, film-former for medical, pharmaceuticals, nutritional, biological applications.

Trade Names: HLA-198

Hydrolyzed yeast protein

CAS 100684-36-4; EINECS/ELINCS 309-709-2

Synonyms: Protein hydrolysate, yeast; Yeast protein hydrolysate

Definition: Hydrolysate of yeast protein, derived by acid, enzyme or other method of hydrolysis

Uses: Ingred. in sun care and eye care prods.

Hydromagnesite. See Magnesium carbonate

Hydromellose acetate succinate. See Hydroxypropyl methylcellulose acetate succinate

Hydron Pink FF. See Vat red 1

6-Hydro-2-oxo-1,3-benzoxathiole. See Tioxolone

Hydroperoxide. See Hydrogen peroxide

Hydroquinol. See Hydroquinone

Hydroquinone

CAS 123-31-9; EINECS/ELINCS 204-617-8

UN 2662 (DOT)

Synonyms: 1,4-Benzenediol; p-Benzenedioli; Benzohydroquinone; Benzoquinone; p-Benzquinone; Dihydroxybenzene; 1,4-
Chemical Component Cross-Reference

</tr>
</tbody>
</table>

Classification: Aromatic organic compd.; aromatic alcohol

Empirical: C₆H₆O₂

Formula: C₆H₄(OH)₂

Properties: Wh., colorless, lt. tan, or gray cryst. solid; odorless; discolored by light and air; sol. in water, alcohol, ether, CCl₄, oxygenated solvs.; mod. sol. in acetone; sl. sol. in benzene; m.w. 110.11; dens. 1.330; vapor pressure 0.00018 mm Hg; m.p.170 C; b.p. 285 C; flash pt. (TCC) 165 C; autoignition temp. 516 C; pH weakly acidic

Toxicology: ACGIH TLV/TWA 2 mg/m³; PEL-TWA 2 mg/m³; LD50 (oral, rat) 320 mg/kg; toxic by ing., inh., IP, IV, subcut. routes; human poison by ing.; harmful if absorbed through skin or swallowed; human systemic effects by ing. (cyanosis, coma); lachrymator; irritant to eyes, skin, respiratory tract; severe human skin irritant; skin sensitizer; active allergen; human mutagenic data; experimental reproductive data; questionable carcinogen; TSCA listed

Environmental: ThOD 1.89

Precaution: Combustible; dust may be ignited by static discharge; incomp. with strong bases (violent reactions may occur) and strong oxidizers (increased fire/explosion risk); may corrode copper and brass

Hazardous Decomp. Prods.: CO, CO₂

NFPA: Health 2, Flammability 1, Reactivity 0

Storage: Sensitive to air and light; store in cool, dry, well-ventilated area, out of direct sunlight, away from heat and ignition sources, work areas, and incomp. materials

Uses: Antioxidant in suntan lotions

Regulatory: FDA 21CFR §175.105, 176.170, 177.2420; SARA §302a extremely hazardous, §313 reportable; CERCLA hazardous substance; HAP; Canada DSL

Manuf./Distrib.: AMC Chems.; AMRESCO†

† = pharmaceutical grade

Trade Names: Eastman® Hydroquinone USP

m-Hydroquinone. See Resorcinol
o-Hydroquinone. See Pyrocatechol
p-Hydroquinone. See Hydroquinone

Hydroquinonecarboxylic acid. See Gentisic acid

Hydroquinone dimethyl ether. See p-Dimethoxybenzene

Hydroquinone methyl ether. See Hydroquinone monomethyl ether

Hydroquinone monomethyl ether

CAS 150-76-5; EINECS/ELINCS 205-769-8

Synonyms: p-Guaiacol; HA; HQMEE;

Hydroquinone methyl ether; 4-Hydroxyanisole; p-Hydroxyanisole; MEHQ;
4-Methoxyphenol; p-Methoxyphenol; MME;

Monomethyl ether of hydroquinone; Phenol, 4-methoxy-

Classification: Aromatic ether; substituted phenolic compd.

Definition: Monomethyl ether of hydroquinone

Empirical: C₇H₈O₂

Formula: CH₃OC₆H₄OH

Properties: Colorless to wh. waxy solid or cryst. powd.; caramel/phenol odor; sol. in water,
benzene, ether, acetone, ethyl acetate, alcohol, oxygenated solvs.; m.w. 124.14; dens. 1.55 (20/20 C); vapor pressure < 0.01 mm Hg (20 C); m.p. 52.5 C; b.p. 243 C; flash pt. (COC) 132 C; pH 5.6 (aq. sol’n.)

Toxicology: ACGIH TLV/TWA 5 mg/m³; PEL-TWA 5 mg/m³; LD50 (oral, rat) 1600 mg/kg, (IP, mouse) 250 mg/kg, (dermal, rabbit) > 1000 mg/kg; poison by IP route; mildly toxic by ing.; severe skin and eye irritant; skin sensitizer; may cause allergic skin reaction; TSCA listed

Precaution: Combustible; may form explosive dust-air mixts.; incompat. with strong oxidizers (increases fire/explosion risk), strong bases, acid chlorides, and acid anhydrides (vigorous exothermic reactions possible)

Hazardous Decomp. Prods.: CO, CO₂; heated to decomp., emits acrid smoke and fumes

NFFPA: Flammability 1, Reactivity 0

Storage: Store in cool, dry, well-ventilated area, out of direct sunlight, away from heat and ignition sources and work areas; hygroscopic

Uses: Mfg. of pharmaceuticals; antioxidant for vitamins

Regulatory: FDA 21CFR §176.170, 177.1010; Canada DSL

Yasho Ind. http://www.yashoindustries.com

Trade Names: Eastman® HQMME
### 2-Hydroxy-1,1′-azonaphthalene-3,6,4′-trisulfonic acid trisodium salt

**Uses:** Abrasive; oral care agent; prosthetic aid (artificial bone and teeth)

**Regulatory:** Canada DSL

**Trade Names Containing:**
- Alcolec® PS 20 P; Alcolec® PS 40 P; Alcolec® PS 50 P

**Chemical Component Cross-Reference**

- **CAS:** 123-08-0; EINECS/ELINCS 204-599-1
- **FEMA:** 3984

**Synonyms:**
- 4-Formyl phenol; p-Formyl phenol;
- 4-Hydroxybenzaldehyde; p-Oxybenzaldehyde;
- Parahydroxybenzaldehyde

**Empirical:** C7H6O2

**Formula:** HOC6H4CHO

**Properties:** Colorless need., sl. agreeable aromatic odor; sol. in alcohol, ether, acetone, MIBK, hot water, oxygenated and aromatic solvs.; m.w. 122.12; dens. 1.129; m.p. 114-117 C; b.p. sublimes

**Toxicology:** LD50 (IP, mouse) 500 mg/kg; mod. toxic by IP route; irritant; mutagen; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Store under nitrogen

**Uses:** Flavor for pharmaceuticals

**Features:** Sweet flavor

### L-β-Hydroxyalanine

7-Hydroxycitronellal. See Hydroxycitronellal

Hydroxycitronellal diethyl acetal
CAS 7779-94-4; EINECS/ELINCS 231-945-9
FEMA 2584

Synonyms: 8,8-Diethoxy-2,6-dimethyl-octanol-
2; 2-Octanol, 8,8-diethoxy-2,6-dimethyl-
Empirical: C14H30O3
Properties: Colorless sl. oily liq.; floral lily, muguet odor; delicate green-floral taste; sol. in alcohol; insol. in water; m.w. 246.39; sp.gr. 0.898-0.908; b.p. 260 C; flash pt. (CC) 110 C; ref. index 1.435-1.442 (20 C)

Toxicology: May be irritating to eyes and skin; TSCA listed
Environmental: Prevent contamination of soil, ground- and surf.-water
Precaution: Incompat. with strong oxidizing agents
 Hazardous Decomp. Prods.: CO, CO2, water
NFPA: Health 1, Flammability 1, Reactivity 0
Storage: Store in cool, well-ventilated area away from ignition sources and open flame
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; DOT nonregulated; Canada DSL

Hydroxyethylcellulose CAS 9004-62-0

Synonyms: Cellulose hydroxyethylate; Cellulose hydroxyethyl ether; Cellulose, 2-hydroxyethyl ether; HEC; HE cellulose; Hetastarch; 2-Hydroxyethyl cellulose; Hydroxyethyl cellulose ether; Hydroxyethyl ether cellulose; Hydroxyethyl starch

Definition: Partially substituted poly(hydroxyethyl) ether of cellulose

Empirical: C₈H₁₄O₆
Formula: C₈H₁₄O₂(OH)₂OCH₂CH₂OH
Properties: Wh. free-flowing powd., odorless, tasteless; nonionic; insol. in org. solvs.; sol. in hot or cold water; grease and oil resistant; bulk

Handbook of Pharmaceutical Additives, Third Edition 1465
**Chemical Component Cross-Reference**

dens. 0.7 kg/l; m.p. 288-290 C (dec.); ref. index 1.336; pH 6.0-8.5 (1%)

**Toxicology:**  
LDLo (IV, human female, 6 days intermittent) 5100 mg/kg; human systemic effects (change in plasma or blood volume, intracranial pressure inc., somnolence); eye and respiratory system irritant; target organs: blood, nerves; experimental reproductive effects; TSCA listed

**Precaution:**  
Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating vapors

**Storage:** Hygroscopic

**Uses:** Thickener, suspending agent, protective colloid, binder, stabilizer in pharmaceuticals, ophthalmics, orals, otics, topicals; visc. control agent in eye lens prods.; toothpaste ingred.

Chemical Component Cross-Reference

Hydroxyoctanoic acid, \( \gamma \)-lactone. See \( \gamma \)-Octalactone

5-Hydroxy-4-octanone
CAS 496-77-5; EINECS/ELINCS 207-830-4
FEMA 2587
Synonyms: Butyroin; 5-Octanol-4-one; 4-Octanone, 5-hydroxy-
Classification: Aliphatic ketone
Empirical: \( \text{C}_{10}\text{H}_{12}\text{O}_2 \)
Formula: \( \text{CH}_3\text{CH}_2\text{CH}_2\text{CH(OH)}\text{COCH}_2\text{CH}_2\text{CH}_3 \)
Properties: Ylsh. liq., buttery nut-like odor, sweet buttery oily taste; m.w. 144.21; dens. 0.9231; b.p. 182 C; flash pt. 79.4 C; ref. index 1.4290
Toxicology: May be harmful by inh., ing., or skin absorb.; may cause eye/skin irritation
Precaution: Combustible liq.; incompat. with strong oxidizing agents
Hazardous Decomp. Prods.: Toxic fumes of CO, CO_2
Storage: Store in cool, dry place; keep tightly closed
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

3-\( \beta \)-Hydroxy-11-oxoolean-12-en-30-oic acid. See Glycyrrhetinic acid
15-Hydroxypentadecanoic acid lactone; 15-Hydroxypentadecanoic acid, \( \omega \)-lactone. See Pentadecalactone
2-Hydroxypentane. See s-Amyl alcohol
4-Hydroxypentanoic acid lactone. See \( \gamma \)-Valerolactone
17-Hydroxy-3,6,9,12,15-pentaoxaheptadec-1-yl dodecanoate. See PEG-6 laurate
17-Hydroxy-3,6,9,12,15-pentaoxaheptadec-1-yl octadecanoate. See PEG-6 stearate
2-Hydroxyphenol. See Pyrocatechol
3-Hydroxyphenol; m-Hydroxyphenol. See Resorcinol
o-Hydroxyphenol. See Pyrocatechol
p-Hydroxyphenol. See Hydroquinone
1-Hydroxy-2-phenoxyethane. See Phenoxyethanol
\( \alpha \)-Hydroxyphenylacetic acid. See Mandelic acid
2-Hydroxy-2-phenylacetophenone; \( \alpha \)-Hydroxy-\( \alpha \)-phenylacetophenone. See Benzoin
3-(4-Hydroxyphenyl) alanine; l-\( \beta \)-(p-Hydroxyphenyl) alanine. See L-Tyrosine
3-Hydroxy-4-(phenylazo)-2-naphthalene-carboxylic acid calcium salt. See D&C Red No. 31
7-Hydroxy-8-(phenylazo)-1,3-naphthalenedisulfonic acid, disodium salt. See Acid orange 10
2-Hydroxy-4-phenyl butane. See 4-Phenyl-2-butanol
1-(p-Hydroxyphenyl)-3-butanone; 4-(4-Hydroxyphenyl)-2-butanone. See 4-(p-Hydroxyphenyl)-2-butanone
4-(p-Hydroxyphenyl)-2-butanone
CAS 5471-51-2; EINECS/ELINCS 226-806-4
FEMA 2588
Synonyms: 2-Butanone, 4-(4-hydroxyphenyl)--; Framinone; 4-Hydroxybenzylacetone; p-Hydroxybenzylacetone; 1-(p-Hydroxyphenyl)-3-butanone; 4-(4-Hydroxyphenyl)-2-butanone; p-Hydroxyphenyl butanone; 2-(4-Hydroxyphenyl) ethyl methyl ketone; Oxyphenalon; Oxyphenylon; Raspberry ketone
Classification: Ketone; aromatic alcohol
Empirical: \( \text{C}_{16}\text{H}_{20}\text{O}_2 \)
Properties: Wh. cryst. solid; sweet, warm, fruit, raspberry odor; sol. in alcohol, ether; < 1% sol. in water; m.w. 164.22; m.p. 81-86 C; flash pt. > 212 F; tenacity > 1 wk. on blotter
Toxicology: LD50 (oral, rat) 1320 mg/kg, (IP, rat) 350 mg/kg; poison by IP route; mod. toxic by ing.; irritating to eyes, respiratory system, skin; may cause skin sensitization; TSCA listed
Precaution: Combustible liq.; wear suitable gloves, eye/face protection; incompat. with strong oxidizers, reducers
Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO_2, acrid smoke and
Chemical Component Cross-Reference

irritating fumes
HMIS: Health 1, Flammability 1, Reactivity 0
Storage: 12 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; FCC; Australia AICS; Canada DSL; Japan ENCS (3-2930); Japan MITI: Philippines PICCS

α-Hydroxypropylbenzene.  See 1-Phenyl-1-propanol
p-Hydroxypropyl benzoate.  See Propylparaben
Hydroxypropylcellulose
CAS 9004-64-2
INS463; E463
Synonyms:  Cellulose, 2-hydroxypropyl ether; HPC; Hydroxypropyl ether of cellulose; Hyprolose; Oxypropylated cellulose
Definition:  Partially substituted poly(hydroxypropyl) ether of cellulose
Properties:  Off-wh. gran. powd., odorless, tasteless; sol. in cold water, methanol, ethanol, many polar org. solvs.; insol. in water > 37.7 C; m.w. 80,000-1,150,000; thermoplastic; can be extruded and molded; softens at 130 C; visc. various; ref. index 1.337; pH 5-8.5 (1%); nonionic
Toxicology:  LD50 (oral, rat) 10,200 mg/kg, (IV, rat) 250 mg/kg; poison by IV route; sl. toxic by ingestion; TSCA listed
Precaution:  Combustible
Hazardous Decomp. Prods.:  Heated to decom., emits acrid smoke and fumes
Uses:  Binder, emulsion stabilizer, visc. control agent, emulsifier, film-former, protective colloid, stabilizer, thickener, suspending agent in pharmaceuticals, orals; protectant in topicals; tablet coating agent, granulation agent
Regulatory:  FDA 21CFR §73.1001, 172.870,

Hydroxypropyl cellulose
CAS 9004-65-3
INS464; E464

†=pharmaceutical grade

Synonyms: Carbohydrate gum; Cellulose hydroxypropyl methyl ether; Cellulose 2-hydroxypropyl methyl ether; HPMC; Hypromellose; Methyl hydroxypropyl cellulose; MHPC
Definition: Propylene glycol ether of methyl cellulose
Properties: Wh. to off-wh. gran. powd.; sol. in most polar solvs., cold water; swells in water to produce a clear to opalescent visc. colloidal sol’n.; insol. in hot water and in anhyd. alcohol, ether, chloroform; nonionic
Toxicology: LD50 (IP, rat) 5200 mg/kg; mildly toxic by IP route; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and fumes
Uses: Binder, emulsion stabilizer, film-former, visc. control agent, thickener, dispersant, suspending agent in pharmaceuticals, ophthalmics, orals, topicals; tablet excipient, binder, coating agent
Regulatory: FDA 21CFR §172.874, 175.105, 175.300, 177.1960; Europe listed; FDA approved for ophthalmics, orals, topicals; USP/NF compliance; Canada DSL
### Chemical Component Cross-Reference

**Trade Names:**

- **Benecel®**

### Hydroxypropyl methylcellulose phthalate

**CAS:** 9004-38-0

**Synonyms:**

- **Cellulose acetate hydrogen 1,2-benzenedicarboxylate; Cellulose acetate hydrogen phthalate; Cellulose acetate monophthalate; Cellulose acetylphtalate; HPMC; Hypermellose phthalate**

**Definition:** A monophthalic acid ester of hydroxypropyl methylcellulose

**Properties:** Wh. powd., odorless, tasteless; swells in water to form viscosity colloidal solution; m.w. 80,000-140,000

**NFPA:** Health 1, Flammability 0, Reactivity 0

**Storage:** 3 yr. shelf life if stored in tightly closed original containers

**Uses:** Enteric film-former, coating agent,
Chemical Component Cross-Reference

excipient, matrix binder for pharmaceutical solid dosage forms, orals
Features: Stable under ordinary conditions

Hydroxypropyltrimonium hyaluronate
Definition: Deriv. of high m.w. sodium hyaluronate
Properties: Cationic
Uses: Rheology control agent, skin moisturizer
Trade Names: HA-Quat™
8-Hydroxy-1,3,6-pyrenetrisulfonic acid trisodium salt. See CI 59040; D&C Green No. 8
8-Hydroxyquinoline
CAS 148-24-3; EINECS/ELINCS 205-711-1
Synonyms: Bioquin; Hydroxybenzopyridine; Oxine; Oxybenzopyridine; Oxychinolin; Oxyquinoline (INCI); 8-Oxyquinoline; Phenopyridine; 8-Quinol; 8-Quinolinol; Quinolin-8-ol; Quinopenol
Classification: Heterocyclic compd.
Empirical: C9H7NO
Formula: C9H7NOH
Properties: Wh. cryst. or powd.; sol. in alcohol, acetone, chloroform, benzene, chlorinated and aromatic solvs.; insol. in water; m.w. 145.16; m.p. 73-75 C; b.p. 267 C
Toxicology: LD50 (oral, rat) 1200 mg/kg, (IP, mouse) 43 mg/kg, (subcut., mouse) 83,600 µg/kg; poison by IP and subcut. routes; mod. toxic by ing.; harmful solid; irritant; CNS stimulant; questionable carcinogen; experimental neoplastagen, tumorigen, reproductive effector; mutagen; target organ: nerves; TSCA listed
Precaution: Combustible exposed to heat or flame
Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of NOx
HMIS: Health 2, Flammability 1, Reactivity 0
Storage: Light-sensitive; store @ R.T.
Uses: Antifungal in pharmaceutical topical anti-infective prods.; anti-septic; nontherapeutic preservative; in intravenous
Regulatory: FDA approved for intravenous; Canada DSL

8-Hydroxyquinoline benzoate
CAS 7091-57-8; EINECS/ELINCS 230-395-7
Synonyms: Benzoic acid, compd. with 8-quinolinol (1:1); 8-Hydroxyquinoline benzoate (salt); Oxine benzoate; Oxyquinoline benzoate (INCI); 8-Quinolinol benzoate; 8-Quinolinol benzoate (salt); 8-Quinolinol compd. with benzoic acid (1:1); 8-Quinolinol monobenzoate
Definition: Salt of oxyquinoline and benzoic acid
Empirical: C16H13NO3
Formula: C9H7NO • C7H6O2
Properties: M.w. 267.30
Uses: Antimicrobial in pharmaceuticals
Manuf./Distrib.: Alfa Chem†
   http://www.alfachem1.com; Clariant†
   http://www.clariant.com
8-Hydroxyquinoline benzoate (salt). See 8-Hydroxyquinoline benzoate
8-Hydroxyquinoline sulfate
CAS 134-31-6; EINECS/ELINCS 205-137-1
Synonyms: Bis (8-hydroxyquinolinium) sulfate; Chinosol; Oxine sulfate; Oxyquinoline sulfate (INCI); 8-Quinolinol sulfate
†=pharmaceutical grade
### Chemical Component Cross-Reference

**hydrogen sulfate (2:1); 8-Quinolinol sulfate; 8-Quinolinol sulfate (2:1) (salt)**

**Definition:** Salt of oxyquinoline and sulfuric acid

**Empirical:** C_{18}H_{14}N_{2}O_{2} • H_{2}SO_{4}

**Formula:** (C_{9}H_{7}NO)_{2} • H_{2}SO_{4}

**Properties:** Yel. powd.; very sol. in water; freely sol. in methanol; sl. sol. in alcohol; pract. insol. in acetone, ether; m.w. 388.40; m.p. ≈ 185 C

**Toxicology:** LD_{50} (oral, rat) 2038 mg/kg; poison by ing.; human mutagenic data; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits very toxic fumes of SO_{x} and NO_{x}

**HMIS: Health 1, Flammability 0, Reactivity 1**

**Uses:** Complexing agent, antimicrobial in pharmaceuticals, wet dressings; antiperspirant

**Regulatory:** USP/NF compliance; Canada DSL

**Manuf./Distrib.:** AMRESCO†

**Trihydroxybenzene**

**5-Hydroxysalicylic acid.** See Gentisic acid

**Hydroxystearic acid, monoester with glycerol.** See Glyceryl hydroxystearate

**12-Hydroxystearyl alcohol**

**CAS 2726-73-0; EINECS/ELINCS 220-342-6**

**Synonyms:** 1,12-Octadecanediol

**Classification:** Aliphatic diol

**Empirical:** C_{18}H_{36}O_{2}

**Properties:** Wh. flakes; m.p. 61-65 C; acid no. < 1; hyd. no. 345-360

**Toxicology:** May cause eye/skin irritation; may be harmful by ing., inh., skin absorp.

**Precaution:** Incompat. with strong oxidizing agents; avoid raising dust

**Hazardous Decomp. Prods.:** CO, CO_{2}; emits toxic fumes under fire conditions

†=pharmaceutical grade

**Storage:** Store in cool, dry place @ R.T.; keep tightly closed

**Uses:** Pharmaceuticals

**Manuf./Distrib.:** Sigma http://www.sigma-aldrich.com/belgium

**Trade Names:** Speziol C 18/2

### Hydroxysuccinic acid; α-Hydroxysuccinic acid. See N-Hydroxysuccinic acid

#### N-Hydroxysuccinic acid

**CAS 6915-15-7 (±); 97-67-6 (L); 617-48-1 (DL); 636-61-3 (D+); EINECS/ELINCS 202-601-5 (L); 230-022-8 (DL)**

**FEMA 2655; INS296; E296**

**Synonyms:** Apple acid; Butanedioic acid, hydroxy-; Deoxytetraric acid; Hydroxysuccinic acid; 1-Hydroxy-1,2-ethanedicarboxylic acid; Hydroxysuccinic acid; α-Hydroxysuccinic acid; Malic acid (INCI); Succinic acid, hydroxy-

**Empirical:** C_{4}H_{6}O_{5}

**Formula:** COOHCH_{2}CH(OH)COOH

**Properties:** Wh. or colorless cryst. powd. or gran., strongly acid taste; dl, i, and d isomeric forms; very sol. in water, alcohol; sl. sol. in ether; m.w. 134.09; dens. 1.595 (20/40 C, d or l), 1.601 (dl); m.p. 100 C (d or l), 128 C (dl); b.p. 140 C (dec.)

**Toxicology:** LD_{50} (IP, rat) 100 mg/kg; LD_{Lo} (oral, rat) 1600 mg/kg; poison by IP route; mod. toxic by ing.; skin and severe eye irritant; dust and aq. sol'ns. may irritate skin, eyes, mucous membranes; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**HMIS: Health 1, Flammability 0, Reactivity 0**

**Storage:** Store @ R.T.

**Uses:** Acidifier, flavor, flavor enhancer, pH control agent, preservative for pharmaceuticals, toothpaste, mouthwashes, germicidal prods.; taste/odor masking agent for medicines (throat lozenges, cough syrups, effervescent powds.); pH control agent in nutritional supplements; rejuvenates skin in facial prods.

**Regulatory:** FDA 21CFR §131.111, 131.136, 131.144, 146.113, 150.141, 150.161, 169.115, 169.140, 169.150, 184.1069, 582.60, 582.1069, GRAS; USDA 9CFR §318.7, 0.01% max.; BATF 27CFR §240.1051, GRAS; not for use in baby foods; FEMA GRAS; Japan

Trade Names Containing: Hair Complex
Aquosum
i-Inositol. See Inositol
Insoluble metaphosphate. See Sodium
metaphosphate
Insoluble polyvidone; Insoluble PVP. See
Crospovidone
Insoluble sodium metaphosphate. See
Sodium metaphosphate
Integral rose. See Rose oil

Invert sugar
CAS 8013-17-0

Synonyms: Invert sugar syrup; Invert syrup
Definition: Aq. sol'n. of inverted/partly inverted
refined/partly refined sucrose; mixt. of approx.
50% dextrose and 50% fructose
Empirical: C12H22O11
Properties: Colorless sol'n., odorless, sweet
flavor; m.w. 180.16
Uses: Sweetener in pharmaceuticals, orals;
parenteral nutrient ingred.

Regulatory: FDA 21CFR §73.85, 131.112,
131.170, 131.200, 131.203, 131.206, 146.140,
146.141, 146.145, 146.146, 169.175,
184.1859, GRAS; FDA approved for orals
Manuf./Distrib.: AMINO GmbH

http://www.ashchem.com; Degussa
AG/Health & Nutrition; MLG Enterprises
Trade Names Containing: Nu-Tab™ 4001; Nu-
Tab™ 4003; Sugartab®

Invert sugar syrup; Invert syrup. See Invert
sugar

Iodamide
CAS 440-58-4
Synonyms: 3-Acetamido-5-(acetamidomethyl)-
2,4,6-triiodobenzoic acid; 3-(Acetylamino)-
5-((acetylamino)methyl)-2,4,6-
triiodobenzoic acid; Ametridinic acid; α-5-
Diacetamido-2,4,6-triido-m-toluic acid
Definition: Crystals from acetic acid
Empirical: C12H11I3N2O4
Properties: Sol. in water; m.w. 627.95; m.p. 255-
257 C
Toxicology: LD50 (IP, rat) 17,900 mg/kg, (IV,
rat) 11,400 mg/kg, (IP, guinea pig) 15 g/kg;
mildly toxic by IP and IV routes
Hazardous Decomp. Prods.: Heated to
decomp., emits very toxic fumes of NOx
and HI
Uses: Pharmaceuticals (parenterals,
intravenous, IV infusion)
Regulatory: FDA approved for intravenous, IV
(infusion)
Manuf./Distrib.: Chemos GmbH
http://www.chemos-group.com

Iode. See Iodine
Iodic acid, calcium salt. See Calcium iodate
Iodic acioidic acid, potassium salt. See
Potassium iodate

Iodine
CAS 7553-56-2; EINECS/ELINCS 231-442-4
UN 1759 (DOT)
Synonyms: Elemental iodine; Iode
Classification: Nonmetallic halogen element
Empirical: I2
Properties: Bluish-black scales or plates,
metallic luster, char. odor, sharp acrid taste;
sol. (g/100 g): 14.09 benzene, 16.47 CS2,
21.43 ethanol; sol. in chloroform, CCl4, glacial
acetic acid, alkaline iodide sol'n., oxygenated
and chlorinated solvs.; very sl. sol. in water;

Chemical Component Cross-Reference

at.wt. 126.9045; m.w. 253.81; dens. 4.98; vapor pressure 1 mm Hg (38.7 C), 0.030 mm Hg (solid, 0 C); m.p. 113.6 C; b.p. 185 C

Toxicology: LD50 (oral, rat) 14 g/kg, (subcut., rat) 10,500 mg/kg; very toxic material; human poison by ing.; experimental poison by IV and subcut. routes; mod. toxic by inh.; human ing. of large quantities causes abdominal pain, nausea, vomiting, diarrhea, asthma, anaphylactic shock; 2-4 g have been fatal; experimental reproductive effector; mutagenic data; TSCA listed

Precaution: DOT: Corrosive material; incompat. with alkaloids, starch, tannins; reacts vigorously with reducing materials; explosive reactions possible

Hazardous Decomp. Pros.: Heated to decomp., emits toxic fumes of I– and various iodine compds.

Iodipamide
CAS 606-17-7
Synonyms: Adipiodone; 3,3´-(Adipoyldimino) bis [2,4,6-triiodobenzoic acid]; 3,3´-(Adipoyldiimino) bis (2,4,6-triodobenzoic acid)

Empirical: C20H14I6N2O6
Formula: (CH2)4(CONHC6HI3COOH)2

Properties: Wh. cryst. powd., nearly odorless; sl. sol. in alcohol, chloroform, ether; insol. in water; m.w. 1139.81; pH 3.5-3.9 (sat. sol'n.)

Toxicology: LD50 (IV, mouse) 2440 mg/kg; toxic by ingestion; TSCA listed

Uses: Medicine (x-ray contrast medium); parenteral pharmaceuticals

Regulatory: FDA approved for parenterals

Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium

Iodohippurate sodium
CAS 133-17-5
Synonyms: Hippuric acid, o-iodo-, monosodium salt

Empirical: C9H7INO3 • Na
Formula: (CH2)4(CONHC6HI3COOH)2

Properties: Cryst.; sol. in water, alcohol; m.w. 327.05

Toxicology: LD50 (IV, rat) 4 g/kg

Uses: Pharmaceuticals (intravenous)

Regulatory: FDA approved for intravenous

Manuf./Distrib.: Chemos GmbH http://www.chemo-group.com

Iodopropynyl butylcarbamate
CAS 55406-53-6; EINECS/ELINCS 259-627-5
Synonyms: Butyl-3-iodo-2-propynylcarbamate; Carbamic acid, butyl-3-iodo-2-propynyl ester; 3-
Chemical Component Cross-Reference

**Iodopropynylbutylcarbamate; 3-iodo-2-propynyl butyl carbamate; 3-iodo-2-propynyl-N-butyl carbamate; IPBC**

**Classification:** Organic compd.
**Empirical:** C\(_8\)H\(_{12}\)INO\(_2\)
**Formula:** \(\text{IC}_2\text{CH}_2\text{OCONH(CH}_2\text{)}_3\text{CH}_3\)
**Properties:** Wh. to off-wh. powd.; m.w. 281.1; m.p. 65-67 C
**Toxicology:** Possible allergen; TSCA listed
**Uses:** Preservative

**Regulatory:**
- FDA 21CFR §175.105;
- USA EPA registered;
- Japan approved;
- Europe listed;
- Canada DSL

**Manuf./Distrib.:**
- Arch Chems. [http://www.archchemicals.com](http://www.archchemicals.com);
- Jan Dekker BV [http://www.jandekker.com](http://www.jandekker.com);
- Troy [http://www.troycorp.com](http://www.troycorp.com)

**Trade Names Containing:**
- Dantogard® Plus Liq.; Germall® Plus; Liquid Germall® Plus
- 3-Iodopropynylbutylcarbamate; 3-Iodo-2-propynyl butyl carbamate; 3-Iodo-2-propynyl-N-butyl carbamate. See iodopropynyl butylcarbamate

**Iofetamine hydrochloride**

**Definition:** Amphetamine analog that is rapidly taken up by the lungs and from there redistributed primarily to the brain and liver

**Uses:** Pharmaceuticals (intravenous); used in brain radionuclide scanning with I-123

**Regulatory:** FDA approved for intravenous

**α-Ionone**

**CAS** 127-41-3; EINECS/ELINCS 204-841-6

**FEMA** 2594

**Synonyms:** α-Cyclocitrylidene acetone; 4-(2,6,6-Trimethyl-2-cyclohexene-1-yl)-3-buten-2-one; 4-(2,6,6-Trimethyl-2-cyclohexen-1-yl)-3-buten-2-one

**Empirical:** C\(_{13}\)H\(_{20}\)O

**Properties:** Colorless oil, woody odor; sol. in alcohol, fixed oils, propylene glycol; sl. sol. in water; misc. with ether; insol. in glycerin; m.w. 192.33; dens. 0.930; b.p. 136 C; flash pt. 118 C; ref. index 1.497-1.502; tenacity 48 hrs. on blotter

**Toxicology:** LD\(_{50}\) (oral, rat) 4590 mg/kg; mildly toxic by ingestion; TSCA listed

**Precaution:** Combustible liq.; incompat. with strong oxidizing agents, iron, iron salts

**Hazardous Decomp. Pros.:** Burning may produce CO, CO\(_2\), NO\(_x\); heated to decomp., emits acrid smoke and fumes

**NFPA:** Health 1, Flammability 1, Reactivity 0

**β-Ionone**

**CAS** 79-77-6; 14901-07-6; EINECS/ELINCS 201-224-3; 238-969-9

**FEMA** 2595

**Synonyms:** β-Cyclocitrylideneacetone; 4-(2,6,6-Trimethyl-1-cyclohexene-1-yl)-3-buten-2-one; 4-(2,6,6-Trimethyl-1-cyclohexen-1-yl)-3-buten-2-one

**Empirical:** C\(_{13}\)H\(_{20}\)O

**Properties:** Colorless oil, woody odor; sol. in alcohol, fixed oils, propylene glycol; sl. sol. in water; misc. with ether; insol. in glycerin; m.w. 192.33; dens. 0.944; b.p. > 234 F; ref. index 1.517-1.522; tenacity 48 hrs. on blotter

**Toxicology:** LD\(_{50}\) (oral, rat) 4590 mg/kg, (IP, mouse) 2277 mg/kg; mod. toxic by IP route; mildly toxic by ing.; TSCA listed

**Precaution:** Combustible liq.; incompat. with...
strong oxidizers, iron, iron salts

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes

NFPA: Health 1, Flammability 1, Reactivity 0

Storage: Store in cool, dry place in tightly sealed containers, protected from heat, light

Uses: Synthetic flavor and fragrance for pharmaceuticals; vitamin A prod.

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia; Canada DSL; Japan ENCS (no. 3-2387); Philippines PICCS

Manuf./Distrib.: Advanced BioTech

α-ionone, isomethyl-. See α-Isomethyliononone

β-ionone, methyl-. See Methyl β-ionone

Ioxaglic acid

CAS 59017-64-0

Definition: Mixt. of ioxaglate meglumine and ioxaglate sodium

Empirical: C24H21I6N5O8

Properties: M.w. 558.87; dens. 1.97 (20 C); m.p. 1536 C; b.p. 300 C; highly reactive chemically; strong reducing agent

Toxicology: LD50 (oral, rat) 30 g/kg; TDLQ (oral, human) 77 mg/kg; poison by IP route; potentially toxic by all forms and routes; human systemic effects (irritability, nausea, vomiting, normocytic anemia); inh. of lg. quantities of dust causes iron pneumoconiosis; chronic exposure can cause fibrosis of the pancreas, diabetes mellitus, liver cirrhosis; questionable carcinogen; experimental tumorigen; TSCA listed

Precaution: Ultrafine powd. is potentially explosive; flamm. solid; explosive and violent reactions possible

HMIS: Health 2, Flammability 3, Reactivity 0

Uses: Nutrient, dietary supplement in pharmaceuticals

Regulatory: FDA 21CFR §111.50, 184.1375, 582.80, 582.5375, GRAS; Japan restricted; Canada DSL

### Chemical Component Cross-Reference

**Iron ammonium citrate**

- **CAS**: 1185-57-5 (green); 1185-57-6 (brown); 1333-00-2 (green); 1332-98-5 (brown); EINECS/ELINCS 214-686-6
- **INS381**
- **Synonyms**: Ammonium ferric citrate; Citric acid, ammonium iron (3+) salt; FAC; Ferric ammonium citrate; Ferric ammonium citrate, green; Iron (III) ammonium citrate
- **Classification**: A complex salt of undetermined structure
- **Formula**: C₆H₈O₇ • xFe • xH₄N
- **Properties**: Green solid, garnet-red scales, or brownish-yel. powd.; mild ammoniacal odor; mild iron-metallic taste; sol. in water; insol. in alcohol; m.w. 709.44
- **Toxicology**: ACGIH TLV/TWA 1 mg(Fe)/m³; irritant; TSCA listed
- **Precaution**: Combustible
- **Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating fumes
- **HMIS**: Health 1, Flammability 0, Reactivity 1
- **Storage**: Deliq.; hygroscopic; light-sensitive
- **Uses**: Colorant (with pyrogallol) for plain or chromic catgut sutures; medicine
- **Use Level**: 3% max. total citrate-pyrogallol complex (sutures)
- **Regulatory**: FDA 21CFR §73.1025, 172.430, 25 ppm max. in finished salt, 184.1296, 573.560, 582.80, GRAS, exempt from certification, permanently listed for use in medical devices; Japan approved; Europe listed; UK approved;

Iron oxide black
CAS 1317-61-9; EINECS/ELINCS 215-277-5
INS 172(i); E172
Synonyms: Black magnetic oxide; Black oxide, precipitated; Black rouge; Cl 77499; Ethiopis iron; Ferric ferrous oxide; Ferrosoferric oxide; Iron oxide; Iron (II, III) oxide; Iron (III) oxide; Iron (II) oxide, black; Iron (II, III) oxide, black; Iron oxide magnetic; Iron oxides (Fe3O4); Magnetite; Pigment black 11; Triairon tetraoxide
Classification: Syn. iron oxide
Empirical: Fe3O4
Properties: Blk. powd.; sol. in acids; insol. in water, alcohol, ether, oils, solvs.; m.w. 231.54;
†=pharmaceutical grade
dens. 4.7 kg/l; m.p. 1538 C (dec.); oxidized to Fe2O3 on heating in air
Toxicology: Harmful by inh., ing., skin contact; irritating to eyes, skin, respiratory system
Uses: Colorant in pharmaceuticals
Regulatory: Colorant in foods, {pharmaceuticals, food-grade polymers}; Canada DSL
Iron (II) oxide, black; Iron (II, III) oxide, black. See Iron oxide black
Iron oxide hydrated. See Iron (III) oxide hydrated
Iron (III) oxide hydrated
CAS 20344-49-4; EINECS/ELINCS 243-746-4; E172
Synonyms: Cl 77492; Ferric hydrate; Ferric hydroxide; Ferric hydroxide oxide; Ferric oxide hydrated; Hydrated ferric oxide; Iron hydrate; Iron hydroxide (INCI); Iron hydroxide oxide; Iron oxide hydrated
Classification: Inorganic compd.
Empirical: FeHO2
Formula: HFeO2
Properties: Red to brn. powd. or cryst.; sol. in min. acids; pract. insol. in water, alcohol; m.w. 88.85; loses H2O to form Fe2O3; noncombustible
Toxicology: May be harmful by inh., ing., or skin absorp.; may cause eye/skin irritation; overdose of iron compds. may have corrosive effect on GI mucosa; complications can lead to acute liver necrosis that can be fatal; TSCA listed
Precaution: Incompat. with strong oxidizing agents
Hazardous Decomp. Prods.: Emits toxic fumes under fire conditions
Storage: Store in cool, dry place; keep tightly closed
Uses: Colorant for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
See also Cl 77492
Iron oxide black. See Iron oxide magnetic.

Iron oxide red. See Ferric oxide

Iron oxides
CAS 1309-37-1 (Fe2O3); 1345-25-1 (FeO); 1317-61-9 (Fe3O4); EINECS/ELINCS 215-168-2 (Fe2O3); 215-721-8 (FeO); 215-277-5 (Fe3O4) INS172; E172

Synonyms: CI 77489; CI 77491; CI 77492; CI 77499

Definition: Inorganic compd. consisting of any one or combinations of synthetically prepared iron oxides incl. the hydrated forms

Toxicology: TSCA listed

Uses: Colorant for pharmaceuticals, ingested drugs, contact lenses

Use Level: ≤ 5 mg elemental Fe/day (ingested drugs)

Regulatory: FDA 21 CFR §73.200, 73.1200, 73.2250, 73.3125, 175.300, 176.170, 177.1460, 177.2600, 178.3297, 182.90, 175.300, 176.170, 186.1300, 186.1374, 522.940, GRAS; exempt from certification, permanently listed for drugs and medical devices; Canada DSL

See also CI 77492; CI 77499; Ferric oxide; Ferrous oxide; Iron oxide black; Iron oxide yellow monohydrate

Iron oxides (Fe3O4). See Iron oxide black

Iron oxide yellow monohydrate
CAS 51274-00-1; EINECS/ELINCS 257-098-5

Synonyms: Hydrated ferric oxide; Iron (III) oxide monohydrate, yellow; Pigment yellow
Isoamyl acetate
CAS 123-92-2; EINECS/ELINCS 204-662-3
UN 1104; FEMA 2055
Synonyms: Acetic acid isopentyl ester; Banana oil; Isoamyl ethanoate; Isoamyl acetate; Isopentyl alcohol acetate; 3-Methyl-1-butanol acetate; 3-Methylbutyl acetate; 3-Methyl-1-butyl acetate; β-Methylbutyl acetate; 3-Methylbutyl ethanoate; Pear oil
Classification: Carboxylic acid ester
Definition: Ester of isoamyl alcohol and acetic acid
Empirical: C7H14O2
Formula: CH3COOCH2CH2CH(CH3)2
Properties: Colorless liq., sweet winey odor, sl. sol. in water; misc. with alcohol, ether, ethyl acetate, fixed oils; insol. in glycerin, propylene glycol; m.w. 130.21; sp.gr. 0.876 (20 C); m.p. -78.5 C; b.p. 142 C; flash pt. (CC) 25 C; ref. index 1.400
Toxicology: ACGIH TLV/TWA 100 ppm; LD50 (oral, rat) 16,600 mg/kg; mildly toxic by ing., inh., subcut. routes; eye and mild skin irritant; inh. can cause nose/throat irritation, CNS depression; ing. may cause mouth/throat irritation, increased heart rate, CNS depression; severe exposure may cause unconsciousness; TSCA listed
Precaution: Highly flamm.; dangerous fire hazard exposed to heat or flame; can react vigorously with reducing materials; also incompat. with oxidizing agents (increases fire/explosion risk), strong acids, strong bases (decomp. can occur)
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
NFPA: Health 1, Flammability 3, Reactivity 0
Storage: Store in cool, dry, well-ventilated area, out of direct sunlight; ground drums and bond transfer containers
Uses: Synthetic flavor for pharmaceuticals; masking agent for undesirable odors
Features: Banana, pear-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Japan approved as flavoring; Canada DSL
Axxence Aromatic GmbH
Axxence Aromatic GmbH
Isoamyl acetoacetate
CAS 2308-18-1; EINECS/ELINCS 218-991-5; FEMA 3551
Synonyms: Isoamyl β-ketobutyrate; Isoamyl 3-oxobutanoate; 3-Oxobutyric acid 3-methylbutyl ester
Classification: Nonaromatic ester
Empirical: C9H16O3
Properties: Colorless liq., sweet winey odor, green-apple flavor; sol. in alcohol; insol. in water; m.w. 172.23; dens. 0.954 (10 C); b.p.

Handbook of Pharmaceutical Additives, Third Edition 1489
Isoamyl alcohol
CAS 123-51-3; EINECS/ELINCS 204-633-5
UN 1105; FEMA 2057
Synonyms: Isoamylol; Isobutyl carbinol; Isopentanol; Isopentyl alcohol; 2-Methyl-4-butanol; 3-Methylbutanol; 3-Methyl-1-butanol; 3-Methylbutan-1-ol; Primary isoamyl alcohol
Classification: Primary aliphatic alcohol
Empirical: C₆H₁₂O
Formula: (CH₃)₂CHCH₂CH₂OH
Properties: Colorless liq.; disagreeable sweet odor; pungent taste; sl. sol. in water; sol. in alcohol, ether, acetone, many org. solvs.; m.w. 88.15; sp.gr. 0.813 (15/4 C); f.p. -117.2 C; b.p. 132 C; flash pt. (CC) 42.7 C; ref. index 1.407 (20 C)
Toxicology: ACGIH TLV/TWA 100 ppm; STEL 125 ppm; LD₅₀ (oral, rat) 1300 mg/kg, (IV, mouse) 234 mg/kg; highly toxic; poison by IP, IV routes; mod. toxic by ing., skin contact; ing. has caused human deaths from respiratory failure; may cause heart, lung, kidney damage; CNS depressant; vapor exposure has caused marked irritation of eyes, nose, throat, and headache; may cause sl. to mild skin irritation; questionable carcinogen; TSCA listed
Precaution: DOT: Flamm. liq.; explosive limits in air 1.2-9%; incomp. with strong oxidizing agents, reducing agents, strong acids, alkalis, hydrogen trisulfide; potential explosive hazard
Hazardous Decomp. Prods.: None known
NFPA: Health 1, Flammability 2, Reactivity 0
Storage: Store in cool, dry, well-ventilated area away from heat/ignition sources
Uses: Solvent, synthetic flavor for pharmaceuticals
Regulatory: FDA 21 CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI
Manuf./Distrib.: AMRESCO†
†=pharmaceutical grade
Isoamyl aldehyde. See Isovaleraldehyde
**Isoamyl benzoate**

CAS 94-46-2; EINECS/ELINCS 202-334-4

FEMA 2058

Synonyms: Benzoic acid, 1-(3-methyl) butyl ester; Isopentyl benzoate; 1-(3-Methyl) butyl benzoate; 3-Methylbutyl benzoate

Empirical: C₁₂H₁₈O₂

Formula: C₆H₅COOC₅H₁₁

Properties: Colorless liq., fruity od.; sol. in alcohol; insol. in water; m.w. 192.26; b.p. 261-262°C; flash pt. > 100°C; ref. index 1.492-1.495

Toxicology: LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; mildly toxic by ing.; primary skin irritant; TSCA listed

Precaution: Combustible liq.; wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers

Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO₂, acrid smoke and irritating fumes

HMIS: Health 2, Flammability 2, Reactivity 0

Uses: Synthetic flavor for pharmaceuticals

Features: Apricot, banana, pineapple-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL; Australia AICS

Manuf./Distrib.: A&E Connock

See Isoamyl butylate

**Isoamyl butyrate**

CAS 106-27-4; EINECS/ELINCS 203-380-8

UN 2620; FEMA 2060

Synonyms: Amyl butyrate; Butanoic acid, 3-methylbutyl ester; Butyric acid isoamyl ester; Isoamyl butanoate; Isoamyl butylate; Isoamyl n-butyrate; Isopentyl butanoate; Isopentyl butyrate; 3-Methylbutyl butyrate

Definition: Ester of isoamyl alcohol and butyric acid

Empirical: C₉H₁₈O₂

Formula: CH₃(CH₂)₂COOCH₂CH₂CH(CH₃)₂

Properties: Colorless liq., strong fruity pear-like odor; sol. in alcohol, fixed oils, most org. solvs.; sl. sol. in water; insol. in glycerin, propylene glycol; m.w. 158.24; dens. 0.860; b.p. 184-185°C; flash pt. 149°F; ref. index 1.409-1.414

Toxicology: LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary skin irritant; TSCA listed

Precaution: Combustible liq.; wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers

Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO₂, acrid smoke and irritating fumes

HMIS: Health 2, Flammability 2, Reactivity 0

Uses: Synthetic flavor for pharmaceuticals

Features: Apricot, banana, pineapple-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL; Australia AICS

Manuf./Distrib.: Chr. Hansen Inc

See Isoamyl octanoate

**Isoamyl cinnamate**

CAS 7779-65-9; EINECS/ELINCS 231-931-2

FEMA 2063

Synonyms: Cinnamic acid, isopentyl ester; Isoamyl β-phenylacrylate; Isoamyl 3-phenyl propenoate; Isoamyl 3-phenylpropenoate; Isopentyl alcohol, cinnamate; Isopentyl acrylate
### Chemical Component Cross-Reference

**Definition:**

Ester of cinnamic acid and commercial isoamyl alcohols

**Empirical:** $C_{14}H_{18}O_2$

**Formula:** \(C_6H_5CH=CHC(O)OCH_2CH_2CH(CH_3)2\)

**Properties:** Colorless to pale yellow liquid, balsamic odor; soluble in most fixed oils; soluble in alcohol; soluble (mg/ml): $\geq 100$ mg DMSO (20°C), 10-50 mg in 95% ethanol, acetone (20°C), $< 1$ mg water (20°C); m.w. 218.29; density 1.003 g/cm$^3$ (18.6°C); flash point $> 100$°C; refractive index 1.535-1.539

**Precaution:** Combustible liquid

**Hazardous Decomps. Prods.:** Heated to decompose, emits acrid smoke and fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL

### Toxicology

**LD$_{50}$ (oral, rat):** 9840 mg/kg, (oral, rabbit) 3020 mg/kg; moderately toxic by ingestion; skin irritant; strong irritant; can cause narcosis; TSCA listed

**Precaution:** Flammable liquid; can react with oxidizing materials

**Hazardous Decomps. Prods.:** Heated to decompose, emits acrid smoke and fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Plum-like flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL

### Toxicology

**LD$_{50}$ (oral, rat):** 9840 mg/kg, (oral, rabbit) 3020 mg/kg; moderately toxic by ingestion; skin irritant; strong irritant; can cause narcosis; TSCA listed

**Precaution:** Flammable liquid; can react with oxidizing materials

**Hazardous Decomps. Prods.:** Heated to decompose, emits acrid smoke and fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Plum-like flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL

### Isoamyl Furfurylacetate

- **Synonyms:** Amyl hexanoate; Isoamyl caproate; Isopentyl hexanoate; Isopentyl-n-hexanoate
- **Definition:** Ester of caproic acid and isomeric amyl alcohols
- **Properties:** Colorless liq., fruity odor; sol. in alcohol, fixed oils; insol. in water, glycerin, propylene glycol; m.w. 186.30; dens. 0.8627; b.p. 94-96 C (10 mm); flash pt. 53 C; ref. index 1.405-1.409
- **Toxicology:** LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary skin irritant; TSCA listed
- **Environmental:** Do not discharge into lakes, streams, ponds, public waters
- **Precaution:** Flammable liq.; wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers
- **Hazardous Decomp. Prods.:** Heated to decomp., emits CO, CO2, acrid smoke and irritating fumes
- **Storage:** 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
- **Uses:** Synthetic flavor for pharmaceuticals
- **Features:** Apricot, grape, pineapple, honey-like

---

### Isoamyl 2-Hydroxybenzoate

- **Synonyms:** Isoamyl 2-methylpropanoate; Isopentyl isobutyrate; 3-Methylbutyl 2-methylpropanoate
- **Empirical:** C9H18O2
- **Properties:** Colorless to pale yel. liq.; fruity, apricot/pineapple odor; m.w. 158.24; dens. 0.8627; b.p. 170 C; flash pt. 53 C; ref. index 1.405-1.409
- **Toxicology:** TSCA listed
- **Environmental:** Do not discharge into lakes, streams, ponds, public waters
- **Precaution:** Flammable liq.; wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers
- **Hazardous Decomp. Prods.:** CO, CO2, acrid fumes
- **Storage:** 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
- **Uses:** Synthetic flavor for pharmaceuticals
- **Features:** Sweet apple, pineapple-like flavor

---

### Isoamyl Hexanoate

- **CAS:** 2198-61-0; EINECS/ELINCS 218-600-8
- **FEMA:** 2075
- **Synonyms:** Amyl hexanoate; Isoamyl caproate; Isopentyl hexanoate; Isopentyl-n-hexanoate
- **Definition:** Ester of caproic acid and isomeric amyl alcohols
- **Properties:** Colorless liq., fruity odor; sol. in alcohol, fixed oils; insol. in water, glycerin, propylene glycol; m.w. 186.30; dens. 0.860; b.p. 94-96 C (10 mm); flash pt. 88 C; ref. index 1.4200
- **Toxicology:** LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary skin irritant; TSCA listed
- **Environmental:** Do not discharge into lakes, streams, ponds, public waters
- **Precaution:** Combustible; wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers
- **Hazardous Decomp. Prods.:** Heated to decomp., emits CO, CO2, acrid smoke and irritating fumes
- **Storage:** 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
- **Uses:** Synthetic flavor for pharmaceuticals
- **Features:** Sweet apple, pineapple-like flavor

---

### Isoamyl Isobutyrate

- **CAS:** 2050-01-3; EINECS/ELINCS 218-078-1
- **UN:** 1993; FEMA 3507
- **Synonyms:** Isoamyl 2-methylpropanoate; Isopentyl isobutyrate; 3-Methylbutyl 2-methylpropanoate
- **Empirical:** C9H18O2
- **Properties:** Colorless to pale yel. liq.; fruity, apricot/pineapple odor; m.w. 158.24; dens. 0.8627; b.p. 170 C; flash pt. 53 C; ref. index 1.405-1.409
- **Toxicology:** TSCA listed
- **Environmental:** Do not discharge into lakes, streams, ponds, public waters
- **Precaution:** Flammable liq.; wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers
- **Hazardous Decomp. Prods.:** CO, CO2, acrid fumes
- **Storage:** 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
- **Uses:** Synthetic flavor for pharmaceuticals
- **Features:** Sweet apple, pineapple-like flavor

---

Isoamyl isovalerate

CAS 659-70-1; EINECS/ELINCS 211-536-1

FEMA 2085

Synonyms: Apple essence; Apple oil; Isoamyl isovalerianate; Isoamyl 3-methylbutanoate; Isopentyl isopentanoate; Isoamyl isovalerate; Isovaleric acid, isopentyl ester

Empirical: C\textsubscript{10}H\textsubscript{20}O\textsubscript{2}

Formula: C\textsubscript{4}H\textsubscript{9}CO\textsubscript{2}C\textsubscript{5}H\textsubscript{1}

Properties: Colorless clear liq., fruity odor, apple-like flavor; sol. in most org. solvs., alcohol, ether, paraffin oil, fixed oils; sl. sol. in propylene glycol; insol. in water; m.w. 172.27; dens. 0.854-0.8583; b.p. 193 °C; flash pt. 72 °C; ref. index 1.4125-1.4135

Toxicology: LD\textsubscript{50} (oral, rabbit) 13,956 mg/kg; mildly toxic by ing.; primary skin irritant; TSCA listed

Precaution: Combustible liq.; wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes

Storage: 6 mos. when stored at 40 °F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air

Uses: Synthetic flavor for pharmaceuticals

Features: Apple-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL; Australia AICS

Isoamyl α-ketopropionate. See Isoamyl pyruvate

Isoamyl laurate

CAS 6309-51-9; EINECS/ELINCS 228-626-1

FEMA 2077

Synonyms: Dodecanoic acid, 3-methylbutyl ester; Isoamyl dodecanoate; Isoamyl dodecylate; Isopentyl laurate; 3-Methylbutyl dodecanoate

Definition: Ester of isoamyl alcohol and lauric acid

Empirical: C\textsubscript{17}H\textsubscript{34}O\textsubscript{2}

Formula: CH\textsubscript{3}(CH\textsubscript{2})\textsubscript{10}COOCH\textsubscript{2}CH\textsubscript{2}CH(CH\textsubscript{3})\textsubscript{2}

Properties: Colorless oily liq., fatty odor and flavor; sol. in alcohol; insol. in water; m.w. 270.46

Uses: Synthetic flavor for pharmaceuticals; emollient

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isoamyl methanoate. See Isoamyl formate

Isoamyl 2-methylbutanoate. See Isoamyl-2-methylbutyrate

Isoamyl 3-methylbutanoate. See Isoamyl isovalerate

Isoamyl-2-methylbutyrate
CAS 27625-35-0; EINECS/ELINCS 248-581-1
FEMA 3505

Synonyms:
Cherry butyate; Isoamyl 2-methylbutanoate; Isopentyl 2-methylbutanoate; Isopentyl-2-methylbutyrate; 3-Methylbutyl 2-methylbutanoate

Empirical: C₁₀H₂₀O₂

Properties:
Fruity, citrus pear odor; m.w. 172.27; dens. 0.857; b.p. 186 °C; flash pt. 64 °C; ref. index 1.413

Toxicology:
TSCA listed

Uses:
Synthetic flavor for pharmaceuticals

Features:
Fruity, citrus, strawberry, sherry flavor

Regulatory:
FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Grau Aromatics

Isoamyl nonylate. See Isoamyl nonanoate

Isoamyl octanoate
CAS 2035-99-6; EINECS/ELINCS 218-004-8
FEMA 2080

Synonyms:
Isoamyl caprylate; Isopentyl octanoate; 3-Methylbutyl octanoate; Octanoic acid, isopentyl ester; Octanoic acid, 3-methylbutyl ester

Classification: Nonaromatic ester

Empirical: C₁₃H₂₆O₂

Properties:
Colorless to pale yel. liq.; oily-fruity, sl. animal, orris odor; sol. in alcohol; insol. in water; m.w. 214.35; dens. 0.861; b.p. 267-268 °C; flash pt. > 230 °F; ref. index 1.4219-1.4299

Toxicology:
LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary skin irritant; irritating to respiratory system, eyes; TSCA listed

Precaution:
Wear safety glasses or goggles, rubber gloves, apron; incompat. with strong oxidizers, reducers

Hazardous Decomp. Prods.:
Heated to decomp., emits CO, CO₂, acrid smoke and irritating fumes

Storage:
6 mos. when stored at 40 °F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air

Uses:
Synthetic flavor for pharmaceuticals

Regulatory:
FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

**Synonyms:** Isopentyl alcohol, propionate;
Isoamyl pyruvate
CAS 7779-72-8; EINECS/ELINCS 231-934-9
FEMA 2083
Synonyms: Isoamyl α-ketopropionate; Isopentyl pyruvate
Classification: Nonaromatic ester
Empirical: C8H14O3
Properties: Colorless to pale yel. liq.; m.w. 158.20; dens. 0.978 (17 C); b.p. 185 C
Precaution: Combustible
Uses: Synthetic flavor for pharmaceuticals
Features: Balsam rum arrack odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: SAFC Specialties
http://www.safcspecialties.com

Isoamyl salicylate
CAS 87-20-7; EINECS/ELINCS 201-730-4
FEMA 2084
Synonyms: 2-Hydroxybenzoic acid; Isoamyl 2-hydroxybenzoate; Isoamyl o-hydroxybenzoate; Isopentyl salicylate; 3-Methylbutyl ester; 3-Methylbutyl salicylate; Orchidee
Classification: Aromatic ester
Empirical: C12H16O3
Properties: Colorless liq.; pleasant sweet odor; sol. in alcohol and chlorinated solvs.; misc. with ether; pract. insol. in water; m.w. 208.26; dens. 1.050; b.p. 277-278 C; flash pt. > 230 F; ref. index 1.5070
Toxicology: LD50 (oral, mouse) 9 g/kg; TSCA listed
Precaution: Combustible liq.
Uses: Synthetic flavor for pharmaceuticals
Features: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isoamyl pyruvate
†=pharmaceutical grade

Isobornanol
CAS 124-76-5; EINECS/ELINCS 204-712-4
FEMA 2158
Synonyms: dl-Isoborneol; Isobornyl alcohol; Isocamphol; exo-1,7,7-Trimethylbicyclo [2.2.1] heptan-2-ol
Definition: A geometrical isomer of borneol
Empirical: C10H18O
Formula: C10H17OH
Properties: Wh. cryst. solid, piney camphoraceous odor; m.w. 154.24; m.p. 212-213 C
Toxicology: LD50 (oral, rat) 5200 mg/kg, (IV, mouse) 56 mg/kg; poison by IV route; mildly toxic by ing.; primary skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Adrian Amer.
dl-Isoborneol. See Isoborneol

Isobornyl acetate
CAS 125-12-2; EINECS/ELINCS 204-727-6
UN NA 1993; FEMA 2160
Synonyms: 2-Camphanyl acetate; exo-1,7,7-Trimethylbicyclo [2.2.1] heptan-2-yl acetate; exo-1,7,7-Trimethylbicyclo [2.2.1] hept-2-yl ethanoate
Definition: Exo-isomer of bornyl acetate; commercial prod. is usually a mixt. of optical isomers
Empirical: C12H20O2
Properties: Colorless clear liq., camphor-like odor, fresh burning taste; sol. in most org. solvs., alcohol, most fixed oils, min. oil; sl. sol. in propylene glycol; insol. in glycerol and water; m.w. 196.29; dens. 0.978 (20 C); b.p. 102-103 C (12 mm); ref. index 1.4620-1.4650
Toxicology: LD50 (oral, mouse) 9 g/kg; TSCA listed
Precaution: Combustible liq.
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA
Isobornyl alcohol. See Isoborneol

Isobornyl formate
CAS 1200-67-5; EINECS/ELINCS 214-853-3
FEMA 2162
Synonyms: exo-1,7,7-Trimethylbicyclo [2.2.1] hept-2-yl formate; exo-1,7,7-Trimethylbicyclo [2.2.1] hept-2-yl methanoate

Empirical: C_{11}H_{18}O_{2}

Properties: Liq., aromatic pine needles odor; sol. in most org. solvs.; insol. in water; m.w. 182.26; dens. 1.000 (18 C); b.p. 110 C (20 mm); ref. index 1.4717

Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Penta Mfg.
http://www.pentamfg.com

Isobornyl isovalerate
CAS 2756-56-1; EINECS/ELINCS 220-410-5
FEMA 2163
Synonyms: exo-1,7,7-Trimethylbicyclo [2.2.1] hept-2-yl propanoate; exo-1,7,7-Trimethylbicyclo [2.2.1] hept-2-yl propionate

Empirical: C_{13}H_{22}O_{2}

Properties: Colorless oily liq.; pine, herbal, fruity, woody odor; sol. in alcohol; insol. in water; m.w. 210.31; sp.gr. 0.9720-0.9770; b.p. 254 C; flash pt. (CC) 98 C; ref. index 1.4640; tenacity 8 hrs. on blotter

Toxicology: TSCA listed

Storage: Store in cool, dry place in tightly sealed containers, protected from heat, light

Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia; Canada DSL; Japan ENCS (no. 4-626); Philippines PICCS

Isobutanol. See 2-Methylpropanal

Isobutandiol-2-amine. See Aminomethyl propanediol

Isobutane
CAS 75-28-5; EINECS/ELINCS 200-857-2
UN 1076 (DOT); UN 1969 (DOT); INS943b; E943b
Synonyms: 2-Methylpropane; Trimethylmethane

Classification: Hydrocarbon gas

Definition: A constituent of natural gas and illuminating gas

Empirical: C_{4}H_{10}

Formula: CH(CH_{3})_{3}

Properties: Colorless gas, odorless; easily liquefied under pressure at R.T.; sol. in oxygenated and hydrocarbon solvs.; insol. in water; m.w. 58.12; dens. 0.5572; vapor pressure 2950 mm Hg (31 psig, 21 C); f.p. -159 C; b.p. -11.73 C; flash pt. -83 C

Toxicology: Asphyxiant; narcotic at high concs.; TSCA listed

Precaution: Highly flamm. gas; explosive; very dangerous fire and explosion hazard exposed to heat, flame, or oxidizers

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating
Isobutanoic acid. See Isobutyric acid
Isobutanol. See Isobutyl alcohol
Isobutanolamine; isobutanol-2 amine. See Aminomethyl propanol
Isobutene homopolymer; isobutene polymer. See Polyisobutene
Isobutyl acetate
CAS 110-19-0; EINECS/ELINCS 203-745-1
UN 1123 (DOT); UN 1213 (DOT); FEMA 2175
Synonyms: Acetic acid isobutyl ester; Acetic acid 2-methylpropyl ester; 2-Methylpropyl acetate; 2-Methyl-1-propyl acetate; 2-Methylpropyl ethanoate; β-Methylpropyl ethanoate
Classification: Carboxylic acid ester
Definition: Ester of isobutyl alcohol and acetic acid
Empirical: C₆H₁₂O₂
Formula: CH₃COOCH₂CH(CH₃)₂
Properties: Colorless clear liq., fruit-like odor; very sol. in alcohol, fixed oils, propylene glycol; sol. in ether, hydrocarbons; sl. sol. in water; m.w. 116.18; sp.gr. 0.8685 (15 C); m.p. -98.9 C; b.p. 118 C; flash pt. (TCC) 18 C; ref. index 1.389
Toxicology: ACGIH TLV/TWA 150 ppm; LD₅₀ (oral, rat) 13,400 mg/kg; mildly toxic by ing. and inh.; vapors can probably irritate nose and throat; high concs. may cause CNS depression; ing. may cause CNS mouth/throat irritation, CNS depression, headache, weakness, dizziness, nausea; higher concs. may cause unconsciousness; skin and eye irritant; TSCA listed
Precaution: Highly flamm.; very dangerous fire and mod. explosion hazard on exposure to heat, flame, oxidizers; incompat. with strong oxidizers, strong bases, strong acids; increased risk of fire/explosion; decom. (hydrolysis) can occur
Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and fumes
NFPA: Health 1, Flammability 3, Reactivity 0
Storage: Store in cool, dry, well-ventilated area, out of direct sunlight; ground drums and bond transfer containers
Uses: Solvent, synthetic flavor for pharmaceuticals; mfg. of pharmaceuticals; defoamer in acute pulmonary edema extractants
Features: Sweet apple, banana-like flavor
Regulatory: FDA 21 CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI
Isobutyl acetate

CAS 7779-75-1; EINECS/ELINCS 231-937-5

FEMA 2177

Synonyms: Acetoacetic acid isobutyl ester; Isobutyl β-ketobutyrate; Isobutyl-3-oxobutanoate; 2-Methyl-1-propyl acetacetate

Empirical: C₈H₁₄O₃

Properties: Colorless liq., brandy-like odor, sweet sl. fruity flavor; sol. in alcohol; insol. in water; m.w. 158.20; dens. 0.9697; b.p. 84.5 C (11 mm); flash pt. 173 F; ref. index 1.4219

Uses: Synthetic flavor for pharmaceuticals

Features: Fruity flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isobutyl alcohol

CAS 78-83-1; EINECS/ELINCS 201-148-0

UN 1212 (DOT); UN 1213; FEMA 2179

Synonyms: 1-Hydroxymethylpropane; IBA; Isobutanol; Isopropylcarbinol; 2-Methylpropanol; 2-Methyl-1-propanol; 2-Methylpropan-1-ol; 2-Methylpropyl alcohol

Classification: Primary aliphatic alcohol

Empirical: C₄H₁₀O

Formula: (CH₃)₂CHCH₂OH

Properties: Colorless liq.; sweet musty odor; sol. in alcohol, ether; misc. with most org. solvs.; partly sol. in water; m.w. 74.12; dens. 0.806 (15 C); vapor pressure 10.4 mm Hg; f.p. -108 C; b.p. 106-109 C; flash pt. (TCC) 29 C; autoignition temp. 415 C; ref. index 1.396; surf. tens. 22.98 dynes/cm; dielec. const. 17.93

Toxicology: ACGIH TLV/TWA 50 ppm; LD₅₀ (oral, rat) 2460 mg/kg; poison by IV, IP route; mod. toxic by ing., skin contact; severe skin/eye irritant; inh. of high concs. or ing. may cause CNS depression effects; collapse, coma, or death possible at higher doses; liver/kidney damage possible; experimental carcinogen, tumorigen; mutagenic data; TSCA listed

Environmental: VOC; BOD₅ 0.41; COD 2.46; ThOD 2.59

Precaution: Flamm.; dangerous fire hazard with heat, flame; mod. explosive as vapor with heat, flame, oxidizers; also incompat. with chromium trioxide; explosion potential with various chems.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes

NFPA: Health 1, Flammability 3, Reactivity 0

Storage: Store in cool, dry, well-ventilated area, out of direct sunlight, away from heat/ignition sources

Uses: Solvent, synthetic flavor and fragrance for pharmaceuticals

Features: Fruity flavor

Regulatory: FDA 21CFR §73.1, 172.515, 172.859, 175.105, 176.200, 176.210, 177.120, 177.2800; FEMA GRAS; Australia AICS; Canada DLS; Japan MITI; CERCLA hazardous substance

Isobutyl aldehyde. See 2-Methylpropanal
Isobutyl 2-aminobenzoate; Isobutyl o-aminobenzoate. See Isobutyl anthranilate

Isobutyl angelate
CAS 7779-81-9; EINECS/ELINCS 231-941-7
FEMA 2180
Synonyms: Isobutyl cis-2-methyl-2-butenoate;
Isobutyl cis-α-methylcrotonate; 2-Methylpropyl (Z)-2-methyl-2-butenoate;
Methylpropyl 2-methylisocrotonate
Definition: Ester of isobutyl alcohol and angelic acid
Empirical: C₉H₁₆O₂
Properties: Colorless liq., chamomile-like odor; sol. in alcohol; insol. in water; m.w. 156.23;
sp.gr. 0.877; b.p. 176-177 C; flash pt. 140 F
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: SAFC Specialties http://www.safcspecialties.com
Thomas Scientific† http://www.thomassci.com
United Pharma Ltd http://www.upltd.com
Wutong Aroma http://www.wu-tong.com
Xinchem† http://www.finechemnet.com

p-Isobutylibenzaldehyde
CAS 40150-98-9
Empirical: C₁₁H₁₄O
Properties: Colorless cl. liq.; sol. in ethanol, ether, toluene; insol. in water; m.w. 162.2;
sp.gr. 0.960 (20 C); b.p. 240 C; flash pt. (COC) 122 C
Toxicology: LD₅₀ (oral, rat) 1000-5000 mg/kg; eye and skin irritant
Storage: Store in cool, dry place
Uses: Intermediate for pharmaceuticals
Manuf./Distrib.: Mitsubishi Gas http://www.mgc-a.com

Isobutyl benzoate
CAS 120-50-3; EINECS/ELINCS 204-401-3
FEMA 2185
Synonyms: Benzoic acid, isobutyl ester;
Benzoic acid, 2-methylpropyl ester;
Eglantine; 2-Methylpropyl benzoate
Definition: Ester of butyl alcohol and benzoic acid
Empirical: C₁₁H₁₄O₂
Formula: C₆H₅CO₂CH₂CH(CH₃)₂
Properties: Colorless liq., floral-leafy odor; misc. with alcohol, ether; insol. in water; m.w. 178.23;
dens. 1.002; b.p. 237 C; flash pt. 96 C; ref. index 1.493-1.496
Toxicology: LD₅₀ (oral, rat) 5600 mg/kg, (oral, mouse) 4800 mg/kg; TSCA listed
Precaution: Combustible
Uses: Synthetic flavor for pharmaceuticals
Use Level: 0.5% max. as benzoic acid in finished cosmetics
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: ABCR http://www.abcr.de;
Isobutylic carbinol. See α-Isobutylphenethyl alcohol

Isobutyl-2-butenoate
CAS 589-66-2; EINECS/ELINCS 209-658-5
UN 3272; FEMA 2187

Synonyms: 2-Butenoic acid, 2-methylpropyl ester; Isobutyl trans-2-butenoate; Isobutyl crotonate

Empirical: C₈H₁₄O₂

Properties: Colorless liq.; fruity rum-like odor; fruity taste; sol. in alcohol; insol. in water; m.w. 142.19; sp.gr. 0.883-0.891; b.p. 171 °C; flash pt. (CC) 56 °C; ref. index 1.428 (20 °C)

Toxicology: Irritating to eyes, skin, respiratory system; lachrymator; harmful by ing., inh., skin absorp.; vapor/mist irritating to eyes, mucous membranes, upper respiratory tract; may cause burning sensation, coughing, wheezing, laryngitis, shortness of breath, headache, nausea, vomiting; TSCA listed

Environmental: Prevent contamination of soil, ground- and surf. water

Precaution: Flamm. liq.; incompat. with strong oxidizing agents

Hazardous Decomp. Prods.: Toxic fumes of CO, CO₂; emits toxic fumes under fire conditions

HMIS: Health 1, Flammability 2, Reactivity 0

Storage: Sensitive to light; store in cool, well-ventilated area away from naked flame, ignition sources; refrigerate; keep tightly closed

Uses: Synthetic flavor for pharmaceuticals

Features: Fruity flavor

Regulatory: DOT nonregulated; FEMA GRAS; AICS, China, Canada DSL, ECL, EINECS, ENCS, PICCS listed

Isobutyl heptanoate  
CAS 7779-80-8; EINECS/ELINCS 231-940-1  
FEMA 2200

Synonyms:  Heptanoic acid, isobutyl ester;  
Heptanoic acid, 3-methylpropyl ester;  
Isobutyl heptoate; Isobutyl heptylate; 2-Methylpropyl heptanoate

Definition:  Ester of heptanoic acid and isobutyl alcohol

Empirical:  C_{11}H_{22}O_{2}

Properties:
Colorless liq., green odor; sol. in most org. solvs.; m.w. 186.30; dens. 0.8593; b.p. 209 °C; flash pt. 86 °C

Toxicology:  Skin irritant; TSCA listed
Chemical Component Cross-Reference

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isobutyl heptanoate; Isobutyl heptylate. See Isobutyl heptanoate

Isobutyl hexanoate
CAS 105-79-3; EINECS/ELINCS 203-332-6
FEMA 2202
Synonyms: Hexanoic acid, isobutyl ester; Hexanoic acid, 2-methylpropyl ester; Isobutyl caproate; Isobutyl capronate; Isobutyl hexylate; 2-Methylpropyl hexanoate
Empirical: \( \text{C}_{10}\text{H}_{20}\text{O}_2 \)
Properties: Colorless liq., fruity apple-like odor; m.w. 172.27; dens. 0.856; vapor dens. 5.9; b.p. 348-350 °C; flash pt. 169 °F; ref. index 1.412-1.416
Toxicology: Primary skin irritant; TSCA listed
Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO₂, acrid smoke and fumes
Storage: Store under nitrogen; refrigerate; store at 40-70 °F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
Uses: Synthetic flavor for pharmaceuticals
Features: Chocolate, apple-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

CAS 97-85-8; EINECS/ELINCS 202-612-5
UN 2528 (DOT); FEMA 2189
Synonyms: IBIB; Isobutyric acid, isobutyl ester; 2-Methylpropanoic acid 2-methylpropyl ester; 2-Methylpropyl isobutyrate; 2-Methylpropyl 2-methylpropanoate
Empirical: \( \text{C}_8\text{H}_{16}\text{O}_2 \)
Formula: \((\text{CH}_3)\text{C}\text{HCOOCH}_2\text{CH(CH}_3\text{)}_2\)
Properties: Colorless liq., fruity odor; sol. in alcohol, ether; insol. in water; m.w. 144.22; dens. 0.854 (20/4 °C); m.p. -81 °C; b.p. 149-151 °C; flash pt. 40 °C; ref. index 1.399 (20 °C)
Toxicology: LD50 (oral, rat) 12,800 mg/kg; LC50 (inh., rat, 6 h) 5000 ppm; mildly toxic by ing. and inh.; irritant; TSCA listed
Precaution: Flamm.; can react with oxidizers

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Grape-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isobutyl β-ketobutyrate. See Isobutyl acetoacetate
Isobutyl ketone. See Diisobutyl ketone
Isobutyl lignate. See Vanillin isobutyrate
Isobutyl methoxypyrazine. See 2-Isobutyl-3-methoxy-pyrazine

2-Isobutyl-3-methoxy-pyrazine
CAS 24683-00-9; EINECS/ELINCS 246-402-1
FEMA 3132
Synonyms: Isobutyl methoxypyrazine; 2-Isobutyl-3(5/6)-methoxy-pyrazine; 2-Methoxy-3-isobutylpyrazine; 2-2-Methylpropyl-3-methoxy-pyrazine
Classification: pyrazine
Empirical: C9H14N2O
Properties: Colorless liq.; green pepper odor; sol. in water; sol. in most org. solvs.; m.w. 166.22; dens. 0.990; vapor dens. 5.7; flash pt. 80 C; ref. index 1.488-1.492
Toxicology: Skin, eye, respiratory system irritant
Precaution: Incompat. with strong oxidizers, acids
HMIS: Health 1, Flammability 1, Reactivity 0
Storage: Keep in original, rightly closed container; keep away from heat, sparks, open flame
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FEMA GRAS; Canada DSL

α-Isobutylphenethyl alcohol
CAS 7779-78-4; EINECS/ELINCS 231-939-6
FEMA 2208
Synonyms: Benzyl isoamyl alcohol; Benzyl isobutyl carbinol; Isobutyl benzyl carbinol; 4-Methyl-1-phenyl-2-pentanol; 4-Methyl-1-phenylpentan-2-ol
Classification: aromatic alcohol
Empirical: C12H18O
Properties: Colorless sl. oily liq., green floral herbaceous straw-like odor, buttery oily caramelic flavor; sol. in alcohol; insol. in water;
Isobutyl phenylacetate

**CAS**: 102-13-6; EINECS/ELINCS 203-007-9

**FEMA**: 2210

**Synonyms**: Acetic acid, phenyl-, isobutyl ester; Benzeneacetic acid, 2-methylpropyl ester; Butyl isophenyl acetate; Isobutyl phenylethanoate; Isobutyl α-toluate; 2-Methylpropyl benzeneacetate; Methyl propyl phenyl acetate; 2-Methyl propyl phenyl acetate; Phenylacetic acid, isobutyl ester

**Definition**: Ester of phenylacetic acid and isobutyl alcohol

**Empirical**: C_{12}H_{16}O_{2}

**Formula**: (CH_{3})_{2}CHCH_{2}OOCCH_{2}C_{6}H_{5}

**Properties**: Colorless liq., sweet musk-like fragrance, sweet honey-like flavor; sol. in alcohol, most fixed oils, oxygenated solvs.; insol. in glycerol, propylene glycol, water; m.w. 192.26; dens. 0.984-0.988; b.p. 253 C; flash pt. 116 C; ref. index 1.4860-1.4880

**Precaution**: Combustible

**Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating fumes

**Uses**: Synthetic flavor for pharmaceuticals

**Regulatory**: FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL

Isobutyric acid
CAS 79-31-2; EINECS/ELINCS 201-195-7
UN 2529 (DOT); FEMA 2222

Synonyms: Acetic acid, dimethyl-
Dimethylacetic acid; Isobutanoic acid;
Isopropylfumaric acid; 2-Methylpropanoic acid;
Methylpropionic acid; 2-
Methylpropionic acid; α-Methylpropionic acid; MPA;
Propionic acid, 2-methyl-

Classification: Organic acid

Empirical: C₄H₈O₂
Formula: (CH₃)₂CHCOOH

Properties: Colorless liq., pungent odor of rancid butter; sol. in 6 parts of water; misc. with alcohol, ether, chloroform, oxygenated and chlorinated solvs.; m.w. 88.11; dens. 0.946-0.950 (20/20 C); m.p. -46 C; b.p. 154.4 C; flash point (TOC) 76.6 C; ref. index 1.393 (20 C)

Toxicology: LD50 (oral, rat) 280 mg/kg, (skin, rabbit) 500 mg/kg; poison by ing.; mod. toxic by skin contact; corrosive irritant to eyes and tissue; TSCA listed

Precaution: Flamm., corrosive; reactive with oxidizing materials

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes

Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air

Uses: Synthetic flavor for pharmaceuticals

Isobutyric acid benzyl ester. See Benzyl isobutyrate

Isobutyric acid, cinnamyl ester. See Cinnamyl isobutyrate

Isobutyric acid, 3,7-dimethyl-octa-2,6-dienyl ester; Isobutyric acid, 3,7-dimethyl-2,6-octadienyl ester, (Z). See Neryl isobutyrate

Isobutyric acid ester with vanillin. See Vanillin isobutyrate

Isobutyric acid, ethyl ester. See Ethyl isobutyrate

Isobutyric acid, hexyl ester. See Hexyl isobutyrate

Isobutyric acid, isobutyl ester. See Isobutyl isobutyrate

Isobutyric acid isopropyl ester. See Isopropyl isobutyrate; Isopropyl isovalerate

Isobutyric acid methyl ester. See Methyl isobutyrate

Isobutyric acid phenethyl ester. See Phenethyl isobutyrate

Isobutyric acid 2-phenoxyethyl ester. See Phenoxyethyl isobutyrate

Isobutyric acid 3-phenylpropyl ester. See 3-Phenylpropyl isobutyrate

Isobutyric acid propyl ester. See Propyl isobutyrate

Isobutyric acid, p-tolyl ester. See p-Tolyl isobutyrate

Isobutyric aldehyde. See 2-Methylpropanal

Isocamphol. See Isoborneol

Isocaproic acid. See 4-Methylpentanoic acid

Isoceteth-20
CAS 69364-63-2

Synonyms: PEG-20 isocetyl ether; PEG 1000 isocetyl ether; POE(20) C16 fatty alcohol;
POE (20) isohexadecyl ether

Definition: A synthetic compound derived from fatty acids and oxirane (ethylene oxide)
Chemical Component Cross-Reference

Isoceteth-30

Synonyms: PEG-30 isocetyl ether; POE (30) isocetyl ether
Definition: A synthetic compound derived from fatty acids and oxirane (ethylene oxide).

Properties: Nonionic
Uses: Emulsifier, solubilizer for pharmaceuticals

Isocetyl alcohol

CAS 36311-34-9; EINECS/ELINCS 252-964-9
Synonyms: 2-Hexyl-1-decanol; Isohexadecanol; Isohexadecyl alcohol; Isopalmityl alcohol
Definition: Mixture of branched chain C16 aliphatic alcohols
Empirical: C16H34O

Isocetyl behenate

CAS 94247-28-6; EINECS/ELINCS 304-205-9
Synonyms: Behenic acid, isocetyl ester; Behenic acid, isohexadecyl ester; Docosanoic acid, isocetyl ester; Isohexadecyl docosanoate
Definition: Ester of isocetyl alcohol and behenic acid

Isocetyl isostearate

CAS 52006-45-8; EINECS/ELINCS 257-598-3
Definition: Ester of isocetyl alcohol and isostearic acid
Empirical: C34H68O2
Properties: Colorless nonoily liq.; m.w. 508.91; congeal pt. -19.5 C; low viscosity; hydrolysis and oxidation stability
Uses: Emollient for pharmaceutical topicals
Manuf./Distrib.: Chempri
Trade Names: Isostriol IC

Isocetyl laurate

Empirical: C28H56O2
Formula: C11H23COOC16H33
Properties: Oily liq.; almost odorless; sol. in org. solvs.; insol. in water; m.w. 424.7; f.p. -65 C
Precaution: Combustible
Uses: Lubricant, fixing agent, and solvent in pharmaceuticals, topicals
Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Pelemol® ICLA

Isocetyl myristate

CAS 83708-66-1
Synonyms: Myristic acid, isocetyl ester; Tetradecanoic acid, isocetyl ester; Tetradecanoic acid, isohexadecyl ester
Definition: Ester of isocetyl alcohol and myristic acid
Empirical: C30H60O2
Formula: CH3(CH2)12COOC16H33
Properties: Oily liq.; pract. odorless; sol. in most org. solvs.; insol. in water; dens. 0.857; f.p. -39 C
Precaution: Combustible
Uses: Emollient, lubricant, fixing agent, and solvent in pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/
Trade Names: Ceraphyl® ICA

Isocetyl octanoate

CAS 125804-19-5
Synonyms: Isohexadecyl octanoate
Uses: Emollient for pharmaceutical topicals
Trade Names: Pelemol® ICO

†=pharmaceutical grade

††=pharmaceutical grade
Isocetyl stearate
CAS 25339-09-7; EINECS/ELINCS 246-868-6
Synonyms: Isohexadecyl stearate; Octadecanoic acid, isocetyl ester; Octadecanoic acid, isohexadecyl ester; Stearic acid, isocetyl ester; Stearic acid, isohexadecyl ester
Definition: Ester of isocetyl alcohol and stearic acid
Empirical: C_{34}H_{68}O_{2}
Formula: CH_{3}(CH_{2})_{16}COOC_{16}H_{33}
Properties: Oily liq., pract. odorless; insol. in water; sol. in most org. solvs.; dens. 0.862; f.p. 57 C; visc. 29 cp (25 C); ref. index 1.446-1.456
Toxicology: LD_{50} (oral, rabbit) > 5 g/kg; LD_{Lo} (oral, rat) 5 g/kg; low toxicity by ing.; skin and eye irritant; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Lubricant, fixing agent, solvent, emollient, thickener, pigment dispersant in pharmaceutical topicals, creams and lotions
Regulatory: Canada DSL
Trade Names: Ceraphyl® 494; Liponate ICS; Monestriol IC; Pelemol® ICS; Schercemol ICS

Isocetyl stearoyl stearate
CAS 97338-28-8; EINECS/ELINCS 306-621-6
Synonyms: Isohexadecyl 12-[(1-oxooctadecyl)oxy] octadecanoate
Classification: Ester
Empirical: C_{52}H_{102}O_{4}
Formula: CH_{3}(CH_{2})_{5}CHOCO(CH_{2})_{16}CH_{3}(CH_{2})_{10}COOC_{16}H_{33}
Properties: Lt. to straw liq., char. mild odor; sol. in min. oil, IPP, IPM, oleyl alcohol; insol. in propylene glycol, glycerin; sp.gr. 0.858-0.864; ref. index 1.4540-1.4560; nonionic
Toxicology: Nonirritating, nonsensitizing
Uses: Emollient, cosolvent, solubilizer for pharmaceutical topicals
Regulatory: Canada DSL
Manuf./Distrib.: A&E Connock http://www.connock.co.uk
Trade Names: Ceraphyl® 140-A; Pelemol® IDO; Schercemol IDO

Isodecyl stearate
CAS 31565-38-5; EINECS/ELINCS 250-704-9
Synonyms: Isodecyl octadecanoate; Octadecanoic acid, isodecyl ester
Definition: Ester of branched chain decyl alcohols and stearic acid
Empirical: C_{28}H_{56}O_{2}
Formula: CH_{3}(CH_{2})_{16}COOC_{10}H_{21}
Properties: Wh. to straw liq., char. mild odor; sol. in peanut oil, 95% ethanol, IPM, oleyl alcohol; insol. in water, glycerin, propylene glycol; sp.gr. 0.858-0.864; ref. index 1.4540-1.4560; nonionic
Toxicology: LD_{50} (oral, rat) > 40 ml/kg; nonirritating to eyes; mildly irritating to skin; TSCA listed
Uses: Emollient, cosolvent, solubilizer for pharmaceutical topicals
Regulatory: Canada DSL
Manuf./Distrib.: A&E Connock http://www.connock.co.uk
Trade Names: M Kemfluid 217

Isodulcit. See Rhamnose
Isoeicosanol; Isoeicosyl alcohol. See Octyldodecanol
Isoeestragole. See Anethole

Isoeugenol
CAS 97-54-1; EINECS/ELINCS 202-590-7
FEMA 2468
Synonyms: 1-(4-Hydroxy-3-methoxyphenyl)propylene; 1-Hydroxy-2-methoxy-4-propenylbenzene; 2-Hydroxy-5-propenylanisole; 2-Methoxy-4-propenylphenol; 2-Methoxy-4-(prop-1-enyl)phenol; Phenol, 2-methoxy-4-(1-propenyl)-;
Propenylguaiacol; 4-Propenylguaiacol

Classification: Substituted phenol; aromatic alcohol

Definition: Commercial grades are a mixt. of cis- and trans-isomers

Empirical: C_{10}H_{12}O_{2}

Formula: (\text{CH}_3\text{CHCH})\text{C}_6\text{H}_3\text{OHOCH}_3

Properties: Pale yel. visc. oil; carnation odor; sol. in fixed oils, propylene glycol, most org. solvs.; misc. with alcohol, ether; very sl. sol. in water; insol. in glycerin; m.w. 164.22; dens. 1.079-1.085; m.p. -10 C; b.p. 266 C; flash pt. > 230 F; ref. index 1.572-1.577

Toxicology: LD_{50} (oral, rat) 1560 mg/kg; mod. toxic by ing.; mod. human skin irritant; allergen; sensitizer; human mutagenic data; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet flavor

Use Level: 0.02% max. in finished cosmetics

Regulatory: FDA 21CFR §172.515, 182.60; GRAS; FEMA GRAS; Japan approved as flavoring; Canada DSL

Isoeugenol acetate. See Acetisoeugenol

Isoeugenol, benzyl ether; trans-Isoeugenol benzyl ether. See Isoeugenyl benzyl ether

Isoeugenol methyl ether; 1,3,4-Isoeugenol methyl ether. See Methyl isoeugenol

Isoeugenol acetate. See Acetisoeugenol

Isoeugenyl benzyl ether

CAS 120-11-6; 92666-21-2; EINECS/ELINCS 204-370-6

FEMA 3698

Synonyms: Benzene, 1-(benzylxy)-2-methoxy-4-propenyl-; Benzene, 2-methoxy-
1,3-Isoindolinedione. See Phthalimide

Isojasomone
CAS 11050-62-7; EINECS/ELINCS 234-273-4
FEMA 3552
Classification: aliphatic ketone
Definition: Mixt. of 2-hexylidencyclopentanone and 2-hexyl-2-cyclopenten-1-one

Empirical: C_{11}H_{16}O
Properties: Yel. to yel.-brn. liq.; jasmine-like odor; m.w. 164.27; dens. 0.911; m.p. 144 C (10 mm); flash pt. > 100 C; ref. index 1.4750-1.4800

Toxicology: Skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Synthetic flavor for pharmaceuticals
Use Level: 0.06% max. in finished cosmetics
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isolated soy protein. See Soybean (Glycine soja) protein

Isoleucine (INCI). See L-Isoleucine

DL-Isoleucine
CAS 443-79-8; EINECS/ELINCS 207-139-8
FEMA 3295
Synonyms: DL-allo-Isoleucine; DL-2-Amino-3-methylvaleric acid
Empirical: C_{6}H_{13}NO_{2}
Properties: Wh. cryst. powd., odorless, sl. bitter taste; sol. in water; insol. in alcohol, ether; m.w. 131.17; m.p. 292 C (with dec.)
Uses: Flavor for pharmaceuticals; nutrient; dietary supplement
Regulatory: BP, EP compliance; FEMA GRAS; Canada DSL
L-Isoleucine

CAS 73-32-5; EINECS/ELINCS 200-798-2

Synonyms: Acetic acid, amino-s-butyl-; 2-Amino-3-methylpentanoic acid; L-2-Amino-3-methylpentanoic acid; 2-Amino-3-methylvaleric acid; α-Amino-β-methylvaleric acid; Isoleucine (INCI); Norvaline, 3-methyl-; Valeric acid, 2-amino-3-methyl

Classification: Natural protein amino acid

Definition: Commercial prod. is the naturally occurring L(+)-enantiomer

Empirical: C6H13NO2

Formula: CH3CH2CH(CH3)CH(NH2)COOH

Properties: Wh. cryst. powd., bitter taste; sl. sol. in water; pract. insol. in alcohol; insol. in ether; m.w. 131.17; m.p. 283-284 C (dec.)

Toxicology: LD50 (IP, rat) 6822 mg/kg; mildly toxic by IP route; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx

Uses: Diagnostic aid; raw material for peptide drugs

Regulatory: BP, EP compliance; FDA 21CFR §172.320, 6.6% max.; Japan approved; Canada DSL

†=pharmaceutical grade

Isomalt

CAS 64519-82-0
INS953; E953

Synonyms: Hydrogenated isomaltulose; Hydrogenated palatinose; Isomaltitol

Definition: A polyol derived exclusively from sugar; mixt. of two components: 6-O-D-glucopyranosyl-D-sorbitol and 1-O-D-glycopyranosyl-D-mannitol-dihydrate

Toxicology: 50% metabolized in humans; breaks down to form sorbitol, mannitol, and glucose; short-term animal studies show increase in bilirubin levels

Uses: Sweetener, sugar substitute in pharmaceuticals; base for medicated hard boiled candies

Features: Nutritive; noncariogenic; nonhygroscopic

Regulatory: BP, EP compliance

Manuf./Distrib.: AB R Lundberg http://www.norfoods.se/lundberg; Cerestar† http://www.cerestar.com; Palatinol

Süßungsmittel† http://www.isomalt.de

Trade Names: C*PharmIsomaltidex 16540

Trade Names Containing: Lucarotin® 20 CWD/R; Pharmagum™ M

Isomaltitol. See Isomalt

Isomaltose

CAS 499-40-1

Empirical: C12H22O11

Properties: M.w. 342.30
α-Isomethy lionone

CAS 127-51-5; EINECS/ELINCS 204-846-3
FEMA 2714

Synonyms: 3-Buten-2-one, 3-methyl-4-(2,6,6-trimethyl-2-cyclohexen-1-yl)-; α-Cetone; α-Cyclocitrylidene butanone; α-Ionone, isomethyl-; Isomethyl-α-ionone; Iso-α-methyl ionone; γ-Methyl ionone; 3-Methyl-4-(2,6,6-trimethyl-2-cyclohex-1-yl)-1-buten-2-one; 4-(2,6,6-Trimethyl-2-cyclohexen-1-yl)-3-methyl-3-buten-2-one

Empirical: C14H22O

Properties: Colorless to ylsh. liq.; flowery, violet, woody, fruity, orris-like odor; sol. in 5 parts 70% alcohol; insol. in water; m.w. 206.30; dens. 0.9304; b.p. 93 C (31 mm); flash pt. 120 C; ref. index 1.5000-1.5020

Toxicology: TSCA listed

Precaution: Combustible; incompat. with strong oxidizers, iron, iron salts

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Fragrance in pharmaceuticals

Regulatory: Canada DSL

Isononyl isononanoate

CAS 42131-25-9; 59219-71-5; EINECS/ELINCS 261-665-2

Synonyms: Isononanoic acid isononyl ester; 3,5,5-Trimethylhexanoic acid, 3,5,5-trimethylhexyl ester; 3,5,5-Trimethylhexyl 3,5,5-trimethylhexanoate

Definition: Ester of a branched chain nonyl alcohol with a branched chain nonanoic acid

Empirical: C18H36O2

Properties: Sol. in alcohol, animal and vegetable oils, min. oil; insol. in water, glycerin, propylene glycol

Toxicology: No known toxicity; TSCA listed

Uses: Emollient for pharmaceutical topicals, mouthwashes

Isomethyl-α-ionone; Iso-α-methyl ionone.

See α-Isomethylionone

Isomyristyl alcohol. See 2-Hexyl-1-octanol

Isonaphthol. See β-Naphthol
Chemical Component Cross-Reference

propanetriol trimer; Isooctadecanoic acid, diester with triglycerol. See Polyglyceryl-3 diisostearate
Isooctadecanoic acid, isoctadecyl ester. See Isostearyl isostearate
Isooctadecanoic acid, monoester with decaglycerol. See Polyglyceryl-10 isostearate
Isooctadecanoic acid, monoester with hexaglycerol. See Polyglyceryl-6 isostearate
Isooctadecanoic acid, monoester with 1,2-propanediol. See Propylene glycol isostearate
Isooctadecanoic acid, monoester with 1,2,3-propanetriol. See Glyceryl isostearate
Isooctadecanoic acid, monoester with triglycerol. See Polyglyceryl-3 isostearate
Isooctadecanoic acid, sesquiester with diglycerol. See Polyglyceryl-2 sesquiosistearate
Isooctadecanol; Isooctadecan-1-ol. See Isostearyl alcohol
Isooctadecyl 2-hydroxypropanoate. See Isostearyl lactate

Isooctadecyl pivalate. See Isostearyl neopentanoate
Isooctanoic acid, monoester with tetraglycerol. See Polyglyceryl-4 isostearate
Isooctaophorone. See Isophorone
Isooctyl acrylate
CAS 29590-42-9; EINECS/ELINCS 249-707-8
Synonyms: Acrylic acid 6-methylheptyl ester; 6-Methylheptyl acrylate
Classification: Nonaromatic ester
Empirical: C_{11}H_{20}O_2
Properties: Liq.; m.w. 184.25; b.p. 125 C (20 mm); ref. index 1.4370
Toxicology: TSCA listed
Precaution: Combustible
Storage: Heat and light sensitive
Uses: Pharmaceutical topicals
Regulatory: FDA approved for topicals; Canada DSL
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Kuraray† http://www.kuraray.co.jp; Robeco† http://www.robecoinc.com

Isophorone
CAS 78-59-1; EINECS/ELINCS 201-126-0
UN 1638; FEMA 3553

Synonyms: Isoacetophorone; Isoforon; Isooctaphorone; α-Isophorone; 1,1,3-Trimethyl-3-cyclohexene-5-one; 3,3,5-Trimethyl-2-cyclohexene-1-one; 3,3,5-Trimethylcyclohexenone; 3,3,5-Trimethyl-2-cyclohexen-1-one

Classification: Cyclic aliphatic ketone

Empirical: C9H14O
Formula: OCHC:C(CH3)CH2C(CH3)2CH2

Properties: Colorless to pale yel. liq.; peppermint or camphor-like odor; sol. in alcohol, ether, acetone, oxygenated solvs.; misc. with org. solvs.; insol. in water; m.w. 138.20; sp.gr. 0.922 (20/20 C); vapor pressure 1 mm (38 C); b.p. 159 C; flash pt. (CC) 84 C; autoignition temp. 380 C; ref. index 1.4781 (20 C)

Toxicology: ACGIH TLV/CL 5 ppm; LD50 (oral, rat) 2330 mg/kg; LCLo (inh., rat, 4 h) 1840 ppm; mod. toxic by ing.; mildly toxic by inh.; irritating to eyes, skin, respiratory system; human systemic effects by inh.; human irritant at 25 ppm; may cause narcosis, lung irritation, death; questionable carcinogen; mutagenic; target organ: kidneys; TSCA listed

Precaution: Combustible; incompat. with strong oxidizing agents such as peroxides, nitrates, and perchlorates

NFPA: Health 2, Flammability 2, Reactivity 0

Storage: Store in tightly closed containers in cool, dry, well-ventilated area, separate from workplace

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet flavor

Regulatory: FDA 21CFR §175.105; FEMA GRAS; SARA reportable; HAP; Canada DSL

CAS: **108-21-4**; EINECS/ELINCS: **203-561-1**

**UN 1220 (DOT); FEMA 2926**

**Synonyms:** Acetic acid isopropyl ester; Acetic acid 1-methylethyl ester; 2-Acetoxypropane; Isopropyl ethanoate; 2Methylethanoate; 1-Methylethyl acetate; 2-Propyl acetate; 2-Propyl ethanoate

**Classification:** Sat. aliphatic carboxylic acid ester

**Empirical:** C₅H₁₀O₂

**Formula:** CH₃COOCH(CH₃)₂

**Properties:** Colorless clear aromatic liq., fruity odor; sol. in acetone, most org. solvs.; mod. sol. in water; misc. with alcohol, ether, fixed oils; m.w. 102.15; dens. 0.874 (20/20 C); vapor pressure 59.2 mm Hg; f.p. -73 C; b.p. 88.4 C; flash pt. 2 C; autoignition temp. 460 C; ref. index 1.377; surf. tens. 26 dynes/cm (20 C)

**Toxicology:** ACGIH TLV/TWA 250 ppm; STEL 310 ppm; LD50 (oral, rat) 3000 mg/kg; mod. toxic by ing.; mildly toxic by inh.; high concs. of vapor irritating to nose and throat; human systemic effects on inh.; narcotic in high conc.; chronic exposure can cause liver damage; TSCA listed

**Environmental:** VOC; BOD5 1.07; COD 1.67; ThOD 2.04

**Precaution:** Highly flamm.; UEL 8%; dangerous fire hazard with heat, flame, oxidizers; mod. explosive with heat or flame; incompat. with strong oxidizers, strong acids, bases, potassium t-butoxide

### Toxicology:

- **ACGIH TLV/TWA**: 400 ppm; STEL 500 ppm; LD₅₀ (oral, rat) 5045 mg/kg, (IP, rat) 2735 mg/kg, (IV, rat) 1099 mg/kg; poison by ing., subcut. routes; mod. toxic by IV and IP routes; mildly toxic by skin contact; skin and eye irritant; human systemic effects by ing./inh. (headache, nausea, vomiting, narcosis); 100 ml can be fatal; may cause dry cracking skin; experimental teratogen, reproductive effector; mutagenic data; questionable carcinogen; TSCA listed

**Environmental:** VOC; BOD₅ 1.53; COD 2.23; ThOD 2.40

**Precaution:** DOT: Flamm. liq.; very dangerous fire hazard with heat, flame, oxidizers; reacts with air to form dangerous peroxides; incompat. with strong oxidizers, phosgene, iron salts, hydrogen-palladium, potassium t-butoxide, nitroform

**NFPA:** Health 1; Flammability 3; Reactivity 0

**Storage:** Store in tightly closed electrically grounded containers in a cool area separate from workplace; use in minimal quantities

**Uses:** Solvent, synthetic flavor, color diluent in pharmaceuticals, orals, topicals; antiseptic in topical anti-infective prods.; externally as 'rubbing alcohol' for topical sterilization, cooling and soothing props.

**Regulatory:** FDA 21CFR §73.1 (no residue), 73.30, 73.315, 73.345, 73.615, 73.1001, 172.385, 172.515, 172.560, 172.665, 172.695, 172.712, 173.240, 173.340; 176.180, 176.200, 176.210, 177.1200, 177.2800, 178.1010, 178.3910; Canada DSL; 27CFR §21.112; use in bread is permitted in Ireland and Japan; FEMA GRAS; FDA approved for orals, topicals; USP/NF, BP, EP compliance; SARA §31/312 acute health/chronic health/fire hazard, §313 reportable

†=pharmaceutical grade

Trade Names: Eastman® Isopropanol

Synonyms: 2-Aminopropane; 1-Methylethylamine; MIPA; Monoisopropylamine; 2-Propanamine; 2-Propanamine; 2-Propylamine; s-Propylamine

Classification: Sat. aliphatic amine

Empirical: C₃H₇N

Formula: (CH₃)₂CHNH₂

Properties: Colorless liq.; ammonia-like odor; very sol. in acetone; sol. in water, ethanol, ether, benzene, chloroform, many org. solvs.; misc. with oxygenated solvs.; m.w. 59.11; dens. 0.6870 (20/20 C); vapor pressure 472 mm Hg (20 C); m.p. -101 C; b.p. 32. 4 C; flash pt. (CC) -37 C; pH 11.8 (0.1M aq. sol'n.)

Isopropylamine

CAS 75-31-0; EINECS/ELINCS 200-860-9

UN 1221 (DOT)

Toxicology: ACGIH TLV/TWA 5 ppm; STEL 10 ppm; LD₅₀ (oral, rat) 820 mg/kg, (skin, rabbit) 550 mg/kg; corrosive, very toxic; can be absorbed through skin in toxic amts.; mod. toxic by ing.; mildly toxic by inh.; severe skin and eye irritant; possible permanent eye injury; inh. can cause
Chemical Component Cross-Reference

nose/throat/lung irritation; narcotic in high concs.; high concs. can cause potentially fatal pulmonary edema; ing. may cause burning of mouth, throat, digestive tract; TSCA listed

Precaution: Flamm.; incompat. with oxidizers, acids, halogenated hydrocarbons, nitroparaffins, nitromethane, calcium or sodium hypochlorite, nitrosyl perchlorate, chloromethylxirane, mercury, perchloryl fluoride; violent/explosive reactions possible

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx

NFPA: Health 3, Flammability 4, Reactivity 0

Storage: Store in cool, dry, well-ventilated areas, out of direct sunlight

Uses: Solvent for pharmaceuticals; pharmaceutical intermediate

Regulatory: Canada DSL

4-Isopropylbenzaldehyde; p-Isopropylbenzaldehyde. See Cuminaldehyde

Isopropylbenzene. See Cumene

p-Isopropylbenzenecarboxaldehyde. See Cuminaldehyde

Isopropyl benzoate
CAS 939-48-0; EINECS/ELINCS 213-361-6
FEMA 2932
Synonyms: Benzoic acid, isopropyl ester; Benzoic acid, 1-methylethyl ester; 1-Methylethyl benzoate; Propan-2-yl benzoate
Definition: Ester of isopropyl alcohol and benzoic acid
Empirical: C10H12O2
Properties: Colorless cl. liq.; sol. in alcohol, ether; insol. in water; m.w. 164.21; dens. 1.0263 (4 C); vapor pressure 0.12 mm (20 C); m.p. -26.4 C; b.p. 218-219 C; flash pt. (OC) 210 F
Toxicology: LD50 (oral, rat) 3730 mg/kg, (skin, rabbit) 20 g/kg; mod. toxic by ing.; mildly toxic by skin contact; irritating to eyes and skin; TSCA listed

Precaution: Combustible; can react with oxidizers
Uses: Synthetic flavor for pharmaceuticals
Features: Sweet fruity floral odor
Use Level: 0.5% max. as benzoic acid in finished cosmetics
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isopropyl benzol. See Cumene

4-Isopropylbenzyl alcohol, p-Isopropylbenzyl alcohol. See Cuminic alcohol

Isopropyl butanoate. See Isopropyl butyrate

Isopropyl butyrate
CAS 638-11-9; EINECS/ELINCS 211-320-7
FEMA 2935
Synonyms: Butanoic acid 1-methyl ethyl ester; Butyric acid isopropyl ester; Isopropyl butanoate; 1-Methyl ethyl butanoate
Empirical: C7H14O2
Formula: (CH3)2CHOOCCH3H7
Properties: Colorless liq., fruity odor; m.w. 130.19; dens. 0.859; b.p. 130-131 C; flash pt. 86 F; ref. index 1.3936
Toxicology: TSCA listed
Uses: Synthetic flavor for pharmaceuticals

### Isopropyl caproate

**CAS:** 2311-46-8; EINECS/ELINCS 219-000-9  
**FEMA:** 2950  
**Synonyms:** N-Caproic acid isopropyl ester; Isopropyl caproate; Isopropyl n-caproate; Isopropyl capronate; Isopropyl hexanoate  
**Empirical:** C9H18O2  
**Properties:** Colorless liq., pineapple-like odor, fresh sweet berry-like taste; sol. in alcohol; insol. in water; m.w. 158.24; dens. 0.8570; b.p. 176 C; flash pt. 26 C  
**Toxicology:** TSCA listed  
**Uses:** Synthetic flavor for pharmaceuticals  
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL  
**Manuf./Distrib.:** Degussa  
  [http://www.degussa.com](http://www.degussa.com); Grau Aromatics

### Isopropyl formate

**CAS:** 625-55-8; EINECS/ELINCS 210-901-2  
**FEMA:** 2944  
**Synonyms:** Formic acid isopropyl ester; Formic acid 1-methyl ethyl ester; 1-Methyl formate  
**Empirical:** C4H8O2  
**Properties:** Colorless visc. liq., balsamic sweet dry amber-like odor, fresh fruity flavor; sol. in alcohol; insol. in water; m.w. 190.24; dens. 1.03; b.p. 268-270 C  
**Toxicology:** LD50 (oral, guinea pig) 2700 mg/kg; mod. toxic by ing.; TSCA listed  
**Uses:** Synthetic flavor for pharmaceuticals  
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL  
**Manuf./Distrib.:** Advanced Synthesis Tech.  
  [http://www.advancedsynthesis.com](http://www.advancedsynthesis.com); Pentamfg.  
  [http://www.pentamfg.com](http://www.pentamfg.com)  

### Isopropyl cresol

**CAS:** 628-07-4; EINECS/ELINCS 210-901-2  
**FEMA:** 2944  
**Synonyms:** Isopropyl phenyl methyl ether; Isopropyl cresol  
**Empirical:** C12H14O2  
**Properties:** Colorless visc. liq., balsamic sweet dry amber-like odor, fresh fruity flavor; sol. in alcohol; insol. in water; m.w. 190.24; dens. 1.03; b.p. 268-270 C  
**Toxicology:** LD50 (oral, guinea pig) 2700 mg/kg; mod. toxic by ing.; TSCA listed  
**Uses:** Synthetic flavor for pharmaceuticals  
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL  
**Manuf./Distrib.:** Advanced Synthesis Tech.  
  [http://www.advancedsynthesis.com](http://www.advancedsynthesis.com); Pentamfg.  
  [http://www.pentamfg.com](http://www.pentamfg.com)  

### Isopropyl cinnamyl alcohol

**CAS:** 2950  
**Synonyms:** Isopropyl cinnamaldehyde; Isopropyl cinnamyl alcohol  
**Empirical:** C10H16O2  
**Properties:** Odor: Sweet, fruity lift odor; sol. in alcohol, ether; insol. in water; m.w. 158.24; dens. 0.8774; vapor pressure 100 mm (17.8 C); b.p. 67-68 C; flash pt. (CC) 22 F; ref. index 1.3678  
**Toxicology:** LD50 (oral, guinea pig) 1400 µg/kg; poison by ing.; TSCA listed  
**Precaution:** Very dangerous fire hazard; can react vigorously with oxidizers  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and fumes  
**Uses:** Synthetic flavor for pharmaceuticals  
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL  
**Manuf./Distrib.:** Grau Aromatics  
  [http://www.grau-aromatics.de](http://www.grau-aromatics.de); Oxford Chems. Ltd

  [http://www.tciamerica.com](http://www.tciamerica.com); United Pharma Ltd  
  [http://www.upltd.com](http://www.upltd.com)
Chemical Component Cross-Reference

hydroxybenzoate. See Isopropylparaben
1-Isopropylidene-4-methyl-2-cyclohexanone. See Pulegone
(R)-2-Isopropylidene-5-methylcyclohexanone. See d-Pulegone
4-Isopropylidene-1-methylcyclohexene. See Terpinolene

Isopropyl isobutyrate
CAS 617-50-5; EINECS/ELINCS 210-517-5
FEMA 2937
Synonyms: Isobutyric acid isopropyl ester; Isopropyl 2-methyl propanoate; 1-Methyl ethyl 2-methyl propanoate; 2-Methyl propanoic acid 1-methyl ethyl ester
Classification: Nonaromatic ester
Empirical: C7H14O2
Properties: Liq., intense fruity ether-like odor; sol. in most org. solvs.; insol. in water; m.w. 130.18; dens. 0.8687 (0 C); b.p. 121 C; flash pt. 18 C; ref. index 1.3880
Precaution: Flamm. liq.
Uses: Synthetic flavor for pharmaceuticals
Features: Pear, pineapple-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Isopropyl isopentanoate: Isopropyl isovaleerianate. See Isopropyl isovalerate

Isopropyl isovalerate
CAS 32665-23-9; EINECS/ELINCS 251-145-3
FEMA 2961
Synonyms: Isobutyric acid isopropyl ester; Isopropyl isopentanoate; Isopropyl isovaleerianate; Isopropyl 3-methylbutanoate; 2-Methyl propanoic acid 1-methyl ethyl ester; 2-Methyl propanoic acid 1-methyl ethyl ester
Empirical: C8H16O2
Formula: (CH3)2CHCO2CH(CH3)2
Properties: Liq., ether-like odor, sweet apple-like taste; sol. in most org. solvs.; insol. in water; m.w. 144.21; b.p. 68-70 C (55 mm); flash pt. 30 C; ref. index 1.3960
Toxicology: TSCA listed
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Degussa http://www.degussa.com; Good Scents http://www.thegoodscentscompany.com

†=pharmaceutical grade

Isopropyl lanolate
CAS 63393-93-1; EINECS/ELINCS 264-119-1
Synonyms: Fatty acids, lanolin, isopropyl esters; IPL; Lanolin fatty acids, isopropyl esters
Definition: Ester of isopropyl alcohol and lanolin acid
Properties: Pale yel. liq. or paste; HLB 9.0; nonionic
Toxicology: Eye and skin irritant; may cause skin sensitization; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Conditioner, penetrant, lubricant, moisturizer, emollient, w/o emulsifier, stabilizer, opacifier for pharmaceuticals
Regulatory: Canada DSL
Trade Names: Ritasol

Isopropyl laurate
CAS 10233-13-3; EINECS/ELINCS 233-560-1
Synonyms: Dodecanoic acid, 1-methylethyl ester; Isopropyl dodecanoate; 1-Methyl ethyl dodecanoate
Definition: Ester of isopropyl alcohol and lauric acid
Empirical: C15H30O2
Formula: CH3(CH2)10COOCH(CH3)2
Properties: M.w. 242.4
Toxicology: TSCA listed
Uses: Emollient, lubricant, plasticizer, and cosolvent for pharmaceuticals
Regulatory: FDA 21CFR §176.210, 177.2800; Canada DSL
Manuf./Distrib.: A&E Connock http://www.connock.co.uk

Isopropyl metacresol. See Thymol
1-Isopropyl-4-methylbenzene; 4-Isopropyl-1-methylbenzene. See p-Cymene
Isopropyl 3-methylbutanoate.  See Isopropyl isovalerate
Isopropyl 2-methyl-2-butanoate; Isopropyl 2-methyloctanoate; Isopropyl α-methyl crotonate; Isopropyl α-methyl crotonic acid.  See Isopropyl tiglate
1-Isopropyl-4-methyl-1,4-cyclohexadiene.  See γ-Terpinene
4-Isopropyl-1-methyl-1,5-cyclohexadiene; 5-Isopropyl-2-methyl-1,3-cyclohexadiene.  See α-Phellandrene
2-Isopropyl-5-methylcyclohexanol.  See d-Neomenthol; Menthol
1-Isopropyl-4-methyl-2-cyclohexanone.  See Isopulegone
4-Isopropyl-1-methyl-3-cyclohexen-1-ol.  See p-Menth-3-en-1-ol (S)-1-Isopropyl-4-methyl-3-cyclohexen-1-ol.  See 4-Carvomenthol
4-Isopropyl-1-methyl-1-cyclohexen-3-one; 6-Isopropyl-3-methylcyclohex-2-enone.  See d-Piperitone
Isopropyl methyl diketone.  See 4-Methyl-2,3-pentanedione
6-Isopropyl-9-methyl-1,4-dioxaspiro-[4,5]-decan-2-methanol.  See Menthone glycerin acetal
5-Isopropyl-2-methylethoxybenzene.  See Carvacryl ethyl ether
p-Isopropyl-α-methylhydrocinnamic aldehyde.  See Cyclamen aldehyde
Isopropyl methyl phenetole.  See Carvacryl ethyl ether
2-Isopropyl-5-methylphenol.  See Thymol
5-Isopropyl-2-methylphenol.  See Carvacrol
p-Isopropyl-α-methylphenylpropyl aldehyde.  See Cyclamen aldehyde
Isopropyl 2-methyl propanoate.  See Isopropyl isobutyrate
Isopropyl myristate.  See Isopropyl isovalerate

**Properties**: Colorless to pale yel. oily low-visc. liq., odorless; sol. in most org. solvs., acetone, chloroform, ethyl acetate, ethanol, min. oil, veg. oil; dissolves waxes; insol. in water, glycerol; m.w. 270.44; dens. 0.850-0.860; f.p. 3 C; b.p. 192.6 C (20 mm); dec. 208 C; acid no. 1 max.; iodine no. 1 max.; sapon. no. 202-212; cloud pt. -3 to 5 C; ref. index 1.432-1.436 (20 C)

**Toxicology**: LD50 (oral, mouse) 49,700 mg/kg, (skin, rabbit) 5 g/kg; low toxicity by ing. and skin contact; human skin irritant; causes blackheads; suspected tumorigen; TSCA listed

**Uses**: Emulsifier, emollient, lubricant, vehicle, solvent, solubilizer, spreading agent in topical medicinals

**Features**: Oleaginous

**Regulatory**: FDA 21CFR §176.210, 177.2800; FEMA GRAS; FDA approved for topicals; NF, BP, EP compliance; Canada DSL

### Isopropyl oleate

**CAS**: 112-11-8; 85116-87-6; EINECS/ELINCS 203-935-4; 285-540-7

**Synonyms**: 1-Methyl-9-octadecenoate; 9-Octadecenoic acid, 1-methylethyl ester

**Definition**: Ester of isopropyl alcohol and oleic acid

**Empirical**: C_{18}H_{36}O_2

**Formula**: CH_3(CH_2)_7CH=CH(CH_2)_7COOCH(CH_3)_2

**Properties**: Colorless liq.; odorless; misc. with paraffin oil; insol. in water; m.w. 324.55; dens. 0.87 kg/l (20°C); pour pt. -21°C; flash pt. (COC) 185°C

**HMIS**: Health 1, Flammability 0, Reactivity 0

**Uses**: Emollient, emulsifier, bodying agent, and spreading agent

**Regulatory**: FDA 21CFR §176.210, 177.2800, 178.3570, 178.3910; Canada DSL

**Trade Names**: Tilol IS

### Isopropyl palmitate

**CAS**: 142-91-6; EINECS/ELINCS 205-571-1

**Synonyms**: Hexadecanoic acid isopropyl ester; Hexadecanoic acid, 1-methylethyl ester; IPP; Isopropyl hexadecanoate; Isopropyl n-hexadecanoate; 1-Methylhexadecaneoate

**Definition**: Ester of isopropyl alcohol and palmitic acid

**Empirical**: C_{18}H_{36}O_2

**Formula**: CH_3(CH_2)_14COOCH(CH_3)_2

**Properties**: Colorless mobile liq., very slight odor; sol. in 4 parts 90% alcohol, min. oil, fixed oils, acetone, castor oil, chloroform, cottonseed oil,
### Chemical Component Cross-Reference

ethyl acetate, oxygenated solvs.; insol. in water, glycerin, propylene glycol; m.w. 298.57; dens. 0.850-0.855; m.p. 14°C; acid no. 1 max.; iodine no. 1 max.; sapon. no. 183-193; cloud pt. 12-14°C; flash pt. > 230°F; ref. index 1.4350-1.4390 (20°C)

**Toxicology:** LD50 (IP, mouse) 100 mg/kg; poison by IP route; human skin irritant; TSCA listed

**Precaution:** Combustible

**Regulatory:**

**Isopropylparaben**

CAS 4191-73-5; EINECS/ELINCS 224-069-3
**Chemical Component Cross-Reference**

**Synonyms:** Benzoic acid, p-hydroxy-, isopropyl ester; 4-Hydroxybenzoic acid, 1-methylethyl ester; Isopropyl 4-hydroxybenzoate; Isopropyl p-hydroxybenzoate; 1-Methylethyl-4-hydroxybenzoate

**Definition:** Ester of isopropyl alcohol and p-hydroxybenzoic acid

**Empirical:** C\(_{10}\)H\(_{12}\)O\(_3\)

**Properties:** M.w. 180.22

**Toxicology:** LD50 (subcut., mouse) 1900 mg/kg

**Uses:** Preservative for topical pharmaceuticals

**Regulatory:** Foods (0.012-1 g/kg as p-hydroxybenzoic acid); Japan approved; Canada DSL

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)

**Trade Names Containing:** LiquaPar® Oil; LiquaPar® PE

---

**2-Isopropylphenol.** See o-Isopropylphenol

**4-Isopropylphenol.** See p-Isopropylphenol

---

**o-Isopropylphenol**

CAS 88-69-7; EINECS/ELINCS 201-852-8

**FEMA:** 3461

**Synonyms:** o-Cumenol; 2-Hydroxycumene; 2-Isopropylphenol; 2-(1-Methylethyl) phenol; OIP; OIPP; Phenol, o-isopropyl-; Phenol, 2-(1-methylethyl)-

**Classification:** aromatic alcohol

**Empirical:** C\(_9\)H\(_{12}\)O

**Formula:** (CH\(_3\))\(_2\)CHC\(_6\)H\(_4\)OH

**Properties:** Lt. yel. liq. or solid; medicinal, creosote odor; sol. in isopentane, toluene, ethanol, 10% NaOH, oxygenated solvs.; insol. in water; m.w. 136.19; dens. 1.012; m.p. 15-16 C; b.p. 212-213 C; flash pt. 88 C; ref. index 1.5620 (20 C)

**Toxicology:** LD50 (oral, mouse) 875 mg/kg, (IV, mouse) 40 mg/kg; LDLo (IP, mouse) 250 mg/kg; poison by IP and IV routes; mod. toxic by ing.; corrosive; avoid skin contact; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and fumes

**Uses:** Flavor for pharmaceuticals

**Regulatory:** Canada DSL

---

**4-Isopropyl phenylacetaldehyde.** See p-Isopropylphenylacetaldehyde

**α-Isopropyl phenylacetaldehyde.** See 3-Methyl-2-phenylbutyraldehyde

**p-Isopropylphenylacetaldehyde**

CAS 4395-92-0; EINECS/ELINCS 224-522-5

**FEMA:** 2954

**Synonyms:** Benzeneacetaldehyde, 4-(1-methylethyl); Cuminc acetaldehyde; Cumyl acetaldehyde; p-Cymen-7-carboxaldehyde; p-Cymene-7-carboxaldehyde; Homocuminic aldehyde; 4-Isopropyl phenylacetaldehyde

**Empirical:** C\(_{11}\)H\(_{14}\)O

**Properties:** Colorless liq., char. bark odor, citrus bittersweet fruity flavor; m.w. 162.23; dens. 0.0955; b.p. 230 C; ref. index 1.5200

**Toxicology:** LD50 (oral, rat) 4100 mg/kg; mildly toxic by ing.; severe skin irritant; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and fumes

**Uses:** Synthetic flavor for pharmaceuticals
Isopropyl phenylacetate

**CAS**: 4861-85-2; **EINECS/ELINCS**: 225-468-5; **FEMA**: 2956

**Synonyms**: Benzene acetic acid 1-methyl ethyl ester; Isopropyl α-toluate; 1-Methyl ethyl benzene acetate; Phenyl acetic acid isopropyl ester

**Empirical**: C11H14O2

**Formula**: C6H5CH2CO2CH(CH3)2

**Properties**: Liq., fragrant rose-like scent, honey-like flavor; m.w. 178.23; dens. 1.0096; b.p. 253 C; flash pt. 103 C

**Toxicology**: TSCA listed

**Uses**: Synthetic flavor for pharmaceuticals

**Features**: Honey-like flavor

**Regulatory**: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Manuf./Distrib.**: Grau Aromatics [http://www.grau-aromatics.de]; SAFC Specialties [http://www.safcspecialties.com]

---

Isopropyl β-phenylacrylate. See Isopropyl cinnamate

1-(4-Isopropylphenyl) ethanone; (4-Isopropylphenyl) ethanone. See p-Isopropylacetophenone

3-(p-Isopropylphenyl) propanal. See 3-(p-Isopropylphenyl) propionaldehyde

Isopropyl 3-phenylpropenoate. See Isopropyl cinnamate

3-(p-Isopropylphenyl) propionaldehyde

**CAS**: 7775-00-0; **EINECS/ELINCS**: 231-885-3; **FEMA**: 2957

**Synonyms**: 3-(p-Cumenyl) propionaldehyde; Cuminyl acetaldehyde; p-Cymyl propanal; p-Isopropylhydrocinnamaldehyde; 3-(p-Isopropylphenyl) propanal

**Empirical**: C12H16O

**Properties**: Colorless visc. liq., powerful sweet green floral odor, sweet green fruity flavor; sol. in alcohol; insol. in water; m.w. 176.26

**Uses**: Synthetic flavor for pharmaceuticals

**Regulatory**: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

---

Isopropyl steareate

**CAS**: 112-10-7; **EINECS/ELINCS**: 203-934-9

**Synonyms**: 1-Methylethyl octadecanoate; Octadecanoic acid, 1-methylethyl ester; Stearic acid, isopropyl ester

**Definition**: Ester of isopropyl alcohol and stearic acid

**Empirical**: C21H42O2

**Formula**: CH3(CH2)16COOCH(CH3)2

**Properties**: Pale yel. liq.; m.w. 326.63; m.p. 16-20 C

**Toxicology**: LDLo (oral, rat) 8 g/kg; mildly toxic by ing.; primary skin irritant; TSCA listed

**Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating vapors

**Uses**: Binder, emollient, cosolvent, and lubricant for pharmaceuticals, topicals

**Regulatory**: FDA 21CFR §176.210, 177.2800; FDA approved for topicals

**Trade Names**: Monestriel IS-C; Tegosoft® S

**Trade Names Containing**: Lexol® 3975

---

Isopropyl tetradecanoate. See Isopropyl
### Isopropyl Tiglate

**CAS:** 1733-25-1; 6284-46-4; EINECS/ELINCS 217-067-9

**Synonyms:** 2-Butenoic acid, 2-methyl-, 1-isopropyl ester, (E)-; Isopropyl 2-methyl-2-butenoate; Isopropyl 2-methylcrotonate; Isopropyl α-methyl crotonate; Isopropyl α-methyl crotonic acid; 2-Methyl-but-2-enio acid isopropyl ester; 1-Methylethyl (E)-2-methyl-2-butenoate; Tiglic acid isopropyl ester

**Classification:** Nonaromatic ester

**Empirical:** C₈H₁₄O₂

**Properties:** Liq.; m.w. 142.20; dens. 0.896; flash pt. 123 F; ref. index 1.4310

**Toxicology:** LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary skin irritant; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Minty flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Manuf./Distrib.:** SAFC Specialties [http://www.safcspecialties.com](http://www.safcspecialties.com)

### Isopulegol

**CAS:** 29606-79-9; EINECS/ELINCS 249-725-6

**Synonyms:** 1-Isopropyl-4-methyl-2-cyclohexanone; δ-8,9-para-menthen-3-one; p-Menth-8-en-3-one; 1-Methyl-4-isopropenyl cyclohexan-3-one; trans-5-Methyl-2-(1-methyl vinyl) cyclohexan-1-one

**Empirical:** C₁₀H₁₈O

**Properties:** Colorless liq.; sol. in alcohol; insol. in water; m.w. 152.23; dens. 0.92177; b.p. 101-102 C (17 mm); ref. index 1.46787

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Peppermint fresh herbal odor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

### Isopulegone

**CAS:** 29664

**Synonyms:** Cyclohexanol, 5-methyl-2-(1-methylethenyl)-, acetate, [(R)-(1α,2β,5α)]; Isopulegyl acetate, mixed isomers; p-Menth-8-en-3-yl acetate; 1-Methyl-4-isopropenylcyclohexan-3-yl acetate

**Empirical:** C₁₂H₂₀O₂

**Properties:** Colorless liq.; sweet mint-like odor; m.w. 196.29; dens. 0.932-0.936; b.p. 232 C; flash pt. 87 C; ref. index 1.4572

**Toxicology:** May be harmful by inh., ing., or skin absorp.; may cause eye/skin irritation

**Precaution:** Combustible liq.; incompat. with strong oxidizing agents, strong acids, strong bases, strong reducing agents

**Hazardous Decomp. Prods.:** Toxic fumes of CO, CO₂

**Storage:** Store in cool, dry place; keep tightly closed; keep away from heat and open flame

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Minty flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS

**Manuf./Distrib.:** Acros Org.
Chemical Component Cross-Reference

Indofine http://www.indofinechemical.com;
SAFC Specialties http://www.safcspecialties.com

Isopulegyl acetate, mixed isomers. See Isopulegyl acetate

Isoquinoline
CAS 119-65-3; EINECS/ELINCS 204-341-8
FEMA 2978
Synonyms: 2-Azanaphthalene; 2-Benzazine; Benzo(c)pyridine; Leucoline
Empirical: C₉H₇N
Properties: Colorless plates or liq.; pungent odor; sol. in most org. solvs.; misc. with oxygenated solvs.; sl. sol. in water; m.w. 129.16; dens. 1.09 (20/4 C); m.p. 23-25 C; b.p. 243 C; flash pt. 102 C; ref. index 1.615
Toxicology: LD₅₀ (oral, rat) 360 mg/kg, (skin, rabbit) 590 mg/kg; toxic by ing.; mod. toxic by skin contact; severe skin and eye irritant; readily absorbed through skin; mutagen; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOₓ
Uses: Synthetic flavor for pharmaceuticals; mfg. of pharmaceuticals (nicotinic acid)
Features: Sweet flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Acros Org.

Isosafrole
CAS 120-58-1; EINECS/ELINCS 264-410-2
Synonyms: Benzene, 1,2-(methylenedioxy)-4-propylenyl; 1,2-Methylenedioxy-4-propenylbenzene; 3,4-Methylenedioxy-1-propenylbenzene; 5-(1-Propenyl)-1,3-benzodioxole; 4-Propenylcatechol methylene ether; 4-Propenyl--1,2-methylenedioxybenzene
Classification: Aromatic ether
Empirical: C₁₀H₁₀O₂
Properties: Colorless liq.; anise-like odor; misc. with oxygenated and aromatic solvs.; insol. in water; m.w. 162.19; dens. 1.12 kg/l (20 C); b.p. 253 C; flash pt. 110 C; ref. index 1.5730
Toxicology: LD₅₀ (oral, rat) 1340 mg/kg, (IP, mouse) 324 mg/kg; LDLo (subcut., cat) 2 g/kg, (IV, rabbit) 300 mg/kg; poison by IP and IV routes; mod. toxic by ing., subcut. routes; harmful by ing., inh., skin contact; irritating to skin, eyes, respiratory system; may cause hallucinations, toxic psychosis in humans; questionable carcinogen; experimental tumorigen; mutagen; TSCA listed
Precaution: Flammable
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOₓ
Uses: Preservative for pharmaceuticals; antianginal drug; coronary vasodilator
Regulatory: BP, EP compliance; Canada DSL
Manuf./Distrib.: Aastrid Int'l.† http://www.aastrid.com; Adept Sol'ns.† Clariant/Functional Chems.

Isosorbide dimethyl ether. See Dimethylisosorbide

Isosorbide dinitrate
CAS 87-33-2
UN 2907
Synonyms: Cardis; 1,4:3,6-Dianhydroinositol 2,5-dinitrate; Dinitrosorbide; ISDN; Isotrate; Nitrosorbide; Sorbide nitrile; Sorbidinitrate
Empirical: C₆H₁₂N₂O₈
Properties: Colorless cryst.; sol. in org. solvs. (acetone, alcohol, ether); sparingly sol. in water; m.w. 236.16; m.p. 71 C
Toxicology: LD₅₀ (oral, rat) 747 mg/kg, (IP, rat) 620 mg/kg, (subcut., rat) 1237 mg/kg; mod. toxic by ing., IP, intramuscular, subcut. routes; primary irritant; mutagen; experimental reproductive effects; TSCA listed
Precaution: Flammable
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOₓ
Uses: Preservative for pharmaceuticals; antianginal drug; coronary vasodilator
Regulatory: BP, EP compliance; Canada DSL
Manuf./Distrib.: Aastrid Int'l.† http://www.aastrid.com; Adept Sol'ns.†

- **isostearyl alcohol and a glycerin polymer contg. an avg. of 2 units**
- **Properties:** Nonionic
- **Uses:** \textit{W/o emulsifier for pharmaceuticals}
- **Trade Names:** Imwitor® 780 K

**Isostearyl isostearate**

- **CAS:** 41669-30-1; EINECS/ELINCS 255-485-3
- **Synonyms:** Isooctadecanoic acid, isooctadecyl ester; Isooctadecanol; 16-Methylheptadecanoic acid, 16-methylheptadecyl ester; 16-Methylheptadecanol 16-methylheptadecanoate

**Definition:** Ester of isostearyl alcohol and isostearic acid

**Empirical:** C$_{36}$H$_{72}$O$_2$

**Properties:** Pale yel. liq.; sol. in hydrocarbons; insol. in water; m.w. 536.98; sapon. no. 95-110; nonionic

**Toxicology:** No known toxicity; TSCA listed

**Uses:** Emollient, lubricant for pharmaceuticals

**Regulatory:** Canada DSL

**Manuf./Distrib.:** A&E Connock

**Trade Names:** Isostearate Isostearyle; Saboderm IS

**Isostearyl lactate**

- **CAS:** 42131-28-2; EINECS/ELINCS 255-674-0
- **Synonyms:** 2-Hydroxypropanoic acid, isostearyl ester; Isooctadecyl 2-hydroxypropanoate

**Definition:** Ester of isostearyl alcohol and lactic acid

**Empirical:** C$_{21}$H$_{42}$O$_3$

**Formula:** CH$_3$CHOHCOOC$_{18}$H$_{37}$

**Properties:** Pale yel. liq.; sol. in IPM, oleyl alcohol, 95% ethanol, min. oil; insol. in glycerin, propylene glycol; m.w. 354.69; sp.gr. 0.850-0.870; sapon. no. 135-155; ref. index 1.4450-1.4497

**Toxicology:** LD$_{50}$ (oral, rat) > 40 ml/kg; eye irritant; nonirritating to skin

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Emollient, spreading agent for pharmaceutical topicals; antitackifier for antiperspirants

**Regulatory:** Canada DSL

**Manuf./Distrib.:** A&E Connock

**Trade Names:** Ceraphyl® 375

**Isostearyl pivalate.** See Isostearyl neopentanoate

**Isotactic polypropylene.** See Polypropylene

**Isotetracosanol; Isotetracosyl alcohol.** See 2-Decyl-1-tetradecanol

**4-Isothiazolin-3-one, 5-chloro-2-methyl-.** See Methylichloroisothiazolinone

**3(2H)-Isothiazolone, 2-methyl-.** See Methylisothiazolinone

**3-Isothiocyanato-1-propene; Isothiocyanic acid allyl ester.** See Allyl isothiocyanate

**Isothiourea.** See Thiourea

**Isothymol.** See Carvacrol

**Isotonic sodium chloride solution**

- **CAS:** 8028-77-1
- **Uses:** Pharmaceutical vehicle for injectables, parenterals, ophthalmics, orals
- **Regulatory:** FDA approved for injectables, parenterals, ophthalmics, orals

**Isotrate.** See Isosorbide dinitrate

**Isotridecanol ethoxylates.** See Trideceth

**Isotridecyl laurate**

- **CAS:** 94134-83-5; EINECS/ELINCS 302-853-7
- **Synonyms:** Dodecanolic acid, 11-methyldodecyl ester; Lauric acid, isotridecyl ester; 11-Methyldodecyl dodecanoate

**Definition:** Ester of isotridecyl alcohol and lauric acid

**Empirical:** C$_{25}$H$_{50}$O$_2$

**Formula:** CH$_3$(CH$_2$)$_{10}$COOC$_{13}$H$_{27}$
Chemical Component Cross-Reference

†=pharmaceutical grade

Uses: Coemulsifier, diluents, lubricant in ointments
Trade Names: Saboderm ITL

Isotridecyl octadecanoate. See Isotridecyl stearate

Isotridecyl stearate
CAS 31565-37-4; EINECS/ELINCS 250-703-3
Synonyms: Isotridecyl octadecanoate
Definition: Ester of isotridecyl alcohol and stearic acid
Empirical: C₃₁H₆₂O₂
Toxicology: TSCA listed
Uses: Solubilizer, vehicle for medicines; excipient for injectable substances; emollient in antiperspirants
Regulatory: Canada DSL
Trade Names: Exceparl TD-S; M Kemfluid TR/S

Isourea. See Urea
 Isovaleral. See Isovaleraldehyde

Isovaleraldehyde
CAS 590-86-3; EINECS/ELINCS 209-691-5
UN 2058; FEMA 2692
Synonyms: 1-Butanal, 3-methyl-; Isoamyl aldehyde; Isopentaldehyde; Isovaleral; Isovaleric aldehyde; 2-Methylbutanal-4; 3-Methylbutanal; 3-Methylbutyraldehyde
Empirical: C₅H₁₀O
Formula: (CH₃)₂CHCH₂CHO
Properties: Colorless liq., pungent apple-like odor; misc. with alcohol, ether, oxygenated solvs.; sparingly sol. in water; m.w. 86.14; dens. 0.797 (20/4 C); m.p. -51 C; b.p. 91-93 C; flash pt. -5 C; ref. index 1.388 (20 C)
Toxicology: LD₅₀ (oral, rat) 5600 mg/kg, (skin, rabbit) 3180 mg/kg; LC₅₀ (inh., mouse) 50,770 mg/m³; mod. toxic by skin contact; mildly toxic by ing., subcut., inh. routes; irritating to eyes, respiratory tract; TSCA listed
Precaution: Highlly flamm.; dangerous fire hazard exposed to heat or flame; incompat. with strong oxidizers, reducers
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
Uses: Synthetic flavor for pharmaceuticals
Features: Peach-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Isovaleric acid. See Isovaleric acid

Isovaleric acid
CAS 503-74-2; EINECS/ELINCS 207-975-3
UN 1760; FEMA 3102
Synonyms: Delphinic acid; Isobutyl formic acid; Isopentanoic acid; Isopropylacetic acid; Isovaleric acid; 3-Methylbutanoic acid; 3-Methylbutyric acid; β-Methylbutyric acid
Empirical: C₅H₁₀O₂
Formula: (CH₃)₂CHCH₂COOH
Properties: Colorless liq. or oil, disagreeable rancid cheese odor, acid taste; sol. in oxygenated and chlorinated solvs.; sol. in water @ 16 C; misc. with alcohol, chloroform, ether; m.w. 102.15; dens. 0.931 (20/4 C); solid. pt. -37 C; m.p. -34.5 C; b.p. 175-177 C; flash pt. (TCC) 70.55 C; ref. index 1.403
Toxicology: LD₅₀ (oral, rat) 2000 mg/kg, (IV,
Chemical Component Cross-Reference

Isovaleric acid butyl ester.  See n-Butyl isovalerate
Isovaleric acid, cinnamyl ester.  See Cinnamyl isovalerate
Isovaleric acid, (4,7-dimethyl-1,6-octadien-3-yl) ester.  See Linalyl isovalerate
(E)-Isovaleric acid-3,7-dimethyl-2,6-octadienyl ester.  See Geranyl isovalerate
Isovaleric acid ethyl ester.  See Ethyl isovalerate
Isovaleric acid, hexyl ester.  See Hexyl isovalerate
Isovaleric acid, isopentyl ester.  See Isoamyl isovalerate
Isovaleric acid para-methyl-1-en-8-yl ester.  See Terpinyl isovalerate
Isovaleric acid p-methyl-3-yl ester.  See Methyl isovalerate
Isovaleric acid, methyl ester.  See Methyl isovalerate
Isovaleric acid octyl ester.  See Octyl isovalerate
Isovaleric acid propyl ester.  See Propyl isovalerate
Isovaleric aldehyde.  See Isovaleraldehyde
Isovalerone.  See Diisobutyl ketone
Isovitamin C.  See Erythorbic acid
Jackbean urease.  See Urease
Jaguar gum.  See Guar (Cyanopsis tetragonoloba) gum
Japan agar.  See Agar
Japan camphor.  See Camphor
Japanese camphor oil.  See Camphor (Cinnamomum camphora) oil
Japan isinglass.  See Agar
Japan (Rhus succedanea) wax
CAS 8001-39-6; 103798-70-5; EINECS/ELINCS 310-125-5
Synonyms: Japan tallow; Japan wax; Rhus succedanea; Rhus succedanea cera; Rhus succedanea wax; Sumac wax
Definition: Fat expressed from the mesocarp of the fruit of Rhus succedanea, contg. 10-15% palmitin, stearin, olein, 1% japoanic acid
Properties: Pale yel. solid, greasy feel; tallow-like rancid odor and taste; sol. in benzene, naphtha, CS₂, ether, hot alcohol, alkalis; insol. in water, cold alcohol; dens. 0.97-0.98; m.p. 53.5-55 C; acid no. 22-23; iodine no. 10-15; sapon. no. 217-237
Toxicology: TSCA listed
Precaution: Combustible
Uses: Wax for pharmaceuticals, ointments;

Handbook of Pharmaceutical Additives, Third Edition 1533
Chemical Component Cross-Reference

plasticizer in dental impression compds.

Regulatory: FDA 21CFR §73.1, 175.105, 175.350, 176.170, 182.70, 186.1555, GRAS

Manuf./Distrib.: Alfa Chem

Trade Names: Japan Wax SP 69; Ross Japan Wax

Japan tallow; Japan wax. See Japan (Rhus succedanea) wax

Japan wax, synthetic
Synonyms: Synthetic Japan wax (INCI)
Definition: Synthetic wax intended to be generally indistinguishable from natural Japan wax
Uses: Gellant, thickener, emulsifier for pharmaceuticals

Trade Names: Cerabel L132; Koster Keulen Synthetic Japan Wax

Jasmalone. See 2-Hexylidene cyclopentanone

Jasmin acetate. See 1,3-Nonanediol acetate, mixed esters

Jasminaldehyde; Jasmine aldehyde. See α- Amylcinnamaldehyde

Jasmine. See cis-Jasmone

cis-Jasmone
CAS 488-10-8; EINECS/ELINCS 207-668-4
FEMA 3196
Synonyms: 2-Cyclopenten-1-one, 3-methyl-2-(2-pentenyl)-(Z); Jasnone; (Z)-Jasnone; 3-Methyl-2-pent-2-enylcyclopent-2-enone; 3-Methyl-2-(2-pentenyl)-2-cyclopenten-1-one; 3-Methyl-2-(cis-2-penten-1-yl)-2-cyclopenten-1-one
Classification: aliphatic ketone
Empirical: C11H16O
Properties: Colorless to pale yel. liq.; jasmine odor; m.w. 164.25; dens. 0.940; b.p. 134-135 C (12 mm), 78-79 C (1.6 kPa); flash pt. 225 F; ref. index 1.4980; tenacity 24 hrs. on blotter
Toxicology: LD50 (oral, rat) 5 g/kg; mildly toxic

†=pharmaceutical grade
by ing.: primary skin irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors

HMIS: Health 1, Flammability 1, Reactivity 0
Storage: Store in cool, dry place in tightly sealed containers, protected from heat, light
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity flavor
Use Level: < 3%

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia; Canada DSL; Japan ENCS (no. 3-2394); Philippines PICCS

(Z)-Jasnone. See cis-Jasnone

Jasmonyl. See 1,3-Nonanediol acetate, mixed esters

Java pepper. See Cubeb (Piper cubeba) oil

Jerusalem artichoke flour
Definition: Flour from the tuber of Helianthus tuberosus
Uses: Bulking agent, nutraceutical ingred. for health food tablets/capsules, gastric upset prods.

Manuf./Distrib.: Garuda Int'l.† http://www.garudaint.com

Jojoba (Buxus chinensis) oil
CAS 61789-91-1
Synonyms: Buxus chinensis; Jojoba liquid wax; Jojoba oil; Oils, jojoba; Simmondsia Chinensis (Jojoba) Seed Oil
Classification: wax ester
Definition: Oil from the seeds of the Jojoba desert shrub (Buxus chinensis)
Properties: Colorless waxy liq.; odorless; dens. 0.86 kg/l; m.p. 6.8-7 C; b.p. 400 C; cloud pt. 4-9 C
Toxicology: TDLo (oral, rat, 4 wk continuous) 151 g/kg; low toxicity by ing.; may cause allergic reaction; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Lubricant used in sunscreens; skin protectant; antifoam in antibiotic
Chemical Component Cross-Reference

fermentation; coating material, carrier

Regulatory: Canada DSL

Juniperus communis oil
CAS 8002-68-4; 8012-91-7; 73049-62-4
FEMA 2604

Synonyms: Juniper berry essential oil;

Juniper berry oil; Juniper oil; Juniperus
communis

Definition: Volatile oil obtained from the berries of Juniperus communis, contg. pinene,
cadinene, camphene, terpineol, juniper

Properties: Colorless to pale grnsh.-yel. liq.,
aromatic bitter taste; sol. in fixed oils, min. oil,
ethanol; pract. insol. in water; insol. in glycerin,
propylene glycol; dens. 0.854-0.879 (25/25 C);
vapor dens. 4.2; vapor pressure 3.5 mm Hg;
flash pt. 105 F; ref. index 1.4780-1.4840 (20 C)

Toxicology: LD50 (oral, rat) 6280 mg/kg;
mildly toxic by ing.; human skin and systemic
irritant; allergen; taken internally may cause
severe kidney irritation; TSCA listed

Hazardous Decomp. Prods.: Heated to
decom., emits acrid smoke and fumes

Storage: Keep cool, well closed; protect from
light

Uses: Natural flavor for pharmaceuticals;

- **Definition:** Native hydrated aluminum silicate
- **Formula:** $\text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2 \cdot 2\text{H}_2\text{O}$
- **Properties:** Wh. to yel. or grayish fine powd., clay-like odor when moist, earthy taste; insol. in water, dilute acids, alkali hydroxides; dens. 1.8-2.6; m.p. 0 C; high lubricity
- **Toxicology:** ACGIH TLV/TWA 2 mg/m$^3$ (respirable fraction); TDLo (oral, female rat, 37 days prior to copulation) 590 g/kg; harmful by inh., ing., skin contact; nuisance dust; large doses may cause obstructions, perforations, or granuloma (tumor)
Kaolinite

CAS 1318-74-7

Definition: Clay (an aluminum silicate) mineral; main constituent of kaolin

Formula: 1: $\text{Al}_4(\text{Si}_4\text{O}_{10})(\text{OH})_8$; 2: $\text{Al}_2[(\text{OH})_2|\text{Si}_2\text{O}_5]$ 

Properties: Wh., pink, and grey

Uses: In pharmaceutical formulations

Trade Names Containing: Sillitin Z 86 Puriss

Karaya; Karaya gum. See Karaya (Sterculia urens) gum

Karaya (Sterculia urens) gum

CAS 9000-36-6; EINECS/ELINCS 232-539-4

FEMA 2605; INS 416

Synonyms: Gum karaya; Gum sterculia; Indian tragacanth; India tragacanth; Kadaya gum; Karaya; Karaya gum; Sterculia gum; Sterculia urens; Sterculia urens gum

Definition: Dried exudate from the tree, Sterculia urens

Properties: Wh. fine powd., sl. acetic acid odor; insol. in alcohol; swells in water to a gel; produces highly stable emulsions, resist. to acids

Toxicology: LD50 (oral, rat) 9100 mg/kg; very mildly toxic by ing.; mild allergen causing hay fever, dermatitis, gastrointestinal diseases, and asthma; may cause intolerance; laxative effect, may reduce nutrient intake; TSCA listed

Uses: Protective colloid, stabilizer, thickener, emulsifier, suspending agent for pharmaceuticals; tablet excipient; bulk laxative; denture adhesive; consistency agent for troches and emulsions

Regulatory: FDA 21CFR §133.133, 133.134, 133.162, 133.178, 133.179, 150.141, 150.161, 184.1349, GRAS; FEMA GRAS; Japan approved; Europe listed; UK approved; BP compliance; Canada DSL

Kelp
CAS 977001-75-4
FEMA 2606
Synonyms: Macrocystis pyriferae
Definition: Dehydrated seaweed from the giant Pacific kelp, Macrocystis pyriferae
Properties: Dk. grn. to olive-brn. color, salty char. taste
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Natural flavor, iodine source, dietary supplement for pharmaceuticals, herbal preps.
Kentonarome. See Methyl cyclopentenolone
Keratin
CAS 68238-35-7; EINECS/ELINCS 269-409-1
Synonyms: Animal keratin; Detoxin
Definition: Natural fibrous protein derived from hair, wool, horn, nails, epidermis, etc. in animals
Properties: Insol. in org. solvs.; absorbs and holds water; dens. 1.00; amphoteric
Toxicology: LD50 (IV, rat) 45 mg/kg; may cause acute pulmonary edema; TSCA listed
Uses: Coating enteric pills not affected in stomach but dissolved by alkaline intestinal secretions
β-Ketopropane. See Acetone
1-Ketopropionaldehyde; 2-Ketopropionaldehyde; α-Ketopropionaldehyde. See Pyruvaldehyde

### Handbook of Pharmaceutical Additives, Third Edition

1539
Chemical Component Cross-Reference

Properties: M.w. 133.17; nonionic
Toxicology: LD50 (subcut., rat) 24 g/kg, (IP, mouse) 16,300 mg/kg; mutagen; TSCA listed
Uses: Humectant, lubricant in creams and lotions
Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium
Trade Names Containing: Lipomectant AL
Lactase. See β-Galactosidase
Lactated pepsin. See Pepsin
Lactem. See Lactic acid esters of mono- and diglycerides of fatty acids
Lactic acid
CAS 50-21-5; 598-82-3 (DL); 79-33-4 (L); 10326-41-7 (D); EINECS/ELINCS 200-018-0; 209-954-4 (DL); 201-296-2 (L); 233-713-2 (D)
UN 1760; FEMA 2611; INS 270; E270
Synonyms: Acetonic acid; Ethylenelactic acid; 1-Hydroxyethanecarboxylic acid; 1-Hydroxyethane 1-carboxylic acid; 2-Hydroxypropionic acid; 2-Hydroxypropionic acid; α-Hydroxypropionic acid; Milk acid; Propanoic acid, 2-hydroxy-; Propionic acid, 2-hydroxy-
Classification: Organic acid
Definition: Prod. of the metabolism of glucose and glycogen
Empirical: C3H6O3
Formula: CH3CHOHCOOH
Properties: Colorless to ylsh. cryst. or syrupy liq., nearly odorless; misc. with water, alcohol, glycerol, furfural; insol. in chloroform; m.w. 90.09; dens. 1.249; m.p. 18 C; b.p. 122 C (15 mm); flash pt. 110 C; ref. index 1.4251; anionic
Toxicology: LD50 (oral, rat) 3730 mg/kg, (subcut., mouse) 4500 mg/kg; LDLo (rectal, rabbit) 1200 mg/kg; mod. toxic by ing., rectal routes; corrosive; severe skin and eye irritant; mutagenic data; TSCA listed
Environmental: VOC; ThOD 0.53
Precaution: DOT: Corrosive material; mixts. with nitric acid + hydrofluoric acid may react vigorously
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 3, Flammability 1, Reactivity 0
Storage: Hygroscopic
Uses: Acidulant, buffer, antimicrobial, preservative, flavor in pharmaceuticals, injectables, parenterals, orals, topicals,
†=pharmaceutical grade
vaginals, digestive aids; treatment of dermatological problems, e.g., warts; treatment of infective skin and vaginal disorders; keratin softener for skin care prods.
Use Level: Up to 10%
Regulatory: FDA 21CFR §131.144, 133.123, 133.124, 133.129, 133.169, 133.173, 133.178, 133.179, 150.141, 150.161, 172.814, 178.1010, 184.1061, GRAS; USDA 9CFR §318.7, 381.147; BATF 27CFR §240.1051, GRAS; not for use in infant foods; Canada DSL; FEMA GRAS; Japan approved; Europe listed; UK approved; FDA approved for injectables, parenterals, orals, topicals, vaginals; USP/NF, BP, EP, JP compliance
Lactic acid, ammonium salt. See Ammonium lactate

Lactic acid, bimol. ester, stearate, sodium salt. See Sodium stearoyl lactylate

Lactic acid butyl ester. See Butyl lactate; Butyl-(S)-lactate

Lactic acid, butyl ester, butyrate. See Butyl butyryl lactate

Lactic acid esters of mono- and diglycerides of fatty acids

INS472b; E472b

Synonyms: Glyceryl-lacto esters of fatty acids; Lactem; Lactoglycerides; Mono- and diglycerides, lactic acid esters

Definition: Esters of glycerol with lactic acid and fatty acids

Properties: Lt. yel. to amber oily to waxy material; sol. in edible oils and fats; disp. in hot water; insol. in cold water; HLB 3-4; nonionic; HLB 3.0-4.0

Uses: Stabilizer, emulsifier, sequestrant, plasticizer, aerating agent
Chemical Component Cross-Reference

Regulatory: FDA 21CFR §172.852; Europe listed; UK approved
Manuf./Distrib.: AB R Lundberg
   http://www.norfoods.se/undberg
Trade Names Containing: Imwitor® 377; Imwitor® 380

Lactic acid ethyl ester. See Ethyl lactate
Lactic acid iron (2+) salt (2:1). See Ferrous lactate
Lactic acid, magnesium salt. See Magnesium lactate
Lactic acid menthyl ester. See Menthyl lactate
Lactic acid monoethanolamide. See Lactamide MEA
Lactic acid, monopotassium salt. See Potassium lactate
Lactic acid, monosodium salt. See Sodium lactate
Lactic acid, 1,2,3-propanetriyl ester. See Trilactin
Lactic acid, sodium salt. See Sodium lactate
L-Lactic acid sodium salt. See Sodium L-lactate
Lactitol
   CAS 585-86-4; EINECS/ELINCS 209-566-6
   INSINS 966; E966
   Synonyms: 4-O-β-D-Galactopyranosyl-D-glucitol
   Classification: Dimeric polyol
   Definition: Disaccharide polyol obtained by controlled hydrogenation of lactose
   Empirical: C12H24O11
   Properties: Wh. cryst.; odorless; mild sweet taste, no aftertaste; m.w. 344.32
   Uses: Sweetener
   Manuf./Distrib.: AB R Lundberg
      http://www.norfoods.se/undberg
      Danisco Sweeteners
      http://www.daniscosweeteners.com
      Indofine http://www.indofinechemical.com
   Trade Names: Finlac™ DC; Lactitol AC

Lactitol monohydrate
   CAS 81025-04-9; EINECS/ELINCS 209-566-5
   Synonyms: 4-O-β-D-Galactopyranosyl-D-glucitol
   Classification: Disaccharide sugar alcohol
   Empirical: C12H24O11 • H2O
   Properties: M.w. 362.37; m.p. 95-98°C

†=pharmaceutical grade

Toxicology: LD50 (oral, rat) > 30 g/kg, (oral, mouse) 23 g/kg; large doses may cause diarrhea
Uses: Sweetener, bulking agent for pharmaceuticals; laxative; treatment of hepatic encephalopathy
Features: Nutritive
Regulatory: USP/NF, BP, EP compliance
Manuf./Distrib.: Adept Sol’ns,†; Aldrich http://www.sigma-aldrich.com
   Int*l,†; CarboMer† http://www.carbomer.com; Danisco Cultor† http://ingredients.danisco.com
   Trade Names: Lactitol MC; Lacty® M

Lactobiose. See Lactose

Lactoferrin
   Synonyms: Glycoproteins, iron-binding, milk, lactoferrin; Lactotransferrin
   Classification: Polypeptide
   Definition: Iron-binding glycoprotein component of mammalian milk
   Uses: Antiinflammatory factor; dietary supplement for inhibiting bone breakdown and boosting bone growth
   Manuf./Distrib.: Adept Sol’ns,†; Chemetall Chem. Prods,† http://www.chemetall.com
   DMV Int*l Pharma† http://www.dmviinternational.com; Friesland Foods Domo† http://www.domo.nl; Pangaea Sciences† http://www.pangaeasciences.com
   RIA Int*l,† http://www.riausa.com
   Trade Names Containing: Sebomine SB12

Lactoflavin. See Riboflavin

Lactoglucersides. See Lactic acid esters of mono- and diglycerides of fatty acids

Lactol spirits. See Naphtha, light aliphatic

Lactoperoxidase
   CAS 9003-99-0; EINECS/ELINCS 232-668-6
   Synonyms: Peroxidase
   Classification: Peroxidase
   Definition: Enzyme obtained from milk
   Properties: Light brown powd.; m.w. ≈ 77,500
   Storage: Sensitive to humidity; keep under argon
   Uses: Preservative in pharmaceuticals
   Regulatory: Canada DSL
   Manuf./Distrib.: Chemetall Chem. Prods,† http://www.chemetall.com; DMV Int*l
Chemical Component Cross-Reference

**Pharma**† [http://www.dmv-international.com](http://www.dmv-international.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Friesland Foods Domo† [http://www.domo.nl](http://www.domo.nl); Pangaea Sciences† [http://www.pangaeasciences.com](http://www.pangaeasciences.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names Containing:** Sebomine SB12

**Lactose**

**CAS** 63-42-3; EINECS/ELINCS 200-559-2

**Synonyms:** 4-O-β-Galactopyranosyl D-glucose; Lactin; Lactobiose; Lactose; Lactosum; Milk sugar; Saccharum lactin; Saccharum lactis

**Classification:** Disaccharide

**Definition:** Commercial prod. is the monohydrate

**Empirical:** C₁₂H₂₂O₁₁

**Formula:** C₆H₇O(OH)₄OC₆H₇O(OH)₄

**Properties:** Wh. hard cryst. mass or wh. powd., odorless to sl. char. odor but readily absorbs odors, mildly sweet taste, odorless; sol. in water, alcohol, ether; sl. sol. in alcohol; m.w. 342.34; dens. 1.525 (20 C); m.p. 203.5 C (dec.); b.p. (dec.); loses water of cryst. @ 120 C; stable in air

**Toxicology:** LDLo (IV, dog) 1500 mg/kg; mod. toxic by IV route; found to cause tumors when injected under skin of mice; derivs. can be irritating to the colon; questionable carcinogen; experimental tumorigen, teratogen; TSCA listed

**Precaution:** Mixts. with oxidizers may be explosion hazards

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Tablet/capsule diluent, filler; sweetener in solid oral dosage forms; injectables; inhalation capsules; rectal tablets; topical creams, ointments, powds.; vaginal creams, suppositories; transdermal ointments and patches; eye lotion base; mfg. of penicillin, riboflavin; culture medium; microbial fermentation nutrient

**Regulatory:** FDA 21CFR §131.112, 131.170, 131.200, 131.203, 131.206, 133.124, 133.178, 133.179, 168.122, 169.179, 169.182, GRAS; FDA approved for orals, buccals, inhalants, rectals, topicals, vaginals, transdermals; Canada DSL; USP/NF, BP, EP, JP compliance

α Lactose. See Lactose monohydrate
d-Lactose. See Lactose

Lactose monohydrate
CAS 10039-26-6; 64044-51-5
Synonyms: α Lactose; Milk sugar
Definition: A natural disaccharide consisting of one glucose and one galactose moiety (obtained from milk)
Empirical: C12H22O11 • H2O
Properties: Wh. fine cryst. powd.; sol. in water; insol. in alcohol; m.w. 360.31
Toxicology: May cause eye, skin, and respiratory tract irritation, GI discomfort
Precaution: Avoid breathing dust
NFPA: Health 0, Flammability 1, Reactivity 0
Storage: Store @ ambient temps., in a dry place away from direct sunlight, heat and incompatible materials
Uses: Tablet/capsule diluent; pharmaceutical parenterals, oralss
Regulatory: FDA approved for parenterals, oralss; USP/NF, BP, EP, JP
Manuf./Distrib.: Aastrid Int'l.†

Pharmatose® 450 M
Pharmatose® DCL 11; Pharmatose® DCL
15; Pharmatose® DCL 21; Pharmatose®
DCL 22; Sheffield Brand Lactose
Monohydrate NF
Trade Names Containing: Ludipress®;
Ludipress® LCE; Pharmatose® DCL 14;
StarLac™

Lactosum. See Lactose
Lactotransferrin. See Lactoferrin
Lactoyl methylsilanol elastinate
Definition: Ester of lactic acid and methylsilanol elastinate
Uses: Conditioner
Trade Names: Lasilium® C

Lady’s thistle extract. See Lady’s thistle
(Silybum marianum) extract

Lady’s thistle (Silybum marianum) extract
CAS 84604-20-6; EINECS/ELINCS 283-298-7
Synonyms: Lady’s thistle extract; Silybum
marianum; Silybum marianum extract
Definition: Extract of the lady’s thistle, Silybum
marianum
Uses: Botanical
Manuf./Distrib.: Carrubba
http://www.carrubba.com
Trade Names Containing: Pronalen® Sensitive
Skin

LAEE. See Ethyl linolenate
Laevosan. See Fructose
Laevulose. See Fructose
LAH. See Lithium aluminum hydride
Lake bordeaux B. See D&C Red No. 34
Lake red C. See D&C Red No. 8; D&C Red No. 9
LAM. See 2-Pyrrrolidone
Landalgin. See Alginic acid
Land plaster. See Calcium sulfate dihydrate

### Laneth
CAS 61791-20-6 (generic)
Synonyms: Lanolin alcohol ethoxylates; Lanolin ethoxylates
Definition: PEG ether of lanolin alcohol
Properties: Yel. to amber solid; nonionic
Uses: Emollient for pharmaceuticals

### Laneth-5
CAS 61790-91-8; 61791-20-6 (generic)
Synonyms: PEG-5 lanolin alcohol; PEG-5 lanolin ether; POE (5) lanolin alcohol; POE (5) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 5
Properties: HLB 7.7; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, stabilizer, solubilizer, cosolvent, wetting agent, dispersant, conditioner, visc. control agent for pharmaceuticals, creams and lotions

### Laneth-10
CAS 61791-20-6 (generic)
Synonyms: PEG-10 lanolin ether; PEG 500 lanolin ether; POE (10) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 10
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, stabilizer, solubilizer, cosolvent, wetting agent, dispersant, conditioner, visc. control agent for pharmaceuticals, creams and lotions

### Laneth-15
CAS 61791-20-6 (generic); 84650-19-1
Synonyms: PEG-15 lanolin ether; POE (15) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 15
Properties: Nonionic
Toxicology: TSCA listed

### Laneth-20
CAS 61791-20-6 (generic)
Synonyms: PEG-20 lanolin ether; PEG 1000 lanolin ether; POE (20) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 20
Properties: HLB 11.0; nonionic
Toxicology: TSCA listed
Uses: Emollient, emulsifier, visc. control agent, thickener for pharmaceuticals; plasticizer and solubilizer for hydrophobic substances

### Laneth-25
CAS 61791-20-6 (generic)
Synonyms: PEG-25 lanolin ether; POE (25) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 25
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier for pharmaceuticals

### Laneth-40
CAS 61791-20-6 (generic)
Synonyms: PEG-40 lanolin ether; PEG 2000 lanolin ether; POE (40) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 40
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, emollient, stabilizer, solubilizer, wetting agent, dispersant, conditioner for pharmaceuticals, creams and lotions

### Laneth-10 acetate
CAS 65071-98-9 (generic)
Synonyms: Acetylated POE (10) lanolin

†=pharmaceutical grade

**Uses:** Emulsifier, emollient, stabilizer, solubilizer, wetting agent, dispersant, conditioner, visc. control agent for pharmaceuticals, topicalcs, creams and lotions

**Trade Names:** Fancol™ LA-15; Polychol 15

**Laneth-16**
CAS 61791-20-6 (generic)
Synonyms: PEG-16 lanolin ether; POE (16) lanolin alcohol; POE (16) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 16
Properties: HLB 13.2-15.0; nonionic
Toxicology: TSCA listed
Uses: Emulsifier for pharmaceuticals
Trade Names: Fancol™ LA-15; Polychol 15

**Laneth-20**
CAS 61791-20-6 (generic)
Synonyms: PEG-20 lanolin ether; PEG 1000 lanolin ether; POE (20) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 20
Properties: HLB 11.0; nonionic
Toxicology: TSCA listed
Uses: Emollient, emulsifier, visc. control agent, thickener for pharmaceuticals; plasticizer and solubilizer for hydrophobic substances

**Laneth-25**
CAS 61791-20-6 (generic)
Synonyms: PEG-25 lanolin ether; POE (25) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 25
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier for pharmaceuticals

**Laneth-40**
CAS 61791-20-6 (generic)
Synonyms: PEG-40 lanolin ether; PEG 2000 lanolin ether; POE (40) lanolin ether
Definition: PEG ether of lanolin alcohol with avg. ethoxylation value of 40
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, emollient, stabilizer, solubilizer, wetting agent, dispersant, conditioner for pharmaceuticals, creams and lotions

**Laneth-10 acetate**
CAS 65071-98-9 (generic)
Synonyms: Acetylated POE (10) lanolin
**Chemical Component Cross-Reference**

- alcohol; PEG 500 lanolin ether acetate; PEG-10 lanolin ether, acetylated; POE (10) lanolin ether, acetylated
- Definition: Acetylated ester of an ethoxylated ether of lanolin alcohol with avg. ethoxylation value of 10
- Properties: HLB 13.0; nonionic
- Toxicology: May cause allergic contact skin rashes
- Uses: Surfactant, emollient, emulsifier for pharmaceutical topicals
- Regulatory: Canada DSL
- Trade Names: Lipolan 98

**Lanolic acids. See Lanolin acid**

**Lanolin**

- CAS: 8006-54-0 (anhyd.); 8020-84-6 (hyd.); EINECS/ELINCS: 232-348-6
- INS913
- Synonyms: Adeps lanae; Anhydrous lanolin; Degras; Wool fat; Wool grease; Wool wax
- Definition: Deriv. of unctuous fatty sebaceous secretion of sheep, Ovis aries, consisting of complex mixt. of esters of high m.w. aliphatic, steroid, or triterpenoid alcohol and fatty acids
- Properties: Yel.-wh. semisolid to paste; sl. odor; sol. in chloroform, ether; insol. in water; m.p. 38-42 C; iodine no. 18-36; flash pt. > 230 F; nonionic
- Toxicology: Can cause allergic reactions, contact dermatitis; TSCA listed
- Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
- NFPA: Health 0, Flammability 1, Reactivity 0
- Uses: Emollient, ointment base, filler, emulsifier, vehicle in pharmaceuticals, ophthalmics, topicals, suppositories; protectant in diaper rash, hemorrhoidal, and antibiotic ointments
- Regulatory: FDA 21CFR §172.615, 175.300, 176.170, 176.210, 177.1200, 177.2600, 178.3910; Japan approved; FDA approved for ophthalmics, topicals; anhyd.: USP/NF, BP compliance; Canada DSL

Trade Names Containing: Emery® 1740; Forlan 300; Lipowax R2; Vilvanolin® C
See also Lanolin alcohol

Lanolin, acetate; Lanolin, acetates. See Acetylated lanolin

Lanolin acid
CAS 68424-43-1; EINECS/ELINCS 270-302-7
Synonyms: Acids, lanolin; Fatty acids, lanolin; Lanolic acids; Lanolin fatty acids
Definition: Mixture of organic acids obtained from hydrolysis of lanolin
Properties: Pale yel. to brn. waxy solid
Toxicology: TSCA listed
Uses: Emollient, emulsifier, stabilizer for pharmaceuticals
Regulatory: Canada DSL

Lanolin alcohol
CAS 8027-33-6; EINECS/ELINCS 232-430-1
Synonyms: Alcohols, lanolin; Lanolin; Lanolin alcohols; Wool alcohol; Wool wax alcohol
Definition: Mixture of organic alcohols obtained from hydrolysis of lanolin; main constituents are cholesterol, lanosterol, dehydrolanosterol, various aliphatic alcohols
Properties: Amber hard waxy solid, char. odor; sol. in ether, chloroform; sl. sol. in alcohol; insol. in water; m.p. 56 C; acid no. 2 max.; sapon. no. 12 max.; nonionic
Toxicology: Less likely to cause allergic reaction than lanolin; TSCA listed
Uses: Emulsifier, solubilizer in pharmaceuticals, ophthalmics, topicals
Regulatory: FDA approved for ophthalmics, topicals; USP/NF compliance; Canada DSL

</tbody>
</table>
chloride
Classification: Quaternary ammonium salt
Empirical: C21H35ClN2O3
Properties: Powd.; m.w. 398.97; cationic
Toxicology: LD50 (IV, mouse) 18 mg/kg; poison by IV route; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic vapors of NOx and Cl−
Uses: Pharmaceutic acid; surfactant, antimicrobial, emollient, emulsifier, foaming agent for pharmaceuticals
Regulatory: Canada DSL
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/
Larch gum; Larch turpentine. See Arabinogalactan
Lard
CAS 61789-99-9; EINECS/ELINCS 263-100-5
Synonyms: Adeps suillus; Bleached lard; Fat, lard; Unhydrogenated lard
Definition: Purified fat from abdomen of the hog
Properties: Whits. soft unctuous mass; insol. in water; nonionic
Toxicology: LD50 (oral, rat) > 90 ml/kg; TSCA listed
Precaution: Combustible; subject to spontaneous heating
Uses: Emollient, emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals
Regulatory: FDA 21CFR §176.210, 182.70; Canada DSL
Lard glyceride
CAS 61789-10-4; EINECS/ELINCS 263-032-6
Synonyms: Glycerides, lard mono-; Lard monoglyceride
Definition: Monoglyceride derived from lard
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, stabilizer, dispersant for pharmaceuticals
Lard glycerides
CAS 68953-43-5; 91744-46-6; EINECS/ELINCS 294-609-0
Synonyms: Animal oil, monoglycerides, †=pharmaceutical grade
diglycerides; Glycerides, lard, mono-, di- and tri-; Lard mono-, di- and tri-glycerides
Definition: Mixture of mono-, di-, and triglycerides derived from lard
Properties: Wh. soft unctuous mass; insol. in water; nonionic
Toxicology: LD50 (oral, rat) > 90 ml/kg; TSCA listed
Uses: Emollient, emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals
Lard, hydrogenated. See Hydrogenated lard
Lard mono-, di- and tri-glycerides. See Lard glycerides
Lard monoglyceride. See Lard glyceride
Lard oil
CAS 8016-28-2
Properties: Colorless or ylsh. liq., peculiar odor, bland taste; sol. in benzene, ether, chloroform, carbon disulfide, min. oil; sl. sol. in alcohol; insol. in water; dens. 0.915; m.p. -2 C; pour pt. 0-15 C; iodine no. 65-80; sapon. no. 190-205; flash pt. 215 C; ref. index 1.470
Precaution: Combustible
Uses: Antibiotic fermentation
Regulatory: FDA 21CFR §176.210, 182.70; Canada DSL
Larixic acid; Larixinic acid. See Maltol
Laughing gas. See Nitrous oxide
Lauraldehyde. See Lauric aldehyde
Lauralkonium chloride
CAS 139-07-1; EINECS/ELINCS 205-351-5
Synonyms: Benzododecinium chloride; Benzylidyldimethyldodecylammonium chloride; N,N-Dimethyl-N-dodecylbenzenemethanaminium chloride; Dimethyl dodecyl benzyl ammonium chloride; Dimethyl lauril benzyl ammonium chloride; Dodecyl dimethyl benzyl ammonium chloride; Lauryl dimethyl benzyl
Chemical Component Cross-Reference

ammonium chloride

Classification: Quaternary ammonium salt
Empirical: $\text{C}_2\text{H}_3\text{N} \cdot \text{Cl}$
Properties: Solid; m.w. 339.99; m.p. 31-32 C; cationic
Toxicology: LD50 (oral, rat) 400 mg/kg, (IP, rat) 100 mg/kg; poison by ing. and IP routes; skin and eye irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of NOx, NH3, and Cl-
Uses: Preservative, germicide, disinfectant for medical/pharmaceutical apps.
Regulatory: FDA 21CFR §172.165 (limitation 0.25-1.0 ppm), 173.320 (0.05 ± 0.005 ppm), 175.105; Canada DSL
Trade Names: Catinal MB-50A; GEM

†=pharmaceutical grade

Trade Names: NINOL® 30-LL; NINOL® 55-LL; NINOL® 70-SL; NINOL® 96-SL; Schercomid SL-Extra

Trade Names Containing: BIO-TERGE® 804; NINOL® L-9; Schercomid SLM-S; STEPANOL® 360; STEPANOL® ABHS-15C

Lauramide MEA
CAS 142-78-9; EINECS/ELINCS 205-560-1
Synonyms: N-(2-Hydroxyethyl) dodecanamide; Lauric acid monoethanolamide; Lauric monoethanolamide; LMMEA; Monoethanolamine lauric acid amide
Classification: Alkanolamide
Definition: Mixture of ethanolamides of lauric acid
Empirical: $\text{C}_{16}\text{H}_{29}\text{NO}_2$
Formula: $\text{CH}_3(\text{CH}_2)_{10}\text{CONHCH}_2\text{CH}_2\text{OH}$
Properties: Cream wax; m.w. 243.39; bulk dens. 0.4 kg/l; m.p. 85 C; nonionic
Toxicology: TSCA listed
Uses: Foam booster/stabilizer, thickener, emollient, conditioner, detergent for pharmaceuticals
Regulatory: Canada DSL
Trade Names: NINOL® C12 LMP; NINOL® LMP

Lauramide/myristamide DEA
CAS 97926-10-8; EINECS/ELINCS 308-224-3
Synonyms: Amides, C12-14, N,N-bis (hydroxyethyl); Lauric/myristic DEA; Lauric/myristic diethanolamide
Definition: Mixture of ethanolamides of a blend

†=pharmaceutical grade

Trade Names: NINOL® 30-LL; NINOL® 55-LL; NINOL® 70-SL; NINOL® 96-SL; Schercomid SL-Extra

Trade Names Containing: BIO-TERGE® 804; NINOL® L-9; Schercomid SLM-S; STEPANOL® 360; STEPANOL® ABHS-15C

Lauramide DEA
CAS 120-40-1; 52725-64-1; 61971-31-9; EINECS/ELINCS 204-393-1
Synonyms: N,N-Bis (2-hydroxyethyl) dodecanamide; Bis (2-hydroxyethyl) lauramide; N,N-Bis (2-hydroxyethyl) lauramide; N,N-Bis (β-hydroxyethyl) lauramide; Diethanolamine lauric acid amide; N,N-Diethanol lauramide; Lauric acid diethanolamide; Lauric acid polydiethanolamide (2:1); Lauric acid superamide (1:1); Lauric diethanolamide; Lauroyl diethanolamide; Lauryl diethanolamide
Definition: Mixture of ethanolamides of lauric acid
Empirical: $\text{C}_{16}\text{H}_{33}\text{NO}_3$
Formula: $\text{CH}_3(\text{CH}_2)_{10}\text{CON}\left(\text{CH}_2\text{CH}_2\text{OH}\right)_2$
Properties: M.w. 287.50; 1:1 type: wh. cryst. solid; nonionic
Toxicology: LD50 (oral, rat) 2700 mg/kg; mod. toxic by ing.; may produce contact sensitivity; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx
Uses: Emulsifier, visc. control agent in topical dermatological prods.
Regulatory: FDA 21CFR §172.710, 173.315, 175.105, 176.120, 176.210, 177.2260, 177.2800, 178.3130; FDA approved for topicals; Canada DSL
Manuf./Distrib.: ABITEC†
Chemical Component Cross-Reference

of lauric and myristic acids
Formula: \( RCO-N(CH_2CH_2OH)_2 \), \( RCO \) represents the lauric/myristic acid radical
Uses: Surfactant for pharmaceuticals, topicals
Regulatory: FDA approved for topicals

Lauramide/myristamide MEA
Synonyms: Lauric/myristic MEA; Lauric/myristic monoethanolamide
Definition: Mixture of ethanolamides of a blend of lauric and myristic acids
Uses: Surfactant for pharmaceuticals, topicals
Regulatory: FDA approved for topicals

Lauramidopropyl betaine
CAS 4292-10-8; 86438-78-0; EINECS/ELINCS 224-292-6
Synonyms: \( N(\text{Carboxymethyl})-N,N\text{-dimethyl-3-}[(1\text{-oxododecyl}) \text{ amino}]\text{propylammonium hydroxide; Inner salt; (Carboxymethyl)dimethyl-3-}[(1\text{-oxododecyl}) \text{ amino}]\text{lauramidopropyl dimethyl glycine; Lauroylaminopropyldimethyl aminoacetate}
Classification: Zwitterion (inner salt)
Empirical: \( C_{19}H_{38}N_2O_3 \)
Formula: \( CH_3(CH_2)_{10}CONH(CH_2)_{3}N^{+}(CH_3)_{2}CH_2COO^- \)
Properties: Cl. to pale yel liq.; sol. in water; sp. gr. 1.043; visc. 3,000-4,000 cps; m.p. -3 C; b.p. 100 C; pH 8 (10% sol'n.); amphoteric
Toxicology: LD50 (oral, rat) 5000mg/kg; TSCA listed
NFPA: Health 1, Flammability 1, Reactivity 0
Uses: Surfactant for pharmaceuticals
Regulatory: Canada DSL

Lauramidopropyl dimethyl glycine. See Lauramidopropyl betaine

Lauramidopropyl PEG-dimonium chloride phosphate
CAS 83682-78-4
Properties: Cationic
Uses: Bactericide, conditioner, detergent, foaming agent, emulsifier, solubilizer, dispersant, thickener, wetting agent for pharmaceuticals, veterinary prods.

Lauramine oxide
CAS 1643-20-5; 70592-80-2; EINECS/ELINCS 216-700-6; 274-687-2
Synonyms: DDAO; N,N-Dimethyl-1-dodecanamine-N-oxide; Dimethyldodecylamine-N-oxide; N,N-†=pharmaceutical grade

Dimethyldodecylamine oxide; N,N-Dimethyldodecylamine-N-oxide; Dimethyl lauramine oxide; Dimethyl lauramidine oxide; Dodecylmethyamine oxide; N-Dodecylmethyamine oxide; Lauryl dimethyamine oxide; Lauryl dimethyamine-N-oxide; LDAO
Classification: Tertiary amine oxide
Empirical: \( C_{14}H_{31}NO \)
Formula: \( CH_3(CH_2)_{11}NO(CH_3)_2 \)
Properties: Liq.; m.w. 229.41; dens. 0.966 (20/4 C); ref. index 1.379 (20 C)
Toxicology: Severe skin and eye irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx
Uses: Thickener, emollient in pharmaceuticals, topicals; foaming agent for surgical scrubs
Regulatory: FDA approved for topicals; Canada DSL
Trade Names: AMMONYX® DMCD-40; AMMONYX® LO; Empigen® OB; Foamox DML

Laurdimonium hydroxypropyl hydrolyzed collagen. See Lauryldimonium hydroxypropyl hydrolyzed collagen

Laurdimonium hydroxypropyl hydrolyzed wheat protein
CAS 130381-06-5
Synonyms: Dodecanaminium, N,N-dimethyl-N-[3-(wheat-protein-hydrolysate) propyl]-chloride; Lauryl dimonium hydroxypropyl hydrolyzed wheat protein; Protein hydrolysates, wheat germ, [3-(dodecyl(dimethylammonio)-2-hydroxypropyl], chlorides
Classification: Quaternary ammonium chloride
Formula: \([CH_3(CH_2)_{11}N(CH_3)_2CH_2CHOHCH_2R]^+Cl^-\)
where \( R \) rep. hydrolyzed wheat protein moiety
Properties: Clear liq., mild char. odor; sp.gr. 1.05; b.p. > 300 F
Toxicology: May be a skin and eye irritant
Precaution: Avoid strong oxidizing agents; may release oxides of carbon and nitrogen, and ammonia
Uses: Conditioner
Chemical Component Cross-Reference

Trade Names: Hydrotriticum™ QL

Laurel berries. See Laurel (Laurus nobilis) berries

Laurel camphor. See Camphor

Laurel (Laurus nobilis) berries
CAS 977051-01-6; 8007-48-5
FEMA 2612
Synonyms: Laurel berries; Laurus nobilis; Laurus nobilis berries
Definition: Berries of Laurus nobilis
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS

Laureth
CAS 9002-92-0 (generic)
Synonyms: C12 fatty alcohol ethoxylate; Lauryl alcohol ethoxylates; PEG lauryl alcohol; POE lauryl alcohol
Definition: PEG ether of lauryl alcohol
Formula: CH₃(CH₂)₁₁(OCH₂CH₂)nOH, n = 2-23
Properties: Liq. to wax; HLB 9.5-17.0 (4-23 EO); nonionic
Uses: Emulsifier for pharmaceuticals; surfactant, wetting agent, foaming agent, bacteriostat, and fungistat for antidandruff shampoos
Trade Names: Emulgen 123P; Nissan Nonion DN-202; Nissan Nonion DN-203; Nissan Nonion DN-209

Laureth-2
CAS 3055-93-4 (generic); 9002-92-0 (generic); 68002-97-1 (generic); EINECS/ELINCS 221-279-7
Synonyms: Diethylene glycol dodecyl ether; 2-[2-(Dodecyloxy) ethoxy] ethanol; PEG-2 lauryl ether
Definition: PEG ether of lauryl alcohol
Empirical: C₁₈H₃₄O₃
Formula: CH₃(CH₂)₁₀CH₂(OCH₂CH₂)ₙOH, avg. n = 2
Properties: Nonionic
Toxicology: TSCA listed
Uses: Thickener, emulsifier, solubilizer for pharmaceuticals
Trade Names: Arlypon® F; Synperonic® L2

Laureth-3
CAS 3055-94-5; 9002-92-0 (generic); 68002-97-1 (generic); EINECS/ELINCS 221-280-2

Laureth-4
CAS 5274-68-0; 9002-92-0 (generic); 68002-97-1 (generic); EINECS/ELINCS 226-097-1
Synonyms: PEG-4 lauryl ether; PEG 200 lauryl ether; POE (4) lauryl alcohol; POE (4) lauryl ether; 3,6,9,12-Tetraoxatetracosan-1-ol
Definition: PEG ether of lauryl alcohol
Empirical: C₂₀H₄₂O₅
Formula: CH₃(CH₂)₁₀CH₂(OCH₂CH₂)ₙOH, avg. n = 4
Properties: HLB 9.5; nonionic
Toxicology: LD₅₀ (oral, rat) 8600 mg/kg, (IV, rat) 27 mg/kg, (IP, mouse) 160 mg/kg; mildly toxic by ing., IV, IP routes; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Surfactant, emulsifier, solubilizer, lubricant, emollient in pharmaceutical topicals
Regulatory: FDA 21CFR §178.3520; FDA approved for topicals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Brij® 30; Ethosperse® LA-4; Lipocol L-4; Rhodasurf® L-4; Simulsol® P4; TEGO® Alkanol L 4

Laureth-6
CAS 3055-96-7; EINECS/ELINCS 221-282-3
Synonyms: 3,6,9,12,15,18-Hexaoxatriacontan-1-ol; PEG-6 lauryl ether
Definition: PEG ether of lauryl alcohol
Laureth-7

**CAS**: 3055-97-8; 9002-92-0 (generic); EINECS/ELINCS 221-283-9

**Synonyms**: 3,6,9,12,15,18,21,24,27-Heptaoxatritriacontan-1-ol; PEG-7 lauryl ether; POE (7) lauryl ether

**Definition**: PEG ether of lauryl alcohol

**Empirical**: \( C_{26}H_{54}O_8 \)

**Formula**: \( CH_3(CH_2)_{10}CH_2(OCH_2CH_2)_nOH, \text{avg. } n = 7 \)

**Properties**: Nonionic

**Toxicology**: LD50 (oral, rat) 4150 mg/kg, (IV, rat) 390 mg/kg; poison by IV route; mod. toxic by ing.; irritating to skin and eyes; TSCA listed

**Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating fumes

**Uses**: Emulsifier for antibiotic gels

**Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names Containing**: Sepigel™ 305

Laureth-9

**CAS**: 3055-99-0; 9002-92-0 (generic); EINECS/ELINCS 221-284-4

**Synonyms**: 3,6,9,12,15,18,21,24,27-Nonaoxanonatriacontan-1-ol; PEG-9 lauryl ether; PEG-9 monododecyl ether; POE (9) lauryl ether

**Definition**: PEG ether of lauryl alcohol

**Empirical**: \( C_{30}H_{62}O_{10} \)

**Formula**: \( CH_3(CH_2)_{10}CH_2(OCH_2CH_2)_nOH, \text{avg. } n = 9 \)

**Properties**: M.w. \( \approx \) 600; sol. in water, ethanol, toluene; misc. with fats, fatty alcohols, and hot min., nat. and syn. oils; nonionic

**Toxicology**: LD50 (oral, mouse) 1170 mg/kg, (IV, mouse) 125 mg/kg; TSCA listed

**Uses**: Pharmaceutical aid; surfactant; spermicide

**Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names**: Synperonic® L11
Chemical Component Cross-Reference

†=pharmaceutical grade

Sodium laureth-5 carboxylate
Laureth-6 carboxylic acid, sodium salt. See Sodium laureth-6 carboxylate

Lauric acid
CAS 143-07-7; EINECS/ELINCS 205-582-1
FEMA 2614; INS570; E570

Synonyms: Dodecanolic acid; n-Dodecanolic acid; Dodecic acid; Duodecyl acid; Laurostearic acid; 1-Undecanecarboxylic acid

Classification: Fatty acid

Empirical: C_{12}H_{24}O_2

Formula: CH_3(CH_2)_{10}COOH

Properties: Colorless needles; sl. bay oil odor; sol. in benzene, chloroform, alcohol, ether, petrol. ether; insol. in water; m.w. 200.36; dens. 0.833; vapor pressure 1 mm (121 C); m.p. 44 C; b.p. 225 C (100 mm); ref. index 1.4323 (45 C)

Toxicology: LD_{50} (oral, rat) 12 g/kg, (IV, mouse) 131 mg/kg; poison by IV route; mildly toxic by ing.; skin and eye irritant; questionable carcinogen; mutagenic data; TSCA listed

Precaution: Combustible when exposed to heat or flame; reactive with oxidizing materials

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Lubricant, emulsifier in pharmaceuticals; pharmaceutical intermediate

CAS 83682-77-3
Properties: Cationic
Uses: Detergent, bactericide, conditioner, foaming agent, emulsifier, solubilizer, dispersant, thickener, and wetting agent for pharmaceuticals, veterinary products.

Laurostearic acid. See Lauric acid
Lauroylaminopropyldimethyl aminoacetate. See Lauramidopropyl betaine
Lauroyl diethanolamide. See Lauramide DEA

Lauroyl lysine
CAS 52315-75-0; EINECS/ELINCS 257-843-4
Synonyms: Lauroyl-1-lysine; Lauroyl-L-lysine
Definition: Lauroyl deriv. of lysine
Empirical: C_{18}H_{36}N_{2}O_{3}
Formula: CH_{3}(CH_{2})_{10}CONH(CH_{2})_{4}CHNH_{2}COOH
Properties: Wh. cryst. powd.; insol. in almost all solvs. except strong acidic and alkaline solns.; sol. in water @ pH < 1 and > 12; amphoteric
Toxicology: LD_{50} (oral, mouse) > 5.0 g/kg; nonirritating and nonsensitizing to skin, nonirritating to eyes
Uses: Visc. control agent, surface modifier, coemulsifier, cosurfactant in pharmaceuticals
Trade Names: Amihope LL
Trade Names Containing: Liponyl 20LL

Lauroyl sarcosine; Lauroyl-L-sarcosine. See Lauryl sarcosine

CAS 97-78-9; EINECS/ELINCS 202-608-3
Synonyms: N-Lauroylsarcosine; N-Methyl-N-(1-oxododecyl) glycine
Definition: N-lauryl deriv. of N-methylglycine
Empirical: C_{15}H_{34}N • Cl
Formula: CH_{3}(CH_{2})_{11}N(CH_{3})_{3}Cl
Properties: Wh. liq.; sol. in water and alcohol; m.w. 263.89; surf. tens. 33 dynes/cm (0.1% aq.); cationic
Toxicology: TSCA listed
Precaution: Nonflammable
Uses: Bactericide for antiseptics
Regulatory: USA permitted; JSCI, Europe listed; Canada DLS
Manuf./Distrib.: AMRESCO

Lauroyl sarcosine, sodium salt. See Sodium lauroyl sarcosinate

Laurtrimonium chloride
CAS 112-00-5; EINECS/ELINCS 203-927-0
Synonyms: Dodecyl trimethyl ammonium chloride; Lauryl trimethyl ammonium chloride; LTAC, N,N,N-Trimethyl-1-dodecanaminium chloride
Classification: Quaternary ammonium salt
Empirical: C_{15}H_{34}N • Cl
Formula: CH_{3}(CH_{2})_{11}N(CH_{3})_{3}Cl
Properties: Wh. liq.; sol. in water and alcohol; m.w. 263.89; surf. tens. 33 dynes/cm (0.1% aq.); cationic
Toxicology: TSCA listed
Precaution: Nonflammable
Uses: Bactericide for antiseptics
Regulatory: USA permitted; JSCI, Europe listed; Canada DLS
Manuf./Distrib.: AMRESCO

Laurus nobilis; Laurus nobilis berries. See Laurel (Laurus nobilis) berries

Lauryl acetate
CAS 112-66-3; EINECS/ELINCS 203-995-1
FEMA 2616
### Chemical Component Cross-Reference

**Synonyms:** Acetate C-12; Acetic acid, dodecyl ester; Dodecanol acetate; 1-Dodecanol acetate; Dodecan-1-ol acetate; Dodecyl acetate; Dodecyl alcohol acetate

**Empirical:** C₁₄H₂₆O₂
**Formula:** C₁₂H₂₅OOCCH₃

**Properties:** Colorless liq., citrus-rose odor; sol. in most org. solvs.; m.w. 228.38; dens. 0.865; b.p. 150 C 915 mm; flash pt. > 230 F; ref. index 1.430-1.433

**Toxicology:** Primary skin irritant; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Citrus flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Lauryl alcohol**

**CAS:** 112-53-8; 27342-88-7; EINECS/ELINCS 203-982-0

**FEMA:** 2617

**Synonyms:** Alcohol C12; C12 linear primary alcohol; 1-Dodecanol; Dodecan-1-ol; n-Dodecanol; n-Dodecan-1-ol; Dodecyl alcohol; 1-Dodecyl alcohol; n-Dodecyl alcohol; Dodecyl alcohol; 1-Hydroxydodecane; Lauric alcohol; Laurinic alcohol; n-Lauryl alcohol; Lauryl alcohol, narrow-cut

**Classification:** Primary aliphatic alcohol; fatty alcohol

**Empirical:** C₁₂H₂₆O
**Formula:** CH₃(CH₂)₁₀CH₂OH

**Properties:** Colorless leaflets, liq. above 21 C, floral odor; sol. in alcohol, ether, oxygenated solvs.; insol. in water; m.w. 186.33; dens. 0.8309 (24/4 C); m.p. 24 C; b.p. 259 C; flash pt. (CC) 127 C; ref. index 1.440-1.444

**Toxicology:** LD₅₀ (oral, rat) 12,800 mg/kg, (dermal, guinea pig) > 8310 mg/kg; mod. toxic by IP route; mildly toxic by ing.; severe human skin irritant; weak to mod. carcinogen; experimental tumorigen; TSCA listed

Lauryl dimonium hydroxypropyl hydrolyzed wheat protein. See Laurdimonium hydroxypropyl hydrolyzed wheat protein
Lauryl gallate. See Dodecyl gallate

Lauryl glucoside
CAS 110615-47-9; 113976-90-2
Synonyms: Dodecyl glucoside; Lauryl polyglucose

Lauryl lactate
CAS 6283-92-7; EINECS/ELINCS 228-504-8
Synonyms: Dodecyl 2-hydroxypropanoate; Dodecyl lactate; 2-Hydroxypropionic acid, dodecyl ester

Lauryl methyl gluceth-10
hydroxypropylidonium chloride
CAS 123005-57-2
UN 3082

Definition: Quaternary ammonium salt prepared by reaction of methyl gluceth-10 with a dimethyl dodecylammonium substituted epoxide

Properties: Yel. liq.; sol. in water

Toxicology: LD50 (oral, rat) > 5000 mg/kg; nonirritating to eyes, mildly irritating to skin; TSCA listed

Uses: Emollient, lubricant for topical pharmaceuticals; antitackifier in antiperspirants

Regulatory: Canada DSL

Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

Trade Names: Ceraphyl® 31

Lauryl methyl gluceth-10 hydroxypropylidonium chloride

Lauryl dimonium hydroxypropyl hydrolyzed collagen

CAS 118441-80-8

Synonyms: Laurdimonium hydroxypropyl hydrolyzed collagen; Laurydimonium hydroxypropyl amino hydrolyzed animal protein

Classification: Quaternary ammonium chloride

Formula: [CH3(CH2)11N(CH3)2CH2CHOHCH2R]+Cl–
where R rep. hydrolyzed collagen moiety

Uses: Emollient in pharmaceutical topicals
Trade Names: Croquat L
Lauryl oleate  
CAS 36078-10-1; EINECS/ELINCS 252-862-4  
Synonyms: Dodecyl oleate; Oleic acid, lauryl ester  
Definition: Ester of lauryl alcohol and oleic acid  
Emulsion: C₃₀H₅₈O₂  
Uses: Emollient  
Manuf./Distrib.: Sigma  
Trade Names: Glucquat® 125, Lauryl oleate

Lauryl polyglucose  
CAS 1559  
Synonyms: Dodecyl oleate; Oleic acid, lauryl ester

Lauryl pyrrolidone  
CAS 2687-96-9; 55257-88-0; EINECS/ELINCS 403-730-1  
Synonyms: 1-Dodecyl-2-pyrrolidinone; N-Dodecylpyrrolidinone; N-Dodecyl-2-pyrrolidone; 1-Lauryl-2-pyrrolidone; 2-Pyrrolidinone, 1-dodecyl-  
Classification: Substituted heterocyclic compd.; nonaromatic amide  
Empirical: C₁₆H₃₁NO  
Properties: M.w. 253.48; dens. 0.890; b.p. 202-205 (11 mm); flash pt. > 230 F; ref. index 1.4660; nonionic  
Toxicology: LD₅₀ (oral, rat) 1300 mg/kg; mod. toxic by in.; TSCA listed  
Precaution: Combustible  
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOₓ  
Uses: Absorption enhancer in pharmaceuticals; drug  
Features: VOC replacement  
Regulatory: Canada DSL  
Manuf./Distrib.: Aldrich  
Trade Names: Surfadone® LP-300

1-Lauryl-2-pyrrolidone  
Definition: Essential oil from flowers of lavandin, Lavandula hybrida; main constituent: linalool
Lavandin oil. See Lavandin (Lavandula hybrida) oil

Lavandula angustifolia; Lavandula angustifolia oil. See Lavender oil

Lavandula hybrida; Lavandula hybrida oil. See Lavandin (Lavandula hybrida) oil

Lavandula officinalis; Lavandula officinalis oil; Lavender flowers oil. See Lavender oil

Lavender oil
CAS 8000-28-0
FEMA 2622

Synonyms: Lavandula angustifolia; Lavandula angustifolia oil; Lavandula officinalis; Lavandula officinalis oil; Lavender flowers oil

Definition: Volatile oil obtained from flowers of Lavandula angustifolia or L. officinalis, contg. linalyl acetate, linalool, pinene, limonene, geraniol, etc.

Properties: Colorless to yel. liq., camphor-lavender odor; sol. in 4 vols 70% alcohol; misc.

†=pharmaceutical grade

with abs. alcohol, CS₂; sl. sol. in water; dens. 0.875-0.888; flash pt. 166 F; ref. index 1.459-1.470 (20 C)

Toxicology: LD₅₀ (oral, rat) 9040 mg/kg; mildly toxic by ing.; skin irritant; may cause adverse skin reactions when the skin is exposed to sunlight; can cause allergic reaction; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Storage: Keep cool, well closed; protect from light

Uses: Colorant, natural flavor for pharmaceuticals, topical, mouthwashes, dentifrices; odor masking agent for unpleasant odors in ointments; carminative

Use Level: 0.5 mg/kg considered safe oral dose

Regulatory: FDA 21 CFR §182.20, GRAS; 27 CFR §21.65, 21.151; FEMA GRAS; Japan approved; FDA approved for topicals; BP, EP compliance; Canada DSL

Lead
CAS 7439-92-1; EINECS/ELINCS 231-100-4
Synonyms: CI 77575; Lead flake; Pigment
metal 4
Classification: Metallic element
Empirical: Pb
Properties: Metallic, heavy ductile soft gray solid;
tarnishes readily in the atmosphere; sol. in
dilute nitric acid; insol. in water; at.wt. 207.19;
dens. 11.35; m.p. 327.4°C; b.p. 1755°C
Toxicology: ACGIH TLV/TWA 0.15 mg(Pb)/m³;
TCLo (inh., human) 10 µg/m³; LDLo (IP, rat)
1000 mg/kg; poison by ing.; mod. toxic by
IP route; toxic by inh. of dust or fume;
cumulative poison; human systemic effects;
affects nervous, renal, reproductive, blood,
and GI systems; blood levels in children <
10 µg/dL can decrease IQ scores;
questionable carcinogen; experimental
reproductive effector; human mutagenic
data; common air contaminant; TSCA listed
Precaution: Noncombustible; dust can be
flamm. and moderately explosive when
exposed to heat or flame; violent reactions
possible; can react vigorously with oxidizers
Hazardous Decomp. Prods.: Heated to
decomp., emits highly toxic fumes of Pb
Uses: Colorant in trace amounts for topical
pharmaceuticals

CAS 8002-43-5; 8030-76-0; 93685-90-6; 97281-47-5; EINECS/ELINCS 232-307-2; 310-129-7
INS322; E322
Synonyms:  Phosphatidylcholine; Soya lecithin
Definition:  Mixture of the diglycerides of stearic, palmitic and oleic acids linked to the choline ester of phosphoric acid; found in plants and animals
Formula:  C₈H₁₇O₅NRR’, R and R’ are fatty acid groups
Properties:  Nearly wh. to yel. or brn. waxy mass or thick fluid, nutlike odor, bland taste; sol. in chloroform, ether, petrol. ether, min. oils, fatty acids, hydrocarbon and chlorinated solvs.; insol. but swells in water and salt sol’ns.; insol. in veg. oils; dens. 1.0305 (24/4 C); HLB 8.0; acid no. 15-30; iodine no. 95; sapon. no. 196; nonionic
Toxicology:  May cause bronchoconstriction in people with asthma; TSCA listed
Hazardous Decomp. Prods.:  Heated to decomp., emits acrid smoke and irritating fumes
Storage:  Refrigerate
Uses:  Surfactant, emulsifier, solubilizer, dispersant, wetting agent, stabilizer, emollient for pharmaceuticals, liposome technology, orals, topicals; nutrient in gel capsules and tablets; binder in tabletting; choline source in dementia
Features:  Edible
Regulatory:  FDA 21CFR §133.169, 133.173, 133.179, 136.110, 136.115, 136.130, 137.160, 136.165, 136.180, 163.123, 163.130, 163.135, 163.140, 163.145, 163.150, 163.155, 166.40, 166.110, 169.115, 169.140, 169.150, 175.300, 176.170, 184.1400; Canada DSL; GRAS; USDA 9CFR §318.7, 0.5% max. in oleomargarine, 381.147; Japan approved; Europe listed; UK approved; FDA approved for orals, topicals; USP/NF compliance

Lemon (Citrus medica limonum) oil
CAS 8008-56-8; EINECS/ELINCS 284-515-8
### Chemical Component Cross-Reference

#### FEMA 2625

**Synonyms:** Cedro oil; Citrus limon oil; Citrus limonum; Citrus medica limonum; Citrus medica limonum oil; Lemon oil; Lemon oil, coldpressed; Lemon oil, expressed; Lemon peel oil

**Definition:** Volatile oil expressed from the fresh peel of fruit of *Citrus limon*, contg. limonene, terpinene, phellandrene, pinene

**Properties:** Pale yel. to greenish-yel. liq., lemon peel odor and taste; misc. with dehydrated alcohol, CS₂, glac. acetic acid; sl. sol. in water; dens. 0.849-0.855 (25/25 C); ref. index 1.4742-1.4755 (20 C)

**Toxicology:** 

**LD50** (oral, rat) 2840 mg/kg; mod. toxic by ing.; skin irritant; questionable carcinogen; experimental tumorigen; TSCA listed

**Precaution:** Do not use if terebinthine odor can be detected

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Keep cool, well closed; protect from light

**Uses:** Natural flavor for pharmaceuticals, orals; topicals; mfg. of terpeneless lemon oil

**Use Level:** ADI 500 µg/kg (WHO)

**Regulatory:** FDA 21 CFR §146.114, 146.120, 146.121, 146.126, 146.190, 172.230, 173.240, 182.20, GRAS; FEMA GRAS; Europe listed, no restrictions; FDA approved for orals, topicals; BP, EP compliance; Canada DSL

**Manuf./Distrib.:** Advanced Synthesis Tech.

#### FEMA 2624

**Synonyms:** Andropogon nardus; Andropogon nardus oil; Cochin; Cymbopogon flexuosus; Cymbopogon flexuosus oil; East Indian lemongrass oil

**Definition:** Oil from steam distillation of grasses of *Cymbopogon flexuosus* and *Andropogon nardus*, contg. citral

**Properties:** Dk. yel. to brn.-red liq., heavy lemon odor; sol. in min. oil, propylene glycol, alcohol; insol. in water, glycerin; dens. 0.894-0.902; ref. index 1.483

**Toxicology:** 

**LD50** (oral, rat) 5600 mg/kg; mildly toxic by ing.; skin irritant

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Protect from light

**Uses:** Natural flavor for pharmaceuticals; carminative

**Regulatory:** FDA 21 CFR §182.20, GRAS; FEMA GRAS; Europe listed, no restrictions

Lemongrass oil West Indian

CAS 8007-02-1
FEMA 2624

Synonyms: Cymbopogon citratus; Cymbopogon citratus oil; Guatemala lemongrass oil; Lemongrass oil; Madagascar lemongrass oil; Verbena oil, Indian; West Indian lemongrass oil

Definition: Volatile oil from steam distillation of fresh Cymbopogon citratus grasses contg. mainly citral

Properties: Lt. yel. to brn. liq., it. lemon odor; sol. in alcohol, min. oil, propylene glycol, chlorinated solvs.; sl. sol. in glycerol; insol. in water; dens. 0.869-0.894; ref. index 1.483

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Storage: Keep cool, well closed; protect from light

Uses: Natural flavor for pharmaceuticals; carminative

Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS; Canada DSL

Lemon juice. See Lemon (Citrus medica limonum) juice

Lemon oil; Lemon oil, coldpressed; Lemon oil, expressed; Lemon peel oil. See Lemon (Citrus medica limonum) oil

Lepidine

CAS 491-35-0; EINECS/ELINCS 207-734-2

FEMA 2744

Synonyms: Cincholepidine; 4-Methylquinoline; γ-Methylquinoline; p-Methylquinoline

Empirical: C10H8N

Properties: Colorless oily liq., quinoline odor; turns reddish-brn. in light; sl. sol. in water; misc. with alcohol, benzene, ether; m.w. 143.19; dens. 1.083 (20/4 C); m.p. 9-10 C; b.p. 260-263 C; congeal pt. 0 C; ref. index 1.620 (20 C)

Toxicology: Irritant; mutagen; TSCA listed

Storage: Photosensitive; protect from light

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Leu; Leucine (INCI). See L-Leucine

L-Leucine

CAS 61-90-5; EINECS/ELINCS 200-522-0

FEMA 3297; INS641

Synonyms: L-α-Aminoisocaproic acid; α-Aminoisocaproic acid; 2-Amino-4-methylpentanoic acid; 1,2-Amino-4-methylvaleric acid; 2-Amino-4-methylvaleric acid; α-Amino-γ-methylvaleric acid; Leu; Leucine (INCI); 4-Methylnorvaline; Norvaline, 4-methyl-; Valeric acid, 2-amino-4-methyl-

Classification: Essential amino acid

Definition: Avail. commercially as the naturally occurring L(+)-enantiomer

Empirical: C6H13NO2

Properties: Wh. cryst.; sol. in water, dil. HCl; sl. sol. in alcohol; insol. in ether; m.w. 131.20; dens. 1.291 (18 C); m.p. 295 C; subl. @ 145-148 C

Toxicology: LD50 (IP, rat) 5379 mg/kg; LDLo (subcut., rabbit) 2620 mg/kg; mod. toxic by subcut. route; experimental teratogen, reproductive effects; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx

Uses: Nutrient; dietary supplement; biochemical research; infusion sofs.; diagnostic aids; raw material in peptide drugs; flavor for pharmaceuticals

Regulatory: BP, EP compliance; FDA 21CFR §172.320, 8.8% max., 172.804; FEMA GRAS; Japan approved; Canada DSL
Levomenol

CAS 23089-26-1

Synonyms: (-)-α-Bisabolol; (-)-6-Methyl-2-(4-methyl-3-cyclohexen-1-yl)-5-hepten-2-ol

Definition: Natural monocyclic sesquiterpene alcohol

Empirical: C_{15}H_{26}O

Properties: Colorless, visc. oil; m.w. 222.37; dens. 0.927-0.935 (20/4 C); b.p. 153 C; ref. index 1.493-1.499 (20 C)

Uses: Transepidermal penetration enhancer for pharmaceutical topicals, skin care prods.; anti-inflammatory, antimicrobial

Definition: Extract of the lichen, Usnea barbata
Uses: Preservative, natural bactericide, fungicide in creams and lotions
Regulatory: USA not restricted; Europe listed
Manuf./Distrib.: Carrubba
http://www.carrubba.com
Trade Names Containing: Anti-Dandruff; Usnate AO

Licorice (Glycyrhriza glabra) extract
CAS 84775-66-6; 97676-23-8; EINECS/ELINCS 238-895-2
FEMA 2628
Synonyms: Glycyrrhiza extract; Glycyrhriza glabra; Glycyrrhiza glabra extract; Licorice extract; Licorice root extract; Liquorice extract
Definition: Extract of roots of licorice, Glycyrrhiza glabra
Uses: Natural flavor, flavor enhancer for pharmaceuticals; expectorant/anti-inflammatory in cough medicines; anti-inflammatory for irritated skin treatments, sun care, eye care prods.
Regulatory: FDA 21CFR §184.1408, GRAS; FEMA GRAS; Japan approved
Trade Names Containing: Melarrest™ L; Phytoderm Complex G; Pronalen® Licorice HSC

Licorice root. See Licorice (Glycyrhriza glabra)

Licorice root extract. See Licorice (Glycyrhriza glabra) extract

Lidocaine
CAS 137-58-6
Synonyms: α-Diethylaminoaceto-2,6-xyldide
Empirical: C14H22N2O
Formula: C6H3(CH3)2NHCOCH2N(C2H5)2
Properties: Wh. or sl. yel. cryst. powd.; char. odor; sol. in alcohol, ether, chloroform; insol. in
Lidofenin
CAS 59160-29-1
Synonyms: N-(Carboxymethyl)-N-((2,6-dimethylphenyl) amino)-2-oxoethylglycine; HIDA; ((2,6-Xylylcarbamoyl) methyl) imino) diacetic acid
Empirical: C14H18N2O5
Properties: Solid; m.w. 294.34; m.p. 215-216 C
Toxicology: LD50 (IV, rat) 88 mg/kg, (IP, mouse) 1100 mg/kg; poison by IV route; mod. toxic by IP route; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx
Uses: Pharmaceutical (injectables)
Regulatory: FDA approved for injectables

### Linalool

**CAS:** 78-70-6; EINECS/ELINCS 201-134-4  
**FEMA:** 2635  
**Synonyms:** 2,6-Dimethyl-2,7-octadien-6-ol; 3,7-Dimethyl-1,6-octadien-3-ol; Licareol; Linalol; Linalyl alcohol  
**Classification:** Terpene  
**Empirical:** C10H18O  
**Formula:** (CH3)2C:CHCH2CH2C(CH3)OHCH:CH2  
**Properties:** Colorless liq., odor similar to Bergamot oil, French lavender; sol. in alcohol, ether, fixed oils, propylene glycol; insol. in water, glycerin; m.w. 154.28; dens. 0.858-0.868; b.p. 195-199 C; flash pt. 172 F; ref. index 1.461; tenacity 12 hrs. on blotter  
**Toxicology:** LD50 (oral, rat) 2790 mg/kg, (skin, rabbit) 5610 mg/kg; mod. toxic by ing.; mildly toxic by skin contact; skin irritant; mutagen; TSCA listed  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**Storage:** Store in cool, dry place in tightly sealed containers, protected from heat and light  
**Uses:** Synthetic flavor and fragrance for pharmaceuticals; raw material in synthesis of isophytol and vitamin E  
**Features:** Citrus flavor  
**Use Level:** < 5%  
**Regulatory:** FDA 21CFR §182.60, GRAS; FEMA GRAS; Japan approved as flavoring (ENCS; Canada DSL; Japan ENCS (no. 2-249); Philippines PICCS  
**Trade Names:** Linalool 95  
**Linalool acetate.** See Linalyl acetate  
**Linalool butyrate.** See Linalyl butyrate  
**Linalool isobutyrate.** See Linalyl isobutyrate  
**Linalool oxide.** See Linalyl oxide  
**Linalool oxide**  
**CAS:** 60047-17-8; 5989-33-3 (cis); 34995-77-2 (trans); 1365-19-1; EINECS/ELINCS 262-038-6; 215-723-9  
**FEMA:** 3746  
**Synonyms:** Epoxylinalool; 5 Ethenyl tetrahydro-α,α-5 trimethyl 2 furan methanol; 2-Methyl-2-vinyl-5-(α-hydroxyisopropyl) tetrahydrofuran; 2-Methyl-2-vinyl-5-(2-hydroxy-2-propyl) tetrahydrofuran; 2- (Tetrahydro-5-methyl-5-vinyl-2-furyl) propan-2-ol; Tetrahydro-α,α-5-trimethyl-5-vinylfurfuryl alcohol; α,α,5-Trimethyl-5-ethenyltetrahydro-2-furanmethanol; cis-and trans-2-Vinyl-2-methyl-5-(1´-hydroxy-1´-methylene) tetrahydrofuran  
**Definition:** Commercial prod. is a mixt. of cis and trans-isomers  
**Empirical:** C10H18O2  
**Properties:** Colorless to sl. yel. oily liq.; sweet lemon cineol flavor; sol. in alcohol, most common org. solvs.; insol. in water; m.w. 170.25; dens. 0.94 kg/l (20 C); b.p. 188 C; flash pt. 63 C; ref. index 1.4523; substantivity 12 hrs. on smelling strip  
**Toxicology:** TSCA listed

Linalyl acetate

CAS 115-95-7; EINECS/ELINCS 204-116-4

Syntones: Acetic acid, linalool ester;
Bergamol; Bergamol; 3,7-Dimethyl-1,6-octadien-3-ol acetate; 3,7-Dimethyl-1,6-octadien-3-yl acetate; Licareol acetate;
Linalol acetate; Linalool acetate

Classification: floral ester; acyclic terpene ester

Definition: Ester of linalool and acetic acid; avail. commercially as a racemic mixt.

Empirical: C_{12}H_{20}O_{2}

Formula: CH_{3}COOC_{10}H_{17}

Properties: Colorless clear oily liq.; bergamot odor; sol. in alcohol, ether, diethyl phthalate, benzyl benzoate, min. oil, fixed oils; sl. sol. in propylene glycol; insol. in water; m.w. 196.32; dens. 0.898-0.914; b.p. 108-110 C; flash pt. 185 F; ref. index 1.4500

Toxicology: LD_{50} (oral, rat) 14,550 mg/kg; mildly toxic by ing.; severe skin irritant; TSCA listed

Precaution: DOT: Combustible liq.

HArdous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air

Uses: Synthetic flavor and fragrance for pharmaceuticals

Features: Pear-like flavor

Regulatory: FDA 21CFR §182.60, GRAS; FEMA GRAS; Japan approved as flavoring; Australia AICS; Canada DSL

Manuf./Distrib.: Adrian Amer.
**Chemical Component Cross-Reference**

rabbit) > 5 g/kg; mildly toxic by ing.; irritating to eyes, skin, respiratory tract; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of NOx

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Fresh linalool orange blossom woody odor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)

**Linalyl benzoate**

CAS 126-64-7; EINECS/ELINCS 204-796-2

FEMA 2638

**Synonyms:** 3,7-Dimethyl-1,6-octadien-3-ol benzoate; 3,7-Dimethyl-1,6-octadien-3-yl benzoate; 1,5-Dimethyl-1-vinyl-4-hexen-1-ol benzoate; 1,5-Dimethyl-1-vinylhex-4-enyl benzoate; 1,5-Dimethyl-1-vinyl-4-hexen-1-yl benzoate

**Classification:** floral ester

**Empirical:** C17H22O2

**Properties:** Yel. or ylsh.-brn. liq.; tuberose odor; sol. in chloroform, alcohol, ether; insol. in water; m.w. 258.37; b.p. 263 C; flash pt. 98 C; ref. index 1.505-1.520

**Toxicology:** LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Use Level:** 0.5% max. as benzoic acid in finished cosmetics

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Manuf./Distrib.:** A&E Connock [http://www.connock.co.uk](http://www.connock.co.uk); Fleurchem [http://www.fleurchem.com](http://www.fleurchem.com); SAFC Specialties [http://www.safcspecialties.com](http://www.safcspecialties.com)

**Linalyl n-butyrate. See Linalyl butyrate**

**Linalyl caproate. See Linalyl hexanoate**

**Linalyl cinnamate**

CAS 78-37-5; EINECS/ELINCS 201-110-3

FEMA 2641

**Synonyms:** Cinnamic acid-1,5-dimethyl-1-vinyl-4-hexenyl ester; Cinnamic acid-1,5-dimethyl-1-vinyl-4-hexen-1-yl ester; Cinnamic acid, linalyl ester; 3,7-Dimethyl-1,6-octadien-3-ol cinnamate; 1,5-Dimethyl-1-vinylhex-4-enyl 3-phenyl-2-propenoate; Linalyl 3-phenylpropenoate; 3-Phenyl-2-propenoic acid-1,5-dimethyl-1-vinyl-4-hexen-1-yl ester; 1,5-Dimethyl-1-vinylhex-4-enyl 3-phenyl-2-propenoate

**Classification:** floral ester

**Empirical:** C19H24O2

**Properties:** Colorless liq., soft floral odor, fruity flavor; sol. in alcohol; insol. in water; m.w. 284.40

**Toxicology:** LD50 (oral, rat) 9960 mg/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

### Linalyl isovalerate

**CAS**: 1118-27-0; EINECS/ELINCS 214-259-4

**Empirical**: C\(_{15}\)H\(_{26}\)O\(_2\)

**Properties**: M.w. 238.37; b.p. 188 \(^\circ\)C; ref. index 1.4510
Linalyl octanoate
CAS 10024-64-3; EINECS/ELINCS 233-026-8
FEMA 2644
Synonyms: 3,7-Dimethyl-1,6-octadien-3-yl octanoate; 1,5-Dimethyl-1-vinyl-4-hexenyl octanoate; Linalyl octoate; Octanoic acid 1-ethenyl-1,5-dimethyl-4-hexenyl ester
Classification: floral ester
Empirical: C_{18}H_{32}O_{2}
Properties: Colorless to pale yel. cl. oily liq.; sol. in alcohol and paraffin oil; insol. in water; m.w. 280.445; sp. gr. 0.875 -0.885; ref. index 1.454-1.457
Uses: Synthetic flavor for pharmaceuticals
Features: Dry fruity herbal sweet green natural odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Penta Mfg.
http://www.pentamfg.com

Linalyl octoate. See Linalyl octanoate
Linalyl 3-phenylpropenoate. See Linalyl cinnamate

Linalyl propionate
CAS 144-39-8; EINECS/ELINCS 205-627-5
FEMA 2645
Synonyms: 3,7-Dimethyl-1,6-octadien-3-ol propanoate; 3,7-Dimethyl-2,6-octadien-3-yl propionate; 1,5-Dimethyl-1-vinylhex-4-enyl propionate
Classification: acyclic terpene ester
Empirical: C_{13}H_{22}O_{2}
Formula: C_{10}H_{17}OOC\textsubscript{2}H_{5}
Properties: Colorless liq.; floral odor similar to bergamot oil; sol. in alcohol, most fixed oils, min. oils; sl. sol. in propylene glycol; insol. in glycerol; m.w. 210.32; dens. 0.895-0.902; b.p. 226 C; ref. index 1.4500-1.4550
Precaution: Combustible liq.
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Pear-like flavor
Regulatory: FDA 21CFR §172.510, GRAS; Japan approved
Manuf./Distrib.: Bell Flavors & Fragrances
http://www.bellff.com; Fleurchem

Linden extract. See Linden (Tilia americana) extract; Linden (Tilia cordata) extract; Linden (Tilia vulgaris) extract

Linden flowers
CAS 977009-77-0
FEMA 2647
Synonyms: Lime-tree extract; Linden extract; Linden flowers extract; Tilia americana; Tilia americana extract
Definition: Extract of the flowers of the linden tree, Tilia americana
Toxicology: No known toxicity
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.510, 182.20, GRAS; Japan approved

Linden (Tilia americana) extract
CAS 90063-53-9; EINECS/ELINCS 290-011-9
FEMA 2647
Synonyms: Lime-tree extract; Linden extract; Linden flowers extract; Tilia americana; Tilia americana extract
Definition: Extract of the flowers of the linden tree, Tilia americana
Toxicology: No known toxicity
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.510, 182.20, GRAS; Japan approved

Linden (Tilia cordata) extract
CAS 84929-52-2; EINECS/ELINCS 284-536-2
Synonyms: Lime-tree extract; Linden extract; Linden flowers extract; Tilia cordata; Tilia cordata extract
Definition: Extract of the flowers of the linden tree, Tilia cordata
Toxicology: No known toxicity
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.510, 182.20, GRAS; Japan approved
Linden (Tilia vulgaris) extract  
CAS 90063-56-2; EINECS/ELINCS 290-015-0  
Synonyms: Lime-tree extract; Linden extract; Linden flowers extract; Tilia vulgaris; Tilia vulgaris extract  
Definition: Extract of the flowers of the linden tree, Tilia vulgaris  
Toxicology: No known toxicity  
Uses: Natural flavor for pharmaceuticals  
Regulatory: FDA 21CFR §172.510, 182.20; GRAS; Japan approved

Linear C10 alpha olefin. See Decene-1  
Linoleamide DEA  
CAS 27883-12-1; 56863-02-6; EINECS/ELINCS 260-410-2  
Synonyms: (9Z,12Z)-N,N-Bis(2-hydroxyethyl)octadeca-9,12-dien-1-amide; N,N-Bis(2-hydroxyethyl)-9,12-octadecadienamide; Diethanolamine linoleic acid amide; Linoleic acid diethanolamide; Linoleic diethanolamide; 9,12-Octadecadienamide, N,N-bis(2-hydroxyethyl)  
Classification: Fatty acid alkanolamide  
Definition: Mixt. of ethanolamides of linoleic acid  
Empirical: C22H41NO3  
Formula: \( CH_3(CH_2)4CH=CHCH_2CH=CH(CH_2)7CON(CH_2CH_2OH)_2 \)  
Properties: Amber liq.; sol. in peanut oil, ethanol, propylene glycol, IPM, oleyl alcohol; gels in water; m.w. 367.58; dens. 0.972-0.982; nonionic  
Toxicology: TSCA listed  
Uses: Solubilizer, thickener, w/o emulsifier, conditioner, and emollient for topical pharmaceuticals; emulsion stabilizer for o/w emulsions  
Regulatory: Canada DSL  
Manuf./Distrib.: Cosmetic Supplies USA  
http://www.cosmeticsuppliesusa.com  
Trade Names: Schercomid SLE  
Linoleamidopropyl PG-dimonium chloride phosphate  
Synonyms: Linoleamidopropyl phosphatidyl PG-dimonium chloride; 1-Propanaminium, 2,3-dihydroxy-N,N-dimethyl-N-[3-(1-oxo-9,12-octadecadienylamino) propyl]-, 3-

**CAS:** 7439-93-2; EINECS/ELINCS 231-102-5

**Formula:** LiAlH₄

**Properties:** Wh. (pure) to lt. gray (Al impurity) powd.; odorless; sol. in diethyl ether,
tetrahydrofuran, dimethyl Cellosolve; sl. sol. in dioxane; reacts with alcohols; m.w. 37.94; dens. 0.92; m.p. dec. above 125 C without melting

Toxicology: ACGIH TLV/TWA 2 mg(Al)/m3; corrosive; reacts with moisture in the body to form a corrosive sol’n. (lithium hydroxide) which can cause severe irritation, tissue damage; ing. can cause severe burns, dizziness, nausea, vomiting, diarrhea; severe exposure can cause collapse, death; severe inh. exposure can cause pulmonary edema; can cause severe skin and eye irritation or tissue destruction (chemical burns); TSCA listed

Precaution: Flamm. solid; reacts violently with water, air, acids, alcohols, benzoyl peroxide, etc.; dec. when exposed to moist air or water; incompat. with CO2, BF3, ethyl acetate, tetrahydrofuran

Hazardous Decomp. Prods.: Dec. above 125 C to lithium hydride, aluminum metal, and hydrogen gas; fire can produce aluminum oxide

NFPA: Health 3, Flammability 2, Reactivity 2

Storage: Stable under cool, dry conditions

Uses: Reducing agent in pharmaceuticals

Regulatory: Canada DSL

Lithium citrate

CAS 919-16-4; EINECS/ELINCS 213-045-8

Synonyms: 2-Hydroxy-1,2,3-propanetricarboxylic acid trilithium salt; Trilithium citrate

Empirical: C6H5O7 • 3Li

Formula: Li3C6H5O7 • 4H2O

Properties: Wh. powd. or granules; sol. in water; sl. sol. in alcohol; m.w. 209.93; m.p. (dec.)

Toxicology: Mutagen; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Storage: Hygroscopic

Uses: Pharmaceuticals

Regulatory: BP, EP compliance

- http://www.norfoods.se/lundberg; AEP
- Colloids [http://www.aepcolloids.com]; Adept Sol'sns.; Agrisales Ltd

**Trade Names:** Locust Bean Gum Speckless Type D-200; Locust Bean Gum Type A-100; Locust Bean Gum Type A-250; Locust Bean
Chemical Component Cross-Reference

Gum Type A-270; Powdered Locust Bean Gum Type D-200
PROVigel® DPC 6; PROVigel® DPC 15;
PROVigel® EXC 30; Seagel; TIC Pretested®
Locust Bean Gum Clarified Powder
TIC Pretested® Locust Bean Gum USP
Powd.; TIC Pretested® Pre-Hydrated®
Locust Bean Gum Powd.

Locust bean gum; Locust gum. See Locust bean (Ceratonia siliqua) gum
Locust tree extract. See Carob (Ceratonia siliqua) extract
Logwood extract. See Logwood (Haematoxylon campechianum) extract
Logwood (Haematoxylon campechianum) extract
CAS 8005-33-2; EINECS/ELINCS 232-337-6
Synonyms: CI 75290; Haematoxylon campechianum; Haematoxylon campechianum extract; Logwood extract
Definition: Extract of the heartwood of Haematoxylon campechianum contg. active colorant substance hematein
Properties: Reddish brn. to blk. liq. or solid extract
Toxicology: May cause allergic reaction in hypersensitive persons
Uses: Colorant for nylon 6 and 6/6 and silk nonabsorbable sutures for general and ophthalmic surgery; mild astringent
Use Level: 1.0% max. (sutures)
Regulatory: FDA §74.1410, exempt from certification, permanently listed for use in medical devices; not listed as approved colorant for cosmetics under FDA 21CFR §73 and 74

Lovage (Levisticum officinale) oil
CAS 8016-31-7
FEMA 2651
Synonyms: Levisticum officinale; Levisticum officinale oil; Lovage oil; Lovage root oil; Smallage oil; Smellage oil
Definition: Volatile oil from steam distillation of fresh root of Levisticum officinale; contains d-α-terpineol, butyl dihydrophtalides, butyl tetrahydroptalides, coumarin, aldehydes, acetic acid, isovaleric acid
Properties: Yel.-green-brn. liq., strong odor and taste; sol. in fixed oils; sl. sol. in min. oil; insol. in glycerin, propylene glycol; dens. 1.034-1.057; ref. index 1.536-1.554 (20 C)
Toxicology: LD50 (oral, mouse) 3400 mg/kg; mod. toxic by ing.; skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.510; FEMA GRAS; Canada DSL
Manuf./Distrib.: Buckton Page Ltd
http://www.bucktonpage.com; Danisco
Seillans http://www.danisco.com; Eramex
Aromatics http://www.eralMex.de; F.D.
Copeland http://www.copelandoil.co.uk;
Fleurchem http://www.fleurchem.com
SAFC Specialties http://www.safcspecialties.com; Voigt

Lovage oil; Lovage root oil. See Lovage (Levisticum officinale) oil
Low-erucic acid rapeseed oil. See Rapeseed (Brassica campestris) oil
LTAC. See Laurtrimonium chloride
LTDP. See Dilauryl thiodipropionate
Lucerne. See Alfalfa (Medicago sativa)
Lucerne extract. See Alfalfa (Medicago sativa) extract
Lurk-in-the-Ditch. See Pennyroyal (Mentha pulegium) extract
Lutein. See Xanthophyll

2,6-Lutidine
CAS 108-48-5; EINECS/ELINCS 203-587-3
UN 1993; FEMA 3540
Synonyms: 2,6-Dimethylpyridine; α-α’ Dimethylpyridine; 2,6-Dimethylpyridine; α-α’-Lutidine; Pyridine, 2,6-dimethyl-
Empirical: C7H9N
Properties: Colorless to pale yel. liq., peppermint odor; sol. in water, alcohol, ether; m.w. 107.16; dens. 0.920; f.p. -6 C; b.p. 143-145 C; flash pt. 33 C; ref. index 1.4970
Toxicology: LD50 (oral, rat) 400 mg/kg, (skin, guinea pig) 2500 mg/kg; LCLo (inh., rat, 1 h) 7500 ppm; poison by ing.; mod. toxic by skin contact; mildly toxic by inh.; mutagenic data; TSCA listed
Precaution: DOT: Flamm. liq.
Hazardous Decomp. Prods.: Heated to decomp., emits toxic vapors of NOx
Storage: Hygroscopic
Uses: Synthetic flavor for pharmaceuticals; reagent for pharmaceutical mfg.
Regulatory: FEMA GRAS; Canada DSL
Manuf./Distrib.: Biddle Sawyer†
http://www.biddlesewyer.com; Fluka
http://www.sigma-aldrich.com; Koei Chem.

α-α´-Lutidine. See 2,6-Lutidine

Lycopene
CAS 502-65-8; EINECS/ELINCS 207-949-1

Synonyms: CI 75125; 2,6,10,14,19,23,27,31-octamethyltetraconta-2,6,8,10,12,14,16,18,20,22,24,26,30-tridecaene

Classification: Carotene

Definition: The red pigment of the tomato

Empirical: C40H56

Properties: Reddish pigment; water-insol.; sparingly sol. in ethanol; sol. in ether and acetone; freely sol. in chloroform and benzene; m.w. 536.88; m.p. 172-173 C

Toxicology: Very toxic by inh., ing., skin contact; severe eye irritant; risk of serious damage to eyes; target organs: liver, kidneys

Hazardous Decomp. Prods.: Emits toxic fumes under fire conditions

Storage: Store below 0 C

Uses: Phytochemical and nutraceutical; antioxidant micronutrient

Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Lycobeads® 5%; Lyc-O-Mato® 6%; Lyc-O-Mato® 7%; Lyc-O-Mato® 10%; Lyc-O-Mato® 15%

Trade Names Containing: LycoVit® Dispersion 10%; LycoVit® 10% DC; redivivo™ (lycopene) 10% FS; redivivo™ (lycopene) 5% TG/P; redivivo™ (lycopene) 10% WS

Lye. See Potassium hydroxide; Sodium hydroxide

Lyoglycogen. See Glycogen

Lys; Lysine (INCI). See L-Lysine

L-Lysine
CAS 56-87-1; EINECS/ELINCS 200-294-2

Synonyms: α,ε-Diaminocaproic acid; L-α,ε-Diaminocaproic acid; 2,6-Diaminohecanoic acid; Lysine (INCI)

Classification: Amino acid

Definition: Essential amino acid isolated from casein, fibrin, or blood; avail. commercially as the naturally occurring L(+)-enantiomer

Empirical: C6H12N2O2

Properties: Wh. need. or hexagonal plates; very sol. in water; very sl. sol. in alcohol; pract. insol. in ether; m.w. 146.19; dens. 1.12; m.p. 215 C (dec.)

Toxicology: Mutagen; TSCA listed

Uses: Pharmaceutical parenterals; nutrient supplement; biochemical and nutritional research; culture media; diagnostic aids; raw material for peptide drugs

Regulatory: FDA 21CFR §172.320; Japan approved; FDA approved for parenterals; Canada DSL

L-Lysine acetate

**CAS:** 57282-49-2

**Synonyms:** L-Lysine Acetate

**Classification:** Amino acid

**Empirical:** C₈H₁₈N₂O₄

**Formula:** C₆H₁₄N₂O₂•C₂H₄O₂

**Properties:** Wh. crystals or crystalline powd.; m.w. 206.24; sol. in water

**Storage:** Store @ R.T.

**Uses:** Amino acid source for use in IV applics.

**Regulatory:** USP, BP, EP compliance; FDA Inactive Ingredients Guide listed

**Manuf./Distrib.:** Sigma-Aldrich†

http://www.sigma-aldrich.com

**L-Lysine Acetate.** See Lysine acetate

**L-Lysine carbocysteinate.** See Lysine carboxymethyl cysteinate

**L-Lysine carboxymethyl cysteinate**

**CAS:** 79458-68-7; EINECS/ELINCS 279-164-2

**Synonyms:** Lysine carboxylycisteinate; DL-Lysine, compd. with S-(carboxymethyl)-L-cysteine (1:1)

**Definition:** Synthetic substance obtained via the reaction of cystine with monochloroacetic acid and subsequent salification with lysine

**Empirical:** C₆H₁₄N₂O₂ • C₅H₉NO₄S

**Properties:** Cl. pale yel. to brn. liq.; faint characteristic odor; very sol. in water; fat-insol.; sp. gr. 1.090-1.130; b.p. 90-110 C; pH (1% aq. sol'n.)

**Environmental:** Harmless

**Uses:** Biological additive

**Trade Names Containing:** Tiolisina Complex®

**DL-Lysine, compd. with S-(carboxymethyl)-L-cysteine (1:1).** See Lysine carboxymethyl cysteinate

**L-Lysine, compd. with 5-oxo-L-proline (1:1).** See Lysine PCA

**Lysine hydrochloride (INCI).** See L-Lysine hydrochloride

**L-Lysine hydrochloride**

**CAS:** 657-27-2; EINECS/ELINCS 211-519-9

**FEMA:** 3847; INS642

**Synonyms:** 2,6-Diaminoheptanoic acid hydrochloride; Lysine hydrochloride (INCI); Lysine monohydrochloride; L-Lysine monohydrochloride

**Classification:** Amine salt

**Empirical:** C₆H₁₄N₂O₂ • CIH

Magnesium alginate

Definition: The magnesium salt of alginic acid

Properties: Water-sol.

Uses: **Pharmaceutical antacids for treatment of esophageal reflux** (forms thick layer on surf. of stomach contents, providing mech. barrier)

Magnesium aluminometasilicate

CAS 12408-47-8; 12511-31-8

**Synonyms:** Simaldrate

**Classification:** Inorganic base

**Formula:** $\text{Al}_2\text{O}_3 \cdot \text{MgO} \cdot 2\text{SiO}_2 \cdot x\text{H}_2\text{O}$

**Properties:** Wh. powd.; odorless; tasteless; pract. insol. in water and ethanol; noncombustible

**Toxicology:** May cause respiratory irritation, cough, eye irritation; if ingested, reacts with gastric acid to give antacid buffering effect; ing. of lg. amts. may cause GI irritation, nausea, vomiting, constipation

**Precaution:** Incompat. with strong oxidizing agents; may absorb moisture; may cause coloring

**Storage:** Avoid high temp., high humidity

**Uses:** **Excipient for pharmaceuticals; antacid**

**Manuf./Distrib.:** Fuji Chem. Ind. USA†

**Trade Names:** Neusilin FH2; Neusilin S1; Neusilin UFL2; Neusilin US2

Magnesium aluminum silicate

CAS 1327-43-1; 12199-37-0; EINECS/ELINCS 215-478-8; 235-374-6

**Synonyms:** Aluminosilicic acid, magnesium salt; Aluminum magnesium silicate; Silicic acid, aluminum magnesium salt

**Definition:** Complex silicate refined from naturally occurring minerals (colerainite, leuchtenbergite, pyrope, saponite, sapphirine, sheridanite, zebedassite); blend of colloidal montmorillonite and saponite

**Empirical:** $\text{Al}_2\text{MgO}_8\text{Si}_2$

**Properties:** Fine powd. or sm. flakes, odorless, tasteless; swells in water or glycerin; insol. in water or alcohol; m.w. 262.45; visc. 100-2200 cps; pH 9-10 (5% susp.)

**Toxicology:** Not harmful at presently used levels; WHO recommends further studies because of kidney damage in dogs that ingested it; TSCA listed

**HMIS:** Health 1, Flammability 0, Reactivity 0

**Uses:** Absorbent, opacifier, visc. control agent, thixotrope, thickener, visc. modifier, emulsifier, suspending agent, binder, stabilizer, emulsion stabilizer for pharmaceuticals, toothpaste, dentals, orals, rectals, topicals, vaginals, medicated jellies, ointments; spreading agent for creams, lotions, ointments; disintegrant, binder for tablets; antacid

**Regulatory:** FDA approved for dentals, orals, rectals, topicals, vaginals; NF, BP, EP compliance; Canada DSL

**Manuf./Distrib.:** Am. Colloid†

**Trade Names:** DHT-4A; Neusilin FH2; Neusilin S1; Neusilin UFL2; Neusilin US2

Magnesium aluminum hydroxide/hydrotalcite

CAS 11097-59-9; 85585-93-9; EINECS/ELINCS 234-319-3; 287-796-5

**Synonyms:** Aluminum magnesium carbonate hydroxide; Aluminum magnesium hydroxide carbonate; [Carbonato(2-)] hexadecahydroxybis (aluminum) hexamagnesium; Magnesium aluminum hydroxide; Magnesium, carbonate hydroxy aluminum complexes; Magnesium [carbonato(2-)] hexadecahydroxybis (aluminum) hexa-

**Classification:** Inorg. carbonate

**Formula:** $\text{Mg}_6\text{Al}(\text{OH})_{16}\text{CO}_3 \cdot \text{H}_2\text{O}$

**Uses:** **Visc. control agent**

**Regulatory:** Canada DSL

**Trade Names:** DHT-4A

Formula: $\text{MgCl}_2$
Properties: Wh. to opaque gray gran. or flakes; odorless; sol. in water evolving heat; sol. in alcohol; m.w. 95.21; dens. 2.325; m.p. 708°C; b.p. 1412°C
Toxicology: LD50 (oral, rat) 2800 mg/kg, (IV, mouse) 14 mg/kg; LDLo (IP, rat) 225 mg/kg, (subcut., rat) 900 mg/kg; poison by IP and IV routes; mod. toxic by ing., subcut. routes; irritating to eyes, skin, respiratory system; target organs: nerves, kidneys; human mutagenic data; TSCA listed
Precaution: Causes steel to rust very rapidly in humid environments
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Cl-
HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Deliq., very hygroscopic; store under nitrogen
Chemical Component Cross-Reference

Uses: Electrolyte replenisher in pharmaceuticals, intramuscular injectables, intraocular injectables, ophthalmics

Regulatory: FDA 21 CFR §172.560, 177.1650, 184.1426, GRAS; USDA 9 CFR §318.7, 381.147, limitation ≤ 3% of 0.8 molar sol’n.; Japan approved; Canada DSL; FDA approved for intramuscular injectables, intraocular injectables, ophthalmics; BP, EP compliance

†=pharmaceutical grade

Magnesium chloride anhydrous. See Magnesium chloride

Magnesium chloride hexahydrate
CAS 7791-18-6; EINECS/ELINCS 232-094-6

Formula: MgCl₂ • 6H₂O

Properties: Colorless cryst.; very sol. in water; sol. in ethanol; m.w. 203.31; dens. 1.569; m.p. 118 C (dec.)

Toxicology: LD₅₀ (oral, rat) 8.1 g/kg, (IP, mouse) 775 mg/kg; LDLo (IV, rat) 176 mg/kg; poison by IV route; mod. toxic by IP route; mildly toxic by ing.; irritant; mutagen; target organs: nerves, kidneys

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Cl⁻

HMIS: Health 1, Flammability 0, Reactivity 0

Storage: Deliq.; hygroscopic; keep well closed; store @ R.T.

Uses: Flavor, adjuvant, nutrient supplement in pharmaceuticals

Regulatory: BP, EP compliance; FDA 21 CFR §184.1426, GRAS

Magnesium diacetate. See Magnesium acetate

Magnesium digluconate. See Magnesium gluconate

Magnesium disalicylate. See Magnesium salicylate

Magnesium distearate. See Magnesium
Magnesium gluconate

CAS 3632-91-5 (anhyd.); 59625-89-7 (dihydrate); EINECS/ELINCS 222-848-2

INS580

Synonyms: D-Gluconic acid magnesium salt; D-Gluconic acid, magnesium salt (2:1); Magnesium digluconate; Magnesium D-gluconate

Classification: Inorganic salt

Definition: Magnesium salt of gluconic acid

Empirical: C_{12}H_{22}MgO_{14}

Formula: (C_6H_{11}O_7)_{2}Mg

Properties: Wh. powd. or fine need., odorless; almost tasteless; sol. in water; sl. sol. in alcohol; insol. in ether; m.w. 414.61 (anhyd.), 450.64 (dihydrate); flash pt. > 100 C

Toxicology: LD50 (IV, mouse) 321 mg/kg; poison by IV route; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Mineral source, dietary supplement for pharmaceuticals, vitamin tablets

Regulatory: Canada DSL

Trade Names: Gluconal® MG-P

†=pharmaceutical grade

Chemical Component Cross-Reference

Magnesium D-gluconate. See Magnesium gluconate

Magnesium hydrogen metasilicate. See Talc

Magnesium hydrogen phosphate dibasic

Magnesium hydroxide

CAS 1309-42-8; EINECS/ELINCS 215-170-3

INS528; E528

Synonyms: Brucite; Magnesia magma; Magnesium hydroxide; Milk of magnesia

Classification: Inorganic base

Empirical: H_{2}MgO_{2}

Formula: Mg(OH)_{2}

Properties: Wh. amorphous powd. or colorless hexagonal cryst., odorless; sol. in sol’n. of ammonium salts and dilute acids; almost insol. in water and alcohol; m.w. 58.33; dens. 2.36; m.p. 350 C (dec.)

Toxicology: LD50 (oral, rat) 8500 mg/kg, (IP, rat) 2780 mg/kg; mod. toxic by IP route; human systemic effects (general depressed activity, coma); toxic when inhaled; harmless to skin; TSCA listed

Precaution: Noncombustible; incompat. with maleic anhydride

HMIS: Health 2, Flammability 0, Reactivity 0

Uses: Alkali in dentifrices; emollient in skin creams; pharmaceutical orals; medicine (antacid, laxative); milk of magnesia

Regulatory: FDA 21CFR §155.170, 176.180, 176.210, 184.1428, GRAS; Europe listed; UK approved; FDA approved for orals; BP, EP compliance; Canada DSL

Manuf./Distrib.: AB R Lundberg http://www.norfoods.se/lundberg; AMRESCO; Aldrich; Alfa Chem; Ria Int’l.

Magnesium octadecanoate. See Magnesium stearate

Magnesium oxide

CAS 1309-48-4; EINECS/ELINCS 215-171-9
INS 530; E 530

Synonyms: Calcined magnesia; Calcined magnesite; Deadburned magnesite; Magnesia; Magnesia, calcined; Magnesia, caustic-calcined; Magnesia clinker; Magnesia, dead-burned; Magnesia, fused; Magnesia oxide fume; Magnesia, sintered; Magnesia usta; Magnesite, caustic-calcined; Magnesium oxide fume; Periclase; Seawater magnesia; White charcoal

Classification: Inorganic oxide

Definition: Inorganic salt of magnesium

Empirical: MgO

Properties: Wh. powd. or cryst., odorless; sol. in dil. acids, ammonium salt sol’ns.; very sl. sol. in water; insol. in alcohol; m.w. 40.31; dens. 3.65-3.75; bulking value 0.034 gal/lb; oil absorp. 70; m.p. 2800 C; b.p. 3600 C

Toxicology: ACGIH TLV/TWA (as magnesium) 10 mg/m$^3$ (fume); TEL (inh., human) 400 mg/m$^3$; toxic by inhalation of fume; can cause febrile reaction and leukocytosis in humans; irritating to eyes and respiratory system; equivocal tumorigen; questionable carcinogen; TSCA listed

Precaution: Noncombustible; violent reaction or ignition with interhalogens; incandescent reaction with phosphorus pentachloride

Storage: Moisture-sensitive

Alkaline buffer, mineral supplement in pharmaceuticals, orals; antacid, mild laxative

Regulatory: FDA 21CFR §155.170, 163.110, 163.111, 163.112, 175.300, 176.170, 177.1460, 177.1680, 177.2260, 177.2400, 177.2600, 178.1010, 178.3297, 184.1431, GRAS; Canada DSL; Japan restricted; Europe listed; FDA approved for orals; BP, EP compliance

Magnesium phosphate secondary. See Magnesium phosphate dibasic

**Magnesium salicylate**

CAS 18917-89-0; EINECS/ELINCS 242-669-3

Synonyms: 2-Hydroxybenzoic acid, magnesium salt; 2-Hydroxybenzoic acid monomagnesium salt; Magnesium disalicylate; Magnesium 2-hydroxybenzoate; Salicylic acid, magnesium salt

**Definition:** Magnesium salt of salicylic acid

**Empirical:** C14H10MgO6 • 4H2O

**Properties:** Wh. solid cryst. powd.; odorless; tasteless; m.w. 370.60 (2)

**Toxicology:** TSCA listed

**Precaution:** Avoid strong oxidizing agents, heat and sources of ignition; do not breathe dust; wear protective gloves, lab coat, and dust respirator

**HMIS:** Health 1, Flammability 1, Reactivity 0

**Storage:** Store in a tightly sealed container in a cool, well-ventilated place

**Uses:** Preservative for pharmaceuticals

**Regulatory:** FDA 21CFR §178.2010; Canada DSL

**Magnesium silicate**

CAS 1343-88-0; EINECS/ELINCS 215-681-1

INS553(i); E553a

**Synonyms:** Silicic acid, magnesium salt (1:1)

**Classification:** Inorganic salt of variable composition

**Definition:** Compd. of magnesium oxide and silicon dioxide with molar ratio approx. 2:5

**Empirical:** MgO • SiO2 • xH2O

**Properties:** Wh. fine effervescent powd., odorless, tasteless; insol. in water, alcohol; decomp. by acids; pH 7-10.8 (10% aq. susp.)

**Toxicology:** Toxic by inhalation; use in foods restricted to 2%

**Precaution:** Noncombustible

**Uses:** Glidant, anticaking agent in pharmaceuticals, orals; medicine (neutralizer to reduce stomach acidity)

**Regulatory:** FDA 21CFR §169.179, 169.182, 182.2437 (2% max.), GRAS; Europe listed; UK approved; FDA approved for orals; USP/NF compliance; Canada DSL

**Magnesium stearate**

CAS: 557-04-0; EINECS/ELINCS: 209-190-3

**Empirical:** \( \text{C}_{36}\text{H}_{70}\text{MgO}_4 \)

**Formula:** \([\text{CH}_3(\text{CH}_2)_16\text{COO}]_2\text{Mg}\)

**Properties:** Wh. soft oily powd., tasteless, odorless; insol. in water, alcohol, ether; dec. by dilute acids; m.w. 591.27; dens. 1.028; m.p. 88.5°C (pure)

**Toxicology:** ACGIH TLV/TWA 10 mg/m³; LD50 (oral, rat) > 10 g/kg (@ 25%); sl. toxic by ing.; ing. may cause vomiting; inh. of high concs. of dust may cause coughing and mild temporary irritation; TSCA listed

**Precaution:** Combustible dust; may form explosive dust-air mixts.; incompat. with acids (reacts vigorously)

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and toxic fumes

**Storage:** Store in cool area away from ignition sources

**Uses:** Colorant, tablet/capsule lubricant in pharmaceuticals, buccals, parenterals, orals, vaginals; anticaking agent; stabilizer

**Regulatory:** FDA 21CFR §172.863, 173.340; 175.105, 175.300, 175.320, 176.170, 176.200, 176.210, 177.1200, 177.2260, 178.3910, 179.45, 181.22, 181.29, 184.1440, GRAS; Canada DSL; must conform to FDA specs for salts of fats or fatty acids derived from edible oils; Europe listed; UK approved; FDA approved for buccals, parenterals, orals, vaginals; USP/NF, BP, EP, JP compliance

**Manuf./Distrib.:** Aceto†; http://www.aceto.com; Aldrich; http://www.sigma-aldrich.com; Alfa Aesar†; http://www.sigma-aldrich.com; Alfa Chem†

**Classification:** Sat. aliphatic carboxylic acid salt

**Definition:** Magnesium salt of stearic acid

**CAS:** 557-04-0; EINECS/ELINCS 209-190-3

**Empirical:** \( \text{C}_{36}\text{H}_{70}\text{MgO}_4 \)

**Formula:** \([\text{CH}_3(\text{CH}_2)_16\text{COO}]_2\text{Mg}\)

**Properties:** Wh. soft oily powd., tasteless, odorless; insol. in water, alcohol, ether; dec. by dilute acids; m.w. 591.27; dens. 1.028; m.p. 88.5°C (pure)

**Toxicology:** ACGIH TLV/TWA 10 mg/m³; LD50 (oral, rat) > 10 g/kg (@ 25%); sl. toxic by ing.; ing. may cause vomiting; inh. of high concs. of dust may cause coughing and mild temporary irritation; TSCA listed

**Precaution:** Combustible dust; may form explosive dust-air mixts.; incompat. with acids (reacts vigorously)

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and toxic fumes

**Storage:** Store in cool area away from ignition sources

**Uses:** Colorant, tablet/capsule lubricant in pharmaceuticals, buccals, parenterals, orals, vaginals; anticaking agent; stabilizer

**Regulatory:** FDA 21CFR §172.863, 173.340; 175.105, 175.300, 175.320, 176.170, 176.200, 176.210, 177.1200, 177.2260, 178.3910, 179.45, 181.22, 181.29, 184.1440, GRAS; Canada DSL; must conform to FDA specs for salts of fats or fatty acids derived from edible oils; Europe listed; UK approved; FDA approved for buccals, parenterals, orals, vaginals; USP/NF, BP, EP, JP compliance

Magnesium sulfate (1:1). See Magnesium sulfate anhydrous

Magnesium sulfate anhydrous
CAS 7487-88-9; EINECS/ELINCS 231-298-2
INS518
Synonyms: Epsom salts; Magnesium sulfate (1:1); Magnesium sulphate; Sulfuric acid magnesium salt (1:1)
Classification: Inorganic salt
Empirical: O$_4$S • Mg
Formula: MgSO$_4$
Properties: Colorless crystals, odorless, saline bitter taste; sol. in water; slowly sol. in glycerin; sl. sol. in alcohol; m.w. 120.37; dens. 2.65; dec. at 1124 C
Toxicology: LDLo (oral, mouse) 5 g/kg, (IV, mouse) 48 mg/kg; LD50 (subcut., rat) 1200 mg/kg; poison by IV route; mod. toxic by ing., IP, subcut. routes; human systemic effects; potential adverse reactions incl. drowsiness, depressed reflexes, paralysis, low blood pressure, circulatory collapse; experimental teratogen; mutagenic data; TSCA listed

**Precaution:** Noncombustible; potentially explosive when heated with ethoxyethynyl alcohols

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of SOX
HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Hygroscopic
Uses: Pharmaceutical orals; medicine (laxative, local painkiller, antidote)

**Regulatory:** FDA 21CFR §184.1443, GRAS; Japan approved; Europe listed; UK approved; FDA approved for orals; BP, EP compliance; Canada DSL
Manuf./Distrib.: Adheswara Chems. Pvt. MgSO$_4$
**Magnesium sulfate heptahydrate**

CAS 10034-99-8; EINECS/ELINCS 231-298-8

**Synonyms:** Bitter salts; Epsom salts; Sulfuric acid, magnesium salt (1:1) heptahydrate

**Empirical:** MgO₄S • 7H₂O

**Formula:** MgSO₄ • 7H₂O

**Properties:** Efflorescent cryst. or powd., bitter saline cooling taste; sol. 71 g/100 ml in water (20 C); sl. sol. in alcohol; m.w. 246.48; dens. 1.670; pH 6-7; loses water of cryst. above 150 C

**Toxicology:** TDL0 (oral, man, 4 h intermittent) 183 mg/kg; mod. toxic by several routes; parenteral use or use in presence of renal insufficiency, may lead to magnesium intoxication; target organs: nerves, GI system

**HMIS:** Health 1, Flammability 0, Reactivity 0

**Storage:** Keep well closed; store @ R.T.

**Uses:** Mfg. of Epsom salts; micronutrient in biosynthesis; anticonvulsant; cathartic; purgative

**Regulatory:** BP, EP compliance; FDA 21CFR §184.1443, GRAS; Europe listed; UK approved; Canada DSL

MALA. See Maleic anhydride
Malaleuca alternifolia leaf oil; Malaleuca alternifolia oil. See Tea tree (Malaleuca alternifolia) oil

Maleated soybean oil
CAS 68648-66-8; EINECS/ELINCS 272-000-0
Synonyms: Oils, soybean, maleated; Soybean oil, maleated
Definition: Modified soybean oil where some of the unsaturation is converted to a cyclic dicarboxylic acid
Properties: Amber-yel. visc. oily liq., mild char. odor; sol. in castor oil, IPM, dioctyl maleate, lauramide DEA (1:1), cocamide DEA (2:1); insol. in water, glycerin, propylene glycol, 90% ethanol; sapon. no. 230-250; ref. index 1.4750-1.4850
Toxicology: LD50 (oral, rat) > 5 g/kg; nonirritating to eyes; mildly irritating to skin; TSCA listed
Uses: Emollient, softener, moisturizer for topical pharmaceuticals, water-resist. sunscreens, creams, lotions
Regulatory: Canada DSL
Trade Names Containing: Ceraphyl® GA-D

Maleic acid
CAS 110-16-7; EINECS/ELINCS 203-742-5
UN NA 2215 (DOT)
Synonyms: cis-Butenedioic acid; (Z)-Butenedioic acid; Ethylenedicarboxylic acid; cis-1,2-Ethylenedicarboxylic acid; Maleinic acid; Maleic acid; Toxilic acid
Classification: Cis unsaturated organic acid
Empirical: C4H4O4
Formula: HOOCCH:CHCOOH
Properties: Wh. cryst. powd., odorless; sol. in water, alcohol, acetone, glacial acetic acid; sl. sol. in ether; pract. insol. in benzene; insol. in chloroform; m.w. 116.07; dens. 1.590; m.p. 132-140 C; flash pt. 100 C; rearranges partially to fumaric acid when heated above m.p.; strong acid
Toxicology: LD50 (oral, rat) 708 mg/kg, †=pharmaceutical grade (dermal, rabbit) 1560 mg/kg; mod. toxic by ing. and skin contact; corrosive; skin and severe eye irritant; passes through intact skin; inh. can cause mild to severe irritation or tissue damage, sore throat, coughing, pulmonary edema; ing. of conc. sol’ns. can probably cause severe burns to lips/mouth/throat, vomiting, diarrhea, permanent tissue damage; TSCA listed
Precaution: DOT: Corrosive material; combustible when exposed to heat or flame
Hazardous Decomp. Prods.: CO, CO2; heated to decomps., emits acid smoke and irritating fumes; maleic anhydride may form in fire
Uses: Rancidity retardant, preservative in pharmaceuticals, intramuscular injectables, orals; pharmaceutical intermediate (antihistamines)
Regulatory: FDA 21CFR §175.105, 177.1200; FDA approved for intramuscular injectables, orals; BP, EP compliance; Canada DSL
Chemical Component Cross-Reference

Maleic acid, diethyl ester. See Diethyl maleate
Maleic acid, dioctyl ester. See Dioctyl maleate
Maleic anhydride
CAS 108-31-6; EINECS/ELINCS 203-571-6
UN 2215 (DOT)
Synonyms: cis-Butenedioic anhydride;
Dihydro-2,5-dioxofuran; 2,5-Dihydrofuran-2,5-dione; 2,5-Furandione; MA; MAA; MALA; Maleic anhydride; MAN; Toxilic anhydride
Classification: Aliphatic carboxylic acid anhydride
Empirical: \( \text{C}_4\text{H}_2\text{O}_3 \)
Properties: Colorless needles; irritating, acrid odor; sol. in water forming maleic acid; sol. in acetone, ethyl acetate, hydrocarbons, alcohol, dioxane, oxygenated solvs.; partly sol. in chloroform, benzene; m.w. 98.06; dens. 0.934 (20/4 C); m.p. 53 C; b.p. 200 C; flash pt. (CC) 102 C
Toxicology: ACGIH TLV/TWA 0.25 ppm; LD50 (oral, rat) 481 mg/kg, (IP, rat) 97 mg/kg, (skin, rabbit) 2620 mg/kg; poison by ing., IP routes; mod. toxic by skin contact; corrosive irritant to tissues, eyes, skin; can cause pulmonary edema; may cause asthmatic reaction in sensitized individuals; questionable carcinogen; experimental tumorigen; mutagenic data; TSCA listed
Precaution: DOT: Corrosive material;
combustible exposed to heat or flame; can react vigorously with oxidizing materials;
explosive as vapor exposed to heat or flame; violent reaction with bases; reacts with water
Hazardous Decomp. Prods.: Combustion prods.: CO, CO₂; heated to decomp., emits acrid smoke, irritating fumes
NFPA: Health 3, Flammability 1, Reactivity 1
Uses: Preservative for pharmaceuticals
Regulatory: SARA reportable; HAP; Canada DSL

Malonic methyl ester nitrile. See Methyl cyanoacetate

Malt extract
CAS 8002-48-0; EINECS/ELINCS 232-310-9
Synonyms: Maltine; Malt syrup
Definition: Dark syrup obtained by evaporating an aq. extract of partially germinated and dried barley seeds; derived from Hordeum vulgare; contains dextrin, maltose, a little glucose, and an amylolytic enzyme
Properties: Lt. brown, visc. liq.; sweet; sol. in cold water; dens. 1.35-1.43
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Nutritive sweetener, emulsifier, flavor, adjuvant, colorant, enzyme, humectant, stabilizer, thickener, texturizer in pharmaceuticals
Regulatory: FDA 21 CFR §73.85, 131.112, 131.170, 131.200, 131.203, 131.206, 131.124, 131.111, 133.124, 133.178, 133.179, 184.1445, GRAS; USDA 9 CFR §318.7,

Maltitol
CAS 585-88-6; EINECS/ELINCS 209-567-0
INS965; E965i
Synonyms: 4-O-α-D-Glucopyranosyl-D-glucitol; 4-O-β-D-Glucopyranosyl-D-glucitol; 4-O-α-D-Glucopyranosyl-D-sorbitol
Definition: Disaccharide polyol obtained by hydrogenation of maltose
Empirical: C12H24O11
Properties: Liq., cryst.; easily sol. in water; m.w. 344.32; m.p. 149-152 C; very stable at different pH conditions and temps.
Toxicology: LD50 (oral) > 24 g/kg; low acute toxicity; nonmutagenic; nonteratogenic
Uses: Nutritive sweetener in pharmaceuticals; crystallization inhibitor in pharmaceutical liq. dosage forms; hemolysis preventer in blood preservatives; base for medicated hard boiled candies and chewing gums; plasticizer in gelatin capsules; base for dental care prods.
Features: Noncariogenic
Regulatory: BP, EP compliance

Maltobiose. See Maltose
Maltodextrin
CAS 9050-36-6; EINECS/ELINCS 232-940-4
Classification: Saccharide
Definition: Saccharide material obtained by hydrolysis of starch; consists of D-glucose units with a DE < 20
Empirical: (C6H10O5)n
Properties: Wh. powd. or sol'n.; sol. in water; pract. insol. in anhyd. alcohol; m.p. 240 C (dec.); pH 4-7 (20%)
Toxicology: TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Hygroscopic
Uses: Nutritive polymer, carrier, bulking agent, absorbent for pharmaceuticals; tablet/capsule diluent, coating agent, binder, visc. builder; coating and spray drying aid
Features: Nonsweet
Regulatory: BP, EP compliance; FDA 21CFR §184.144, GRAS; Canada DSL

D-Maltose. See Maltose

Maltotriose
CAS 1109-28-0; EINECS/ELINCS 214-174-2
Synonyms: Amylotriose; O-α-D-Glucopyranosyl-(1→4)-O-α-D-glucopyranosyl-(1→4)-D-glucose
Empirical: C_{18}H_{32}O_{16}
Properties: M.w. 504.45; m.p. 132-135°C
Storage: Keep under argon
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium; Supelco http://www.sigma-aldrich.com
Trade Names Containing: Emdex®

Malt sugar; α-Malt sugar.  See Maltose
Malt syrup.  See Malt extract

Maltotriose
CAS 65416-14-0; EINECS/ELINCS 265-755-2
FEMA 3462
Synonyms: Maltol isobutyrate
Empirical: C_{10}H_{12}O_{4}
Properties: Pale yel. liq.; m.w. 196.20; dens. 1.149; b.p. 176.00°C @ 7.00 mm; flash pt. > 230°F
Toxicology: TSCA listed
Uses: Synthetic flavor for pharmaceuticals
Features: Sweet, strawberry-like flavor
Regulatory: FEMA GRAS; Canada DSL

MAN. See Maleic anhydride

Mandarin oil; Mandarin oil, coldpressed; Mandarin oil, expressed.  See Mandarin orange oil

Mandarin orange oil
CAS 8008-31-9; 84696-35-5
FEMA 2657
Synonyms: Citrus nobilis; Citrus nobilis oil; Citrus reticulata; Mandarin oil; Mandarin oil, coldpressed; Mandarin oil, expressed; Orange mandarin oil; Tangerine oil
Definition: Oil expressed from the peel of the mandarin Orange, Citrus reticulata or C. nobilis
Properties: Clear orange to brn.-orange liq.,
Manganese chloride (INCI); Manganese (II) chloride (1:2). See Manganese chloride (ous), anhydrous

Manganese chloride (ous), anhydrous
CAS 7773-01-5; EINECS/ELINCS 231-869-6
Synonyms: Manganese chloride (INCI); Manganese (II) chloride (1:2); Manganese dichloride; Manganese chloride
Classification: Inorganic salt
Empirical: Cl$_2$Mn
Formula: MnCl$_2$
Properties: Rose-colored cryst.; very sol. in water; sol. in alcohol; insol. in ether; m.w. 125.84; dens. 2.98; m.p. 650 C; b.p. 1190 C; noncombustible
Toxicology: ACGIH TLV/TWA 5 mg(Mn)/m$^3$; LD50 (oral, mouse) 1715 mg/kg, (IM, rat) 700 mg/kg, (IP, mouse) 121 mg/kg, (IV, dog) 202 mg/kg; poison by IP, subcut., IM, IV, parenteral routes; mod. toxic by ing.;
Chemical Component Cross-Reference

†=pharmaceutical grade

experimental carcinogen, teratogen, reproductive effects; mutagenic data; TSCA listed

Precaution: Explosive reaction when heated with zinc foil; reacts violently with potassium or sodium

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Cl-

Storage: Deliq.

Uses: Pharmaceuticals; dietary supplement

Regulatory: Canada DSL

Manganese chloride (ous), tetrahydrate
CAS 13446-34-9; EINECS/ELINCS 231-869-6

Synonyms: Manganese chloride tetrahydrate; Manganese (II) chloride tetrahydrate; Manganese dichloride tetrahydrate; Manganous chloride tetrahydrate

Empirical: Cl₂Mn • 4H₂O

Formula: MnCl₂ • 4H₂O

Properties: Pink translucent cryst.; sol. in 0.7 part water, sol. in alcohol; insol. in ether; m.w. 197.91; dens. 2.01; m.p. 58 C; pH 5.5 (0.2 molar aq.); noncombustible

Toxicology: LD₅₀ (oral, rat) 1484 mg/kg, (IP, rat) 138 mg/kg; toxic; poison by IP and parenteral routes; mod. toxic by ing.; irritant; mutagen; experimental reproductive effector; target organs: nerves, lungs; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Cl-

Storage: Hygroscopic; sl. deliq.; keep well closed; refrigerate

Uses: Nutrient, dietary supplement in pharmaceuticals

Regulatory: FDA 21CFR §184.1446, 582.80, GRAS

Manganese chloride tetrahydrate. Manganese (II) chloride tetrahydrate. See Manganese chloride (ous), tetrahydrate

Manganous citrate. See Manganese citrate (ous)

Manganese citrate (ous)
CAS 10024-66-5

Synonyms: Manganese citrate; Manganous citrate

Empirical: C₁₂H₁₀Mn₃O₁₄

Formula: Mn₃(C₆H₅O₇)₂

Properties: Pale orange or pinkish wh. powd.; sol. in water in presence of sodium citrate; m.w. 543.02

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Nutrient, dietary supplement in pharmaceuticals

Regulatory: FDA 21CFR §184.1449, GRAS

Manuf./Distrib.: Degussa AG/Health & Nutrition; Lohmann http://www.lohmann-chemikalien.de

Manganese dichloride. See Manganese chloride (ous), anhydrous

Manganese dichloride tetrahydrate. See Manganese chloride (ous), tetrahydrate

Manganese gluconate
CAS 6485-39-8; EINECS/ELINCS 229-350-4

Synonyms: Bis (D-gluconato-O₁,O₂) manganese; Gluconic acid, manganese salt (2:1); Manganese (II) gluconate

Definition: Manganese salt of gluconic acid

Empirical: C₁₂H₂₂MnO₁₄ • 2H₂O

Formula: Mn(C₆H₁₁O₇)₂ • 2H₂O

Properties: Lt. pinkish powd. or gran.; sol. in water; insol. in alcohol and benzene; m.w. 481.27 (dihydrate)

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of manganese

†=pharmaceutical grade

Regulatory: FDA 21CFR §184.1446, 582.80, GRAS

Manganese chloride tetrahydrate. Manganese (II) chloride tetrahydrate. See Manganese chloride (ous), tetrahydrate

Manganous citrate. See Manganese citrate (ous)

Manganese citrate (ous)
CAS 10024-66-5

Synonyms: Manganese citrate; Manganous citrate

Empirical: C₁₂H₁₀Mn₃O₁₄

Formula: Mn₃(C₆H₅O₇)₂

Properties: Pale orange or pinkish wh. powd.; sol. in water in presence of sodium citrate; m.w. 543.02

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Nutrient, dietary supplement in pharmaceuticals

Regulatory: FDA 21CFR §184.1449, GRAS

Manuf./Distrib.: Degussa AG/Health & Nutrition; Lohmann http://www.lohmann-chemikalien.de

Manganese dichloride. See Manganese chloride (ous), anhydrous

Manganese dichloride tetrahydrate. See Manganese chloride (ous), tetrahydrate

Manganese gluconate
CAS 6485-39-8; EINECS/ELINCS 229-350-4

Synonyms: Bis (D-gluconato-O₁,O₂) manganese; Gluconic acid, manganese salt (2:1); Manganese (II) gluconate

Definition: Manganese salt of gluconic acid

Empirical: C₁₂H₂₂MnO₁₄ • 2H₂O

Formula: Mn(C₆H₁₁O₇)₂ • 2H₂O

Properties: Lt. pinkish powd. or gran.; sol. in water; insol. in alcohol and benzene; m.w. 481.27 (dihydrate)

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of manganese
Chemical Component Cross-Reference

Uses: Mineral source for pharmaceuticals, vitamin tablets
Regulatory: FDA 21 CFR §184.1452, 582.80, GRAS; Canada DSL
Trade Names: Gluconal® MN-P

Manganese (II) gluconate. See Manganese gluconate

Manganese glycerophosphate
CAS 1320-46-3; EINECS/ELINCS 215-301-4
Synonyms: Manganese (II) glycerophosphate
Empirical: C₃H₇MnO₆P • xH₂O
Formula: CH₂OHCH₂OCH₂OP(O)O₂Mn
Properties: Wh. or pinkish powd., odorless, nearly tasteless; sol. in citric acid sol’n.; sl. sol. in water; insol. in alcohol; m.w. 224.91 (anhyd.)
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of manganese
HMIS: Health 1, Flammability 0, Reactivity 0
Uses: Dietary supplement, nutrient for pharmaceuticals
Regulatory: FDA 21 CFR §184.1452, 582.5455, GRAS; Canada DSL

†=pharmaceutical grade

Manganese lactate
CAS 16039-56-8
Synonyms: Manganese-L-2-hydroxy propionate
Formula: Mn(CH₃CHOHCOO)₂ • 2H₂O
Properties: Pink powd.; sol. 10 g/100 ml water; m.w. 233 (anhyd.)
Uses: Manganese source, nutrient supplement in pharmaceuticals
Trade Names: Puramex® MN

Manganese sulfate; Manganese (II) sulfate (1:1). See Manganese sulfate (ous)

Manganese sulfate (ous)
CAS 7785-87-7 (anhyd.); 10034-96-5 (monohydrate); EINECS/ELINCS 232-089-9
Synonyms: Manganese sulfate; Manganese (II) sulfate (1:1); Manganeseous sulfate; Sulfuric acid, manganese (2+) salt
Empirical: MnO₄S (anhyd.); MnO₄S • H₂O (monohydrate)
Formula: MnSO₄ (anhyd.), MnSO₄ • H₂O (monohydrate)
Properties: Anhyd.: Pink gran. powd., odorless; very sol. in water; insol. in alcohol; m.w. 151.00; dens. 3.25; m.p. 700 C; b.p. 850 C (dec.); Monohydrate: Pale red, sl. efflorescent cryst.; sol. in 1 part water; insol. in alcohol; m.w. 169.00
Toxicology: ACGIH TLV/TWA 5 mg(Mn)/m³; LD50 (IP, mouse) 332 mg/kg; poison by IP
Mango seed oil. See Mango (Mangifera indica) seed oil

Manna sugar. See D-Mannitol

Mannide monooleate
CAS 9049-98-3; 25339-93-9

Synonyms: (Z)-Dianhydro-D-mannitol, mono-9-octadecenoate; Dianhydromannitol monooleate; D-Dianhydromannitol monooleate; Mannide oleate; D-Mannitol, dihydro-, mono-9-octadecenoate, (Z)-; D-Mannitol, dihydro-, monooleate

Empirical: C₂₄H₄₂O₅

Properties: Yel. to brn. liq.; sol. in DMSO, 95% ethanol, acetone; sol. 50-100 mg/ml in water; m.w. 410.60; sp.gr. 1.05 (23 C); flash pt. > 100 C; ref. index 1.477 (23 C); Nonionic

Toxicology: May be harmful by inh., ing., or skin absorp.; may be irritating to eyes, skin, mucous membranes, upper respiratory tract; intradermal injection in guinea pigs produced severe inflammatory reaction, local tissue necrosis, lesions which healed leaving noticeable scars; can cause abscesses; very strong promoter of carcinogenesis in all strains of mice

Precaution: Probably combustible; incompat. with strong oxidizers; readily hydrolyzed in presence of UV lt./air, when refluxed with sodium hydroxide; readily hydrolyzed by pancreatic lipase; auto-oxidizes on storage in presence of light/air

Hazardous Decomp. Prods.: Toxic fumes of CO, CO₂

Storage: Store under ambient temps. in tightly closed container under inert atmosphere; protect from light

Uses: Surfactant for prep. of w/o injectable pharmaceuticals; emulsifier; active for cattle medicine

Mannide oleate. See Mannide monooleate

Mannite; Mannitol (INCI). See D-Mannitol

D-Mannitol
CAS 69-65-8; EINECS/ELINCS 200-711-8

Synonyms: Cordycepic acid; 1,2,3,4,5,6-Hexanehexol; Manna sugar; Mannite; Mannitol (INCI); Mannose sugar

Classification: Hexahydric alcohol
Empirical: C₆H₁₄O₆
Formula: HOCH₂(CHOH)₄CH₂C
Properties: Wh. orthorhombic need. or powd.,
Chemical Component Cross-Reference
 odorless, sweetish taste; sol. 1 g/5.5 ml water, 1 g/18 ml glycerol; 1 g/83 ml alcohol; sol. in pyridine, aniline, aq. sol. of alkalis; sl. sol. in oxygenated solvs.; insol. in veg. and min. oils; m.w. 182.18; dens. 1.52 (20 C); m.p. 165-167 C; b.p. 290-295 C (3.5 mm)

Toxicology: LD50 (oral, rat) 13,500 mg/kg, (IV, rat) 9690 mg/kg, (IP, mouse) 14 g/kg, (IV, mouse) 7470 mg/kg; mildly toxic by ing., IP, IV routes; human systemic effects by IV route (raised blood pressure, bladder tube changes, nausea, vomiting); excess consumption may have a laxative effect; may cause diarrhea and flatulence; human mutagenic data; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes

Storage: Hygroscopic; store @ R.T.

Uses: Anticaking agent, humectant, sweetener, toxicity agent, stabilizer, thickener, processing aid for pharmaceuticals, parenterals, injectables (IM, IP, intrapleural), intravenous, ophthalmics, orals; bulking agent for freeze-drying; tablet inert base/diluent; parenteral nutrition

Regulatory: FDA 21CFR §100.130, 101.9, 101.80, 175.300, 175.320, 177.1390, 177.2420, 180.25; GRAS; Japan approved; Europe listed; UK approved; Canada DSL; FDA approved for parenterals, intramuscular injectables, intraperitoneal injectables, intrathecal injectables, intravenous, ophthalmics, orals; USP/NF, BP, EP compliance

D-Mannitol, dianhydro-, mono-9-octadecenoate, (Z)-; D-Mannitol, dianhydro-, monoooleate. See Mannide monooleate
L-Mannomethyllose. See Rhamnose

D-Mannose
CAS 530-26-7; 3458-28-4
Definition: A carbohydrate occurring in some plant polysaccharides
Empirical: C6H12O6
Properties: Cryst.; sweet taste; bitter aftertaste; m.w. 180.16; m.p. 132 C (dec.)
Uses: Pharmaceutical orals; biochemical research
Regulatory: FDA approved for orals

Mannose sugar. See D-Mannitol
MAP. See Ammonium phosphate
Marble. See Calcium carbonate

Marigold extract; Marigold flower extract. See Calendula officinalis extract
Marigold, pot. See Calendula officinalis
Marjoram hortensis oleoresin; Marjoram oleoresin. See Oleoresin marjoram

†=pharmaceutical grade

Marrubium vulgare; Marrubium vulgare extract. See Horehound (Marrubium vulgare) extract
Marshmallow. See Althea (Althea officinalis) root
Marshmallow root extract. See Althea officinalis extract
Mascagnite. See Ammonium sulfate
Matricaria chamomilla extract. See Matricaria (Chamomilla recutita) extract
Matricaria (Chamomilla recutita) extract
CAS 84082-60-0; EINECS/ELINCS 282-006-5
Synonyms: Camomile extract; Chamomile extract, German; Chamomile extract Hungarian; Chamomilla recutita; Chamomilla recutita extract; Matricaria chamomilla extract; Matricaria extract; Wild chamomile extract

Definition: Extract of flowerheads of the matricaria, Chamomilla recutita
Regulatory: BP, EP compliance; FDA 21CFR §182.20, GRAS
Trade Names Containing: Cremogen® Camomile Forte 728790; Crodarom Chamomile O

Matricaria extract. See Matricaria (Chamomilla recutita) extract

Matting acid. See Sulfuric acid
Maw oil. See Poppyseed oil

Maxatase. See Protease
Mayalan camphor. See DL-Borneol
MBK. See 2-Hexanone
MBY. See Methyl butynol
MC. See Methylcellulose
6-MC. See 6-Methylcoumarin
MCB. See Chlorobenzene
MCC. See Microcrystalline cellulose
MCF. See 1,1,1-Trichloroethane
MCP. See Methyl cyclopentenolone
MCP/A. See Calcium phosphate monobasic anhydrous
MDB. See 1,2-Methylenedioxybenzene
MDC. See Methylene chloride
MDG. See Mono- and diglycerides of fatty acids

MDMH. See MDM hydantoin

MDM hydantoin
CAS 116-25-6; EINECS/ELINCS 204-132-1
Synonyms: 1-(Hydroxymethyl)-5,5-dimethyl hydantoin; 1-(Hydroxymethyl)-5,5-dimethyl-2,4-imidazolidinedione; MDMH; Monomethylol dimethyl hydantoin
Chemical Component Cross-Reference

Classification: Organic compd.
Empirical: C₆H₁₀N₂O₃
Properties: Wh. to off-wh. cryst. powd.; sol. in water; m.w. 158.16
Toxicology: TSCA listed
NFPA: Health 1, Flammability 0, Reactivity 0
Uses: Used in the manufacture of anticonvulsant drugs such as phenytoin, ethotoin, and methyphenytoin
Features: Stable under ordinary conditions; moisture sensitive
Regulatory: USA not restricted; Japan not approved; Canada DSL
Trade Names Containing: Dantogard® Plus Liq.

MDS. See Methyl disulfide
2-ME. See 2-Mercaptoethanol; Methoxyethanol
MEA. See Ethanolamine

Meadowfoam amidopropyldimethyl betaine
CAS 412328-58-6
Classification: High molecular weight betaine
Uses: Conditioner
Trade Names Containing: Fancor® Uni-enbase

Meadowfoam (Limnanthes alba) seed oil
CAS 153065-40-8
Synonyms: Limnanthes alba; Meadowfoam seed oil
Definition: Oil extracted from the seeds of the meadowfoam plant, Limnanthes alba
Uses: Emollient, conditioner, color enhancer, gloss aid, bodying agent, moisturizer, lubricant, superfatting agent for pharmaceuticals
Manuf./Distrib.: Anglia Oils† http://www.angliaoils.co.uk; Charkit http://www.charkit.com
Trade Names Containing: Fancol™ VB

Meadowfoam seed oil. See Meadowfoam (Limnanthes alba) seed oil
Meadowsweet extract. See Meadowsweet (Spiraea ulmaria) extract

Meadowsweet (Spiraea ulmaria) extract
CAS 84775-57-5; EINECS/ELINCS 283-886-3
Synonyms: Drupwort extract; Filipendula ulmaria extract; Meadowsweet extract; Queen of the meadow extract; Spiraea extract; Spiraea ulmaria; Spiraea ulmaria extract
Definition: Extract of Spiraea ulmaria

†=pharmaceutical grade

Uses: Antidote for infections, externally for wounds and eye inflammations
Trade Names: Actiphyte® of Queen-of-the-Meadow conc.

Medicago sativa; Medicago sativa extract.
See Alfalfa (Medicago sativa) extract
Medium aliphatic solvent naphtha; Medium aliphatic solvent naphtha (petroleum). See Naphtha, medium aliphatic
Medium chain triglycerides. See Caprylic/capric triglyceride

Medronate disodium
CAS 25681-89-4
Uses: Excipient for intravenous pharmaceuticals
Regulatory: BP, EP compliance; FDA approved for intravenous
Manuf./Distrib.: Vioryl http://www.vioryl.gr

Medronic acid
CAS 1984-15-2
Synonyms: Methylene diphosphonic acid
Properties: Freeze-dried wh. powd.
Uses: Imaging agent (radiotracer) to form an image of the skeleton
Regulatory: FDA approved for intravenous
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

MEG. See Ethylene glycol

Meglumine
CAS 6284-40-8; EINECS/ELINCS 228-506-9
Synonyms: 1-Deoxy-1-(methylamino)-D-glucitol; D-Glucitol, 1-deoxy-1-(methylamino); 1-Methylamino-1-deoxy-D-glucitol; Methylglucamine (INCI); N-Methylglucamine
Empirical: C₇H₁₇NO₅
Formula: CH₂NHCH₃(CHOH)₄CH₂OH
Properties: Wh. to faintly ylsh. cryst. or powd., odorless; sol. in water; sl. sol. in alcohol; pract. insol. in chloroform, ether; m.w. 195.21; m.p. 128-132 C
Uses: Pharmaceutical aid; base for preps. of salts of org. acids incl. many used as contrast media; pharmaceutical injectables, intravenous
Regulatory: FDA approved for injectables,
Chemical Component Cross-Reference

intravenous; USP/NF, BP, JP compliance; Canada DSL

MEHQ. See Hydroquinone monomethyl ether
MEK (INCI). See Methyl ethyl ketone
Mel. See Honey
MELA. See Ethanolamine
Melaleuca alternifolia. See Tea tree (Melaleuca alternifolia) oil
Melaleuca leucadendron; Melaleuca leucadendron oil. See Cajeput (Melaleuca leucadendron) oil
Melanin
CAS 8049-97-6; 77465-45-3; EINECS/ELINCS 232-473-6
Classification: Polymer
Definition: Pigment responsible for color of animal skin, hair, feathers, and fur; not listed as approved colorant for cosmetics under FDA 21CFR § 73 and 74
Properties: Brownish-blk.
Uses: Pharmaceutical raw material; chelating agent; free radical scavenger; UV light absorber; biological additive
Regulatory: Use prohibited in U.S.
Trade Names: Lipo Melanin 10%
Melilotin. See Dihydrocoumarin
Melissa officinalis; Melissa officinalis extract.
See Balm mint (Melissa officinalis) extract
Melissa officinalis oil; Melissa oil. See Balm mint (Melissa officinalis) oil
Melissyl alcohol. See Myricyl alcohol
Melomor; Melonal; Melonyl. See 2,6-Dimethyl-5-heptenal
Menhaden acid, hydrogenated. See Hydrogenated menhaden acid
Menhaden oil
CAS 8002-50-4; EINECS/ELINCS 232-311-4
Synonyms: Brevoortia; Brevoortia tyrannus oil; Mossbunker oil; Pogy oil
Definition: Oil obtained from the small North Atlantic fish, Brevoortia tyrannus
Properties: Ylsh.-brown or reddish-brown oil, char. fishy odor and taste; sol. in ether, benzene, petrol. ether, naphtha, kerosene, CS₂; dens. 0.925-0.933; m.p. 38.5-47.2 C; iodine no. 115-160; sapon. no. 191-200; ref. index 1.480 (20 C)
Toxicology: No known toxicity; TSCA listed
Precaution: Combustible
Uses: Nutritional supplement in pharmaceuticals, therapeutic uses
Regulatory: FDA 21CFR §175.300, 176.200, 176.210, 177.2800, 184.1472; Canada DSL
Menhaden oil, hydrogenated. See Hydrogenated menhaden oil

Mentha arvensis oil
CAS 68917-18-0
FEMA 3501
Synonyms: Cornmint oil, partially demetholized; Mentha arvensis oil, partially demetholized; Mint oil; Wild pennyroyal
Definition: Oil from Mentha arvensis
Properties: Colorless to yel. liq., minty odor; sol. in fixed oils, min. oil, propylene glycol; insol. in water, glycerin; dens. 0.888-0.908; flash pt. 167 F; ref. index 1.458 (20 C)
Toxicology: Experimental reproductive effects
Precaution: Combustible liq.
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Flavor for pharmaceuticals
Regulatory: Europe listed; Canada DSL
Manuf./Distrib.: Acme-Hardesty http://www.acme-hardesty.com; Chemtex International
Mentha arvensis oil, partially demethanolized.

See Mentha arvensis oil

p-Mentha-1,8-dien-7-al. See Perillaldehyde
Menthadien-7-carbinyl acetate. See Perillyl acetate

(+)-1,8-p-Menthadiene. See d-Limonene
1,4-(8)-p-Menthadiene. See Terpinolene
1,4-p-Menthadiene. See γ-Terpipnine
1,8(9)-p-Menthadiene; dl-p-Mentha-1,8-diene. See d-Limonene

d-p-Mentha-1,8-diene. See d-Limonene
p-Mentha-1,3-diene. See α-Terpipnine
p-Mentha-1,4-diene. See γ-Terpipnine
p-Mentha-1,5-diene. See α-Phellandrene
p-Mentha-1,8-diene. See d-Limonene; dl-Limonene

(R)-p-Mentha-1,8-diene. See d-Limonene
(±)-1,8-p-Menthadiene. See dl-Limonene
p-Mentha-1,8-dien-7-ol. See Perillyl alcohol
p-Mentha-6,8-dien-2-ol. See Carveol
p-Mentha-6,8-dien-2-ol, acetate. See Carvyl acetate
p-Mentha-6,8-dien-2-ol, propionate. See Carvyl propionate

1,6,8(9)-p-Menthadien-2-one; (-)-1,8-p-Menthadien-6-one. See L-Carvone
6,8(9)-p-Menthadien-2-one. See Carvone
d-p-Mentha-6,8,(9)-dien-2-one. See d-Carvone
L-p-Mentha-1(6),8-dien-2-one. See L-Carvone
1,8-p-Menthadien-7-yl acetate. See Perillyl acetate
1-p-Mentha-6(8,9)-dien-2-yl acetate. See Carvyl acetate
p-Mentha-1,8-dien-7-yl acetate. See Perillyl acetate
1-p-Mentha-6,8(9)-dien-2-yl propionate; l-p-Mentha-6,8-dien-2-yl propionate. See Carvyl propionate
p-Mentha-1-en-8-ol propionate. See Terpinyl propionate

Menthalactone

CAS 13341-72-5; EINECS/ELINCS 236-390-6
FEMA 3764

Synonyms: Dehydroxymenthofuro lactone; 3,6-Dimethyl-5,6,7,7a-tetrahydro-2(4H)-benzofuranone; Mintlactone; Tetrahydrodimethyl benzofuran-2-one; 5,6,7,7a-Tetrahydro-3,6-trimethyl-2(4H)-benzofuranone

Classification: aliphatic ketone

Empirical: C10H14O2

Properties: Colorless liq.; sol. in alcohol; insol. in water; m.w. 166.22; dens. 1.058; b.p. 87-89 C (25 mm); flash pt. 176 F

Uses: Flavor for pharmaceuticals; used in antiseptics

Features: Sweet creamy coumarin coconut powdery tobacco spearmint odor; creamy, coconut, sweet, vanilla and coumarin taste

Regulatory: FEMA GRAS; Canada DSL

Manuf./Distrib.: SAFC Specialties

http://www.safcspecialties.com

p-Menthane, 1,4-epoxy-. See 1,4-Cineole

p-Menthan-3-one. See 1,4-Cineole

3-p-Menthanol; p-Menthan-3-ol. See Menthol (1R,4S)-(−)-p-Menthan-3-one; L-Menthan-3-one; l-p-Menthan-3-one; p-Menthan-3-one. See l-Menthone

dl-p-Menthan-3-yl acetate. See dl-Menthyl acetate

p-Menthan-3-yl isovalerate. See Menthyl isovalerate

L-p-Menthan-3-yl lactate. See Menthyl lactate

Mentha piperita. See Peppermint (Mentha piperita) leaves; Peppermint (Mentha piperita) oil

Mentha piperita leaf; Mentha piperita leaves. See Peppermint (Mentha piperita) leaves

Mentha piperita oil. See Peppermint (Mentha piperita) oil

Mentha pulegium. See Pennyroyal (Mentha pulegium) extract; Pennyroyal (Mentha pulegium) oil

Mentha pulegium oil. See Pennyroyal (Mentha pulegium) oil

Mentha spicata; Mentha spicata oil. See Spearmint (Mentha viridis) oil

p-Menthan-8-thiol-3-one

CAS 38462-22-5; EINECS/ELINCS 253-953-1
FEMA 3177
Chemical Component Cross-Reference

Synonyms: 8-Mercapto-p-menthane-3-one; 2-(1-Mercapto-1-methylethyl)-5-methylocyclohexanone; Thiomenthone
Empirical: C₁₀H₁₈OS
Properties: Yel. liq.; pungent, green grassy, fruity ester-like, blackcurrant odor; m.w. 186.32; dens. 1.00; vapor dens. 6.4; b.p. 56 C (0.1 mm); flash pt. 227 F; ref. index 1.493-1.497
Toxicology: Skin, eye irritant; harmful by ing.; TSCA listed
Environmental: Keep run-off water out of sewers, water sources
Precaution: Wear safety glasses, goggles and rubber gloves, apron; incomapt. with strong oxidizers, acids, alkalies, reducers
Hazardous Decomp. Prods.: CO, CO₂, acrid fumes
Storage: Keep in original, tightly closed container; keep away from heat, sparks, open flame
Uses: Synthetic flavor for pharmaceuticals
Features: Berry-like flavor
Regulatory: FEMA GRAS; Australia AICS; Canada DSL; Japan MFI
Manuf./Distrib.: Degussa AG/Health & Nutrition

Mentha viridis; Mentha viridis oil. See Spearmint (Mentha viridis) oil
1,8-p-Menthndien-7-ol. See Perillaldehyde
p-Menth-1,4(8)-diene. See Terpinolene
p-Menth-1-en-8-ol. See α-Terpineol
1-p-Menth-4-ol. See 4-Carvomenthenol
1-p-Menth-8-ol. See α-Terpineol

p-Menth-3-en-1-ol
CAS 586-82-3; EINECS/ELINCS 209-585-9
FEMA 3563

†=pharmaceutical grade

Synonyms: 4-Isopropyl-1-methyl-3-cyclohexen-1-ol; 1-Methyl-4-isopropyl-3-cyclohexen-1-ol; 1-Methyl-4-(1-methyl ethyl)-3-cyclohexen-1-ol; 1-Terpinenol; Terpinen-1-ol; 3-Terpinen-1-ol
Empirical: C₁₀H₁₈O
Properties: Colorless oily liq., dry woody somewhat musty odor; sol. in alcohols, oils; sl. sol. in water; m.w. 154.24; dens. 0.9210; b.p. 210 C; ref. index 1.478
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Augusus Oils Ltd 17916-91-5; EINECS/ELINCS 28839-13-6; 17916-91-5; EINECS/ELINCS 249-266-1
FEMA 3566
Synonyms: 9-Acetoxy-1-para-menthene; β-4-Dimethyl-3-cyclohexene-1-ethanol acetate; p-Menth-1-en-9-ol acetate; 1-p-Menth-9-yl acetate
Empirical: C₁₂H₂₀O₂
Properties: Colorless cl. liq.; sol. in alcohol; insolv. in water
**Chemical Component Cross-Reference**

*Definition:* 

*Classification:* Diterpene alcohol

*Empirical:* C₁₀H₂₀O

*Formula:* CH₃C₆H₉(C₃H₇)OH

*Properties:* Wh. cryst., cooling peppermint-like odor and taste; very sol. in alcohol, light petrol. solv., glacial acetic acid, min. oil, fixed/volatile oils; sl. sol. in water; m.w. 156.26; dens. 0.89;

†=pharmaceutical grade

**Menthol**

m.p. 42.5 C; b.p. 215 C; flash pt. 200 F; ref. index 1.461; tenacity 2 hrs. on blotter

**Toxicology:** LD₅₀ (oral, rat) 3180 mg/kg, (IM, rat) 10 g/kg; LD₅₀ (IP, mouse) 1800 mg/kg, (IV, cat) 37 mg/kg; poison by IV route; mod. toxic by ing., IP routes; severe eye irritant; irritating to mucous membranes on inh.; may cause human intolerance reaction; TSCA listed

**Precaution:** Combustible; incompat. with phenol, β-naphthol, others

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**HMIS:** Health 1, Flammability 0, Reactivity 0

**Uses:** Synthetic flavor, fragrance, cooling agent in pharmaceuticals, buccals, dentals, inhalants, orals, topicals, liniments, cough drops, in formulations for bronchitis and sinusitis, esp. for localized pain, veterinary medicated shampoos/ointments; fragrance, cooling agent in chest rubs

**Features:** Minty flavor

**Use Level:** < 3%

**Regulatory:** FDA 21CFR §172.515, 182.20, GRAS; 27CFR §21.65, 21.151; FEMA GRAS; Japan approved as flavoring (ENCS no. 3-233); FDA approved for buccals, dentals, inhalants, orals, topicals; USP/NF compliance; Australia; Canada DSL; Philippines PICCS

- FEMA 2667
- Colorless oily liq.
- peppermint/geranium odor; bitter taste; sol. in org. solvs.; sl. sol. in water; m.w. 154.25; dens. 0.893; m.p. -6 C; b.p. 207-210 C; flash pt. 72 C; ref. index 1.4502 (20 C)
- Most frequently occurring in nature of four optically active isomers of menthene; found in oils such as pennyroyal, peppermint, geranium
Chemical Component Cross-Reference

**Precaution:** Combustible liq.; incompat. with strong oxidizing agents, strong reducing agents

**Hazardous Decomp. Prods.:** Irritating and toxic fumes and gases

**Storage:** Store in cool, dry place; keep container closed when not in use

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Minty flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Menthone glycerin acetal**

**CAS:** 63187-91-7

**Synonyms:** 6-Isopropyl-9-methyl-1,4-dioxaspiro-[4,5]-decane-2-methanol; Menthone 1,2-glycerol ketal

**Empirical:** C_{13}H_{24}O_{3}

**Properties:** Colorless liq.; fruity, berry, minty, woody odor; misc. with alcohol, fixed oils, ether, propylene glycol; sl. sol. in water, glycerin; m.w. 198.31; sp.gr. 0.922; b.p. 228-229 C; flash pt. 92 C; ref. index 1.4450

**Toxicology:** LD50 (oral, rat) 7620 mg/kg, (skin, rabbit) > 5 g/kg; mildly toxic by ing.; may be harmful by ing., inh., skin absorp.; may cause irritation; primary skin irritant

**Precaution:** Combustible liq.; vapor may flash back; incompat. with strong oxidizing agents, strong bases

**Hazardous Decomp. Prods.:** CO, CO_{2}; heated to decomp., emits acrid smoke and irritating fumes; emits toxic fumes under fire conditions

**HMIS:** Health 1, Flammability 1, Reactivity 0

**Storage:** 6 mos. when stored in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Berry-like, minty flavor

**Regulatory:** FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

**Menthyl acetate racemic.** See dl-Menthyl acetate

**Menthyl o-aminobenzoate.** See Menthyl anthranilate

**Menthyl anthranilate**

**CAS:** 134-09-8; EINECS/ELINCS 205-129-8

**Synonyms:** Menthyl o-aminobenzoate; 5-Methyl-2(1-methylthethyl) cyclohexanol-2-aminobenzoate

**Definition:** Ester of menthol and o-anthranilic acid

**Empirical:** C_{17}H_{25}NO_{2}

**Properties:** Colorless liq.; fruity, berry, minty, woody odor; misc. with alcohol, fixed oils, ether, propylene glycol; sl. sol. in water, glycerin; m.w. 275.38; sp.gr. 0.998; b.p. 228-229 C; flash pt. 84.5 C; ref. index 1.4450

**Toxicology:** Mildly irritating to skin and eyes on prolonged contact; TSCA listed

**Precaution:** Incompat. with oxidizing agents

**Storage:** Store away from strong oxidizing agents

**Uses:** UV-A absorber for sunscreens; OTC drug active

**Regulatory:** Canada DSL

**Manuf./Distrib.:** Aldrich [http://www.sigma-

p-Menth-3-yl ester-dl-acetic acid. See dl-Menthy acetate

Menthy isovalerate
CAS 89-47-4; 16409-46-4; EINECS/ELINCS 240-460-1
FEMA 2669
Synonyms: Isovaleric acid p-menth-3-yl ester; p-Menthan-3-yl isovalerate; Menthol valerate; p-Menth-3-yl isovalerate; Menthy isovalerianate; Menthyl valerate; (1α,2β,5α)-3-Methylbutanoic acid 5-methyl-2-(-1-methylthyl) cyclohexyl ester; 5-Methyl-2-(1-methylthyl) cyclohexyl 3-methylbutanoate; Validol
Empirical: C15H28O2
Formula: (CH3)2CHCH2COOC10H19
Properties: Colorless liq.; mild odor; cooling, faintly bitter taste; sol. in alcohol, chloroform, ether, and oils; insol. in water; m.w. 240.39; dens. 0.907 (15.4 C)
Toxicology: TSCA listed
Uses: Synthetic flavor for pharmaceuticals; medicine (sedative)
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Advanced Synthesis Tech.

Menthyl lactate
CAS 59259-38-0; EINECS/ELINCS 261-678-3
FEMA 3748
Synonyms: 2-Hydroxypropanoic acid, 5-methyl-2-(1-methylethyl) cyclohexyl ester; Lactic acid menthyl ester; L-p-Menthan-3-yl lactate; L-Menthyl lactate; 5-Methyl-2-(1-methylthyl) cyclohexyl α-hydroxypropanoate; (1R-(1α(R),2β,5α))5-Methyl-2-(1-methylthyl) cyclohexyl lactate
Definition: Ester of menthol and lactic acid
Empirical: C13H24O3
Formula: HSCH2CH2OH

Uses: Synthetic flavor, cooling agent for pharmaceuticals
Regulatory: FEMA GRAS; Canada DSL
Manuf./Distrib.: SAFC Specialties
http://www.safcspecialties.com

2-Mercaptoethanol
CAS 60-24-2; EINECS/ELINCS 200-464-6
UN 2966 (DOT)
Synonyms: BME; 1-Ethanol-2-thiol; Ethylene thioglycol; 2-Hydroxy-1-ethanethiol; Hydroxyethylmercaptan; 2-Hydroxyethylmercaptan; 2-ME; Mercaptoethanol; β-Mercaptoethanol; Monothioethyleneglycol; 2-Thioethanol; Thioethylene glycol; Thioglycol; Thiomonoglycol
Classification: Aliphatic organic compd.; alkyl mercapto alcohol
Empirical: C2H6OS
Formula: HSCH2CH2OH
Chemical Component Cross-Reference

Properties: Water-wh. mobile liq.; disagreeable odor; sol. in water, most org. solvs. incl. alcohol, benzene, ether; misc. with oxygenated and aromatic solvs.; m.w. 78.13; dens. 1.114; m.p. < -100 C; b.p. 157 C; flash pt. 74 C; ref. index 1.5006

Toxicology: LD50 (oral, rat) 244 mg/kg, (skin, rabbit) 150 mg/kg; poison by ing., skin contact, IP routes; mod. toxic by IV route; severely irritating to eyes, skin, nose; massive exposures can be fatal; ing. may irritate GI tract; human mutagenic data; TSCA listed

Precaution: Combustible; flamm. exposed to heat, flame, oxidizers; incomp. with oxidizers, reducing agents, strong acids, nitric acid, strong bases, alkali metals, moisture; vigorous or explosive reactions possible; can produce toxic fumes

Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of SOx

NFPA: Health 2, Flammability 2

Storage: Store in cool, dry, well-ventilated area, out of direct sunlight

Uses: Intermediate for pharmaceuticals

Regulatory: FDA 21CFR §177.1020, 177.1030; Canada DSL

Mercury ammonium chloride
CAS 10124-48-8; EINECS/ELINCS 233-335-8
UN 1630
Synonyms: Aminomercuric chloride; Ammoniated mercury; Mercuric ammonium chloride; Mercuric ammonium chloride, solid; Mercuric chloride, ammoniated; Mercury-amide-chloride; Mercury (II) amidochloride; Mercury amine chloride; Mercury ammoniated; White mercury precipitated; White precipitate
Empirical: ClH2HgN
Formula: Hg(NH2)Cl
Properties: Wh. tasteless, odorless powdered solid; insol. in cold water; m.w. 252.07; sp. gr. 5.1
Toxicology: Toxic
Precaution: Do not breathe dust
Storage: Keep container tightly closed and in a cool, well-ventilated area
Uses: Oral homeopathic drugs

Mercury oxide (ic), red
CAS 21908-53-2; EINECS/ELINCS 244-654-7
UN 1641 (DOT)
Synonyms: CI 77760; Mercuric oxide (INCI); Mercuric oxide, red; Mercury oxide; Mercury (II) oxide; Mercury oxide, red; Red precipitate
Classification: Inorganic oxide
Empirical: HgO
Properties: Orange-red powd.; sol. in dil. HCl and nitric acid; insol. in water, alcohol, ether; m.w. 216.59; dens. 11-11.29; m.p. 500 C (dec.)
Toxicology: DOT: Poisonous material; TLV 0.05 mg(Hg)/m³ of air; LD50 (oral, rat) 18 mg/kg, (skin, rat) 315 mg/kg, (IP, mouse) 4500 µg/kg; highly toxic; poison by ing., skin contact, IP, intramuscular routes; inh. may cause respiratory tract irritation, abdominal pain, vomiting, diarrhea, inflamm. of gums; chronic exposure results in anxiety, depression, insomnia, nervous system effects, kidney damage; experimental teratogen, reproductive effector; TSCA listed
Precaution: Strong oxidizer capable of igniting combustible materials; fire risk in contact with organic materials; flamm. by chem. reactions; explosive, violent, or incandescent reactions possible
Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of Hg
HMIS: Health 3, Flammability 1, Reactivity 1
Storage: Light-sensitive
Uses: Pharmaceuticals; antiseptic; OTC drug
Regulatory: SARA reportable

Synonyms: Mercuric oxide (INCI); Mercury (II) oxide; Mercury oxide, yellow; Yellow mercuric oxide; Yellow oxide of mercury; Yellow precipitate
Empirical: HgO
Properties: Lt. orange-yel. powd.; odorless; darkens on exposure to light; sol. in dil. HCl and nitric acid, potassium iodide sol'n., conc. sol'ns. of alkaline-earth chloride, magnesium
Mercury subchloride. See Dimercury dichloride

Meroxapol 105
CAS 9003-11-6 (generic)
Classification: Polyoxypropylene, polyoxyethylene block polymer
Formula:
\[ \text{HO(CHCH_3CH_2O)}_{x}(\text{CH_2CH_2O)}_{y}(\text{CH_2CHCH_3O)}_{z})\text{H} \], avg. \( x = 7, y = 22, z = 7 \)
Properties: Nonionic liq.
Toxicology: LD50 (oral, rat) 2300 mg/kg; mod. toxic by ing. and IP routes; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Emulsifier, wetting agent, binder, stabilizer, plasticizer, lubricant, solubilizer, dispersant, visc. control agent, defoamer for pharmaceuticals

Meroxapol 172
CAS 9003-11-6 (generic)
Classification: Polyoxypropylene, polyoxyethylene block polymer
Formula:
\[ \text{HO(CHCH_3CH_2O)}_{x}(\text{CH_2CH_2O)}_{y}(\text{CH_2CHCH_3O)}_{z})\text{H} \], avg. \( x = 12, y = 9, z = 12 \)
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, wetting agent, binder, stabilizer, plasticizer, lubricant, solubilizer, dispersant, visc. control agent, defoamer for pharmaceuticals

Meroxapol 174
CAS 9003-11-6 (generic)
Classification: Polyoxypropylene, polyoxyethylene block polymer
Formula:
\[ \text{HO(CHCH_3CH_2O)}_{x}(\text{CH_2CH_2O)}_{y}(\text{CH_2CHCH_3O)}_{z})\text{H} \], avg. \( x = 12, y = 23, z = 12 \)
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, wetting agent, binder, stabilizer, plasticizer, lubricant, solubilizer, dispersant, visc. control agent, defoamer for pharmaceuticals

Meroxapol 251
CAS 9003-11-6 (generic)
Classification: Polyoxypropylene, polyoxyethylene block polymer
Formula:
\[ \text{HO(CHCH_3CH_2O)}_{x}(\text{CH_2CH_2O)}_{y}(\text{CH_2CHCH_3O)}_{z})\text{H} \], avg. \( x = 18, y = 6, z = 18 \)
Properties: Nonionic liq.
Toxicology: TSCA listed
Uses: Emulsifier, wetting agent, binder, stabilizer, plasticizer, lubricant, solubilizer,
Chemical Component Cross-Reference

dispersant, visc. control agent, defoamer for pharmaceutical creams

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Meroxapol 252
CAS 9003-11-6 (generic)
Classification: Polyoxypropylene, polyoxyethylene block polymer

Formula:
\[ HO(CHCH_3CH_2O)_x(CH_2CH_2O)_y(CH_2CHCH_3O)_z H, \text{avg. } x=18, y=14, z=18 \]

Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, wetting agent, binder, stabilizer, plasticizer, lubricant, solubilizer, dispersant, visc. control agent, defoamer for pharmaceutical creams

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Antarox® 25-R-2

Meroxapol 254
CAS 9003-11-6 (generic)
Classification: Polyoxypropylene, polyoxyethylene block polymer

Formula:
\[ HO(CHCH_3CH_2O)_x(CH_2CH_2O)_y(CH_2CHCH_3O)_z H, \text{avg. } x=18, y=34, z=18 \]

Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, wetting agent, binder, stabilizer, plasticizer, lubricant, solubilizer, dispersant, visc. control agent, defoamer for pharmaceutical creams

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Antarox® 31-R-1

Meroxapol 258
CAS 9003-11-6 (generic)
Classification: Polyoxypropylene, polyoxyethylene block polymer

Formula:
\[ HO(CHCH_3CH_2O)_x(CH_2CH_2O)_y(CH_2CHCH_3O)_z H, \text{avg. } x=21, y=7, z=21 \]

Properties: Nonionic liq.
Toxicology: TSCA listed
Uses: Emulsifier, wetting agent, binder, stabilizer, plasticizer, lubricant, solubilizer, dispersant, visc. control agent, defoamer for pharmaceuticals

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Antarox® 31-R-1

Meroxylon pereirae. See Balsam Peru (Myroxylon pereirae)

Merphenyl nitrate. See Phenylmercuric nitrate; Phenylmercuric nitrate, basic

Merthiolate; Merthiolate sodium. See Thimerosal

meso-Erythritol. See Erythritol

meso-Inositol. See Inositol

Met. See L-Methionine

Metacetone. See Diethyl ketone

Metacetic acid. See Propionic acid

Metallum problematum. See Tellurium

Metanilic acid
CAS 121-47-1; EINECS/ELINCS 204-473-6
Synonyms: 1-Aminobenzenesulfonic acid; 3-Aminobenzenesulfonylic acid; m-Aminobenzenesulfonic acid; Aniline-3-sulfonic acid; m-Anilinesulfonic acid; m-Sulfanilic acid

Empirical: \( \text{C}_6\text{H}_7\text{NO}_3\text{S} \)
Formula: \( \text{C}_6\text{H}_4(\text{NH}_2)\text{SO}_3\text{H} \)

Properties: Wh. needles; sol. in water, alcohol, ether; sl. sol. in ethanol; m.w. 173.18; dec. by heating

Toxicology: Eye irritant; mutagenic data; TSCA listed

Hazardous Decomp. Prods.: Heated to decomps., emits very toxic fumes of NO\(_x\) and SO\(_x\)

Uses: Sulfa drug synthesis
Chemical Component Cross-Reference

Metaphenylenediamine. See m-Phenylenediamine

Metaphos. See Sodium metaphosphate

Metaphosphoric acid, hexasodium salt. See Sodium hexametaphosphate

Metaphosphoric acid potassium salt. See Potassium metaphosphate

Metaphosphoric acid, sodium salt. See Sodium metaphosphate

Metaphosphoric acid trisodium salt. See Sodium trimetaphosphate

Metasilicic acid. See Silica gel

Methacetone. See Diethyl ketone

Methacrylate copolymer; Methacrylate polymer. See Methacrylic acid copolymer

Methacrylic acid

CAS 79-41-4; EINECS/ELINCS 201-204-4

UN 2531 (inhibited)

Synonyms: Acrylic acid, 2-methyl-; MAA; 2-Methacrylate acid; α-Methacrylic acid; α-Methacylic acid (monomer); 2-Methylene propionic acid; 2-Methylehypernoic acid; 2-Methyl-2-propenoic acid; 2-Propenoic acid, 2-methyl-; Propionic acid, 2-methylene-

Empirical: C₄H₈O₂

Formula: H₂C:C(CH₃)COOH

Properties: Colorless liq., repulsive acrid odor; sol. in warm water, alcohol, ether, most org. solvs.; sol. > 10 mg/ml in water (17 C); m.w. 86.09; dens. 1.015 (20 C); vapor pressure 1 mm (25.5 C); m.p. 15-16 C; b.p. 163 C; flash pt. (OC) 76 C

Toxicology: ACGIH TLV/TWA 20 ppm; LD50 (oral, rat) 1060 mg/kg, (IP, mouse) 48 mg/kg, (skin, rabbit) 500 mg/kg; poison by IP route; mod. toxic by ing., skin contact; corrosive; strong irritant to skin, eyes, mucous membranes; mutagenic data; TSCA listed

Precaution: Combustible; corrosive; flamm. exposed to heat, flame, oxidizers; a storage hazard; spontaneous exothermic polymerization can occur

†=pharmaceutical grade

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke, irritating fumes

Storage: Storage hazard

Uses: Pharmaceutical ophthalmics

Regulatory: FDA approved for ophthalmics; Canada DSL

Sigma http://www.sigma-aldrich.com/belgium; Whyte Chems. Ltd http://www.whytechemicals.co.uk

β-Methacrylic acid. See Crotonic acid

Methacrylic acid butyl ester. See Butyl methacrylate

Methacrylic acid copolymer

Synonyms: Methacrylate copolymer; Methacrylate polymer

Definition: Fully polymerized copolymer of methacrylic acid and an acrylic or methacrylic ester; Type C may contain surfactants

Properties: Wh. powd., faint char. odor; sol. in dil. alkali, buffer solns. of pH ≥ 7, methanol, alcohol, IPA, acetone; insol. in water, dil. acids; visc. 50-200 cps

Uses: Coating agent for pharmaceutical enteric coated tablets; taste/odor masking agent for pharmaceuticals

Regulatory: USP?NF compliance

Manuf./Distrib.: Esschem http://www.esschem.com; Monomer-Polymer & Dajac Labs http://www.monomerpolymer.com

Trade Names: Aqueous Enteric Coat L30D; Aqueous Enteric Coat L100D; Controlled/Sustained Release Coat S100; Eudragit® L 30 D-55; Eudragit® L 100; Eudragit® L 100-55; Eudragit® S 100

Trade Names Containing: Acryl-Eze™; Acryl-Eze™ MP; Controlled/Sustained Release Coat S12.5; Eudragit® L 12.5; Eudragit® S 12.5
Chemical Component Cross-Reference

Methacrylic acid copolymer type C and
Metacrylic acid-ethyl acrylate copolymer (1:1). See Methacrylic acid/ethyl acrylate copolymer

Methacrylic acid-divinylbenzene copolymer
CAS 50602-21-6
Synonyms: Methacrylic acid/DVB copolymer
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Carrier of vitamin B₂ for special dietary use; tablet disintegrant
Regulatory: FDA 21CFR §172.775, 173.25, 175.105, 176.180; Canada DSL

Methacrylic acid/ethyl acrylate copolymer
CAS 25212-88-8
Synonyms: Acrylates copolymer; Methacrylic acid copolymer type C and Metacrylic acid-ethyl acrylate copolymer (1:1); P(EA/MAA); 2-Propenoic acid, 2-methyl-, polymer with ethyl 2-propenoate
Uses: Excipient for pharmaceuticals; film former in enteric coatings for solid dosage forms
Trade Names: Polyquid PA-30; Polyquid PA-30S
Trade Names Containing: Kollicoat® MAE 30 DP; Kollicoat® MAE 100P

Methacrylic acid, methyl ester. See Methyl methacrylate

Methacrylic acid methyl ester polymers. See Polymethyl methacrylate

Methacrylic acid polymer with divinylbenzene, potassium salt. See Polacrillin potassium

2-Methacryloyloxyethyl phosphorylcholine
CAS 67881-98-5
Synonyms: 2-MOEP
Classification: Choline compound
Uses: Ingredient in formulation of drug solubilizers
Trade Names Containing: Purebright MB-37 Series

Methaldehyde. See Formaldehyde
Methallyl butyrate. See 2-Methylallyl butyrate
Methanal. See Formaldehyde
Methanamide. See Formamide
Methanaminium, 1-carboxy-N,N,N-trimethyl-, chloride. See Betaine hydrochloride
Methanebis (N,N’-(5-ureido-2,4-diketotetrahydroimidazole)-N,N-dimethylol). See Imidazolidinyl urea

†=pharmaceutical grade
diketotetrahydroimidazole(-N,N-dimethylol).
See Imidazolidinyl urea
Methanecarbonitrile. See Acetonitrile
Methanecarboxamide. See Acetamide
Methanecarboxylic acid. See Acetic acid
Methanedicarboxylic acid; Methanedicarboxylic acid. See Malonic acid
Methanedicarboxylic acid, diethyl ester. See Diethyl malonate
Methane dichloride; Methane-, dichloro-. See Methylene chloride
Methanesulfonic acid, hydroxy-, monosodium salt. See Sodium formaldehyde sulfoxylate

Methanesulfonic acid
CAS 75-75-2; EINECS/ELINCS 200-898-6
UN 2584; UN 2586
Synonyms: Methylsulfonic acid; MSA; Sulfomethane
Classification: Aliphatic organic compd.
Empirical: CH₄O₃S
Formula: CH₃SO₃H
Properties: Colorless to ylsh. liq.; sol. in water, alcohol, ether, oxygenated solvs.; m.w. 96.10; dens. 1.483 (20/4 C); vapor pressure 1 mm Hg (20 C); m.p. 20 C; b.p. 167 C (10 mm); dec. > 200 C; flash pt. 110 C; ref. index 1.4300
Toxicology: LDLo (oral, rat) 200 mg/kg, (IP, rat) 50 mg/kg; poison by ing., IP routes; corrosive to tissue, skin, eyes, mucous membranes; causes burns; target organs: liver, kidney, stomach, CNS; TSCA listed
Environmental: Good biodegrad.; VOC; ThOD 0.67; do not allow undiluted prod. to reach ground water or sewage systems
Precaution: Corrosive to iron, steel, brass, copper, lead; explosive reaction with ethyl vinyl ether; incomp. with hydrogen fluoride, alkalis, amines, vinyl ethers; reacts violently with water
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of SOx
Storage: Store container tightly sealed in cool, dry area with sufficient ventilation; keep away from heat, direct sunlight
Uses: Pharmaceutical parenterals
Regulatory: FDA approved for parenterals; Canada DSL

### L-Methionine

**CAS**: 63-68-3; EINECS/ELINCS 200-562-9

**Synonyms**: 1-α-Amino-γ-methylmercaptobutyric acid; (S)-2-Amino-4-(methylmercapto) butyric acid; L-2-Amino-4-methylthiobutyric acid; Met; 1-γ-Methylthio-α-aminobutyric acid

**Classification**: Amino acid

**Definition**: Avail. commercially as the naturally occurring L(-)-enantiomer

**Empirical**: C₅H₁₁NO₂S

**Formula**: CH₃SCH₂CH₂CH(NH₂)COOH

**Properties**: Wh. cryst. powd. or platelets, sl. char. odor; sol. in water, dil. acids, alkalis; insol. in abs. alcohol, alcohol, benzene, acetone, ether; m.w. 149.21; dens. 1.340; m.p. 281 C (dec.)

**Toxicology**: LD₅₀ (oral, rat) 36 g/kg; (IP, rat) 4328 mg/kg; mildly toxic by ing., IP routes; human mutagenic data; experimental teratogen, reproductive effects; TSCA listed

**Features**: Hazardous Decomp. Pros.: Heated to decomp., emits very toxic fumes of NOₓ and SOₓ

**Trade Names Containing**: Aminodermin CLR

**L-Methionine**

**L-Methionine, N-acetyl-** See N-Acetyl-L-methionine

**Methocel** See Methylcellulose

**4′-Methoxyacetophenone; p-Methoxyacetophenone** See Acetanisole

**3-Methoxy-4-acetoxybenzaldehyde** See Vanillin acetate

**p-Methoxyallylbenezene** See Estragole

**2-Methoxy-4-allylphenol** See Eugenol

**2-Methoxy-1-aminobenzenene** See o-Anisidine

**4-Methoxy-1-aminobenzenene** See p-Anisidine

**2-Methoxyaniline** See o-Anisidine

**3-Methoxyaniline** See m-Anisidine

**4-Methoxyaniline** See p-Anisidine

**m-Methoxyaniline** See m-Anisidine

Chemical Component Cross-Reference

Synonyms: 1,3-Butanediol 3-methyl ether; 1-Butanol, 3-methoxy-; Butolether; 1,3-Butylene glycol monomethyl ether; 3-Methoxy-n-butanol

Classification: Organic compd.

Empirical: C₉H₁₂O₂

Formula: CH₃CH(OCH₃)CH₂CH₂OH

Properties: Colorless clear liq.; mild odor; sol. in water; misc. with common org. solvs.; m.w. 104.15; dens. 0.920-0.922 g/cc; vapor pressure 0.9 mm Hg (20 C); sets to glass @ -85 C; b.p. 161 C; flash pt. (CC) 60 C; autoignition temp. 335 C; ref. index 1.415-1.416 (20 C)

Toxicology: LD₅₀ (oral, rat) 4000 mg/kg; toxic by ingestion

Environmental: Good biological eliminability

Precaution: Combustible

NFPA: Health 1, Flammability 2, Reactivity 0

Storage: Store in cool, dark, dry place in tightly closed containers, with air excluded

Uses: Solvent for pharmaceuticals

Features: High boiling; good dissolving power

Regulatory: Canada DSL

CAS 1504-74-1; EINECS/ELINCS 216-131-3

FEMA 3181

Synonyms: o-Cumaric aldehyde methyl ether; 2’-Methoxycinnamaldehyde; o-Methoxycinnamic aldehyde; β-(o-Methoxyphenyl) acrolein; 3-(2-Methoxyphenyl)-2-propenal

Empirical: C₁₀H₁₀O₂

Properties: Pale yel. cryst. flakes, spicy-floral odor; sol. in alcohol, ether, chloroform; sl. sol. in water; m.w. 162.18; m.p. 45-46 C; b.p. 295 °C

T = pharmaceutical grade

Toxicology: LD₅₀ (oral, mouse) > 2 g/kg; primary skin irritant; mutagen; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Advanced Synthesis Tech.

http://www.advancedsynthesis.com; Citrus and Allied Essences

http://www.citrusandallied.com; SAFC Specialties http://www.safcspecialties.com

o-Methoxycinnamic aldehyde. See o-Methoxycinnamaldehyde

2-Methoxy-p-cresol. See 2-Methoxy-4-methylphenol

Methoxyethanol

CAS 109-86-4; EINECS/ELINCS 203-713-7

UN 1188 (DOT)

Synonyms: EGME; Ethylene glycol methyl ether; Ethylene glycol monomethyl ether; Glycol monomethyl ether; 2-ME; 2-Methoxyethanol; β-Methoxyethanol; Methoxyhydroxyethane; Methyl ‘Cellosolve’

Classification: Aliphatic ether alcohol

Empirical: C₃H₆O₂

Formula: CH₃OCH₂CH₂OH

Properties: Colorless liq., mild agreeable ether-like odor.; sol. in water, alcohols, ketones, glycols, most hydrocarbons; misc. with ether, benzene, glycerol, acetone, dimethylformamide; m.w. 76.10; dens. 0.964 (20/4 C); vapor pressure 9.5 mm Hg; f.p. -86.5 C; b.p. 123-124 C; flash pt. (OC) 43 C; autoignition temp. 235 C; ref. index 1.4028 (20 C); surf. tens. 30.84 dynes/cm; pH neutral

Toxicology: ACGIH TLV/TWA 5 ppm (skin); LD₅₀ (oral, rat) 2460 mg/kg, (IP, rat) 2500 mg/kg, (IV, rat) 2140 mg/kg, (skin, rabbit) 1280 mg/kg; mod. toxic by ing., inh., skin contact, IP, IV routes; mod. toxic to humans by ing.; human systemic effects; skin/eye irritant; inh. can cause headache, confusion, weakness, nausea, difficulty breathing, increased heart rate; target organs: blood, brain, kidneys; potential occupational carcinogen; experimental teratogen; mutagenic data; TSCA listed

Environmental: VOC; BOD₅ 0.12; COD 1.69; ThOD 1.68
**Precaution:** Flamm. on exposure to heat and flame; mod. explosion hazard; can react with oxidizers to form explosive peroxides; incompat. with acid chlorides, acid anhydrides (forms ester compds.)

**Hazardous Decomp. Prods.:** Acetaldehyde, methanol; heated to decomp., emits acrid smoke, irritating fumes

**NFPA:** Health 2, Flammability 2, Reactivity 0

**Storage:** Store in cool, dry, well-ventilated area, out of direct sunlight

**Uses:** Solvent in pharmaceuticals

**Regulatory:** FDA 21CFR §73.1 (no residue), 175.105; USDA 9CFR §381.147; SARA §313 reportable; HAP; Canada DSL

2-Methoxyethanol; β-Methoxyethanol. See Methoxyethanol

**Properties:** Colorless to ylsh. liq., spicy, vanilla-like odor; sol. in alcohol, ether, benzene, chloroform, acetic acid; sl. sol. in water; m.w. 138.17; dens. 1.092 (20/4 C); vapor dens. 4.7; m.p. 5 C; b.p. 221-222 C; flash pt. 99 C; ref. index 1.537 (20 C)

**Toxicology:** LD50 (oral, rat) 740 mg/kg, (IV, mouse) 75 mg/kg; poison by IV route; probably mod. toxic; irritating to eyes, skin, respiratory system; mutagenic data; TSCA listed

**Environmental:** Do not contaminate water sources, sewers

**Precaution:** Wear protective gloves, splash-proof eye goggles; incompat. with strong oxidizers, alkalies

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Keep in original, tightly closed container; keep away from heat, sparks, open flame

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Sweet vanilla-like flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

p-Methoxy-β-methylstyrene. See Anethole

Methoxy PEG
CAS 9004-74-4 (generic)
Synonyms: Methoxy polyethylene glycol; PEG methyl ether; Polyethylene glycol monomethyl ether
Definition: Addition polymer of ethylene oxide and methanol
Formula: CH3(CH2CH2O)nOH, n = 7-16
Properties: Liq. grades: Colorless or prac.

†=pharmaceutical grade
colorless clear to sl. hazy sl. hygroscopic visc. liqs., sl. char. odor; sol. in acetone, alcohol, chloroform, ethyl acetate, toluene; misc. with water; sp.gr. 1.09-1.10; Solid grades: wh. waxy plastic, flakes, beads, or powds., pract. odorless and tasteless; sol. in water, acetone, alcohol, chloroform, ethyl acetate, toluene
Uses: Ointment base, solvent, plasticizer in pharmaceuticals
Regulatory: NF compliance

Methoxy PEG methacrylate
CAS 26915-72-0
Synonyms: Methoxy polyethylene glycol methacrylate
Uses: Steric stabilizer and controlled release device for pharmaceuticals
Trade Names: Rohamere® 6850-0

2-Methoxyphenol. See Guaiacol
4-Methoxyphenol. See Hydroquinone monomethyl ether
o-Methoxyphenol. See Guaiacol
p-Methoxyphenol. See Hydroquinone monomethyl ether

4-Methoxyphenylacetic acid. See p-Methoxyphenylacetic acid

p-Methoxyphenylacetic acid
CAS 104-01-8; EINECS/ELINCS 203-166-4
Synonyms: 2-(p-Anisyl) acetic acid; Homoanisic acid; 4-Methoxybenzeneacetic acid; 4-Methoxyphenylacetic acid; p-Methoxy-α-toluic acid; MOPA
Classification: Aromatic organic compd.
Empirical: C9H10O3
Formula: CH3OC6H4CH2COOH
Properties: Off-wh. to pale yel. flakes; sol. in methanol; insol. in cold water; m.w. 166.18; m.p. 86-88.5 °C; b.p. 140 °C (3 mm)
Toxicology: LD50 (oral, rat) 1550 mg/kg, (IP, mouse) 504 mg/kg; mod. toxic by ing. and IP routes; irritant; questionable carcinogen; tumorigen; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Intermediate for pharmaceuticals, other organic compds.
Regulatory: Canada DSL

o-Methoxyphenylamine. See o-Anisidine
p-Methoxyphenylamine. See p-Anisidine

4-p-Methoxyphenyl-2-butanone
CAS 104-20-1; EINECS/ELINCS 203-184-2
FEMA 2672
Synonyms: Anisyl acetone; 2-Butanone, 4-(p-methoxyphenyl)-; 4-Methoxybenzylacetone; p-Methoxyphenylbutanone; Raspberry ketone methyl ether
Classification: aromatic ketone
Empirical: C11H14O2
Formula: CH3OC6H4C2H4COCH3
Properties: Colorless to pale yel. liq.; sweet floral odor; m.w. 178.23; dens. 1.045; m.p. 8 C; b.p. 152-153 C (15 mm); flash pt. > 230 F; ref. index 1.5200
Toxicology: LD50 (oral, rat) > 5 gm/kg; sensitizer; primary irritant
Uses: Synthetic flavor for pharmaceuticals
Classifications: synthetic flavor for pharmaceuticals
Features: Sweet cherry, raspberry-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; prohibited in cosmetics (Europe); Canada DSL
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; MelChem http://www.melchem.com

2-Methoxyphenyl phenylacetate; o-Methoxyphenyl phenylacetate. See Guaiacyl phenylacetate
1-(p-Methoxyphenyl)-2-propanone
CAS 122-84-9; EINECS/ELINCS 204-433-2; 204-578-7
FEMA 2674
Synonyms: 4-Acetonylanisole; p-Acetonylanisole; Anisic ketone; Anisketone; Anisylmethyl ketone; p-Anisyl methyl ketone; 4-Methoxybenzyl methyl ketone; p-Methoxybenzyl methyl ketone; 4-Methoxybenzyleacetone; p-Methoxyphenylacetone; 2-Propanone, 1-(p-methoxyphenyl)-
Chemical Component Cross-Reference

Classification: Aromatic ketone
Empirical: C_{10}H_{12}O_2
Properties: Oil or cryst.; sl. sol. in water and oxygenated solvs.; m.w. 164.20; dens. 1.067; m.p. 46 C; b.p. 110-113 C; flash pt. 215 F; ref. index 1.5250
Toxicology: LD50 (oral, rat) 3330 mg/kg, (IP, mouse) 560 mg/kg, (skin, rabbit) > 5 g/kg; mod. toxic by ing. and other routes; primary skin irritant; TSCA listed
Precaution: Flamm.
Storage: Refrigerate; store under nitrogen
Uses: Synthetic flavor for pharmaceuticals
Features: Caramel, vanilla-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; SAFC Specialties http://www.safcspecialties.com

Methoxypyrazine. See 2-Methoxypyrazine

2-Methoxypyrazine
CAS 3149-28-8
FEMA 3302
Synonyms: Methoxypyrazine
Classification: pyrazine
Empirical: C_5H_6N_2O
Properties: Colorless to yel. liq.; nutty cocoa-like odor; sol. in alcohol; insol. in water @ 61 C; m.w. 110.12; dens. 1.110; b.p. 60-61 C (29 mm); flash pt. 114 F; ref. index 1.508
Toxicology: Skin and eye irritant
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx
Uses: Synthetic flavor for pharmaceuticals
Features: Sweet, cocoa-like flavor
Regulatory: FEMA GRAS; Canada DSL

2-Methoxyltoluene. See o-Methylanisole
4-Methoxyltoluene. See p-Methylanisole
o-Methoxyltoluene. See o-Methylanisole
p-Methoxyltoluene. See p-Methylanisole

2-Methoxy-4-vinylphenol
CAS 7786-61-0; EINECS/ELINCS 231-101-2
FEMA 2675
Synonyms: 4-Hydroxy-3-methoxy styrene; p-Vinylcatechol-O-methyl ether; Vinyl guaiiacol; p-Vinylguaiacol
Classification: Aromatic phenol
Empirical: C_9H_10O_2
Properties: Colorless solid or liq.; spicy, clove odor; insol. in wager; sol. in most org. solvs.; m.w. 150.18; sp.gr. 1.105-1.115; dens. 1.11; vapor dens. 5.1; flash pt. (CC) > 99 C; ref. index 1.570-1.580

Handbook of Pharmaceutical Additives, Third Edition 1633
Methylecetaldehyde. See Propionaldehyde

Methyl acetate
CAS 79-20-9; EINECS/ELINCS 201-185-2
UN 1231 (DOT); FEMA 2676
Synonyms: Acetic acid methyl ester; Methyl acetic ester; Methyl ethanoate
Classification: Sat. aliphatic carboxylic acid ester
Definition: Ester of methyl alcohol and acetic acid
Empirical: C₃H₆O₂
Formula: CH₃COOCH₃
Properties: Colorless volatile liq., fragrant odor; sl. bitter flavor; very sol. in water; sol. in ethanol, diethyl ether, acetone, benzene, chloroform; m.w. 78.09; dens. 0.92438; vapor pressure 100 mm Hg (9.4 C); f.p. -98.05 C; m.p. 54.05 C; flash pt. (CC) -10 C; autoignition temp. 454 C; surf. tens. 24.1 dynes/cm (20 C); dielec. const. 6.68
Toxicology: ACGIH TLV/TWA 200 ppm in air; STEL 250 ppm; LD50 (oral, rabbit) 3705 mg/kg; LCLo (inh., cat, 1 h) 57,000 mg/m³; mod. toxic by several routes; human systemic irritant by inh.; mod. skin and severe eye irritant; irritant to respiratory tract; narcotic in high concns.; mutagenic data; TSCA listed
Environmental: ThOD 1.51
Precaution: Flamm.; dangerous fire and explosion risk; explosive limits 3.1-16% in air; incompat. with oxidizing agents, strong acids, bases, potassium t-butoxide
Hazardous Decomp. Prods.: Methanol, acetic acid; heated to decomp., emits acrid smoke and fumes
NFPA: Health 1, Flammability 3, Reactivity 0

Methylacetic acid. See Propionic acid
Methylacetic anhydride. See Propionic anhydride
Methyl acetic ester. See Methyl acetate

Methyl acetoacetate
CAS 105-45-3; EINECS/ELINCS 203-299-8
Synonyms: Acetoacetic acid methyl ester; MAA; 1-Methoxybutane-1,3-dione; Methyl acetylacetate; Methyl acety lacetonate; Methyl 3-oxobutanoate; Methyl 3-oxobutyrate; 3-Oxobutanoic acid methyl ester
Classification: Carboxylic acid ester
Empirical: C₅H₈O₃
Formula: CH₃COCH₂COOCH₃
Properties: Colorless liq.; very sol. in water; sol. in alcohol, ether; misc. with oxygenated solvs.; m.w. 116.1; dens. 1.076 (20/4 C); m.p. -80 C; b.p. 100 mm Hg (9.4 C); m.p. -98.05 C; surf. temp. 454 C; ref. index 1.3614 (20 C); surf. tens. 24.1 dynes/cm (20 C); dielec. const. 6.68
Toxicology: LD50 (oral, rat) 3228 mg/kg; mod...
Chemical Component Cross-Reference

toxic by ing.; severe eye and mild skin irritant; high concs. of vapor may cause nose/throat irritation, drowsiness, headache, lightheadedness; TSCA listed

Precaution: Flamm. exposed to heat or flame; incompt. with oxidizing agents (increases fire/explosion hazard), bases (decomp. can occur)

Hazardous Decomp. Prods.: Methanol, acetic acid; heated to decomp., emits acrid smoke and irritating fumes

NFPA: Health 2, Flammability 2, Reactivity 0

Storage: Store in cool, dry, well-ventilated area, out of direct sunlight

Uses: Pharmaceutical intermediate; synthesis of nifedipine (a cardiac drug); intermediate for vitamins

Regulatory: Canada DSL

Trade Names: Eastman® MAA

Methyl acetone. See Methyl ethyl ketone

4′-Methyl acetophenone. See 4′-Methyl acetonaphone

CAS 122-00-9; EINECS/ELINCS 204-514-8

FEMA 2677

Synonyms: p-Acetotoluene; p-Acetyl toluene; 1-(4-methylphenyl)-p-Methylacetonaphone (INCI); 1-Methyl-4-acetyl benzene; 1-(4-Methylphenyl)ethanone; Methyl p-tolyl ketone

Classification: Organic compd.; aliphatic ketone

Empirical: C9H10O

Formula: CH3C6H4COCH3

Properties: Colorless cryst. solid; fruity-floral odor, strawberry-like flavor; sol. in oxygenated solvs.; insol. in water; m.w. 134.18; dens. 1.004 (20/4 C); m.p. 28 C; b.p. 220-223 C; flash pt. 82 C; ref. index 1.534 (20 C)

Toxicology: LD50 (oral, rat) 1400 mg/kg; mod. toxic by ing.; primary irritant; human skin irritant; TSCA listed

Precaution: Combustible liq.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals; pharmaceutical intermediate

Features: Fruity flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL

p-Methylacetophenone (INCI). See 4′-Methyl acetonaphone

Methylacetoxypropanone. See Dehydroacetic acid

Methyl 12-acetoxy-9-octadecenoate; Methyl 12-acetoxyoleate. See Methyl acetyl ricinoleate

Methyl acetylace tate; Methyl acetylace tone. See Methyl acetoacetate

1-Methyl-4-acetyl benzene. See 4′-Methyl acetonaphone

Methyl acetyl ricinoleate

CAS 140-03-4; EINECS/ELINCS 205-392-9

Synonyms: Methyl 12-acetoxy-9-octadecenoate; Methyl 12-acetoxyoleate; Ricinoleic acid, methyl ester, acetate

Empirical: C21H38O4

Formula: C17H32(OCOCH3)COOCH3

Properties: Cryst.; sol. in most org. solvs.; insol. in water; pale yel. liquid; mild odor; m.w. 1306.59; sp.gr. 0.938; m.p. -15 C; flash pt. (COC) 196 C; ref. index 1.4545

Toxicology: LD50 (oral, mouse) 34,900 mg/kg; low toxicity by ing.; primary irritant to eyes; probable skin and mucous membrane irritant; TSCA listed

Precaution: Combustible exposed to heat or...
2-Methylacrylic acid. See Methacrylic acid

3-Methylacrylic acid. See Crotonic acid

α-Methylacrylic acid. See Methacrylic acid

β-Methylacrylic acid. See Crotonic acid

2-Methylacrylic acid 1-methyl-3-(2-methylacryloyloxy)-propyl ester. See 1,3-Butanediol dimethacrylate

α-Methylacrylic acid (monomer). See Methacrylic acid

Methyl alcohol

CAS 67-56-1; EINECS/ELINCS 200-659-6
UN 1230 (DOT)
Synonyms: Carbinol; Colonial spirit; Columbian spirits; Methanol; Methyl hydrate; Methyl hydroxide; Methylo; Monohydroxymethane; Pyroxylic spirit; Wood alcohol; Wood naphtha; Wood spirit

Empirical: CH₄O
Formula: CH₃OH
Properties: Clear colorless liq., non-flammable, highly polar, misc. with water, alcohol, ether, benzene, ketones, most org. solvs.; m.w. 32.05; dens. 0.7924; vapor pressure 127 mm Hg; m.p. -97.8 C; b.p. 64.5 C; flash pt. (CC) 6 C; autoignition temp. 385 C; ref. index 1.3292 (20 C); surf. tens. 22.3 dynes/cm; dielec. const. 32.66

Toxicology: ACGIH TLV/TWA 200 ppm; LD₅₀ (oral, rat) 5628 mg/kg; toxic (causes blindness); poisonous by ing., inh., or percutaneous absorp.; eye/skin irritant; narcotic; acute effects: headache, fatigue, nausea, visual impairment, acidosis, convulsions, circulatory collapse, respiratory failure, death; usual fatal dose
Chemical Component Cross-Reference

100-250 ml; experimental teratogen, reproductive effects; TSCA listed

Environmental: VOC; BOD5 0.85; COD 1.50; ThOD 1.50

Precaution: DOT: Flamm. liq.; dangerous fire risk; explosive limits 6.0-36.5 vol.% in air; reacts vigorously with oxidizers; violent or explosive reactions possible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

NFPA: Health 1, Flammability 3, Reactivity 0

Uses: Solvent, excipient in pharmaceuticals, orals

Regulatory: FDA 21CFR §73.345, 73.615, 172.560, 172.859, 172.867, 173.250, 173.385, 175.105, 175.300, 176.180, 176.200, 176.210, 177.1200, 177.2420, 177.2460, 177.2800, 27CFR §21.115; FDA approved for orals; USP/NF, BP compliance; Canada DSL; SARA §313 reportable; CERCLA hazardous substance; HAP

Methyl aldehyde. See Formaldehyde

Methyl-1-alkyl amidoethyl-2-alkyl imidazolinium methylsulfate. See Oleic imidazolinium methosulfate

2-Methylallyl butyrate

CAS 7149-29-3

FEMA 2678

Synonyms: Isopropenyl carbinyln-n-butyrate; Methallyl butyrate; 2-Methyl-2-propenyl butyrate; 2-Methyl-2-propen-1-yl butyrate

Definition: Ester of β-methylallyl alcohol and butyric acid

Empirical: C₈H₁₄O₂
Methylaminoacetic acid. See Sarcosine

Methyl 2-aminobenzoate; Methyl-o-aminobenzoate. See Methyl anthranilate

1-Methylamino-1-deoxy-D-glucitol. See Meglumine

1-Methyl-2-aminoethanol. See Isopropanolamine

2-Methylamino methyl benzoate. See Dimethyl anthranilate

2-Methyl-2-aminopropane. See t-Butylamine

2-Methyl-2-amino-1-propanol. See Aminomethyl propanol

Methylamylacetic acid. See 2-Methylheptanoic acid

Methyl amyl ketone. See Methyl n-amyl ketone

Methyl n-amyl ketone

CAS 110-43-0; EINECS/ELINCS 203-767-1

UN 1110 (DOT); FEMA 2544

Synonyms: Amyl methyl ketone; n-Amyl methyl ketone; Butylacetone; 2-Heptanone; Heptan-2-one; Ketone C-7; MAK; Methyl amyl ketone; Methyl pentyl ketone; n-Pentyl methyl ketone

Classification: Sat. aliphatic ketone

Empirical: C₇H₁₄O

Formula: CH₃CH₂CH₂CH₂CH₂COCH₃

Properties: Colorless liq., fruity ethereal odor; sol. in alcohol; insol. in water; m.w. 142.19; b.p. 168 C

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

TSCA listed

NFPA: Health 1, Flammability 2, Reactivity 0

Storage: Store in cool, dry, well-ventilated area, away from heat/ignition sources

Uses: Synthetic flavor for pharmaceuticals

Features: Banana-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; DOT nonregulated; Australia AICS; Canada DSL; Japan MITI

Methyl (2-amyl-3-oxocyclopentyl) acetate. See Methyl dihydrojasmonate
Chemical Component Cross-Reference

α-Methylisalacetone.  See 1-(p-Methoxyphenyl)-1-penten-3-one
Methyl anisate.  See Methyl p-anisate
Methyl o-anisate.  See Methyl o-methoxybenzoate
Methyl p-anisate
CAS 121-98-2; EINECS/ELINCS 204-513-2
FEMA 2679
Synonyms:  p-Anisic acid, methyl ester; Benzoic acid, 4-methoxy-, methyl ester; Benzoic acid, p-methoxy-, methyl ester; Methyl anisate; Methyl 4-methoxybenzoate; Methyl p-methoxybenzoate
Classification:  Aromatic ester
Empirical:  C₉H₁₀O₃
Properties:  Wh. powd.; insol.; m.w. 166.18; m.p. 49-51 C; b.p. 244-245 C; flash pt. 235 F
Toxicology:  LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary irritant; prevent inh. and direct contact with skin and eyes; TSCA listed
Precaution:  Avoid strong oxidants
Hazardous Decomp. Prods.:  Irritating and toxic fumes and gases
Storage:  Store in a cool, dry place; keep container closed when not in use.
Uses:  Synthetic flavor for pharmaceuticals
Regulatory:  FDA 21CFR §172.515; FEMA GRAS; Canada DSL

p-Methylanisole
CAS 104-93-8; EINECS/ELINCS 203-253-7
FEMA 2681
Synonyms:  p-Cresol methyl ether; p-Cresyl methyl ether; Methoxy-1 methyl-4 benzene; 1-Methoxy-4-methylbenzene; 4-Methoxytoluene; p-Methoxytoluene; 4-Methylanisole; Methyl p-cresol; 4-Methyl-1-methoxybenzene; 4-Methylphenol methyl ether; Methyl-p-tolyl ether; p-Tolyl methyl ether
Classification:  Aromatic ether; aliphatic ketone
Empirical:  C₈H₁₀O
Properties:  Colorless liq., pungent ylang-ylang odor; sol. in ethanol, diethyl ether, fixed oils; insol. in glycerin, propylene glycol, water; m.w. 122.18; dens. 0.996-0.970; b.p. 175-176 C; flash pt. 144 F; ref. index 1.510-1.513
Toxicology:  LD₅₀ (oral, rat) 1920 mg/kg; mod. toxic by ing.; skin irritant; TSCA listed
Precaution:  Flamm.
Hazardous Decomp. Prods.:  CO, CO₂; heated to decomp., emits acid smoke and irritating fumes
NFPA:  Flammability 2, Reactivity 0
Uses:  Synthetic flavor for pharmaceuticals
Methyl anthranilate
CAS 134-20-3; EINECS/ELINCS 205-132-4
FEMA 2682
Synonyms: 2-Aminobenzoic acid methyl ester; o-Aminobenzoic acid methyl ester; Anthranilic acid methyl ester; Benzoic acid, 2-amino-, methyl ester; 2-Carbomethoxyaniline; o-Carbomethoxyaniline; 2-(Methoxycarbonyl) aniline; Methyl 2-aminoanisole; Methyl-o-aminoanisole; Methyl 2-anthranilate; Neroli oil, artificial
Classification: Aromatic organic compd.
Definition: Ester of methyl alcohol and 2-aminobenzoic acid
Empirical: C9H9NO2
Formula: H2NC6H4CO2CH3
Properties: Cryst. or pale yel. liq., bluish fluorescence, grape-like odor; sol. in fixed oils, propylene glycol, oxygenated solvs.; sl. sol. in water; insol. in glycerol; m.w. 151.18; dens. 1.167-1.175 (15 C); m.p. 23.8 C; b.p. 258-261 C; flash pt. 123 C; ref. index 1.583 (20 C)
Toxicology: LD50 (oral, rat) 2910 mg/kg; poison by intravenous route; mod. toxic by ing.; skin irritant; experimental tumorigen; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx, CO, CO2
Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air
Uses: Synthetic flavor for pharmaceuticals; pharmaceutical intermediate; fragrance for ointments
Features: Grape and berry flavor; orange scent
Methylated trimethylated silica

**CAS:** 238094-36-5

**Uses:** Major component of **bioadhesive** transdermal **drug delivery systems**

**Trade Names Containing:** BIO-PSA® 7-4101 Silicone Adhesive; BIO-PSA® 7-4102 Silicone Adhesive; BIO-PSA® 7-4201 Silicone Adhesive; BIO-PSA® 7-4202 Silicone Adhesive

**Synonyms:**
- BIO-PSA® 7-4101 Silicone Adhesive;
- BIO-PSA® 7-4102 Silicone Adhesive;
- BIO-PSA® 7-4201 Silicone Adhesive;
- BIO-PSA® 7-4202 Silicone Adhesive

**Classification:** Quaternary ammonium salt

**Empirical:** C_{28}H_{44}NO_2 • Cl

**Formula:** (CH_3)_3CCH_2C(CH_3)_2C_6H_3(CH_3O)(CH_2)_2N(CH_3)_2(CH_2C_6H_5)Cl • H_2

**Properties:** Colorless to wh. cryst., odorless, bitter taste; readily sol. in alcohol, hot benzene, Cellosolve, water; pract. insol. in chloroform; insol. in CCl_4, ether; m.w. 462.12; m.p. 161-163 C

**Toxicology:** LD_{50} (oral, rat) 800 mg/kg; mod. toxic by ing.

**Hazardous Decomp. Prods.:** Heated to decomp., emits very toxic fumes of NO_x and Cl^-

**Storage:** Hygroscopic

**Uses:** Surfactant, antimicrobial in pharmaceuticals; medicine; OTC drug; topical anti-infective; bactericide; sanitizer

**Regulatory:** Canada DSL

**Manuf./Distrib.:** Sigma [http://www.sigma-aldrich.com/belgium]; Spectrum Quality [http://www.spectrumchemical.com]

**Methyl benzoate**

**CAS:** 93-58-3; EINECS/ELINCS 202-259-7

**UN 2938 (DOT); FEMA 2683**

**Synonyms:**
- Benzoic acid methyl ester
- Essence of niobe
- Methyl benzenecarboxylate
- Niobe oil
- Oil of niobe

**Classification:** Aromatic ester

**Empirical:** C_8H_8O_2

**Formula:** C_6H_5COOCH_3

**Properties:**
- Colorless liq., fragrant odor; sol. in alcohol, fixed oils, propylene glycol, water @ 30 C; misc. with alcohol, ether, oxygenated solvs.; insol. in glycerin; m.w. 136.15; dens. 1.082-1.088; vapor pressure 1 mm Hg (39 C); m.p. -12.5 C; b.p. 199.6 C; flash pt. 181 F; ref. index 1.515

**Toxicology:**
- LD_{50} (oral, rat) 1350 mg/kg; LD_{Lo} (skin, cat) 10 g/kg; mildly toxic by skin contact; skin and eye irritant; TSCA listed

**Precaution:** Flamm. exposed to heat or flame; reactive with oxidizing materials; keep away from food

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**NFPA:** Health 0, Flammability 2, Reactivity 0

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Fruity flavor

**Use Level:** 0.5% max. as benzoic acid in finished cosmetics

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL
4-Methylnbenzoic acid methyl ester. See p-Cresyl acetate

Methylbenzol. See Toluene

6-Methyl-2H-1-benzopyran-2-one; 6-Methylbenzopyrone; 6-Methyl-1,2-benzopyrone. See 6-Methylcoumarin

α-Methylbenzyl acetate

CAS 93-92-5; EINECS/ELINCS 202-288-5

FEMA 2684

Synonyms: Acetic acid, 1-phenylethyl ester; Benzenemethanol, α-methyl-, acetate; Benzyl alcohol, α-methyl-, acetate; Gardenol; α-Methylbenzene methanol acetate; Methylphenylcarbinol acetate; Methylphenylcarbinyl acetate; s-Phenethyl acetate; 1-Phenylethyl acetate; α-

†=pharmaceutical grade

Phenylethyl acetate; s-Phenylethyl acetate; Phenylmethylcarbinyl acetate; Styralyl acetate; Styralyl acetate; Styrolyl acetate; Styrolyl acetate

Empirical: C_{10}H_{12}O_{2}

Formula: C_{6}H_{5}CH(CH_{3})OOCCH_{3}

Properties: Colorless to pale yel. clear liq., gardenia odor; sol. in fixed oils, glycerin; insol. in water; m.w. 164.20; dens. 1.023; vapor dens. > 1; f.p. 0 C; b.p. 94-95 C (12 mm); flash pt. 95 C; ref. index 1.493-1.497

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; irritating to eyes, skin, respiratory system; TSCA listed

Precaution: Combustible liq.; avoid incompat. materials, strong oxidizers

Hazardous Decomp. Prods.: CO, CO₂; heated to decomp., emits acid smoke and irritating fumes

Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

Uses: Synthetic flavor for pharmaceuticals

Features: Apple, apricot, pineapple, plum-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Manuf./Distrib.: Acros Org.

Methylbenzyl acetate, mixed o-, m-, p-

CAS 29759-11-3

FEMA 3702

Synonyms: Methyl benzene methanol acetate
### Chemical Component Cross-Reference

(mixed ortho-,meta-,para-): 1-Phenyl ethyl acetate (mixed ortho-,meta-,para-); Tolyl acetate

**Empirical:** C_{10}H_{12}O_{2}

**Properties:** Colorless liq.; sol. in benzyl benzoate, min. oil; sl. sol. in propylene glycol; insol. in glycerin; m.w. 164.20; ref. index 1.5015-1.5040

**Toxicology:** TSCA listed

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Sweet floral fruity herbal odor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)

### α-Methylbenzyl alcohol

**CAS:** 98-85-1; EINECS/ELINCS 202-707-1

**UN:** 2937 (DOT); FEMA 2685

**Synonyms:** Benzenemethanol, α-methyl-; Ethanol, 1-phenyl-; Methyl phenylcarbinol; Methylphenylmethanol; α-Phenethyl alcohol; s-Phenethyl alcohol; 1-Phenylethanol; α-Phenylethyl alcohol; Phenylmethylcarbinol; Styrallyl alcohol; Styralyl alcohol

**Classification:** aromatic alcohol

**Empirical:** C_{8}H_{10}O

**Formula:** C_{6}H_{5}CH(CH_{3})OH

**Properties:** Colorless liq.; mild floral odor; sol. in alcohol, glycerol, min. oil, oxygenated and hydrocarbon solvs.; sl. sol. in water; m.w. 122.17; dens. 1.009-1.014; vapor pressure 0.1 mm (20 C); m.p. 20.7 C; b.p. 204 C; flash pt. (COC) 96 C; ref. index 1.525-1.529 (20 C); congeals below R.T.

**Toxicology:** LD_{50} (oral, rat) 400 mg/kg, (subcut., mouse) 250 mg/kg, (skin, rabbit) 2500 mg/kg; toxic by ing., subcut. routes; mod. toxic by skin contact; primary skin irritant; severe eye irritant; cancer suspect agent; mutagen; tumorigen; target organ: kidneys; TSCA listed

**Precaution:** Combustible; can react with oxidizers

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

### α-Methylbenzyl butyrate

**CAS:** 3460-44-4; EINECS/ELINCS 222-409-5

**FEMA:** 2686

**Synonyms:** Methyl phenylcarbinyl butyrate; Styralyl butyrate

**Empirical:** C_{12}H_{16}O_{2}

**Properties:** Colorless oily liq.; m.w. 192.26; dens. 0.990; b.p. 83-84 C (3 mm); flash pt. 229 F

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Sweet fruity berry juicy earhty floral jasmin odor; heavy, fruity, plum-like with a rich tropical nectar nuance taste

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

### α-Methylbenzyl formate

**CAS:** 7775-38-4; EINECS/ELINCS 231-893-7

**FEMA:** 2688

**Synonyms:** α-Methyl benzene methanol formate; Methyl phenylcarbinyl formate; 1-Phenyl-1-ethyl formate; 1-Phenyl-1-ethyl methanoate; Styralyl formate

**Empirical:** C_{9}H_{10}O_{2}

**Properties:** Colorless liq.; woody mimosa gardenia odor; m.w. 150.18; sp. gr. 1.042-1.050; b.p. 198 C; acid no. 2.0 max.; ref. index 1.502-1.508

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

### 1-Methyl-1-benzylidene-acetone

**See 3-Methyl-4-phenyl-3-buten-2-one**

### Methylbenzyl isobutyrate

**CAS:** 7775-39-5; EINECS/ELINCS 231-894-2

**FEMA:** 2687

**Synonyms:** α-Methylbenzyl isobutyrate; α-Methyl benzyl 2-methyl propanoate; Methyl phenylcarbinyl isobutyrate; 1-Phenylethyl 2-methylpropionate; Styralyl isobutyrate

Chemical Component Cross-Reference

**Toxicology:**
LD50 (oral, rat) 4920 mg/kg; LDLo (skin, rabbit) 3540 mg/kg; mod. toxic by skin contact, IP; mildly toxic by ing.; can be absorbed through skin; inh. may cause nose/throat irritation, headache, dizziness, dyspnea, nausea, vomiting; eye, skin, mucous membrane irritant; severe exposures may produce double vision, deafness, delirium, severe nervous symptoms, fatalities; can cause severe lung damage, respiratory/cardiac arrest, or death if aspirated into lungs; TSCA listed

**Precaution:** Flamm. exposed to heat, flame, oxidizers; explosive as vapor exposed to heat or flame; incompatible with oxidizing agents (increases fire/explosion hazard), corrosives; heat or flame may cause hazardous decom., emits acrid smoke and irritating fumes

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**NFPA:** Health 2, Flammability 2, Reactivity 0

**Storage:** Store in cool, dry place away from corrosives

**Uses:** Solvent

Methyl butyl ketone; Methyl N-butyl ketone.

See 2-Hexanone

3-Methylbutyl methanoate.  See Isoamyl formate

2-Methylbutyl-3-methylbutanoate.  See 2-Methylbutyl isovalerate

3-Methylbutyl 2-methylbutanoate.  See Isoamyl-2-methylbutyrate

3-Methylbutyl 2-methylpropanoate.  See Isoamyl isobutyrate

3-Methyl butyl nonanoate.  See Isoamyl nonanoate

3-Methylbutyl octanoate.  See Isoamyl octanoate

Methyl 4-t-butylphenylacetate.  See Methyl p-t-butylphenylacetate

Methyl p-t-butylphenylacetate

CAS 3549-23-3; 33155-60-1; EINECS/ELINCS 222-602-4

FEMA 2690

Synonyms: 4-t-Butylphenylacetic acid, methyl ester; Methyl 4-t-butylphenylacetate

Empirical: C13H18O2

Formula: (CH3)3CC6H4CH2CO2CH3

Properties: Colorless liq., fragrant odor; misc. with water, acetone, benzene, CCl4; sol. in most org. solvs.; m.w. 206.29; dens. 0.999; b.p. 106°C (2 mm); flash pt. > 110°C; ref. index 1.5010

Toxicology: May be harmful by inh., ing., or skin absorp.; may cause irritation; TSCA listed

Precaution: Incompat. with strong oxidizing agents, strong bases

Hazardous Decomp. Prods.: Toxic fumes of CO, CO2

Storage: Store in cool, dry lace; keep tightly closed

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: ABCR http://www.abcr.de; Advanced Synthesis Tech.

3-Methylbutyl propanoate.  See Isoamyl propionate

3-Methylbutyl salicylate.  See Isoamyl salicylate

Methyl butynol

CAS 115-19-5; EINECS/ELINCS 204-070-5

UN 1993

Synonyms: 1-Butyn-3-ol, 3-methyl-; Dimethyl acetylene carbinol; Dimethylacetylenedicarbinol; Dimethyl ethynylcarbinol; Dimethylethynylmethanol; 1,1-Dimethylpropargyl alcohol; α,α-Dimethylpropargyl alcohol; 1,1-Dimethylpropynol; Ethynylmethyl carbinol; 2-Hydroxy-2-methyl-3-butyne; MBY; 2-Methyl-3-butyne-2-ol; 2-Methylbutyn-3-ol-2; 3-Methyl-1-butyn-3-ol

Classification: Aliphatic organic compd.

Definition: Tertiary acetylenic alcohol

Empirical: C5H8O

Formula: (CH3)2COHCCH

Properties: Colorless liq., fragrant odor; misc. with water, acetone, benzene, CCl4; sol. in most org. solvs.; m.w. 84.13; dens. 0.8672 (20/20 C); m.p. 2.6 C; b.p. 104-105 C; flash pt. (TOC) 25 C; ref. index 0.861 (20C)

Toxicology: LD50 (oral, rat) 1950 mg/kg, (IP, mouse) 3600 mg/kg, (subcut., mouse) 2340 mg/kg; LC50 (inh., mouse) 2 g/m3; mod. toxic by ing., IP, subcut. routes; TSCA listed

Precaution: Flamm.; very dangerous fire hazard exposed to heat or flame; reactive with oxidizing agents

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Reactive intermediate for pharmaceutical mfg.

Regulatory: Canada DSL

3-Methylbutyl propanoate.  See Isoamyl propionate

3-Methylbutyl salicylate.  See Isoamyl salicylate

Methyl butynol
Chemical Component Cross-Reference

2-Methyl-3-butyn-2-ol; 2-Methylbutyn-3-ol; 3-Methyl-1-butyn-3-ol. See Methyl butynol

2-Methylbutyaldehyde
CAS 96-17-3; EINECS/ELINCS 202-485-6
FEMA 2691

Synonyms: Acetaldehyde, methylethyl-; Butanal, 2-methyl-; Butyraldehyde, 2-methyl-; 2-Formylbutane; 2-Methylbutanal; 2-Methylbutanal-1; 2-Methyl-1-butanal; α-Methylbutanal; α-Methylbutyaldehyde; 2-Methyl butyric aldehyde; α-Methyl butyric aldehyde; Methyl ethyl acetaldehyde

Empirical: C₅H₁₀O₂

Formula: C₅H₁₀O₂

Properties: Colorless liq.; apple-like odor; sol. in about 60 parts water; misc. with alcohol, ether; m.w. 102.14; dens. 0.898 (20/4 C); vapor pressure 40 mm (29.6 C); m.p. -95 C; b.p. 99-102 C; flash pt. 14 C; ref. index 1.3869 (20 C)

Toxicology: LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) 3560 mg/kg; LC₅₀ (inh., mouse, 2 h) 18 g/m³; mod. toxic by ing., skin contact; primary skin irritant; TSCA listed

Environmental: VOC; ThOD 1.25

Precaution: Highly flamm.; dangerous fire risk exposed to heat, flame, or oxidizers; can react vigorously with oxidizers

Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO₂, acrid smoke and irritating fumes

Storage: 12 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Manuf./Distrib.: Advanced BioTech

3-Methylbutyaldehyde. See Isovaleraldehyde

α-Methylbutyaldehyde. See Active valeric acid

Methyl butyrate
CAS 623-42-7; EINECS/ELINCS 210-792-1
UN 1237 (DOT); FEMA 2693

Synonyms: Butanoic acid methyl ester; Butyric acid, methyl ester; Methyl butanoate; Methyl n-butanoate; Methyl-n-butyrte

Empirical: C₅H₁₀O₂

Formula: CH₃CH₂CH₂COOCH₃

Properties: Colorless liq.; apple-like odor; sol. in about 60 parts water; misc. with alcohol, ether; m.w. 102.14; dens. 0.898 (20/4 C); vapor pressure 40 mm (29.6 C); m.p. -95 C; b.p. 99-102 C; flash pt. 14 C; ref. index 1.3869 (20 C)

Toxicology: LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) 3560 mg/kg; LC₅₀ (inh., mouse, 2 h) 18 g/m³; mod. toxic by ing., skin contact; primary skin irritant; TSCA listed

Environmental: VOC; ThOD 1.25

Precaution: Highly flamm.; dangerous fire risk exposed to heat, flame, or oxidizers; can react vigorously with oxidizers

Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO₂, acrid smoke and irritating fumes

Storage: 12 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

Uses: Synthetic flavor for pharmaceuticals

2-Methylbutyrate. See 2-Methylbutyric acid

Methyl-n-butyrte. See Methyl butyrate

2-Methylbutyric acid
CAS 116-53-0; EINECS/ELINCS 204-145-2
UN 3265; 2922; FEMA 2695

Synonyms: Active valeric acid; Butanoic acid,
Chemical Component Cross-Reference

2-methyl-: Butyric acid, 2-methyl-:
Carboxylic acid Cs; Ethylmethylacetic acid;
2-Methylbutanoic acid; 2-Methylbutyrate; α-
Methylbutyric acid; Methylacetic acid
Classification: Nonaromatic carboxylic acid
Definition: Commercial prod. is a racemic mixt.
Empirical: CsH10O2
Formula: CH3CH2CH(CH3)COOH
Properties: Colorless liq.; strong unpleasant odor; sol. in oxyg.
ated solvs.; sl. sol. in water; m.w. 102.14; dens. 0.934 (20/4 C);
vapor pressure 0.5 mm Hg; b.p. 173-176 C; ref. index 1.4055
Flash pt. 83 C; ref. index 1.4055
Toxicology: LD50 (oral, rat) 1870 µl/kg, (skin, rabbit) 1460 µl/kg; toxic; serious effects if swallowed; harmful by skin contact; skin/eye irritant; corrosive; may cause hypermotility, diarrhea, salivary gland changes, ataxia; TSCA listed
Precaution: Combustible; avoid strong oxidizing agents, reducing agents, alkaline materials
Hazardous Decomp. Prods.: CO, CO2
NFPA: Health 2, Flammability 2, Reactivity 0
Storage: Store in cool, well-ventilated area
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity flavor
Regulatory: FDA 21CFR §172.515; FEMA 2-Methylbutyric acid. See Isovaleric acid
α-Methylbutyric acid. See 2-Methylbutyric acid
β-Methylbutyric acid. See Isovaleric acid
3-Methylbutyric acid, allyl ester. See Allyl isovalerate
3-Methylbutyric acid, 3,7-dimethyl-octa-2,6-dienyl ester. See Neryl isovalerate; Geranyl isovalerate
3-Methylbutyric acid, 1,5-dimethyl-1-vinyl-hex-4-enyl ester. See Linalyl isovalerate
3-Methylbutyric acid, ethyl ester. See Ethyl isovalerate
3-Methylbutyric acid hexyl ester. See Hexyl isovalerate
2-Methylbutyric acid, phenethyl ester. See Phenethyl-2-methylbutyrate
3-Methylbutyric acid phenethyl ester. See Phenethyl isovalerate
2-Methyl butyric aldehyde; α-Methyl butyric aldehyde. See 2-Methylbutyraldehyde
3-Methylbutyrolactone; 4-Methyl-γ-butyrolactone; γ-Methyl-γ-butyrolactone. See γ-Valerolactone
Methyl caproate
CAS 106-70-7; EINECS/ELINCS 203-425-1
UN 3272; FEMA 2708
Synonyms: Hexanoic acid, methyl ester;
Methyl capronate; Methyl hexanoate;
Methyl 2-hexanoate; Methyl n-hexanoate;
Methyl hexoate; Methyl hexylate
Definition: Ester of methyl alcohol and caproic acid
Empirical: C7H14O2
Formula: CH3(CH2)4COOCH3
Properties: Colorless liq.; pleasant, fruity odor; sol. in alcohol, ether, oxyg.
ated solvs.; insol. in water; m.w. 130.19; dens. 0.884 (20/4 C); vapor dens. 4.4; f.p. -71 C; b.p. 150-151 C; flash pt. 43 C; ref. index 1.4055
Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, guinea pig) > 5 g/kg; LDLo (IV, mouse) 48 mg/kg; poison by IV route; sl. toxic by ing., inh., skin contact; TSCA listed
Precaution: Flamm.
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke, irritating
Chemical Component Cross-Reference

vapors, CO₂

Uses: Synthetic flavor for pharmaceuticals
Features: Pineapple-like flavor

Methylcarbinol. See Alcohol
Methylcatechol; α-Methylcatechol. See Guaiacol
Methyl 'Cellosolve'. See Methoxyethanol

Methylcellulose
CAS 9004-67-5
FEMA 2696; INS461; E461
Synonyms: Cellulose methyl; Cellulose methy late; Cellulose methyl ether; Citru cel; Cologel; MC; Methocel; Methyl cellulose ether
Definition: Methyl ether of cellulose
Properties: Grayish-wh. fibrous powd., odorless, tasteless;aq. suspension swells in water to visc. colloidal sol’n.; sol. in cold water, glacial acetic acid, some org. solvs.; insol. in alcohol, ether, chloroform, warm water; m.w. 86,000-115,000
Toxicology: LD₅₀ (IP, mouse) 275 g/kg; LD₉₀ (IV, mouse) 1 g/kg; poison by IP route; nonallergenic; may cause immune responses; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Thickener, suspending agent, stabilizer, emulsifier, dispersant, filler in pharmaceuticals, buccals, injectables, ophthalmics, orals, topicals, vaginals; tablet binder, coating agent; placebo tablets and capsules; bulk laxative
Regulatory: FDA 21CFR §150.141, 150.161, 175.105, 175.210, 175.300, 177.2260, 182.1480, GRAS; USDA 9CFR §318.7, limitation 0.15% in meat and vegetable prods.; FEMA GRAS; Canada DSL; Japan restricted (2% max.); Europe listed; UK approved; FDA approved for buccals, injectables, ophthalmics, orals, topicals, vaginals; USP/NF, BP, EP compliance
Manuf./Distrib.: AB R Lundberg

Methyl cellulose ether. See Methylcellulose

Methyl chavicol. See Estragole

Methylchloroform. See 1,1,1-Trichloroethane

Methylchloroisothiazolinone
CAS 26172-55-4; EINECS/ELINCS 247-500-7

Synonyms: Chloromethylisothiazolinone; 5-Chloro-2-methyl-4-isothiazolin-3-one; Chloro-2-methyl-3(2H)-isothiazolone; 5-Chloro-2-methyl-2H-isothiazol-3-one; CIT; CMI/MIT; 4-Isothiazolin-3-one, 5-chloro-2-methyl-

Classification: Heterocyclic organic compd.

Empirical: C₄H₄ClNOS

Properties: M.w. 149.60

Toxicology: Danger of skin and respiratory sensitization

Uses: Antimicrobial, biocide, preservative for pharmaceuticals, topicals

Regulatory: FDA 21CFR §175.105, 176.170; Canada DSL

3-Methyl-4-chlorophenol. See p-Chloro-m-cresol

4-methyl cinnamaldehyde. See p-Methylcinnamaldehyde

α-Methylcinnamaldehyde
CAS 101-39-3; EINECS/ELINCS 202-938-8

FEMA 2697

Synonyms: Methyl cinnamic aldehyde; α-Methyl cinnamic aldehyde; α-Methyl cinninal; 2-Methyl-3-phenyl-2-propenal; 2-Methyl-3-phenyl-propenyl; 3-Phenyl-2-methylacrolein

Classification: Aromatic aldehyde

Empirical: C₁₀H₁₀O

Properties: Yel. liq.; cinnamon odor; sol. in fixed oils, propylene glycol; insol. in glycerin; m.w. 146.19; dens. 1.037; b.p. 148-149 C (27 mm); flash pt. 175 F; ref. index 1.6050

Toxicology: LD₅₀ (oral, rat) 2050 mg/kg; mod. toxic by ing.; primary skin irritant; TSCA listed

Precaution: Combustible liq.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals
Chemical Component Cross-Reference

Features: Cinnamon-like flavor

Regulatory: FDA 21CFR §172.515; FEMA

GRAS; Japan approved as flavoring; Canada

Manuf./Distrib.: Advanced Synthesis Tech.
SAFC Specialties http://www.safcspecialties.com

p-Methylcinnamaldehyde
CAS 1504-75-2
FEMA 3640
Synonyms: 4-methyl cinnamaldehyde; 3-(4-Methyl phenyl)-2-propenal; 3-p-Methyl phenyl propenal; 3-(p-Methyl phenyl)propenal; 3-p-Tolyl propenal

Empirical: C_{10}H_{10}O
Properties: Pale yel. to yel. crystals; sol. in alcohol; insol. in water; m.p. 154 C; b.p. 154 C; acid no. 5.0 max.

Uses: Synthetic flavor for pharmaceuticals

Features: Spicy cinnamon odor

Regulatory: FDA 21CFR §172.515; FEMA

Manuf./Distrib.: Degussa AG/Health & Nutrition

Methyl cinnamate
CAS 103-26-4; EINECS/ELINCS 203-093-8
FEMA 2698
Synonyms: Methyl cinnamylate; Methyl-3-phenyl propenoate; 3-Phenyl-2-propenoic acid methyl ester

Empirical: C_{10}H_{10}O_{2}
Formula: C_{6}H_{5}CH:CHCOOCH_{3}

Properties: Wh. to sl. yel. cryst., fruity strawberry-like odor; very sol. in alcohol, ether; sol. in fixed oils, glycerin, propylene glycol, oxygenated solvs.; insol. in water; m.w. 162.20; dens. 1.042 (36/0 C); m.p. 33.4 C; b.p. 263 C; flash pt. > 212 F

Toxicology: LD_{50} (oral, rat) 2610 mg/kg; mod. toxic by ing.; TSCA listed

Precaution: Combustible; incompat. with strong oxidizers, reducers

Hazardous Decomp. Pros.: Heated to decomp., emits CO, CO_{2}, acrid smoke and irritating fumes

Storage: 12 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

Uses: Synthetic flavor for pharmaceuticals

Features: Strawberry-like flavor

Regulatory: FDA 21CFR §172.515; FEMA

†=pharmaceutical grade

Methyl cinnamic aldehyde; α-Methyl cinnamic aldehyde. See α-Methylcinnamaldehyde

Methyl cinnamylate. See Methyl cinnamate

α-Methyl cinninmal. See α-Methylcinnamaldehyde

Methyl cocoate
CAS 61788-59-8; EINECS/ELINCS 262-988-1
Synonyms: Coconut acid methyl ester; Fatty acids, coco, methyl esters; Methyl ester of coconut oil fatty acids

Definition: Ester of methyl alcohol and coconut fatty acids

Formula: RCO–OCH_{3}, RCO– represents the fatty acids derived from coconut oil

Toxicology: TSCA listed

Uses: Emollient, plasticizer, lubricant for pharmaceuticals

Regulatory: FDA 21CFR §172.225, 175.105, 176.200, 176.210, 177.2260, 177.2800,
Chemical Component Cross-Reference

178.3910; Canada DSL
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Chempri;
Mosselman NV http://www.mosselman.be
Trade Names: Exceparl MC

N-Methyl-N-(1-coconut alkyl) glycine. See Cocoyl sarcosine

6-Methylcoumarin
CAS 92-48-8; EINECS/ELINCS 202-158-8
FEMA 2699
Synonyms: 2H-1-Benzopyran-2-one, 6-methyl-; 6-MC; 6-Methyl-2H-1-benzopyran-2-one; 6-Methylbenzopyrone; 6-Methyl-1,2-benzopyrone; 6-Methylcoumarinic anhydride
Classification: Heterocyclic compd.; lactone
Empirical: C10H8O2
Properties: Wh. cryst.; dry herbaceous coconut; m.w. 160.17; m.p. 73-76 C; b.p. 303 C (725 mm)
Toxicology: LD50 (oral, rat) 1680 mg/kg; (subcut, mouse) 253 mg/kg; poison by subcut. route; mod. toxic by ing.; harmful; skin irritant; possible mutagen; TSCA listed
Precaution: Combustible; photosensitizer
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx and CN–
Uses: Synthetic flavor for pharmaceuticals; oral care agent
Features: Coconut-like flavor
Regulatory: FEMA GRAS; prohibited in cosmetics (Europe); Canada DSL

Methyl 2-cyanoacetate; Methyl cyanoethanoate. See Methyl cyanoacetate

Methyl cyclodextrin (INCI). See Methyl-β-cyclodextrin

Methyl-α-cyclodextrin
Uses: Chelating agent, solubilizer, bioavailability enhancer, odor/taste masking agent, stabilizer, antioxidant in pharmaceuticals
Features: Complex hosting guest molecules; turns liqs. or volatiles into stable solid powds.
Manuf./Distrib.: CarboMer†
http://www.carbomer.com

Methyl-β-cyclodextrin
CAS 128446-36-6
Synonyms: MβCD; Methyl cyclodextrin (INCI)
Classification: Cyclic oligosaccharides
Definition: Prod. obtained by methylation of cyclodextrin
Uses: Chelating agent, solubilizer, bioavailability enhancer, odor/taste masking agent, stabilizer, antioxidant in pharmaceuticals
Features: Complex hosting guest molecules; turns liqs. or volatiles into stable solid powds.
Chemical Component Cross-Reference

Regulatory: Canada DSL
Manuf./Distrib.: CarboMer†
http://www.carbomer.com

Trade Names: Cavasol® W7 M; Cavasol® W7 M Pharma; Cavasol® W7 M TL; Crysmeb

Methyl-γ-cyclodextrin

Definition: Complex hosting guest molecule
Uses: Chelating agent, solubilizer, bioavailability enhancer, odor/taste masking agent, stabilizer, antioxidant in pharmaceuticals
Features: Complex hosting guest molecules; turns liqs. or volatiles into stable solid powds.
Manuf./Distrib.: CarboMer†
http://www.carbomer.com

Methyl cyclohexane
CAS 108-87-2; EINECS/ELINCS 203-624-3
UN 2296 (DOT)
Synonyms: Cyclohexane, methyl-; Cyclohexylmethane; Hexahydrotoluene; Toluene hexahydrate
Classification: Sat. alicyclic hydrocarbon
Empirical: C7H14
Formula: C6H11CH3
Properties: Colorless liq.; faint benzene-like odor; sol. in most org. solvs.; insol. in water; m.w. 98.19; sp.gr. 0.77 (20 C); vapor pressure 40 mm Hg (20 C); m.p. -126 C; b.p. 101 C; flash pt.-4 C
Toxicology: ACGIH TLV/TWA 400 ppm; LD50 (oral, rat) 1600 mg/kg; FEMA 3360
Precaution: Combustible
Uses: Flavor in pharmaceuticals
Features: Medicinal, mild cherry flavor
Regulatory: FEMA GRAS; Canada DSL
Manuf./Distrib.: Advanced Synthesis Tech.

3-Methylcyclohex-2-enone. See 3-Methyl-2-cyclohexen-1-one

3-Methyl-2-cyclohexen-1-one
CAS 1193-18-6; EINECS/ELINCS 214-769-7
FEMA 3360
Synonyms: 3-Methylcyclohex-2-enone
Classification: Nonaromatic ketone
Empirical: C7H10O
Properties: Liq.; m.w. 110.16; dens. 0.971; b.p. 199-200 C; flash pt. 155 F; ref. index 1.4940
Toxicology: LD50 (oral, rat) 1600 mg/kg; TSCA listed
Precaution: Flamm.; dangerous fire risk; lower explosive limit in air 1.2%; incompat. with strong oxidizing agents (increases fire and explosion hazard)
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
NFPA: Health 2, Flammability 3, Reactivity 0
Storage: Store in cool, dry, well-ventilated area out of direct sunlight
Uses: Solvent in pharmaceuticals
Regulatory: Canada DSL
Manuf./Distrib.: Aldrich http://www.sigma-

HMIS: Health 1, Flammability 1, Reactivity 0
### Chemical Component Cross-Reference

**Storage:** 12 mos. when stored at 40-70°F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

**Uses:** *Synthetic flavor for pharmaceuticals*

**Regulatory:** FDA 21 CFR §175.105; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

**Methyldibromo glutaronitrile**

CAS 35691-65-7; EINECS/ELINCS 252-681-0

**Synonyms:** 2-Bromo-2-(bromomethyl) glutaronitrile; 2-Bromo-2-(bromomethyl) pentanedinitrile; 1,2-Dibromo-2,4-dicyanobutane; Glutaronitrile, 2-bromo-2-(bromomethyl)

**Definition:** Brominated methylene glutaronitrile

**Empirical:** C_{6}H_{6}Br_{2}N_{2}

**Formula:** NCCBrCH_{2}BrCH_{2}CH_{2}CN

**Properties:** Mildly pungent odor; sol. in methanol, ethanol, ether; insol. in water; m.w. 265.96; m.p. 51.2-52.5°C

**Toxicology:** TDLo (oral, rat) 1750 mg/kg; TSCA listed

**Uses:** Antimicrobial, preservative for pharmaceuticals

**Regulatory:** FDA 21 CFR §175.105, 176.170,

---

†=pharmaceutical grade

176,210, 176,300; USA not restricted; Europe listed; Canada DSL

**Trade Names Containing:** Nipaguard® DCB

4-Methyl-2,6-di-t-butylphenol; Methyl di-t-butylphenol. See BHT

**Methyl diglyme.** See Diethylene glycol dimethyl ether

**Methyl dihydrojasmonate**

CAS 2630-39-9; 24851-98-7; EINECS/ELINCS 220-112-5; 246-495-9; 253-379-1

**FEMA 3408**

**Synonyms:** 2-Amylcyclopentanoneacetic acid methyl ester; 3-(Carbomethoxymethyl)2-pentylcyclopentanone; Cyclopentenacetic acid, 3-oxo-2-pentyl-, methyl ester; Methyl (2-amyl-3-oxocyclopentyl) acetate; Methyl 2-hexyl-3-oxocyclopentanecarboxylate; Methyl (1R-trans)-3-oxo-2-pentylcyclopentanecacetate; Methyl 3-oxo-2-pentylcyclopentanecacetate; 3-Oxo-2-pentylcyclopentanecacid, methyl ester

**Classification:** Organic compd.; cycloaliphatic ester

**Empirical:** C_{13}H_{22}O_{3}

**Properties:** Colorless i.q.; fruity, jasmine-like odor; sol. in ethanol; m.w. 226.32; sp.gr. 0.998-1.006; flash pt. > 110°C; ref. index 1.457-1.461; acid value 0-1

**Uses:** Flavor for pharmaceuticals

**Regulatory:** FEMA GRAS; Canada DSL

**Trade Names:** Super-Cepionate®

**Methyl dimethylacetate.** See Methyl isobutyrate

**Methyl 1,1-dimethylethyl ether.** See Methyl t-butyl ether

**Methyl 2,4-dimethylphenyl ketone.** See 2,4-Dimethylacetophenone

**4-Methyl-1,3-dioxolan-2-one.** See Propylene

**†=pharmaceutical grade**

Methyl dodecanoate; Methyl n-dodecanoate; Methyl dodecylate. See Methyl laurate

11-Methyldodecyl dodecanoate. See Isotridecyl laurate

Methyl enanthate. See Methyl heptanoate

Methylene bichloride. See Methylene chloride

N,N’-Methylenebis[N’-[1-(hydroxymethyl)-2,5-dioxo-4-imidazolidinyl] urea]; N,N’-Methylenebis[N’-[3-(hydroxymethyl)-2,5-dioxoimidazolidin-4-yl] urea]. See Imidazolidinyl urea

4,4’-Methylenebis(3-hydroxy-2-naphthoic acid) disodium salt. See Disodium pamoate

N,N’-Methylenebis(methacrylamide)/glycidyl methacrylate/allyl glycidyl ether/methacrylamide copolymer

Uses: Carrier for enzyme immobilization in prod. of semisyn. antibiotics and chiral pharmaceuticals

Trade Names: Eupergit® C; Eupergit® C M; Eupergit® C250 L

2,2’-Methylenebis(3,4,6-trichlorophenol). See Hexachlorophene

Methylene blue. See Methylene blue trihydrate

Methylene blue trihydrate

CAS 7220-79-3

Synonyms: 3,7-Bis (dimethylamino) phenazathionium chloride trihydrate; 3,7-Bis (dimethylamino) phenothiazin-5-i um, chloride, trihydrate; CI basic blue 9, trihydrate; 7-(Dimethylamino)-3-(methylimino)-3H-phenothiazine, 3-methochloride, trihydrate; Methylene blue; Methylothionine chloride trihydrate; Methylothionine trihydrate; Phenothiazin-5-ium, 3,7-bis (dimethylamino)-, chloride, trihydrate; Tetramethylene blue trihydrate; Tetramethylothionine chloride trihydrate

Empirical: C₁₆H₁₈N₃S • Cl • 3H₂O

Properties: Dk. grn. cryst. with bronze luster or cryst. powd.; odorless or prac. odorless; sol. in water, DMSO, 95% ethanol; sol. < 1 mg/ml in acetone; insol. in ether; m.w. 373.90; m.p. 190 C (dec.)

Toxicology: LD₅₀ (oral, rat) 1180 mg/kg, (IP, mouse) 150 mg/kg, (IV, rat) 1250 mg/kg, (subcut., guinea pig) 300 mg/kg; poison by ing., IP, IV, subcut. routes; severe eye irritant; ing. may cause nausea, vomiting, diarrhea, dysuria, hemolytic anemia; skin irritant; IV exposure may cause nausea,
abdominal pain, chest pain, headache, dizziness, mental confusion, profuse sweating; subcut. exposure may cause necrotic abscesses; mutagenic data; target organ: blood; TSCA listed

Precaution: Probably combustible; incompat. with strong oxidizers, caustic alkali, alkali iodides, reducing agents, dichromates; forms double salts with many inorg. salts; bleached reversibly by (zinc + HCl) or sodium hydrosulfite

Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of CO, CO₂, NOₓ, SOₓ, chlorine, hydrogen chloride gas

Storage: Hygroscopic; store under ambient temps.; keep away from oxidizing materials

Uses: Medicine (antimethemoglobinemic, antidote to cyanide); veterinary medicine (antiseptic, disinfectant, antidote to cyanide and nitrate)

Methylene chloride
CAS 75-09-2; EINECS/ELINCS 200-838-9
UN 1593 (DOT)

Synonyms: DCM; Dichloromethane; Freon 30; MDC; Methane dichloride; Methane-, dichloro-; Methylene bichloride; Methylene dichloride

Classification: Halogenated aliphatic

†=pharmaceutical grade

Empirical: CH₂Cl₂

Properties: Colorless clear volatile liq., penetrating ether-like odor; sol. in alcohol, ether, phenols, aldehydes, ketones; misc. with fixed and volatile oils, oxygenated and chlorinated solvs.; mod. sol. in water; m.w. 84.93; dens. 1.335 (15/4 C); vapor pressure 380 mm (22 C); f.p. -97 C; b.p. 40.1 C; autoignition temp. 556 C; ref. index 1.4244 (20 C); KB value 136; nonflamm.

Toxicology: ACGIH TLV/TWA 50 ppm; LD50 (oral, rat) 2136 mg/kg, (IP, mouse) 437 mg/kg, (subcut., mouse) 6460 mg/kg; very toxic; poison by IV route; mod. toxic by ing., subcut., IP routes; mildly toxic by inh.; human systemic effects; eye and severe skin irritant; narcotic in high concs.; confirmed carcinogen; experimental tumorigen, teratogen, reproductive effector; human mutagenic data; TSCA listed

Environmental: ThOD 0.38

Precaution: Explosive as vapor exposed to heat or flame; incompat. with methanol, Al powd., amines, quat. ion exchange resins (azide form), DMSO, perchloric acid, alkali metals, nitric acid, etc.

Hazardous Decomp. Prods.: Contact with hot surfaces cause decomp., yielding toxic fumes; heated to decomp., emits highly toxic fumes of phosgene and CI⁻

NFPA: Health 2, Flammability 1, Reactivity 0

Storage: Store in cool, dry, well-ventilated area out of direct sunlight; keep quantities stored as small as possible

Uses: Solvent in pharmaceuticals, orals; pharmaceutical aid; medicine (anesthetic)

Regulatory: FDA 21CFR §73.1 (no residue), 73.30, 73.345, 73.615, 172.560, 173.255, 175.105, 177.1580, 177.1585; FDA approved for orals; Canada DSL; SARA §311/312 acute health/chronic health hazard, §313 reportable; CERCLA hazardous substance; Calif. Prop. 65 reportable; HAP; USP/NF, BP, EP compliance

Synonyms: Benzoic acid, 3,4,5-trihydroxy-, methyl ester; Gallic acid, methyl ester; Methyl 3,4,5-trihydroxybenzoate; 3,4,5-Trihydroxybenzoic acid, methyl ester

Empirical: C8H6O3

Formula: C6H2(OH)3 • COOCH3

Properties: Wh. cryst. powd.; odorless; sol. in hot water, alcohol, methanol, ether; m.w. 184.15; m.p. 202-205 C

Toxicology: LD50 (oral, mouse) 1200 mg/kg, (IP, mouse) 784 mg/kg, (IV, mouse) 470 mg/kg; mod. toxic by ing., IP and IV routes; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Antioxidant for pharmaceuticals

Methylglucamine (INCI); N-Methylglucamine. See Meglumine

Methyl gluceth-10

CAS 68239-42-9

Synonyms: PEG-10 methyl glucose ether; POE (10) methyl glucose ether

Definition: PEG ether of methyl glucose

Formula: CH3C6H10O5(OCH2CH2)nOH, avg. n = 10

Properties: Nonionic

Uses: Solvent and solubilizer for pharmaceutical topicals

Regulatory: Canada DSL

Trade Names: Glucam® E-10

Methyl gluceth-20

CAS 68239-42-9; 68239-43-0

Synonyms: PEG-20 methyl glucose ether; POE (20) methyl glucose ether

Definition: PEG ether of methyl glucose

Formula: CH3C6H10O5(OCH2CH2)nOH, avg. n = 20

Properties: Nonionic

Uses: Solvent and solubilizer for pharmaceutical topicals

Trade Names: Glucam® E-20

Methyl gluceth-20 distearate

CAS 119831-19-5

Properties: Nonionic

Uses: O/w emulsifier, moisturizer, conditioner, emollient and lubricant for pharmaceuticals
Methyl glucose dioleate
CAS 83939-91-3; EINECS/ELINCS 280-069-3
Synonyms: D-Glucopyranoside methyl 2,6-dioleate
Definition: Diester of a methyl glucoside and oleic acid
Empirical: C_{43}H_{78}O_{8}
Properties: Nonionic
Uses: Emollient, humectant, w/o emulsifier, aux. emulsifier for o/w systems, conditioner, emollient, lubricant, plasticizer, and pigment dispersant in topical pharmaceuticals
Trade Names: Glucate® DO

Methyl glucose sesquistearate
CAS 68936-95-8; EINECS/ELINCS 273-049-0
Synonyms: D-Glucopyranoside, methyl, octadecanoate (2:3)
Definition: Mixture of mono- and diesters of a methyl glucoside and stearic acid
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emollient, w/o emulsifier, visc. stability, mildness agent for pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucate® SS

N-Methylglycine; Methyl glycocoll. See Sarcosine

Methyl glycol. See Propylene glycol

Methylglyoxal. See Pyruvaldehyde

Methylguaiacol; 4-Methylguaiacol; p-Methylguaiacol. See 2-Methoxy-4-methylphenol

2-Methylhendecanal. See Methyl nonyl acetaldehyde

p-Methylhexyl 2-methylpropanoate. See p-Tolyl isobutyrate

16-Methylheptadecanoic acid. See Isostearic acid

16-Methylheptadecanoic acid, 16-methylheptadecyl ester. See Isostearyl isostearate

1-Methyl-2-heptadecenyl-3-oleylamidoethyl imidazolium methosulfate. See Oleic imidazolium methosulfate

16-Methylheptadecyl 16-methylheptadecanoate. See Isostearyl isostearate

Methyl heptanoate
CAS 106-73-0; EINECS/ELINCS 203-428-8
FEMA 2705
Synonyms: Heptanoic acid methyl ester; Methyl enanthate; Methyl heptoa; Methyl n-heptylate; Methyl oenanthylate
Empirical: C_{8}H_{16}O_{2}
Formula: CH_{3}(CH_{2})_{5}COOCH_{3}
Properties: Liq.; m.w. 144.22; dens. 0.881 (20/4 C); m.p. -55.8 C; b.p. 173.8 C; flash pt. 55 C; ref. index 1.412 (20 C)
Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; TSCA listed
Precaution: Flamm.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Synthetic flavor for pharmaceuticals
Features: Berry-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

2-Methylheptanoic acid
CAS 1188-02-9
FEMA 2706
Synonyms: Methylamylacetic acid; Methyl-2-heptanoic acid; 2-Methoxyenhanic acid
Empirical: C_{8}H_{16}O_{2}
Properties: Colorless liq.; char. odor; m.w. 144.21; ref. index 1.423-1.427
Storage: Store in tightly closed containers in dry, well-ventilated area away from direct sunlight
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Methyl-2-heptanoic acid. See 2-Methylheptanoic acid

5-Methyl-3-heptanone. See 3-Octanone

6-Methyl-5-heptene-2-one; Methyl-5-hepten-2-
Methyl heptenone

**Empirical:** \( \text{C}_8\text{H}_{14}\text{O} \)

**Formula:** \((\text{CH}_3)_2\text{C}:\text{CHCH}_2\text{CH}_2\text{COCH}_3\)

**Properties:** Colorless to sl. yel. liq.; citrus-lemongrass odor; misc. with alcohol, ether, chloroform, oxygenated solvs.; insol. in water; m.w. 126.22; dens. 0.846-0.851; m.p. -67 C; b.p. 173-174 C; flash pt. 55 C; ref. index 1.438-1.442

**Toxicology:** LD50 (oral, rat) 3500 mg/kg; mod. toxic by ing.; skin irritant; TSCA listed

**Precaution:** Combustible; incompat. with strong oxidizers, reducers

**Hazardous Decomp. Prods.:** Heated to decomp., emits CO, CO₂, acrid smoke and irritating fumes

**Storage:** 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Methyl hydroxyethylcellulose

CAS 9032-42-2
Synonyms: Cellulose, 2-hydroxyethyl methyl ether; Hydroxyethylmethylcellulose; MHEC
Definition: Methyl ether of hydroxyethylcellulose
Properties: Wh. powd.; sol. in cold water forming colloidal sol's, which gel as the temp. increases; nonionic
Uses: Binder, thickener, pigment, foam/filler stabilizer, dispersant, emulsifier, plasticizer, visc. control agent, sedimenting aid, and protective colloid in pharmaceuticals, orals
Regulatory: FDA approved for orals; BP, EP compliance; Canada DSL
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; CarboMer† http://www.carbomer.com

†=pharmaceutical grade

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: R.C. Treatt & Co. Ltd http://www.rctreatt.com

γ-Methyl ionone. See α-Isomethylionone

Methyl ionone delta. See Methyl Δ-ionone

Methyl isobutylacetate. See Methyl 4-
methylvalerate

Methyl isobutyl ketone
CAS 108-10-1; EINECS/ELINCS 203-550-1
UN 1245; FEMA 2731

Synonyms: Hexanone; Hexone; Isobutyl methyl ketone; Isopropylacetone; 4-Methyl-
2-oxopentane; 2-Methyl-4-pentanone; 4-
Methyl-2-pentanone; 4-Methylpentan-2-one;
2-Methylpropyl methyl ketone; MIBK (INCI)

Classification: Sat. aliphatic ketone

Empirical: C6H12O

Formula: CH3COCH2CH(CH3)2

Properties: Colorless volatile liq., faint ketonic/camphoraceous odor; misc. with alcohol, ether, benzene, most org. solvs.; sl. sol. in water; m.w. 100.18; dens. 0.8042 (20/20 C); vapor pressure 19.9 mm Hg; m.p. -85 C; b.p. 115.8 C; flash pt. (CC) 13 C; autoignition temp. 448 C; ref. index 1.396; surf. tens. 23.29 dynes/cm; dielec. const. 13.11

Toxicology: ACGIH TLV/TWA 50 ppm; STEL 75 ppm; LD50 (oral, rat) 2080 mg/kg; poison by IP route; mod. toxic by ing.; mildly toxic by inh.; very irritating to skin, eyes, mucous membranes; narcotic in high conc.; TSCA listed

Environmental: VOC; BOD5 1.67; COD 2.16; ThOD 2.72

Precaution: Flamm.: dangerous fire risk; explosive limits 1.4-7.5% in air; incomp. with oxidizing/reducing agents, strong bases, potassium t-butoxide; violent reactions possible

Hazardous Decomp. Prods.: Explosive peroxides (e.g., methyl isobutyl peroxide)

NFPA: Health 2, Flammability 3, Reactivity 1

Storage: Store in well-ventilated area; bond and ground metal containers in storage area

Uses: Alcohol denaturant, solvent, extractive agent, synthetic flavor for pharmaceuticals

Features: Fruity flavor

Regulatory: FDA 21CFR §172.515, 172.842, 175.105, 176.180, 176.200, 176.210, 177.1650; FEMA GRAS; USP/NF compliance; SARA §313 reportable; CERCLA hazardous substance; HAP; Canada DSL

Methyl isobutyrate
CAS 547-63-7; EINECS/ELINCS 208-929-5
UN 3272; FEMA 2694
Synonyms: Isobutyric acid methyl ester; Methyl dimethylacetate; 2-Methylpropanoic acid methyl ester
Definition: Ester of methanol and isobutyric acid
Empirical: CsH10O2
Formula: (CH3)2CHCOOCH3
Properties: Colorless mobile liq.; pungent, fruity odor; sl. sol. in water; misc. with alcohol, ether; m.w. 102.14; dens. 0.891 (20/4 C); vapor dens. 3.5; vapor pressure 50 mmHg; m.p. -84 to -85 C; b.p. 91-93 C; flash pt. 12 C; ref. index 1.384 (20 C)
Toxicology: LD50 (oral, rat) 16 g/kg; LC50 (inh., mouse) 25,500 mg/kg; mildly toxic by inh.; skin, eye, respiratory system irritant; TSCA listed
Precaution: Highly flamm.; incompat. with strong oxidizers
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes; COx
Storage: Keep in original, tightly closed container; keep away from heat, sparks, open flame
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Methyl isocaproate. See Methyl 4-methylvalerate

Methyl isoeugenol
CAS 93-16-3; EINECS/ELINCS 202-224-6
FEMA 2476
Synonyms: 4-Allyl-1,2-dimethoxybenzene; 1-(3,4-Dimethoxyphenyl) propene; 1,2-Dimethoxy-4-propenylbenzene; Isoeugenol methyl ether; 1,3,4-Isoeugenol methyl ether; Isoeugenyl methyl ether; Isohomogenol; 1,2-Methoxy-4-propenylbenzene; Propenyl
**Chemical Component Cross-Reference**

**guaiacol; 4-Propenylveratrole; 4-Prop-1-enylveratrole**

**Definition:** Commercial grades are mixts. of cis- and trans-isomers

**Empirical:** C₁₁H₁₄O₂

**Formula:** CH₃CH:CHC₆H₃(OCH₃)₂

**Properties:** Colorless to pale yel. liq., clove-carnation odor, burning bitter taste; sol. in 2 parts 70% alcohol; pract. insol. in min. oil; insol. in glycerol; m.w. 178.23; dens. 1.050; b.p. 262-264 C; flash pt. > 230 F; ref. index 1.5650-15.690 (20 C)

**Toxicology:** LD₅₀ (IP, mouse) 570 mg/kg, (IV, mouse) 181 mg/kg; poison by IV route; mod. toxic by IP route; irritating to skin; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and fumes

**Uses:** Synthetic flavor for pharmaceuticals

Methy]paraben

CAS 99-76-3; EINECS/ELINCS 202-785-7

FEMA 2710; INS218; E218

Synonyms: 4-Hydroxybenzoic acid, methyl ester; Methyl 4-hydroxybenzoate; Methyl p-hydroxybenzoate; Methyl p-oxybenzoate; Methyl parasept

Classification: aliphatic ketone

Definition: Ester of methyl alcohol and p-hydroxybenzoic acid

Empirical: C8H8O3

Formula: CH3OOC6H4OH

Properties: Colorless crystals or wh. cryst. powd., odorless or faint char. odor, sl. burning taste; sol. in alcohol, ether, oxygenated solvs.; sl. sol. in water, benzene, CCl4; m.w. 152.14; m.p. 125-128 C; b.p. 270-280 C (dec.)

Toxicology: LD50 (oral, dog) 3000 mg/kg, (IP, mouse) 960 mg/kg, (subcut., mouse) 1200 mg/kg; mod. toxic by ing., subcut., and IP routes; may cause skin and eye irritation, asthma, rashes, hyperactivity; may promote allergic sensitization in humans; mutagenic data; TSCA listed

Precaution: Conc. dust may present an explosion hazard; incompat. with alkalis and strong oxidizing agents

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes; burning may produce phenolic vapors and CO

HMIS: Health 1, Flammability 0, Reactivity 0

Uses: Antimicrobial, preservative, antifungal, antibacterial in pharmaceuticals, injectables, parenterals, inhalants, intravenous, ophthalmics, orals, rectals, topicals; flavor; dental anesthetics; insulin preps.

Use Level: 0.05% (eye wash); 0.1-0.8% (drug extracts); 0.3% (cough syrups); 0.02-0.1% (tablets); 0.1% (ointment bases); 0.2% (suppositories)

Regulatory: FDA 21CFR §150.141, 150.161, 172.515, 181.22, 181.23, 184.1490, GRAS, limitation 0.1%, 556.390, zero limitation in milk; USA CIR approved, EPA reg.; FEMA GRAS; Japan listed; Europe listed; UK approved; Canada DSL; FDA approved for injectables, parenterals, inhalants, intravenous, ophthalmics, orals, rectals, topicals; USP/NF compliance

Methyl parahydroxybenzoate; Methyl parasept. See Methylparaben

Methyl pelargonate
CAS 1731-84-6; EINECS/ELINCS 217-052-7
FEMA 2724

Synonyms: Methyl nonanoate; Methyl n-nonanoate; Methyl nonylate; Nonanoic acid, methyl ester; Pelargonic acid, methyl ester

Definition: Ester of methyl alcohol and pelargonic acid

Empirical: C_{10}H_{20}O
Formula: CH_{3}(CH_{2})_{7}COOCH_{3}

Properties: Colorless liq.; sol. in alcohol, ether; sol. 22.9 mg/l in water; m.w. 172.27; dens. 0.874 (20/4 C); b.p. 91-92 C (11 mm); flash pt. 87 C; ref. index 1.422 (20 C)

Toxicology: LDLo (IV, mouse) 48 mg/kg; may be harmful by inh., ing., or skin absorp.; may cause irritation; TSCA listed

Precaution: Combustible; incompat. with strong oxidizing agents, strong bases

Hazardous Decomp. Prods.: Toxic fumes of CO, CO_{2}; emits toxic fumes under fire conditions

Storage: Limited shelf life; store in a cool, dry place; keep tightly closed

Uses: Synthetic flavor for pharmaceuticals; medical research

Features: Coconut-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Methylpentamethylenediamine. See 2-Methylpentamethylenediamine

2-Methylpentamethylenediamine

CAS 15520-10-2; EINECS/ELINCS 239-556-6

Synonyms: 2-Methyl-1,5-diaminopentane; Methylpentamethylenediamine; MPMD; 1,5-Pentanediamine, 2-methyl-

Empirical: C_{8}H_{16}N_{2}
Formula: H_{2}NCH_{2}CH(CH_{3})C(CH_{2})_{2}NH_{2}

Properties: Colorless liq., weak ammonia, fishy odor; m.w. 116.2; sp.gr. 0.86; b.p. 193 C; f.p. -50 to -60 C; flash pt. (CC) 83 C

Toxicology: LD50 (oral, rat) 1690 mg/kg; can cause burns and ulceration of skin and eye tissue, nose, throat, and gastrointestinal irritation; TSCA listed

Precaution: Corrosive; avoid strong oxidants; combustible

Hazardous Decomp. Prods.: Emits toxic fumes of nitrogen oxides on decomp.
Chemical Component Cross-Reference

† = pharmaceutical grade

**Uses:** Organic synthesis of pharmaceuticals
**Regulatory:** Canada DSL
**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com]; Fluka [http://www.sigma-aldrich.com]
**Trade Names Containing:** Dytek® A

2-Methyl-2,4-pentanediol; 2-Methylpentane-2,4-diol; 4-Methyl-2,4-pentanediol. See Hexylene glycol

4-Methyl-2,3-pentanedione
**CAS:** 7493-58-5; **EINECS/ELINCS:** 231-328-4
**FEMA:** 2730
**Synonyms:** Acetyl isobutyryl; Isopropyl methyl diketone; Methyl isopropyl diketone
**Classification:** aliphatic ketone
**Empirical:** C₆H₁₀O₂
**Properties:** Yel. oil, char. pungent odor; sol. in alcohol; insol. in water; m.w. 114.15; dens. 0.9215 (11 C); m.p. -2.4 C; b.p. 116 C
**Uses:** Synthetic flavor for pharmaceuticals
**Features:** Sweet fruity buttery creamy fatty odor
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL
**Manuf./Distrib.:** Degussa AG/Health & Nutrition; Penta Mfg. [http://www.pentamfg.com]

Methyl pentanoate. See Methyl valerate

2-Methylpentanoic acid
**CAS:** 97-61-0; **EINECS/ELINCS:** 202-594-9
**UN:** 1760; **FEMA:** 2754
**Synonyms:** 3-Methylvaerlic acid
**Empirical:** C₆H₁₂O₂
**Properties:** Colorless oily liq.; misc. with alcohol, benzene, acetone; low sol. in water; m.w. 116.18; dens. 0.921 (20/4 C); m.p. -33 C; b.p. 197 C; ref. index 1.4146 (20 C)
**Toxicology:** LD₅₀ (oral, rat) 2050 mg/kg, (skin, rabbit) 2500 mg/kg; mod. toxic by ing. and skin contact; primary irritant; skin and severe eye irritant; corrosive; TSCA listed
**Environmental:** Prevent contamination of soil, ground- and surface water
**Precaution:** Combustible; incompat. with strong oxidizing agents
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes
**NFPA:** Health 2, Flammability 1, Reactivity 0
**Storage:** Store in cool, well-ventilated area
**Uses:** Synthetic flavor for pharmaceuticals
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

3-Methylpentanoic acid
**CAS:** 105-43-1
**UN:** 1760; **FEMA:** 3437
**Synonyms:** 3-Methylvaleric acid
**Empirical:** C₆H₁₂O₂
**Properties:** Colorless liq.; sour, herbaceous, sl. green, parmesan cheese odor; sol. in water; m.w. 116.16; dens. 0.930; b.p. 196-198 C; flash pt. 185 F; ref. index 1.412-1.418
**Precaution:** Corrosive; wear goggles or face shield, chemical resistant gloves
**HMIS:** Health 1, Flammability 2, Reactivity 0
**Uses:** Flavor for pharmaceuticals
**Features:** Herbaceous, sweet flavor
**Regulatory:** FEMA GRAS; Canada DSL

4-Methylpentanoic acid
**CAS:** 646-07-1; **EINECS/ELINCS:** 211-464-0
**FEMA:** 3463
**Synonyms:** Isocaproic acid; Isohexanoic acid; 4-Methyl valeric acid
**Empirical:** C₆H₁₂O₂
**Formula:** (CH₃)₂CH(CH₂)₂COOH
**Properties:** Colorless oily liq.; misc. with alcohol, benzene, acetone; low sol. in water; m.w. 116.18; dens. 0.921 (20/4 C); m.p. -33 C; b.p. 197 C; ref. index 1.4146
**Toxicology:** LD₅₀ (oral, rat) 2050 mg/kg, (skin, rabbit) 1050 mg/kg; toxic; mod. toxic by ing. and skin contact; primary skin and eye irritants
2-Methyl-4-pentanone; 4-Methyl-2-pentanone; 4-Methylpentan-2-one. See Methyl isobutyl ketone

Methyl-2-pentenoic acid. See 2-Methyl-2-pentenoic acid

2-Methyl-2-pentenoic acid

**CAS 3142-72-1; EINECS/ELINCS 221-552-0**

**FEMA 3195**

**Synonyms:** Methyl-2-pentenoic acid; 2-Pentenoic acid, 2-methyl-

**Empirical:** \(\text{C}_6\text{H}_{10}\text{O}_2\)

**Properties:** Wh. to yel. cryst.; sweet woody fruity aroma; sl. sol. in water; m.w. 114.14; dens. 0.979; m.p. 24-26 C; b.p. 123-125 C (30 mm); flash pt. 226 F; sp.gr. 0.975-0.982; b.p. 120 C (20 mm); flash pt. (CC) 225 F; ref. index 1.450-1.460 (20 C)

**Uses:** Flavor for pharmaceuticals

**Features:** Fruity flavor

**Regulatory:** FEMA GRAS; Canada DSL

**Formula:** \(\text{C}_6\text{H}_{10}\text{O}_2\)

**Environmental:** Dangerous to the environment

**Precaution:** Flamm. exposed to heat or flame; can react with oxidizing materials

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and fumes

**Uses:** Reactive intermediate in the mfg. of pharmaceuticals; medicine (soporific and...

Chemical Component Cross-Reference

acetate; Dimethyl phenylethyl carbinyl acetate; 1,1-Dimethyl-3-phenylpropyl acetate; (1,1-Dimethyl-3-phenylpropyl) ester acetic acid; 2-Methyl-4-phenyl-2-butanol acetate; Phenyl ethyl dimethyl carbinyl acetate

Empirical: C_{13}H_{18}O_{2}

Properties: M.w. 206.31

Toxicology: LD50 (oral, rat) 4850 mg/kg; mildly toxic by ing.; skin irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: R.C. Treatt & Co. Ltd

2-Methyl-4-phenyl-2-butyl isobutyrate

CAS 10031-71-7; EINECS/ELINCS 233-092-8

FEMA 2736

Synonyms: Dimethylphenethyl carbinyl isobutyrate; Dimethylphenylethyl carbinyl isobutyrate; 1,1-Dimethyl-3-phenylpropyl isobutyrate; 1,1-Dimethyl-3-phenylpropyl 2-methylpropanoate; 2-Methyl-4-phenyl-2-butyl 2-methyl propanoate; 2-Methyl propanoic acid 1,1-dimethyl-3-phenyl propyl ester; Papaya isobutyrate

Empirical: C_{15}H_{22}O_{2}

Properties: Colorless to pale yel. liq.; sol. in alcohol and dipropylene glycol; insol. in water; sp. gr. 0.949-0.957; b.p. 250 C; flash pt. (TCC) > 212.00 F; ref. index .477-1.482

Uses: Synthetic flavor for pharmaceuticals

Features: Floral green fruity sweet papaya juicy odor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

2-Methyl-4-phenyl-2-butyl 2-methyl propanoate. See 2-Methyl-4-phenyl-2-butyl isobutyrate

3-Methyl-2-phenylbutyraldehyde

CAS 2439-44-3

FEMA 2738

Synonyms: α-Isopropyl phenylacetaldehyde

Empirical: C_{11}H_{14}O

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Methyl 4-phenylbutyrate

CAS 2046-17-5; EINECS/ELINCS 218-067-1

†=pharmaceutical grade

FEMA 2739

Synonyms: Benzenebutanoic acid, methyl ester; Butyric acid, 4-phenyl-, methyl ester; Methyl ester of benzenebutanoic acid; Methyl 4-phenylbutanoate; 4-Phenylbutanoic acid methyl ester

Empirical: C_{11}H_{14}O_{2}

Properties: Colorless cl. liq.; sol. in alcohol; sl. sol. in water; m.w. 178.23; vapor pressure 0.0243 mm Hg

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Methyl phenylcarbinol. See α-Methylbenzyl alcohol

Methylphenylcarbinol acetate; Methylphenylcarbinyl acetate. See α-Methylbenzyl acetate

2-Methylpropyl propanoate; 2-Methylpropyl propionate. See Isobutyl propionate
Methylprotopocatechualdehyde; Methylprotopocatechuic aldehyde. See Vanillin

2-Methylpyrazine
CAS 109-08-0; EINECS/ELINCS 203-645-8
FEMA 3309
Synonyms: Pyrazine, 2-methyl
Classification: Aromatic heterocyclic; pyrazine
Empirical: C₅H₇NO
Properties: Liq.; nutty cocoa odor; misc. with water, alcohol, acetone, fixed oils; m.w. 109.14; m.p. 40 C; hygroscopic range of polar solvents and water; m.w. 109.14; m.p. 40 C; hygroscopic
Toxicology: LD50 (oral, rat) 1689 mg/kg; mod. toxic by IP route; TSCA listed
Hazardous Decomp. Pros.: Heated to decomp., emits toxic vapors of NOₓ
Uses: Pharmaceutical intermediate
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Raschig

Methyl 2-pyridyl ketone. See 2-Acetylpyridine
Methyl 3-pyridyl ketone; Methyl β-pyridyl ketone. See 3-Acetylpyridine

2-Methyl pyrromeconic acid. See Maltol
Methyl pyromucate. See Methyl 2-furoate
1-Methylpyrrolidinone; 1-Methyl-2-pyrrolidinone; N-Methylpyrrolidinone; N-Methyl-2-pyrrolidinone; Methyl pyrrolidone (INCI); 1-Methylpyrrolidone; 1-Methyl-2-pyrrolidone; N-Methylpyrrolidone. See N-Methyl-2-pyrrolidone

N-Methyl-2-pyrrolidone
CAS 872-50-4; EINECS/ELINCS 212-828-1
UN NA 1993 (DOT)
Synonyms: 1-Methylazacyclopentan-2-one; 1-Methylpyrrolidinone; 1-Methyl-2-pyrrolidinone; N-Methylpyrrolidinone; N-
**Chemical Component Cross-Reference**

**Methyl-2-pyrrolidinone; Methyl pyrrolidone (INCI); 1-Methylpyrrolidone; 1-Methyl-2-pyrrolidone; N-Methylpyrrolidone; NMP; m-Pyrrole**

**Classification:** Sat. nitrogen heterocyclic compd.

**Empirical:** C₅H₉NO

**Properties:** Colorless liq., mild amine odor; sol. in water, alcohols, ketones, ethers, ethyl acetate, aromatic hydrocarbons, most org. solvs.; mod. sol. in aliphatic hydrocarbons; misc. with castor oil; m.w. 99.13; dens. 1.032 (20/4 C); vapor pressure 0.3 mm Hg (20 C); f.p. -24 C; b.p. 202 C; flash pt. 95 C; ref. index 1.470 (20 C); pH 7.7-8.0 (10% aq.)

**Toxicology:** LD₅₀ (oral, rat) 7000 mg/kg, (IP, rat) 2472 mg/kg, (IV, mouse) 54,500 µg/kg, (skin, rabbit) 8000 mg/kg; poison by IV route; mod. toxic by ing. and IP routes; mildly toxic by skin contact; severely irritating to eyes, skin; inh. of high consc. may cause fatigue, difficulty breathing; ing. may cause nausea, vomiting; not a skin absorption hazard; experimental teratogen, reproductive effects; mutagenic data; TSCA listed

**Environmental:** Readily biodeg.; VOC; ThOD 1.05; EC50 (rainbow trout, 96 h) ≥ 500 mg/l, (algae, 72 h) ≥ 500 mg/l

**Precaution:** Combustible exposed to heat, open flame, powerful oxidizers; incompat. with oxidizing agents (may spontaneously ignite), strong acids and strong bases (can cause hydrolysis)

**Hazardous Decomp. Prods.:** May form hydroperoxides on exposure to air and sunlight; heated to decomp., emits CO, CO₂, toxic fumes of NOₓ

**HMIS:** Health 2, Flammability 1, Reactivity 0

**Storage:** Store in cool, dry, well-ventilated area, out of direct sunlight; hygroscopic; photosensitive

**Uses:** Solvent in pharmaceuticals; synthesis of vitamin E precursor; solubilizer for topicals; increases water sol. of therapeutic compds.; bioadhesive; spray bandages; veterinary pharmaceuticals

**Regulatory:** BP, EP compliance; FDA 21 CFR §176.300, 177.1655, 177.2440; SARA §311/312 acute health/chronic health/fire hazard; Canada DSL

Methyl salicylaldehyde. See α-Methoxybenzaldehyde

Methyl salicylate

CAS 119-36-8; EINECS/ELINCS 204-317-7

UN 3082; FEMA 2745

**Synonyms:** Betula; Betula oil; 2-Carbomethoxyphenol; 2-Hydroxybenzoic acid, methyl ester; o-Hydroxybenzoic acid, methyl ester; 2-(Methoxycarbonyl) phenol; Methyl hydroxybenzoate; Methyl 2-hydroxybenzoate; Methyl o-hydroxybenzoate; Oil of wintergreen; Sweet birch oil; Synthetic oil of wintergreen; Teaberry oil; Wintergreen oil

**Classification:** Aromatic organic compd.

**Definition:** Ester of methyl alcohol and salicylic acid

**Empirical:** C₈H₈O₃
Chemical Component Cross-Reference

Formula: \( C_6H_4OHCOOCH_3 \)

Properties: Colorless, yel., or red liq., wintergreen odor and taste; sol. in ether, glacial acetic acid, oxygenated and chlorinated solvs.; very sl. sol. in water; m.w. 152.14; dens. 1.180-1.185; m.p. -8.6 C; b.p. 222.2 C; flash pt. (CC) 101 C; ref. index 1.535-1.538 (20 C)

Toxicology: LD50 (oral, rat) 887 mg/kg, (subcut., rabbit) 4250 mg/kg; mod. toxic by ing., IP, IV, subcut. routes; human poison by ing.; lethal dose 30 cc in adults, 10 cc in children; human systemic effects; primary irritant; severe skin/eye irritant; experimental teratogen, reproductive effects; TSCA listed

Precaution: Combustible when exposed to heat or flame; reactive with oxidizing materials; protect from light, alkaline, iron salts

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 2, Flammability 1, Reactivity 0

Uses: Synthetic flavor, fragrance, disinfectant, antiseptic in pharmaceuticals, buccals, orals, topicals, dentifrices; topical analgesic; local anesthetic; relief of pain in lumbar and sciatic regions and for rheumatic conditions; UV absorber in sunburn lotions

Features: Sweet minty flavor

Use Level: 0.5 mg/kg/day considered safe for ingestion

Regulatory: FDA 21CFR §175.105, 177.1010; 27CFR §21.65, 21.151; FEMA GRAS; Japan approved as flavoring; FDA approved for buccals, orals, topicals; USP/NF, BP, EP compliance; Canada DSL

Methylsalicylate methyl ester. See Methyl α-methoxybenzoate

Methylsilanol mannuronate
CAS 102397-69-3; 128973-71-7; EINECS/ELINCS 310-104-0
Synonyms: 1-O-(Dihydroxymethylsilyl)-β-D-mannopyranuronic acid; Siloxanes and silicones, α-D-mannopyranuronoyl-oxy methyl, hydroxy-terminated
Definition: Ester of monomethylsilanol and oligomeric mannuronic acid
Empirical: C2H14O9Si
Formula: CH3Si(OH)2OC6H9O6
Uses: Conditioner in health prods.
Trade Names: Algisium C

Methyl silicone; Methyl silicone resin. See Polydimethylsiloxane

Methyl soyate
CAS 67784-80-9; EINECS/ELINCS 267-015-4
Synonyms: Methyl esters of soybean oil
Classification: Fatty acid esters
Definition: Ester of methyl alcohol and soya acid derived from soybeans
Properties: Vapor pressure 0
Toxicology: Noncarcinogenic
Environmental: Biodeg.; low VOC; not an ODC or HAP
HMIS: Health 1, Flammability 1, Reactivity 0
Uses: Emollient in creams and lotions
Regulatory: EPA approved SNAP solvent; SARA nonreportable; Canada DSL
Trade Names Containing: Natural Wax Jelly SP-505

Methyl stearate
CAS 112-61-8; 85586-21-6; EINECS/ELINCS 203-990-4, 287-824-6
Synonyms: Methyl ester stearic acid; Methyl octadecanoate; Methyl n-octadecanoate; Octadecanoic acid, methyl ester; Stearic acid, methyl ester

Definition: Ester of methyl alcohol and stearic acid
Empirical: C19H38O2
Formula: CH3(CH2)16COOCH3
Properties: Wh. crystals; sol. in ether, alcohol; insol. in water; m.w. 298.57; m.p. 37.8 C; b.p. 234.5 C (30 mm); flash pt. 307 F
Toxicology: TDLo (subcut., mouse, 26 wk intermittent) 5200 mg/kg; experimental tumorigen; questionable carcinogen; TSCA listed
Precaution: Combustible exposed to heat or flame; can react with oxidizing materials
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Emollient in pharmaceuticals, topicals; defoamer and nutrient in fermentation
Regulatory: FDA 21CFR §172.225, 176.200, 176.210, 177.2260, 177.2800, 178.3910; FDA approved for topicals; Canada DSL

Trade Names: Exceparl MS

Methyl p-tolyl ether. See p-Methylanisole
Methyl p-tolyl ketone. See 4’-Methyl acetophenone

2-Methyl-3-tolylpropionaldehyde, mixed α-, m-, p-
CAS 977044-51-1
FEMA 2748
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS
Manuf./Distrib.: Degussa AG/Health & Nutrition; Penta Mfg.
http://www.pentamfg.com

Methyl tosylate
CAS 80-48-8; EINECS/ELINCS 201-283-5
UN 2922
Synonyms: Benzenesulfonic acid, 4-methyl-, methyl ester; Methyl-4-methylbenzenesulfonate; Methyl-p-methylbenzenesulfonate; Methyl-4-toluene sulfonate; Methyl-para-toluene sulfonate; p-Toluene sulfonic acid, methyl ester
Empirical: C₉H₁₀O₃S
Properties: Pale yel. to amber solid; sol. in diethyl ether.; insol. in hot and cold water; m.w. 186.23; sp. gr. 1.23; b.p. 292 C; m.p. 28 C; flash pt. (CC) 152 C
Toxicology: LD₅₀ (acute oral, rat) 341 mg/kg; can cause eye, skin, digestive tract, and respiratory tract irritation; harmful if swallowed; may be carcinogenic
Hazardous Decomp. Prods.: COₓ
Uses: Methylating agent and intermediate for use in production of pharmaceutical and health care products
Manuf./Distrib.: Seal Sands Chems. Ltd†
http://www.rutherfordchemicals.com

Methyl trichloride. See Chloroform
Methyltrichloromethane. See 1,1,1-Trichloroethane
12-Methyl-1-tridecanol. See 2-Hexyl-1-octanol

Methyl 3,4,5-trihydroxybenzoate. See Methyl gallate
3-Methyl-4-(2,6,6-trimethyl-2-cyclohex-1-yl)-1-buten-2-one. See α-Isomethylionone
Methyltrimethylene glycol. See Butylene glycol
Methylundecanal; 2-Methyl undecanal. See Methyl nonyl acetaldehyde

Methyl 9-undecenoate
CAS 5760-50-9; EINECS/ELINCS 227-279-3
FEMA 2750
Synonyms: Methyl decylenenate; 9-Undecenoic acid, methyl ester
Empirical: C₁₂H₂₂O₂
Properties: M.w. 198.34
Toxicology: LD₅₀ (oral, rat) 3 g/kg; skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: NetQem
http://www.netqem.us; Penta Mfg.
http://www.pentamfg.com

Methyl undecylenate. See Methyl 9-undecenoate

Methyl 2-undecynoate
CAS 10522-18-6
FEMA 2751
Synonyms: Methyl decyne carbonate; 2-Undecynoic acid methyl ester
Empirical: C₁₂H₂₀O₂
Properties: Colorless liq.; sol. in alcohol and dipropylene glycol; insol. in water; sp. gr. 0.91; b.p, 230.00 C @ 760.00 mm
Uses: Synthetic flavor for pharmaceuticals
Features: Waxy fruity green floral violet odor; green, fruity, oily, fatty, chicken- and tallow-like taste
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Degussa AG/Health & Nutrition

3-Methylvaleric acid. See 3-Methylpentanoic acid

Methyl valerate
CAS 624-24-8; EINECS/ELINCS 210-838-0
FEMA 2752
Synonyms: Methyl pentanoate; Methyl n-valerate; Methyl valerianate; Pentanoic acid
methyl ester; Valeric acid, methyl ester
Empirical: C₇H₁₂O₂
Formula: CH₃(CH₂)₃COOCH₃
Properties: Colorless liq.; fruity odor; misc. with oxygenated solvs.; sl. sol. in water; m.w. 116.16; dens. 0.889 (20/4 C); b.p. 126-128 C; flash pt. 27 C; ref. index 1.397 (20 C)
Toxicology: LC50 (inh., mouse, 2 h) 6600 mg/m³; sl. toxic by inh.; TSCA listed
Precaution: Flamm.
Hazardous Decomp. Prods.: Heated to decomp., emits acid smoke and irritating vapors
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity flavor
Regulatory: FDA 21CFR §175.215; FEMA GRAS; Canada DSL
Methyl n-valerate; Methyl valerianate. See Methyl valerate
2-Methylvaleric acid. See 2-Methylpentanoic acid
4-Methyl valeric acid. See 4-Methylpentanoic acid
α-Methylvaleric acid. See 2-Methylpentanoic acid
Methyl vanillin; 4-o-Methylvanillin. See Veratraldehyde
4-Methyl vinyl cyclohexene-1-methyl acetate. See Perillyl acetate
Methyl vinyl ether/maleic acid copolymer
CAS 25153-40-6
Synonyms: 2-Butenedioic acid (2Z), polymer with methoxyethene; MVE/MA copolymer; Poly (methyl vinyl ether-alt-maleic acid)
Classification: Vinyl ether
Formula: (C₇H₁₀O₅)n
Properties: Wh. powd.; dissolves readily in water; chelates alkaline earth cations but not toxic heavy metal ions; m.w. (174.15)n
Toxicology: May be harmful by inh., ing., or skin absorption; may cause eye/skin irritation; TSCA listed
Precaution: Incompat. with strong oxidizing agents, strong bases
Hazardous Decomp. Prods.: CO, CO₂; emits toxic fumes under fire conditions
Storage: Store in cool, dry place; keep tightly closed
Uses: Used in denture adhesive formulations
Regulatory: Canada DSL
Trade Names: Gantrez® S-95
Methyl vinyl ether/maleic anhydride copolymer. See PVM/MA copolymer
2-Methyl-2-vinyl-5-(α-hydroxyisopropyl) tetrahydrofuran; 2-Methyl-2-vinyl-5-(2-hydroxy-2-propyl) tetrahydrofuran. See Linalool oxide
Methyl violet. See Basic violet 3
Metoxal. See Sulphamethoxazole
Mexican oregano. See Oregano
MFP. See Sodium fluorophosphate
MHEC. See Methyl hydroxyethylcellulose
MHPC. See Hydroxypropyl methylcellulose
3-MI. See Skatole
MIBK (INCI). See Methyl isobutyl ketone
Mica
CAS 12001-26-2; EINECS/ELINCS 310-127-6
Synonyms: CI 77019; Mica silicate; Muscovite mica; Phlogopite; Sericite; Suzorite mica
Classification: Silicate minerals
Definition: Any of several silicates of varying chem. composition, but similar physical props. and crystalline structure
Properties: Colorless to sl. red, brown to greenish-yel. soft, translucent solid; odorless; dens. 2.6-3.2; bulking value 0.044 gal/lb; oil absorp. 40-65; GE brightness 80-88; ref. index 1.56-1.60; hardness (Mohs) 2.8-3.2; dielec. const. 6.5-8.7; heat resistant to 600 C; noncombustible
Toxicology: ACGIH TLV/TWA 3 mg/m³ (respirable dust); irritant by inhalation; may damage lungs (fibrosis); may cause abnormal chest x-ray, coughing, shortness of breath; nontoxic to skin
Uses: Colorant for external pharmaceuticals, eye use
Regulatory: FDA 21CFR §73.1496, 73.2496, 175.300, 176.170, 177.1460, 177.2410, 177.2600, 178.3297; exempt from certification, permanently listed for drug use; Canada DSL

### Properties

- **Formula:** \((\text{C}_6\text{H}_{10}\text{O}_5)_n\)
- **Properties:** Wh. fine cryst. powd., odorless; partly sol. with swelling in dil. alkali; insol. in water, dil. acids, and most org. solvs.; m.w. \(\approx 36,000\); bulk dens. 18-19 lb/ft\(^3\); ref. index 1.55; pH 5-7
- **Toxicology:** LD50 (oral, rat) > 5 g/kg, no significant hazard; irritant by inhalation (dust); may be damaging to lungs; TSCA listed
- **Uses:** Binder, disintegrant, diluent, filler, and lubricant in tablets or capsules; flow aid, sorbent, suspending agent, visc. builder for pharmaceuticals; adsorbs water-sol.

### Regulatory

- FDA GRAS; Europe listed; UK approved; USP/NF, BP, EP, JP compliance; Canada DSL

### Uses

- **Binder, disintegrant, diluent, filler, and lubricant in tablets or capsules; flow aid, sorbent, suspending agent, visc. builder for pharmaceuticals; adsorbs water-sol.**
Microcrystalline hydrocarbon wax. See Microcrystalline wax

Microcrystalline wax

CAS 8063-08-9; 63231-60-7; 64742-42-3; EINECS/ELINCS 264-038-1

INS905c(i); E905

Synonyms: Cera microcristallina;
Microcrystalline hydrocarbon wax; Paraffin waxes and hydrocarbon waxes,
microcrystalline; Petroleum wax,
microcrystalline; Waxes, microcrystalline

Classification: Hydrocarbon wax

Definition: Wax derived from petroleum; combination of long branched chain hydrocarbons obtained from residual oils by solvent crystallization; consists of high m.w. saturated aliphatic hydrocarbons > C35 and char. by fineness of crystals

Properties: Wh. or cream-colored waxy solid, odorless; sol. in chloroform, ether, volatile oils, most warm fixed oils; insol. in water; very sl. sol. in dehydrated alcohol; m.p. 54-102 C

 Toxicology: May be carcinogenic; TSCA listed

Uses: Coating agent, lubricant, protectant in pharmaceuticals, orals, topicals

Regulatory: USP/NF compliance; FDA 21 CFR §172.886, 173.340, 175.105, 175.320, 176.170, 176.200, 177.2600; Europe listed; UK approved for restricted use; FDA approved for orals, topicals

Microcrystalline wax, hydrogenated. See
Hydrogenated microcrystalline wax

Milfoil. See Yarrow (Achillea millefolium)

Milk acid. See Lactic acid

Milk of lime. See Calcium hydroxide

Milk lipids
CAS 188550-52-9

Synonyms: Lactis lipida
Definition: Mixt. of lipids derived from milk
Uses: Conditioner, emollient, moisturizer

Trade Names: Monalac ML

Milk of magnesia. See Magnesium hydroxide

Milk, nonfat dry. See Nonfat dry milk

Milk protein
CAS 9000-71-9; EINECS/ELINCS 232-555-1

Synonyms: Casein; Lactis proteinum
Definition: Mixture of proteins obtained from
cow's milk

Properties: Light-yel. powd.
Uses: Thickener for pharmaceuticals

Manuf./Distrib.: Adams Food Ingreds. Ltd

Handbook of Pharmaceutical Additives, Third Edition 1694
Mimosa tenuiflora bark extract; Mimosa tenuiflora leaf extract

Synonyms: Mimosa bark extract; Mimosa tenuiflora

Definition: Extract of the bark of Mimosa tenuiflora

Uses: Protectant in pharmaceutical lotions and creams

Manuf./Distrib.: Carrubba
http://www.carrubba.com

Mimosa tenuiflora leaf extract

CAS 93685-96-2

Synonyms: Mimosa tenuiflora

Definition: Extract of the leaves of Mimosa tenuiflora

Uses: Botanical extract, protectant in lotions, creams, and salves to treat skin disorders

Manuf./Distrib.: Creative Fragrances
http://www.creativefragrances.com

Mineral grease (petrolatum); Mineral jelly.

See Petrolatum

Mineral naphtha. See Benzene

Mineral oil

CAS 8012-95-1; 8020-83-5 (wh.); 8042-47-5 (wh.); 39355-35-6; 79956-36-8; 83046-05-3; EINECS/ELINCS 232-384-2; 232-455-8 (wh.)

INS 905a

Synonyms: Heavy mineral oil; Light mineral oil; Liquid paraffin; Liquid petrolatum; Mineral oil, white; Oil mist, mineral; Paraffin oil; Paraffinum liquidum; Petroleum liquid; Petroleum oil; White mineral oil; White oil

Definition: Liq. mixture of hydrocarbons obtained from petroleum by intensive treatment with sulfuric acid and oleum, or by hydrogenation, or a combination; consists of predominantly C15-50 sat. hydrocarbons

Properties: Colorless transparent oily liq., odorless, tasteless; insol. in water, alcohol; sol. in benzene, chloroform, ether, petrol. ether, carbon disulfide, volatile oils; dens. 0.83-0.86 (light), 0.875-0.905 (heavy); flash pt. (OC) 444 F; surf. tens. < 35 dynes/cm

Toxicology: ACGIH TLV/TWA 5 mg/m³; STEL 10 mg/m³; LD50 (oral, mouse) 22 g/kg; skin and severe eye irritant; inh. of vapor or particulates may cause aspiration pneumonia; human carcinogen and teratogen by inhalation; tumorigen; highly purified food grades are of low toxicity;

†=pharmaceutical grade

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes

NFPA: Health 0, Flammability 1, Reactivity 0

Uses: Vehicle, filler, solvent, lubricant for pharmaceuticals, ophthalmic ointments or suspensions, oral tablets and capsules, topical creams, lotions, and ointments, suppositories; light min. oil as tablet/capsule lubricant; laxative; cathartic

Features: Oleaginous

Regulatory: FDA 21CFR §172.842, 172.878, 173.340 (limitation 0.008% in wash water for sliced potatoes, 150 ppm in yeast), 175.105, 175.210, 175.230, 175.300, 176.170, 176.200, 176.210, 177.1200, 177.2260, 177.2600,; Canada DSL; 177.2800, 178.2010, 178.3570, 178.3620, 178.3740, 178.3910, 179.45, 573.680; ADI not specified (FAO/WHO); FDA approved for ophthalmics, orals, topicals; USP/NF compliance

Mono decanoyl octanoyl glyceride. See Caprylic/capric triglyceride
Monodehydroxysoorbital monoooleate. See Sorbitan oleate

Handbook of Pharmaceutical Additives, Third Edition 1697
### Mono- and di-acetylated monoglycerides

**Definition:** Glycerin esterified with edible fatty acids and acetic acid

**Properties:** Wh. to pale yel. waxy solid; sol. in ether, chloroform; sl. sol. in carbon disulfide; insol. in water; m.p. ≈ 45 C; acid no. 3 max.; sapon. no. 279-292; hyd. no. 133-152

**Uses:** Plasticizer for pharmaceuticals

**Synonyms:** INS 471; E 471

### Mono- and diglycerides, acetic acid esters

See Acetylated mono- and diglycerides of fatty acids

### Mono- and diglycerides citrates; Mono- and diglycerides, citric acid esters

See Citric acid esters of mono- and diglycerides of fatty acids

### Mono- and diglycerides, ethoxylated

See Ethoxylated mono- and diglycerides

### Mono- and diglycerides of fatty acids

CAS 67254-73-3; 67701-32-0; 67701-33-1; 68990-53-4

**Synonyms:** Fatty acid mono/diglycerides; MDG

**Definition:** Mixt. of glycerol mono- and di-esters, with minor amts. of tri-esters, of fatty acids from edible oils

**Properties:** Yel. liqs. to ivory plastics to hard solids, bland odor and taste; sol. in alcohol, ethyl acetate, chloroform, other chlorinated hydrocarbons; insol. in water; acid no. 4 max.; nonionic

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Emulsifier, solubilizer for pharmaceutical topical ointments; tableting aid

**Regulatory:** FDA 21CFR §136.110, 172.812, 172.863, 175.105, 184.1505, GRAS; USDA 9CFR §318.7, 381.147; Europe listed; UK approved; NF compliance

Morellone. See Benzyl dipropyl ketone

Morpholine
CAS 110-91-8; EINECS/ELINCS 203-815-1
UN 1760 (DOT); UN 2054 (DOT)

Synonyms: Diethyleneimide oxide; Diethylene imidoxide; Diethylenimide oxide; 1-Oxa-4-azacyclohexane; Tetrahydro-1,4-isoxazine; Tetrahydro-p-isoxazine; Tetrahydro-2H-1,4-oxazine; Tetrahydro-4H-1,4-oxazine; Tetrahydro-2H-1,4-oxazine; Tetrahydro-p-oxazine

Classification: Heterocyclic sec. amine

Empirical: C₄H₉NO
Formula: C₄H₈ONH

Properties: Colorless clear oily liq., amine-like odor; sol. in water, acetone, benzene, ether, ethyl acetate, chloroform, ethylene glycol, castor oil, alcohols; m.w. 87.14; sp.gr. 1.002 (20/20 C); vapor pressure 10 mm Hg (23 C); f.p. -4.9 C; b.p. 128.9 C; flash pt. (OC) 37.7 C; autoignition temp. 590 F; ref. index 1.4540 (20 C)

Toxicology: ACGIH TLV/TWA 20 ppm; STEL 30 ppm (skin); LD50 (oral, rat) 1050 mg/kg, (skin, rabbit) 500 mg/kg; mod. toxic by ing., inh., skin contact, IP; corrosive irritant to skin, eyes, mucous membranes; overexposure may cause visual disturbance, nose and respiratory irritation, coughing, liver and kidney damage; very high concs. may be fatal; TSCA listed

Environmental: LC50 (bluegill, 96 h) 350 mg/l

Precaution: DOT: Flamm. liq.; dangerous fire hazard exposed to flame, heat or oxidizers; reactive with oxidizers; explosive with nitromethane; incompat. with strong acids, acid anhydrides, nitrites, cellulose nitrate, isocyanates, org. peroxides, epoxides

Hazardous Decomp. Pros.: Thermal decomp. prod.: CO, CO₂, NOₓ, ammonia

NFPA: Health 3, Flammability 3, Reactivity 0

Storage: Store in cool, dry, well-ventilated area, out of direct sunlight; hygroscopic

Uses: Local anesthetic and antiseptic; analgesics

Regulatory: FDA 21CFR §172.235, 173.310 (10 ppm max. in steam). 175.105, 176.180, 176.210, 178.3300; Canada DSL

FEMA 2759
Synonyms: Musk; Musk tonquin; Tonquin musk
Definition: Derived from musk deer, Moschus moschiferus
Properties: Potent penetrating musk odor with strong animal note
Toxicology: Allergen
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21 CFR §172.515; FEMA GRAS; Australia; Canada DSL; Japan MITI; Philippines PICCS
β-Myrcene. See Myrcene
Myreth-3 laurate CAS 84605-13-0; 977068-97-5; EINECS/ELINCS 283-390-7
Synonyms: PEG-3 myristyl ether laurate; POE (3) myristyl ether laurate; 2-[2-[2-(Tetradecyloxy)ethoxy]ethoxy]ethyl
**laurate**
**Definition:** Ester of myreth-3 and lauric acid
**Empirical:** C₃₂H₆₄O₅
**Uses:** Penetrant, emollient for topical pharmaceuticals; coupling agent in hydroalcoholic systems; emulsifier and solubilizer in lotions
**Manuf./Distrib.:** Somerset Cosmetic Co. [http://www.makingcosmetics.com/]

**Myreth-3 myristate**
**CAS:** 59599-55-2; 59686-68-9
**Synonyms:** PEG-3 myristyl ether myristate; POE (3) myristyl ether myristate
**Definition:** Ester of myreth-3 and myristic acid
**Empirical:** C₃₄H₆₈O₅

**Myrica oil** See Bay (Pimenta acris) oil

**Myricyl alcohol**
**CAS:** 593-50-0; EINECS/ELINCS 209-794-5
**Synonyms:** 1-Hydroxytriacontane; Melissyl alcohol; Triacantan; 1-Triacontanol
**Classification:** Alcohol
**Empirical:** C₃₀H₆₂O
**Formula:** CH₃(CH₂)₂₈CH₂OH
**Properties:** Cryst.; sol. in benzene, ether; very sl. sol. in cold alcohol, more sol. in hot alcohol; pract. insol. in water; m.w. 438.82; dens. 0.777; m.p. 87°C
**Storage:** Store @ 2-8°C
**Uses:** Ingrid. in dietary supplements
**Regulatory:** Canada DSL
**Trade Names Containing:** Lesstanol™ Natural Octacosanol 30%; Lesstanol™ Natural Policosanol 60

**Myristaldehyde**
**CAS:** 124-25-4; EINECS/ELINCS 204-692-7
**FEMA:** 2763
**Synonyms:** Aldehyde C-14; Aldehyde C-14, myristic; C-14 alcohol, myristic; Myristic aldehyde; Tetradecanal; 1-Tetradecanal; Tetradecyl aldehyde; 1-Tetradecyl aldehyde
**Empirical:** C₁₄H₂₈O
**Formula:** CH₃(CH₂)₁₂CHO
**Properties:** Colorless to sl. yel. liq. or solid,
**Properties (continued):**
- Strong fatty orris-like odor; insol. in water; m.w. 212.38; dens. 0.825-0.835; m.p. 23°C; b.p. 260°C; ref. index 1.43.80-1.4450
- Toxicology: LD₅₀ (oral, rat) > 5 g/kg, (skin, rabbit) > 10 g/kg; low toxicity by ing. and skin contact; primary skin irritant; TSCA listed
- Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and irritating fumes
- Storage: Refrigerate; store under nitrogen
**Uses:** Synthetic flavor for pharmaceuticals
**Features:** Citrus, fruity flavor
**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Myristalkonium chloride**
**CAS:** 139-08-2; EINECS/ELINCS 205-352-0
**Synonyms:** Benzenemethanaminium, N,N-dimethyl-N-tetradecyl-, chloride; Dimethyl myristyl benzylammonium chloride; N,N-Dimethyl-N-tetradecylbenzenemethanaminium chloride; Myristyl dimethyl benzyl ammonium chloride; Tetradecyl dimethyl benzyl ammonium chloride
**Classification:** Quaternary ammonium salt
**Empirical:** C₂₃H₄₂N • Cl
**Properties:** Wh. free-flowing powd.; m.w. 368.11; m.p. 60-61°C; cationic
**Toxicology:** LD₅₀ (IV, mouse) 18 mg/kg; skin and eye irritant; TSCA listed
**Hazardous Decomp. Prods.:** Heated to decom., emits very toxic fumes of NOₓ, NH₃, and Cl⁻
**Uses:** Antimicrobial, preservative in pharmaceuticals
**Regulatory:** FDA 21CFR §172.165 (limitation 3-12 ppm), 173.320 (limitation 0.6 ppm on wt. of raw sugar cane or raw beets), 175.105, 178.1010; Canada DSL
**Manuf./Distrib.:** Amyl [http://www.amyl.com]; Fluka [http://www.sigma-aldrich.com]; JFC
**Chemical Component Cross-Reference**

Trade Names Containing: SO/SAN® 30M  

**Myristamide DEA**  
CAS 7545-23-5; EINECS/ELINCS 231-426-7  
Synonyms: N,N-Bis (2-hydroxyethyl) myristamide; N,N-Bis (2-hydroxyethyl) tetradecanamide; Myristic diethanolamide; Myristoyl diethanolamide  
Definition: Mixture of ethanolamides of myristic acid  
Empirical: C_{18}H_{37}NO_3  
Formula: CH_3(CH_2)_{12}CON(CH_2CH_2OH)_2  
Properties: Nonionic  
Toxicology: May produce contact sensitivity; TSCA listed  
Uses: Antistat, visc. control agent, thickener, superfatting agent, foam booster/stabilizer, emulsifier for topical dermatological prods.  
Regulatory: FDA 21CFR §175.105, 176.180, 176.210, 177.2260, 177.2800; Canada DSL  
Manuf./Distrib.: Cosmetic Supplies USA  
http://www.cosmeticsuppliesusa.com  
Trade Names Containing: Schercomid SLM-S  

**Myristamide MEA**  
CAS 142-58-5; EINECS/ELINCS 205-546-5  
Synonyms: N-(2-Hydroxyethyl) myristamide; N-(2-Hydroxyethyl) tetradecanamide; Myristic monoethanolamide; Myristoyl monoethanolamide  
Definition: Mixture of ethanolamides of myristic acid  
Empirical: C_{16}H_{33}NO_2  
Formula: CH_3(CH_2)_{12}CONHCH_2CH_2OH  
Properties: Nonionic  
Toxicology: TSCA listed  
Uses: Antistat, visc. control agent, thickener, pearlescent, thickener, opacifier in pharmaceuticals  
Regulatory: Canada DSL  
Manuf./Distrib.: Somerset Cosmetic Co.  
http://www.makingcosmetics.com/  

**Myristamine oxide**  
CAS 3332-27-2; EINECS/ELINCS 222-059-3  
Synonyms: N,N-Dimethyl-1-tetradecanamine-N-oxide; N,N-Dimethylethyltetradecylamine-N-oxide; Myristyl dimethyl amine oxide;  
Classification: Tertiary amine oxide  
Empirical: C_{18}H_{35}NO_3  
Properties: LIq.; m.w. 257.47  
Toxicology: TSCA listed  
Uses: Foam booster/stabilizer, conditioner, visc. builder, and wetting agent for pharmaceuticals  
Regulatory: Canada DSL  
Trade Names: AMMONYX® MCO; AMMONYX® MO  

**Myristic acid**  
CAS 544-63-8; EINECS/ELINCS 208-875-2  
FEMA 2764; INS570; E570  
Synonyms: Tetradecanoic acid; n-Tetradecoic acid; 1-Tridecanecarboxylic acid  
Classification: Organic acid; aliphatic carboxylic acid  
Empirical: C_{14}H_{28}O_2  
Formula: CH_3(CH_2)_{12}COOH  
Properties: Oily wh. cryst. solid; faint odor; sol. in acetone, alcohol, benzene, chloroform, ether, aromatic and chlorinated solvs.; pract. insol. in water; m.w. 228.36; dens. 0.8739 (80 °C); m.p. 54.5 °C; b.p. 326.2 °C; flash pt. > 230 F  
Toxicology: LD50 (oral, rat) > 10 g/kg, (IV, mouse) 43 mg/kg; poison by IV route; eye and human skin irritant; mutagenic data; TSCA listed  
Precaution: Combustible; incomp. with strong oxidizers (may react violently if heated, increased fire risk), reactive metals (may cause violent/explosive reaction), strong bases (may generate heat)  
Hazardous Decomp. Prods.: Combustion decomp. prods.: CO, CO_2; heated to decomp., emits acrid smoke and irritating fumes  
HMIS: Health 1, Flammability 0, Reactivity 0  
Storage: Store in cool, dry, well-ventilated area, out of direct sunlight, away from incompat. materials; avoid generating dust; limit quantities in storage  
Uses: Emulsifier in pharmaceuticals, vaginals  
Regulatory: FDA 21CFR §172.210, 172.860, 173.340, 175.105, 175.320, 176.170, 176.200, 176.210, 177.1010, 177.1200, 177.2260, 177.2600, 177.2800, 178.3570, 178.3910; FEMA GRAS; FDA approved for vaginals; Canada DSL  
Manuf./Distrib.: Acme-Hardesty

Myristyl lactate
CAS 1323-03-1; EINECS/ELINCS 215-350-1
Synonyms: 2-Hydroxypropanoic acid,
tetradecyl ester; Tetradecyl 2-
hydroxypropanoate; Tetradecyl lactate
Definition: Ester of myristyl alcohol and lactic acid
Empirical: C_{17}H_{34}O_{3}
Formula: CH_{3}COHHCOO(CH_{2})_{12}CH_{3}
Properties: Pale yel. liq. or soft solid; sol. in
ethanol, IPM, min. oil, oleyl alcohol, propylene glycol; insol. in water, glycerin; sp.gr. 0.892-
0.904
Toxicology: LD50 (oral, rat) 20 ml/kg;
nonirritating to skin; TSCA listed
Uses: Emollient, conditioner, solubilizer,
lubricant, gloss aid for pharmaceuticals;
pharmaceutical raw material
Regulatory: Canada DSL
Manuf./Distrib.: A&E Connock

Myristyl myristate
CAS 3234-85-3; EINECS/ELINCS 221-787-9
Synonyms: Tetradecanoic acid, tetradecyl ester; Tetradecyl tetradecanoate
Definition: Ester of myristyl alcohol and myristic acid
Empirical: C_{28}H_{56}O_{2}
Formula: CH_{3}(CH_{2})_{12}COO(CH_{2})_{13}CH_{3}
Properties: Wh. waxy solid; bland char. odor;
sol. in min. oil, IPM, oleyl alcohol; insol. in water, glycerin, propylene glycol; m.p. 36-39 C
Toxicology: LD50 (oral, rat) 8.6 g/kg; minimal
eye irritation, mild skin irritation; TSCA
listed
Uses: Emollient, emulsifier, thickener,
lubricant, moisturizer, superfatting agent,
opacifier, humectant, solubilizer, pigment
dispersant for pharmaceutical topicals,
creams and lotions
Features: Melts at body temp.
Regulatory: Canada DSL

### Myristyl octadecanol

**Definition:** Ester of myristyl alcohol and octadecanoic acid

**Empirical:** C$\text{17H}_{34}\text{O}_2$

**Formula:** CH$_3$(CH$_2$)$_{16}$COOCH$_2$(CH$_2$)$_{12}$CH$_3$

**Uses:** Emollient, penetrant, spreading agent for topical pharmaceuticals, antiperspirants, creams, lotions; humectant; solvent

**Regulatory:** Canada DSL

**Manuf./Distrib.:** A&E Connock  
[http://www.connock.co.uk](http://www.connock.co.uk)

**Trade Names:** Schercemol MP

### Myristyl propionate

**CAS:** 6221-95-0; EINECS/ELINCS 226-300-9

**Synonyms:** 1-Tetradecanol, propanoate; Tetradecyl propionate

**Definition:** Ester of myristyl alcohol and propionic acid

**Empirical:** C$\text{17H}_{34}\text{O}_2$

**Formula:** CH$_3$CH$_2$COOCH$_2$(CH$_2$)$_{12}$CH$_3$

**Uses:** Emollient, penetrant, spreading agent for topical pharmaceuticals, antiperspirants, creams, lotions; humectant; solvent

**Regulatory:** Canada DSL

**Manuf./Distrib.:** A&E Connock  
[http://www.connock.co.uk](http://www.connock.co.uk)

**Trade Names:** Schercemol MP

### Myristyl stearate

**CAS:** 17661-50-6; EINECS/ELINCS 241-640-2

**Synonyms:** Octadecanoic acid, tetradecyl ester; Stearic acid myristyl ester; Stearic acid, tetradecyl ester; Tetradecyl octadecanoate; Tetradecyl stearate

**Definition:** Ester of myristyl alcohol and stearic acid

**Empirical:** C$\text{32H}_{64}\text{O}_2$

**Formula:** CH$_3$(CH$_2$)$_{16}$COOCH$_2$(CH$_2$)$_{12}$CH$_3$

**Properties:** M.w. 480.96

**Toxicology:** Eye irritant; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Emollient, visc. builder in pharmaceutical topicals

**Features:** Waxy; replacement for spermaceti

**Regulatory:** Canada DSL

**Manuf./Distrib.:** A&E Connock  
[http://www.connock.co.uk](http://www.connock.co.uk)

**Trade Names:** Pelemol® MS

### Myristyl sulfate, sodium salt

**See Sodium myristyl sulfate**

### Myristyl trimethyl ammonium bromide

**See Myrtrimonium bromide**

**Myroxylon balsamum balsam.** See Balsam tolu (Myroxylon balsamum)

**Myroxylon pereirae balsam; Myroxylon pereirae oleoresin.** See Balsam Peru (Myroxylon pereirae)

**Myroxylon toluiferum.** See Balsam tolu (Myroxylon balsamum)

**Myrrh (Commiphora myrrha) oil**

**CAS:** 8016-37-3

**FEMA:** 2766

**Synonyms:** Commiphora myrrha; Commiphora myrrha oil; Myrrhe oil; Myrrh oil

**Definition:** Volatile oil from steam distillation of myrrh gum, Commiphora myrrha

**Properties:** Lt. brn. to grn. liq.; char. odor; sol. in fixed oils; sl. sol. in min. oil; insol. in glycerol, propylene glycol

**Toxicology:** LD$\text{50}$ (oral, rat) 1650 mg/kg; mod. toxic by ing.; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Natural flavor for pharmaceuticals

**Regulatory:** BP, EP compliance; FDA 21CFR §172.510; FEMA GRAS; Canada DSL

**FEMA:** 3439

**Synonyms:** (1R)-(−)-Myrtenol; (−)-Pin-2-ene-10-ol

**Empirical:** C$\text{10H}_{16}\text{O}$

**Properties:** M.w. 152.24; dens. 0.954; b.p. 221-22 C; flash pt. 193 F

**Uses:** Flavor for pharmaceuticals

**Regulatory:** FEMA GRAS; Canada DSL

**Manuf./Distrib.:** SAFC Specialties  
[http://www.safcspecialties.com](http://www.safcspecialties.com)

(1R)-(−)-Myrtenol. See Myrtenol
**Myrtrimonium bromide**

**CAS 1119-97-7; EINECS/ELINCS 214-291-9**

**Synonyms:** Ammonium, tetradecyltrimethyl-, bromide; Ammonium, trimethyltetradecyl-, bromide; MTAB; Myristyl trimethyl ammonium bromide; Quaternium 13; 1-Tetradecanaminium, N,N,N-trimethyl-, bromide; Tetradecyltrimethylammonium bromide; Tetradonium bromide; Trimethylmyristylammonium bromide; N,N,N-Trimethyl-1-tetradecanaminium bromide; Trimethyltetradecylammonium bromide; TTAB

**Classification:** Quaternary ammonium salt

**Empirical:** $\text{C}_{17}\text{H}_{38}\text{N} \cdot \text{Br}$

**Formula:** $[\text{CH}_3(\text{CH}_2)_{12}\text{CH}_2\text{N(CH}_3)_3]^+\text{Br}^-$

**Properties:** Wh. powd.; sol. in 5 parts water; m.w. 336.40; m.p. 245-250 C; pH 5-8 (1%); cationic

**Toxicology:** LD50 (IV, mouse) 12 mg/kg; poison by IV route; corrosive; can be toxic depending on dose and conc.; conc. sol’n. can irritate the skin and cause necrosis of the mucous membranes; conc. as low as 0.1% are irritating to eyes and mucous membranes; TSCA listed

**Hazardous Decomp. Prods.:** Heated to comp., emits toxic vapors of NOx and Br⁻

**Storage:** Store @ R.T.

**Uses:** Preservative, biocide for pharmaceuticals; disinfectant; sanitizer; sterilizer for skin and mucous membranes in dilute sol’n.; antiseptic creams; purification of heparin

**Regulatory:** Canada DSL

**Nalidixin.** See Nalidixic acid

2-Naphthacenecarboxamide, 4- (dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,5,6,10,12a-hexahydroxy-6-methyl-1,11-dioxo-, monohydrochloride.

See Oxytetracycline hydrochloride

Naphtha, heavy hydrotreated. See Naphtha, hydrotreated heavy

Naphtha, hydrotreated heavy

CAS 64742-48-9; EINECS/ELINCS 265-150-3
UN 3295

**Synonyms:** Heavy hydrotreated naphtha
Chemical Component Cross-Reference

(petroleum): Hydrotreated heavy naphtha; Naphtha, heavy hydrotreated; Naphtha (petroleum), hydrotreated heavy

Definition: Complex combination of hydrocarbons obtained by treating a petrol. fraction with hydrogen in the presence of a catalyst; consists predominantly of C6-13 hydrocarbons; mixt. of C9-13 naphthenes, iso- and n-paraffins

Properties: Colorless liq.; insol. in water; dens. 0.76-0.79 g/cm³; vapor pressure 0.1-0.3 kPa (20 C); m.p. 0 C; b.p. 155-217 C; flash pt. (CC) 40-62 C; autoignition temp. 255-270 C

Toxicology: Inh. may cause dizziness, headache, drowsiness, nausea; contact may cause dry skin, eye redness; ing. may cause cough, diarrhea, sore throat, vomiting; if aspirated, may cause chem. pneumonitis

Environmental: Toxic to aquatic organisms; prevent entry into sewers

Precaution: Flamm.; explosive limits in air 0.7-6.0 vol.%; may form explosive vapor/air mixts. above 40 C; reacts with strong oxidants, causing fire/explosion hazard

Uses: Solvent

Regulatory: Canada DSL

Trade Names: Shellsol® D40

Naphtha, hydrotreated light
CAS 64742-49-0; EINECS/ELINCS 265-151-9
UN 1208

Synonyms: Hydrotreated light naphtha (petroleum); Hydrotreated light straight run petroleum; Light hydrotreated naphtha; Naphtha (petroleum), hydrogen-treated, light; Naphtha (petroleum), hydrotreated light; Naphtha (petroleum), light, hydrotreated; SBP; Special boiling point spirit

Classification: High benzene naphtha

Definition: Complex combination of hydrocarbons obtained by treating a petrol. fraction with hydrogen in the presence of a catalyst; consists predominantly of C4-11 hydrocarbons

Properties: B.p. -20 to 190 C

Uses: Solvent

Regulatory: Canada DSL

Trade Names: VM&P Naphtha HT

Trade Names Containing: Punctilious® SDA 2B-2; Punctilious® SDA 2B-2 190 Proof; Punctilious® SDA 2B-4 190 Proof; Punctilious® SDA 2B-4 Anhydrous; Shellsol® B HT

Naphtha, medium aliphatic
CAS 64742-89-8; EINECS/ELINCS 265-192-2

Synonyms: Aliphatic petroleum distillate; Lactol spirits; Light aliphatic naphtha; Light aliphatic solvent naphtha (petroleum); Naphtha (petroleum), light aliphatic; Solvent naphtha (petroleum), light aliphatic

Definition: Complex combination of hydrocarbons obtained from distillation of crude oil or nat. gasoline; consists of predominantly C5-10 sat. hydrocarbons

Properties: B.p. 35-160 C

Uses: Solvent

Regulatory: Canada DSL

Trade Names: VM&P Naphtha HT

Trade Names Containing: Punctilious® SDA 2B-2; Punctilious® SDA 2B-2 190 Proof; Punctilious® SDA 2B-4 190 Proof; Punctilious® SDA 2B-4 Anhydrous; Shellsol® B HT

Naphtha, light aliphatic
CAS 64742-90-9; EINECS/ELINCS 265-191-9
UN 1268; 1993

Synonyms: Aliphatic petroleum solvent; Naphtha, medium aliphatic; Lactol spirits; Light aliphatic naphtha; Light aliphatic solvent naphtha (petroleum); Naphtha (petroleum), light aliphatic; Solvent naphtha (petroleum), light aliphatic

Definition: Complex combination of hydrocarbons obtained from distillation of crude oil or nat. gasoline; consists of predominantly C5-10 sat. hydrocarbons

Properties: B.p. -20 to 190 C

Uses: Solvent

Regulatory: Canada DSL

Trade Names: VM&P Naphtha HT

Trade Names Containing: Punctilious® SDA 2B-2; Punctilious® SDA 2B-2 190 Proof; Punctilious® SDA 2B-4 190 Proof; Punctilious® SDA 2B-4 Anhydrous; Shellsol® B HT

Naphtha, light aliphatic
β-Naphthol
CAS 135-19-3; EINECS/ELINCS 205-182-7
Synonyms: Cl 37500; Cl azoic coupling component 1; 2-Hydroxynaphthalene; β-Hydroxynaphthalene; Isonaphthol; β-Monoxynaphthalene; 2-Naphthalenol; 2-Naphthol; β-Naphthyl alcohol; β-Naphthyl hydroxide

Definition: Derived by fusing sodium β-naphthalene sulfonate with caustic soda

Empirical: C_{10}H_{8}O

Formula: C_{10}H_{7}OH

Properties: Wh. to tan powd.; darkens with age; faint phenol-like odor; sol. in alcohol, ether, chloroform, glycerol, oils, alkaline sol'ns.; pract. insol. in water; m.w. 144.18; dens. 1.217; vapor pressure 10 mm (145.5 C); m.p. 122-123 C; b.p. 285-286 C; flash pt. 152.7 C

Toxicology: LD50 (oral, rat) 1960 mg/kg, (IP, mouse) 97,500 mg/kg, (skin, rabbit) > 10 g/kg; LC50 (inh., rat, 1 h) > 770 mg/m3; harmful by inh., ing., skin absorption; primary irritant; eye/skin/respiratory system irritant; may cause changes in salivary glands/kidney wt./blood count/liver, somnolence, convulsions; mutagen; TSCA listed

Environmental: Very toxic to aquatic organisms; avoid release to environment

Precaution: Combustible; incompat. with strong oxidizing agents, acid chlorides, acid anhydrides, strong bases; stable in air, but darkens on exposure to sunlight

Hazardous Decomp. Prods.: CO, CO2; emits toxic fumes under fire conditions

Storage: Light-sensitive; keep container closed; store in cool, dry place

Uses: Pharmaceuticals; antiseptic

Regulatory: FDA 21CFR §176.200, 176.210; Canada DSL

Trade Names: Shellsol® D43

[45x38]Handbook of Pharmaceutical Additives, Third Edition 1711
Chemical Component Cross-Reference

**Decanoic acid**

*Empirical: C_{25}H_{48}O_{4}*

*Formula: CH_{3}(CH_{2})_{8}COOCH_{2}C(CH_{3})_{2}CH_{2}OCO(CH_{2})_{8}C_{6}H_{3}*

*Uses: Solvent in topical pharmaceuticals*

**Neopentyl glycol dioctanoate**

*Corresponding CAS: 28510-23-8; 31335-74-7; EINECS/ELINCS 249-060-1; 250-575-9 Synergists: 2,2-Dimethyl-1,3-propanediyl dioctanoate, 2,2-Dimethyl-1,3-propanediyl 2-ethylhexanoate, 2-Ethylhexanoic acid, 2,2-dimethyl-1,3-propanediyl ester, Octanoic acid, 2,2-dimethyl-1,3-propanediol diester*

*Definition: Diester of neopentyl glycol and 2-ethylhexanoic acid*

*Empirical: C_{21}H_{40}O_{4}*

**Toxicology:**

*TSCA listed*

*Uses: Emollient, solvent, pigment dispersant*

**Trade Names:** Schercemol NGDC

**NEPD. See 2-Nitro-2-ethyl-1,3-propanediol**

**Neral. See Citral**

**Nerol**

*Corresponding CAS: 106-25-2; EINECS/ELINCS 203-378-7; FEMA 2770

*Synonyms: 2,6-Dimethyl-2,6-octadien-8-ol; 2-cis-3,7-Dimethyl-2,6-octadien-1-ol; 3,7-Dimethyl-octa-2,6-dien-1-ol; 3,7-Dimethylisocaproic acid; 3,7-Dimethyl-(Z)-2,6-octadien-1-ol; cis-3,7-Dimethyl-2,6-octadien-1-ol*

*Classification: Nonaromatic alcohol, unsat.*

*Definition: The cis-isomer of geraniol; found in many essential oils*

*Empirical: C_{10}H_{18}O*

*Formula: (CH_{3})_{2}C:CHCH_{2}CH_{2}C(CH_{3})_{2}:CHCH_{2}OH*

*Properties: Colorless liq., sweet rose odor, bitter flavor; sol. in abs. alcohol, oxygenated solvs.; insol. in water; m.w. 154.25; dens. 0.8813 (15 C); b.p. 224-225 (745 mm), 125 C (25 mm); flash pt. (OC) 130 C; ref. index 1.4730-1.4780 (20 C); tenacity 24 hrs. on blotter*

*Toxicology:**

*LD50 (oral, rat) 4500 mg/kg, (intramuscular, mouse) 3000 mg/kg; mod. toxic by intramuscular route; mildly toxic by ing.; skin irritant; TSCA listed*

*Precaution: Combustible; incompat. with strong oxidizers*

*Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and irritating fumes, CO, CO_{2}*

**Nervonic acid**

*Corresponding CAS: 506-37-6

*Synonyms: Selacholeic acid; 15-Tetracosaenoic acid, (Z)-; Tetracosanoic acid; 15-Tetracosanoic acid, cis-15-Tetracosanoic acid*

*Definition: Most prevalent fatty acid in the nervous system*
Neryl acetate
CAS 141-12-8; EINECS/ELINCS 205-459-2
FEMA 2773

Synonyms: Acetic acid 3,7-dimethyl-octa-2,6-dienyl ester; cis-3,7-Dimethyl-2,6-octadien-1-ol acetate; cis-3,7-Dimethyl-2,6-octadien-1-yl-acetate; Nerol acetate; 2,6-Octadien-1-ol, 3,7-dimethyl-, acetate, (Z)-

Classification: floral ester; acyclic terpene ester
Definition: Ester of nerol and acetic acid
Empirical: C_{12}H_{20}O_{2}
Formula: (CH_{3})_{2}C:CHCH_{2}CH_{2}C(CH_{3}):CHCH_{2}OCOCH_{3}

Properties: Colorless to sl. yel. oily liq.; sweet floral orange-blossom and rose-like odor, honey-like flavor; m.w. 196.29; dens. 0.912 (20/4 C); vapor pressure 0.1 mm Hg; vapor dens. \approx 6.8; b.p. 234-236 C; flash pt. (CC) 100 C; ref. index 1.460 (20 C); tenacity 24 hrs. on blotter

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; irritant; TSCA listed
Precaution: Incomp. with strong oxidizers, iron, iron salts

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
NFPFA: Health 1, Flammability 1, Reactivity 1

Storage: Refrigerate; store in dry place in tightly sealed containers, protected from heat and light

Uses: Synthetic flavor for pharmaceuticals

Neryl butyrate
CAS 999-40-6; EINECS/ELINCS 213-660-1
FEMA 2774

Synonyms: cis-3,7-Dimethyl-2,6-octadienyl butanoate

Classification: floral ester
Empirical: C_{12}H_{20}O_{2}
Formula: (CH_{3})_{2}C:CHCH_{2}CH_{2}C(CH_{3}):CHCH_{2}OCOCH_{3}

Properties: M.w. 224.35; dens. 0.898; b.p. 240 C; flash pt. > 230 F

Toxicology: TSCA listed

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet orange-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Grau Aromatics http://www.grau-aromatics.de; SAFC Specialties http://www.safcspecialties.com

Neryl formate
CAS 2142-94-1; EINECS/ELINCS 218-401-6
FEMA 2776

Synonyms: cis-3,7-Dimethyl-2,6-octadien-1-ol formate; cis-3,7-Dimethyl-2,6-octadienyl methanoate; Formic acid, neryl ester; 2,6-Octadien-1-ol, 3,7-dimethyl-, formate (Z)-

Classification: floral ester
Empirical: C_{11}H_{18}O_{2}

Properties: M.w. 182.29

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; primary skin irritant; TSCA listed

Uses: Synthetic flavor for pharmaceuticals
**Neryl isobutyrate**

CAS 2345-24-6; EINECS/ELINCS 219-061-1

FEMA 2775

**Synonyms:** cis-3,7-Dimethyl-2,6-octadien-1-yl isobutyrate; Isobutyric acid, 3,7-dimethyl-octa-2,6-dienyl ester; Isobutyric acid, 3,7-dimethyl-2,6-octadienyl ester, (Z)-; (Z)-2-Methylpropanoic acid 3,7-dimethyl-2,6-octadienyl ester; Propionic acid, 2-methyl-, 3,7-dimethyl-2,6-octadienyl ester, (Z)-

**Classification:** Floral ester

**Empirical:** C14H24O2

**Properties:** M.w. 224.35; dens. 0.895; b.p. 229 C; flash pt. > 230 F; ref. index 1.4570

**Toxicology:** LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; TSCA listed

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Sweet orange-like flavor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Manuf./Distrib.:** Citrus and Allied Essences [http://www.citrusandallied.com](http://www.citrusandallied.com)

---

**Neryl isovalerianate**

CAS 3915-83-1; EINECS/ELINCS 223-478-4

FEMA 2778

**Synonyms:** cis-3,7-Dimethyl-2,6-octadien-1-ol isovalerate; Isovaleric acid, 3,7-dimethyl-octa-2,6-dienyl ester; Isovaleric acid, 3,7-dimethyl-2,6-octadienyl ester; (Z)-2-Methylpropanoic acid 3,7-dimethyl-2,6-octadienyl ester; Propionic acid, 2-methyl-, 3,7-dimethyl-2,6-octadienyl ester, (Z)-

**Classification:** Floral ester

**Empirical:** C15H26O2

**Properties:** M.w. 238.37; dens. 0.890; b.p. 252 C; flash pt. > 230 F; ref. index 1.4580

**Toxicology:** LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; may be harmful by inh., ing., or skin absorp.; vapor or mist is irritating to eyes, mucous membranes, upper respiratory tract; TSCA listed

**Precaution:** Incompat. with strong oxidizing agents

**Hazardous Decomp. Prods.:** Toxic fumes of CO, CO2; heated to decomp., emits acrid smoke and irritating fumes; emits toxic fumes under fire conditions

**Storage:** Store in cool, dry place; keep tightly closed

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

---

**Neryl propionate**

CAS 105-91-9; 27751-90-2; EINECS/ELINCS 203-345-7

FEMA 2777

**Synonyms:** cis-3,7-Dimethyl-2,6-octadien-1-ol propionate; (Z)-3,7-Dimethyl-2,6-octadien-1-ol propionate; cis-3,7-Dimethyl-2,6-octadienyl propanoate; Propionic acid, 3,7-dimethyl-2,6-octadienyl ester; Propionic acid, neryl ester

**Definition:** Ester of nerol and propionic acid

**Empirical:** C13H22O2

**Properties:** Colorless oily liq., ether-like sweet intense fruity odor, plum-like taste; sol. in alcohol; sl. sol. in water; m.w. 210.31; b.p. 233 C; flash pt. 120 C; ref. index 1.4550

**Toxicology:** LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; may be harmful by inh., ing., or skin absorp.; vapor or mist is irritating to eyes, mucous membranes, upper respiratory tract; TSCA listed

**Precaution:** Incompat. with strong oxidizing agents

**Hazardous Decomp. Prods.:** Toxic fumes of CO, CO2; heated to decomp., emits acrid smoke and irritating fumes; emits toxic fumes under fire conditions

**Storage:** Store in cool, dry place; keep tightly closed

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Manuf./Distrib.:** Fleurchem [http://www.fleurchem.com](http://www.fleurchem.com); Grau Aromatics [http://www.grau-aromatics.de](http://www.grau-aromatics.de)
Nettle extract. See Nettle (Urtica dioica) extract

Nettle (Urtica dioica) extract
CAS 84012-40-8; EINECS/ELINCS 281-685-5
Synonyms: Nettle extract; Stinging nettle extract; Urtica dioica; Urtica dioica extract
Definition: Extract of the nettle, Urtica dioica
Uses: Botanical
Regulatory: BP, EP compliance
Trade Names Containing: Hair Complex Aquosum

New coccine. See Acid red 18
Niacin (INCI). See Nicotinic acid

Nicotinamide
CAS 98-92-0; EINECS/ELINCS 202-713-4
Synonyms: Nicotinamid; Nicotinic acid amide; Nicotinic acid amide; Nicotinic amide; Nicotylamide; Nicotinamide; NSA; 3-Pyridinecarboxamide; Pyridine-3-carboxylic acid amide; 3-Pyridinecarboxylic acid amide; Vitamin B3; Vitamin PP
Classification: Heterocyclic aromatic amide
Empirical: C6H6N2O
Formula: C6H6NCONH2
Properties: Colorless needles or wh. cryst. powd., odorless, bitter taste; sol. in water, ethanol, ether, glycerin, oxygenated solvs.; m.w. 122.14; dens. 1.40; m.p. 129 C; b.p. 150-160 C (0.0005 mm)
Toxicology: LD50 (oral, rat) 3500 mg/kg, (IP, mouse) 2050 mg/kg, (subcut., rat) 1680 mg/kg; mod. toxic by ing., IV, IP, and subcut. routes; no known skin toxicity; mutagenic data; TSCA listed
Hazardous Decomp. Pros.: Heated to decomp., emits toxic fumes of NOx
HMIS: Health 1, Flammability 1, Reactivity 0
Uses: Skin stimulant; nutrient, dietary supplement to prevent pellagra; pharmaceutical intermediate
Regulatory: FDA 21CFR §137.260, 137.305, 137.350, 139.115, 139.117, 139.122, 139.155, 184.1535, GRAS; BP, EP compliance; Canada DSL

Nicotinamide

Nicotinic acid amide; Nicotinic amide. See Niacinamide

Nicotinonitrile

CAS 100-54-9
UN 1993
Synonyms: 3-Cyanopyridine
Empirical: C6H4N2
Properties: Cl. to amber solid; characteristic odor; sol. in water (10% aq. soln.); m.w. 104.11; sp. gr. 1.08 @ 50 C; dens. 8.8 lb/gal; f.p. 48.5 C; flash pt. none; stains animal tissues yel.
Toxicology: ACGIH TLV/TWA 2 ppm; STEL 4 ppm; LDLo (oral, human) 430 mg/kg; human poison by ing.; highly corrosive to eyes, skin, mucous membranes, teeth; rapidly destroys tissues; avoid contact; can cause intermittent severe upper respiratory irritation; experimental teratogen, reproductive effects; TSCA listed
Precaution: DOT: Corrosive material; powerful oxidizing agent; will react with water or steam to produce heat and toxic and corrosive fumes; flamm. by chem. reaction with reducing agents; explosive reactions possible; many incompatibilities
Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of NOx and hydrogen nitrate
NFPA: Health 4, Flammability 0, Reactivity 0
Uses: Acidifier in pharmaceuticals, inhalants, ophthalmics, topicals; corrosive for removing warts, tattoos; pharmaceutical intermediate
Regulatory: FDA 21CFR §175.105; FDA approved for inhalants, ophthalmics, topicals; USP/NF, BP, EP compliance; Canada DSL

Nitric acid

CAS 7697-37-2; EINECS/ELINCS 231-714-2
UN 2031 (DOT); UN 2032 (DOT)
Synonyms: Aqua fortis; Azotic acid; Engraver's acid; Hydrogen nitrate
Classification: Inorganic acid
Empirical: HNO3
Formula: H-O-N(O)=O
Properties: Colorless to pale yel. fuming liq., char. highly irritating odor; misc. with water; m.w. 63.01; dens. 1.41; m.p.-42 C; b.p. 120 C; flash pt. none; stains animal tissues yel.
Toxicology: ACGIH TLV/TWA 2 ppm; STEL 4 ppm; LDLo (oral, human) 430 mg/kg; human poison by ing.; highly corrosive to eyes, skin, mucous membranes, teeth; rapidly destroys tissues; avoid contact; can cause intermittent severe upper respiratory irritation; experimental teratogen, reproductive effects; TSCA listed
Precaution: DOT: Corrosive material; powerful oxidizing agent; will react with water or steam to produce heat and toxic and corrosive fumes; flamm. by chem. reaction with reducing agents; explosive reactions possible; many incompatibilities
Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of NOx and hydrogen nitrate
NFPA: Health 4, Flammability 0, Reactivity 0
Uses: Acidifier in pharmaceuticals, inhalants, ophthalmics, topicals; corrosive for removing warts, tattoos; pharmaceutical intermediate
Regulatory: FDA 21CFR §175.105; FDA approved for inhalants, ophthalmics, topicals; USP/NF, BP, EP compliance; Canada DSL

2-Nitrobenzaldehyde. See o-Nitrobenzaldehyde

4-Nitrobenzaldehyde. See p-Nitrobenzaldehyde

o-Nitrobenzaldehyde

CAS 552-89-6; EINECS/ELINCS 209-025-3
Synonyms: 2-Nitrobenzaldehyde
Classification: Aromatic organic compd.
Empirical: C7H5NO3
Formula: O2NC6H4CHO
Properties: Lt. yel. need.; sol. in alcohol, benzene, chloroform, oxygenated and chlorinated solvs.; sl. sol. in water; m.w. 151.12; m.p. 42-43 C; b.p. 153 C (23 mm); flash pt. > 230 F; volatile with steam
Toxicology: LD50 (oral, mouse) 600 mg/kg; mod. toxic by ing.; irritant; possible mutagen; TSCA listed
Precaution: Violent reaction with pyrrole; thermal decom. is very dangerous; pressure increases rapidly

Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of NOx
Uses: Used in the synthesis of pharmaceuticals
Regulatory: Canada DSL

p-Nitrobenzaldehyde

CAS 555-16-8; EINECS/ELINCS 209-084-5
Synonyms: p-Formyl nitrobenzene; 4-Nitrobenzaldehyde
Classification: Aromatic organic compd.
Empirical: C7H5NO3
Formula: O2NC6H4CHO
Properties: Wh. to yel. cryst.; sol. in alcohol, glac. acetic acid, benzene, aromatic solvs.; sl. sol. in water, ether; m.w. 151.12; m.p. 106-107 C; sublimes; sl. volatile with steam
Toxicology: LD50 (oral, rat) 4700 mg/kg, (IP, rat) 545 mg/kg, (skin, rat) 16 g/kg; mod. toxic by IP route; mildly toxic by ing. and skin contact; irritant; mutagen; TSCA listed
Precaution: Exothermic decom. is vigorous with a very high rate of pressure inc.; reacts violently with pyrrole in acetic acid
Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of NOx
Uses: Used in the synthesis of pharmaceuticals
Regulatory: Canada DSL
5-Nitrobenzene-1,3-dicarboxylic acid. See 5-Nitroisophthalic acid.

2-Nitro-1-butanol
CAS 609-31-4
Classification: Nitro alcohol
Empirical: C₄H₉NO₃
Formula: CH₃CH₂CHNO₂CH₂OH
Properties: Colorless liq.; sol. in water; m.w. 119.1; dens. 1.133; b.p. -48 C; flash pt. 105 C; ref. index 1.4390
Precaution: Combustible
Uses: Pharmaceutical intermediate; deodorants
Trade Names: NB

Nitrocarbol. See Nitromethane

Nitrocellulose
CAS 9004-70-0; EINECS/ELINCS 239-069-9
UN 2059 (DOT); UN 2555 (DOT); UN 2556 (DOT); UN 2557 (DOT)
Synonyms: Cellloid; Celluloid; Cellulose nitrate; Cellulose tetrinitrate; Collodion; Collodion cotton; Collodion wool; Colloxylin; Flexible collodion; Guncotton; Nitrocellulose, dry; Nitrocellulose sol’n.; Nitrocellulose, wetted; Nitrocelloton; Nitron; Pyroxylin; Pyroxylin plastic; Pyroxylin rods; Soluble guncotton; Xyloidin
Classification: Cellulose deriv.
Empirical: C₁₂H₁₆N₄O₁₈
Formula: C₁₂H₁₆(ONO₂)₄O₆
Properties: Colorless liq. or wh. amorphous solid; sol. in acetone, methanol, glac. acetic acid; insol. in water, ether-alcohol mixt.; m.w. 504.3; dens. 1.66; b.p. 83 C; flash pt. (CC) 40 F
Toxicology: LD₅₀ (oral, rat) > 5 g/kg; very low oral toxicity; severe eye irritant; target organs: kidneys, nerves; TSCA listed
Precaution: DOT: Explosive, flam. liq., flamm. solid; highly dangerous exposed to heat, flame, strong oxidizers; ignites easily;

Nitrocellulose, dry; Nitrocellulose sol’n.; Nitrocellulose, wetted; Nitrocelloton. See also Collodion

Nitrocellulose, dry
Nitrocellulose, wetted; Nitrocelloton. See Nitrocellulose

Nitroethane
CAS 79-24-3; EINECS/ELINCS 201-188-9
UN 2842 (DOT)
Synonyms: Ethane, nitro-; NE
Classification: Aliphatic organic compd.; nitroparaffin
Empirical: C₂H₅NO₂
Formula: CH₃CH₂NO₂
Properties: Colorless oily clear liq.; mild fruity agreeable odor; sol. in water, alcohols, esters, ketones, ethers, aromatic hydrocarbons, chloroform, acid, alkali; misc. with oxygenated solvs.; m.w. 75.07; dens. 1.048 (20/4 C); f.p. -50 C; m.p. -90 C; b.p. 335-382 C; flas. pt. (TCC) 30 C; autoignition temp. 414 C; ref. index 1.391 (20 C)
Toxicology: ACGIH TLV/TWA 100 ppm; LD₅₀ (oral, rat) 1100 mg/kg, (IP, rat) 310 mg/kg; poison by IP route; mod. toxic by ing.;
Chemical Component Cross-Reference

**mildly toxic by inh.; irritating to eyes, mucous membranes; may cause headache, nausea, coughing, sneezing, CNS depression, respiratory obstruction, cyanosis; causes injury to liver and kidneys; mild skin irritant; cancer suspect agent; mutagen; TSCA listed**

**Precaution:** DOT: Flamm. liq.; explodes when heated; incompat. with strong oxidizers, strong acids, reducing agents, alkali metals, inorg. bases, amines, heavy metal oxides, hydrocarbons, activated carbon

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of NOx

**NFPA:** Health 1, Flammability 3, Reactivity 3

**Storage:** Hygroscopic; store in well-ventilated area; bond and ground metal containers in storage area; install pressure and vacuum-relief venting in drums

**Uses:** Raw material for pharmaceutical synthesis, e.g., for α-methyldopa, a hypertensive drug, and for phenylpropanolamine used in bronchial decongestants and appetite suppressants

**Regulatory:** Canada DSL

**Trade Names:** NE™

2-Nitro-2-ethyl-1,3-propanediol

**CAS:** 597-09-1

**Synonyms:** 2-Ethyl-2-nitropropan-1,3-diol; 2-Ethyl-2-nitro-1,3-propanediol; NEPD

**Classification:** Nitro alcohol

**Empirical:** C5H11NO4

**Formula:** HOCH2C(C2H5)(NO2)CH2OH

**Properties:** Wh. crystals; very sol. in water; sol. in org. solvs.; m.w. 149.14; m.p. 56-65 C; b.p. dec. (10 mm); pH 5.48 (0.1M aq.)

**Toxicology:** TSCA listed

**Uses:** Pharmaceutical intermediate

**Regulatory:** Canada DSL

**Trade Names:** NEPD™

Nitrogen

**CAS:** 7727-37-9; EINECS/ELINCS 231-783-9

**UN:** 1066 (compressed); UN 1977 (refrig. liq.);

**INS:** 941; E941

**Synonyms:** Nitrogen, compressed; Nitrogen gas; Nitrogen, refrigerated liquid

**Classification:** Gaseous element

**Definition:** Gas that is 78% of the atmosphere by volume and essential to all living things

**Empirical:** N2

**Properties:** Colorless gas, odorless, tasteless; sol. in liq. ammonia, alcohol; sl. sol. in water; at. wt. 14.0067; m.w. 28.01; dens. 1.2506 g/l (0 C); 0.808 g/cm² (liq., -195.8 C); m.p. -210 C; b.p. -195.79 C; chemically nonreactive; noncombustible

**Toxicology:** Low toxicity; simple asphyxiant in high concs.; toxic conc. 90 ppm in humans, 250 ppm in mice; narcotic at high conc. and pressure; narcotic effects and the bends are hazards of compressed air atmospheres such as found in underwater diving; TSCA listed

**Precaution:** Combines with oxygen and hydrogen on sparking forming nitric oxide and ammonia resp.

**Uses:** Propellant, diluent, air displacement agent in pharmaceuticals

**Regulatory:** FDA 21CFR §169.115, 169.140, 169.161, 169.150, 177.1615, 184.1540, GRAS; Japan approved; USP/NF, BP, EP compliance; Canada DSL

**Synonyms:** 5-Nitrobenzene-1,3-dicarboxylic acid

**Classification:** Aromatic carboxylic acid

**Empirical:** C8H5NO5

**Properties:** Grn. cryst.; sol. in hot water; insol. in cold water; m.w. 211.13; m.p. 260-261 C

**Toxicology:** Irritating to eyes, skin, respiratory system; TSCA listed

**Uses:** Pharmaceutical intermediate
Nitroisopropylene. See 2-Nitropropane

Nitromethane
CAS 75-52-5; EINECS/ELINCS 200-876-6
UN 1261 (DOT)
Synonyms: Nitrocarbol; NM
Classification: Aliphatic nitro compd.; nitroparaffin
Empirical: CH₃NO₂
Properties: Colorless oily liq., mild fruity to disagreeable odor; sol. in water, alcohol, ether, aromatic hydrocarbons, esters, ketones; misc. with oxygenated and aromatic solvs.; m.w. 61.04; sp.gr. 1.139 (20/20 C); m.p. -29 C; b.p. 100-103 C; flash pt. (TCC) 35-35.6 C; ref. index 1.382 (20 C)
Toxicology: ACGIH TLV/TWA 20 ppm; LD₅₀ (oral, rat) 940 mg/kg, (IP, mouse) 110 mg/kg; LDLo (IV, rabbit) 750 mg/kg; poison by ing., inh., IP routes; mod. toxic by IV route; vapor inh. may cause mild respiratory tract irritation; CNS depression occurs in animals; may cause human anorexia, nausea, vomiting, diarrhea, kidney/liver damage; mild skin irritant; TSCA listed
Precaution: Flamm.; dangerously reactive; dangerous fire/explosion risk; may detonate under high temps. and pressures; incompat. with acids, alkali metals, inorg. bases, amines, strong oxidizers, hydrocarbons, metal oxides, aluminum chloride, etc.
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOₓ
NFPA: Health 1, Flammability 3, Reactivity 4
Storage: Store in cool, dry, well-ventilated area out of direct sunlight; store separately from incompatible materials; limit quantity in storage
Uses: Solvent in pharmaceuticals; raw material for synthesis of pharmaceutical actives, e.g., for 1,1-bis(methylthio)-2-nitroethane used to mfg. ranitidine, an anti-ulcer drug, or serinol, a raw material for iopamidol, an injectable radio-opaque x-ray contrast medium

Nitrone. See Nitrocellulose
Nitropropane. See 1-Nitropropane; 2-Nitropropane
1-Nitropropane

CAS 108-03-2; EINECS/ELINCS 203-544-9

UN 2608

Synonyms: Nitropropane; n-Nitropropane; 1-NP

Classification: Aliphatic nitro compd.; nitroparaffin

Empirical: C₃H₇NO₂

Formula: CH₃CH₂CH₂NO₂

Properties: Colorless oily liq.; mild fruity odor; sol. in aromatic hydrocarbons, alcohols, esters, ketones, ethers, lower carboxylic acids; misc. with most org. solvs.; very sl. sol. in water; m.w. 89.09; dens. 1.003 (20/20 C); vapor pressure 12.9 mm Hg (20 C); autoignition temp. 420 C; ref. index 1.4018 (20 C; b.p. 129-133 C; flash pt. (TCC) 35.6 C; m.w. 89.09; dens. 1.003 (20/20 C); m.p. -108 with most org. solvs.; very sl. sol. in water; m.w. 89.09; dens. 1.003 (20/20 C); ref. index 1.4018 (20 C)

Toxicology: ACGIH TLV/TWA 25 ppm; LD50 (oral, rat) 725 mg/kg, (IP, rat) 75 mg/kg; very toxic; poison by ingestion, inhalation, and IP routes (nausea, vomiting, diarrhea, anorexia, severe headaches, cyanosis); eye/skin/mucous membrane/upper respiratory tract irritant; Ig doses may cause respiratory tract/liver damage and CNS effects; acute inh. may cause GI bleeding; may cause methemoglobinemia, depressed appetite, pulmonary edema, etc.; suspected carcinogen; mutagenic; reproductive effects

Precaution: Flamm. liq.; reacts violently; incompatible with strong oxidizers, metal oxides, strong acids, amines, inorg. bases, hydrocarbons, activated carbon; sensitive to heat

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx

NFPA: Health 1, Flammability 3, Reactivity 2

Storage: Store in cool, well-ventilated area out of direct sunlight

Uses: Pharmaceutical intermediate

Regulatory: Canada DSL

CAS 112-05-0; EINECS/ELINCS 203-931-2

FEMA 2784

Synonyms: Carboxylic acid C9; Hexacid C9; n-Nonanoic acid; Nonoic acid; n-Nonoic acid; Nonyl acid; n-Nonyl acid; 1-Octanecarboxylic acid; Pelargic acid; Pelargonic acid (INCI)

Classification: Aliphatic carboxylic acid

Empirical: C_{9}H_{18}O_{2}

Formula: CH_{3}(CH_{2})_{7}COOH

Properties: Colorless oily liq.; char. fatty odor; cryst. when cooled; sol. in alcohol, chloroform, ether, acetone, benzene, cyclohexane, n-hexane, oxygenated solvs.; pract. insol. in water; m.w. 158.24; dens. 0.907 (20/4 C); m.p. 10-12 C; b.p. 252-253 C (756 mm); acid no. 351; flash pt. 129 C; ref. index 1.433 (20 C); weakly acidic

Toxicology: LD_{50} (oral, mouse) 15 g/kg, (IV, mouse) 224 ± 4.6 mg/kg; poison by IV route; mod. toxic by ing.; strong irritant to skin and eyes; inh. of mists may cause mild to mod. irritation to nose/throat; ing. of lg. doses may cause mild irritation, sore throat, abdominal pain, nausea, vomiting; TSCA listed

Precaution: Combustible; corrosive

Hazardous Decomp. Prods.: CO, CO_{2}; heated to decomp., emits acid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals; pharmaceutical intermediate

Regulatory: FDA 21CFR §172.515, 173.315, 178.1010; FEMA GRAS; Canada DSL

n-Nonanoic acid. See Nonanoic acid

Nonanoic acid, ethyl ester. See Ethyl pelargonate

Nonanoic acid, 2-ethylhexyl ester. See Octyl pelargonate

Nonanoic acid, methyl ester. See Methyl pelargonate

Nonanoic acid, 1-methyl-1,2-ethanediyl ester. See Propylene glycol dipelargonate

Nonanoic aldehyde. See Nonanal

Nonan-1-ol; 1-Nonanol. See Nonyl alcohol

2-Nonanol

CAS 628-99-9

FEMA 3315

Synonyms: n-Heptyl methyl carbinol; Nonan-2-ol

Empirical: C_{9}H_{18}O

Properties: Colorless liq.; sol. in alcohol, oils; insol. in water; m.w. 144.26; dens. 0.827; b.p. 193-194 C; flash pt. 180 F; ref. index 1.432-1.432

Uses: Flavor for pharmaceuticals

Features: Melon-like flavor
Chemical Component Cross-Reference

Regulatory: FEMA GRAS; Canada DSL
Manuf./Distrib.: Advanced Synthesis Tech.
http://www.advancedsynthesis.com; Cargill Flavors & Fruit Systems USA

Nonan-2-ol. See 2-Nonanol
n-Nonanol. See Nonyl alcohol
Nonanol acetate. See n-Nonyl acetate
Nonanol-4-olide. See γ-Nonalactone

2-Nonanone
CAS 821-55-6; EINECS/ELINCS 212-480-0
UN 1244; FEMA 2785
Synonyms: Heptyl methyl ketone; Methyl heptyl ketone; Nonan-2-one; 2-Nonanone (methyl heptyl ketone), natural
Classification: aliphatic ketone
Empirical: C9H18O
Formula: CH3(CH2)6COCH3
Properties: Colorless oily liq., char. rue odor, rose tea-like flavor; sol. in alcohol, oils, propylene glycol; insol. in water; m.w. 142.24; dens. 0.82 (20/4 C); m.p. -21 C; b.p. 72-74 C (10 mm); flash pt. 68 C; ref. index 1.421 (20 C)
Toxicology: LD50 (oral, rat) 3200 mg/kg; mod. toxic by ing.; irritant; TSCA listed
Precaution: Combustible liq.; can react with oxidizers; wear suitable protective clothing, gloves, and eye/face protection
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS delisted
Manuf./Distrib.: Degussa AG/Health & Nutrition

Nonanoyl 4-hydroxy-3-methoxybenzylamide; N-Nonanoyl vanillylamide. See Pelargonyl vanillylamide
3,6,9,12,15,18,21,24,27-Nonaoxanonatriacontan-1-ol. See Laureth-9
Nonate. See Isoamyl nonanoate
Non-bronze blue. See Ferric ferrocyanide
Noncarbinol. See Decyl alcohol
Noncrystalline hydrated silica
CAS 20243-18-9
Synonyms: Opal CT
Trade Names Containing: Van Gel® C; Veegum®; Veegum® D; Veegum® F; Veegum® HS; Veegum® HV; Veegum® K

2-Nonenoic acid, methyl ester; Non-2-enioic acid methyl ester. See Methyl 2-nonenoate
cis-6-Nonenol. See cis-6-Nonen-1-ol

cis-6-Nonen-1-ol
CAS 35854-86-5; EINECS/ELINCS 252-764-1
FEMA 3465
Synonyms: cis-6-Nonenol; (Z)-6-Nonen-1-ol; (Z)-Non-6-en-1-ol
Empirical: C9H18O
Properties: Wh. to sl. yel. liq., powerful melon-like odor; insol. in water; m.w. 142.23; dens. 0.850-0.870; b.p. 203.00 C @ 760.00 mm; m.w. 200.27
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity floral waxy mignonette odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS delisted
Manuf./Distrib.: Degussa AG/Health & Nutrition

Noncry stalline hydrated silica
CAS 20243-18-9
Synonyms: Opal CT
Trade Names Containing: Van Gel® C; Veegum®; Veegum® D; Veegum® F; Veegum® HS; Veegum® HV; Veegum® K

2-Nonenoic acid, methyl ester; Non-2-enioic acid methyl ester. See Methyl 2-nonenoate
cis-6-Nonenol. See cis-6-Nonen-1-ol

cis-6-Nonen-1-ol
CAS 35854-86-5; EINECS/ELINCS 252-764-1
FEMA 3465
Synonyms: cis-6-Nonenol; (Z)-6-Nonen-1-ol; (Z)-Non-6-en-1-ol
Empirical: C9H18O
Properties: Wh. to sl. yel. liq., powerful melon-like odor; insol. in water; m.w. 142.23; dens. 0.850-0.870; b.p. 203.00 C @ 760.00 mm; m.w. 200.27
Chemical Component Cross-Reference

†=pharmaceutical grade

Storage: 24 mos. when stored in tight glass, aluminum, or double lined containers in a cool area away from direct heat

Uses: Synthetic flavor for pharmaceuticals
Features: Melon-like flavor
Regulatory: FEMA GRAS; Canada DSL
Manuf./Distrib.: Citrus and Allied Essences, De Monchy Aromatics, Frutarom Ltd, Lluch Essence, R.C. Treutt & Co. Ltd, SAFC Specialties, Zeon

trans-2-Nonen-1-ol
CAS 31502-14-4; EINECS/ELINCS 250-662-1
FEMA 3379
Empirical: C9H18O
Formula: CH3(CH2)5CH=CHCH2OH
Properties: Wh. liq., fatty violet odor; insol. in water; m.w. 142.23; dens. 0.830-0.850; b.p. 105 C (12 mm); flash pt. 101.6 C; ref. index 1.444-1.448
Toxicology: May be harmful by inh., ing., or skin absorp.; may be irritating to eyes, skin, mucous membranes, upper respiratory tract; may cause effects on fetus or newborn; TSCA listed
Precaution: Incompat. with strong oxidizing agents
Hazardous Decomp. Prods.: Toxic fumes of CO, CO2; emits toxic fumes under fire conditions
Storage: Store in cool, dry place; keep tightly closed
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FEMA GRAS; Canada DSL
Manuf./Distrib.: ABCR, Bedoukian Research, SAFC Specialties

(Z)-6-Nonen-1-ol; (Z)-Non-6-en-1-ol. See cis-6-Nonen-1-ol

Nonfat dry milk
EINECS/ELINCS 310-127-6
Synonyms: Milk, nonfat dry; Nonfat milk; Powdered skim milk; Sine adipe lac
Definition: Solid residue from dehydration of defatted cow's milk
Uses: Ingred. in pharmaceuticals

Nonoxynol-1
CAS 9016-45-9 (generic); 26027-38-3 (generic); 27986-36-3; 37205-87-1 (generic); EINECS/ELINCS 248-762-5
Synonyms: Ethylene glycol nonyl phenyl ether; 2-(Nonylphenoxy) ethanol; PEG-1 nonyl phenyl ether
Classification: Ethoxylated alkyl phenol
Empirical: C17H28O2
Formula: C9H19C6H4OCH2CH2OH
Properties: Yel. to almost colorless liq.; sol. in oil; HLB 4.6; nonionic
Toxicology: Moderately toxic by ingestion, skin contact; severe eye and mild skin irritant in humans; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Emulsifier, solubilizer in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 176.180
Manuf./Distrib.: Aldrich

Trade Names Containing: Bentone Gel® EUG V

Nonoxynol-2
CAS 9016-45-9 (generic); 26027-38-3 (generic); 37205-87-1 (generic); 27176-93-8 (generic); EINECS/ELINCS 248-291-5
Synonyms: PEG-2 nonyl phenyl ether; PEG 100 nonyl phenyl ether; POE (2) nonyl phenyl ether
Classification: Ethoxylated alkyl phenol
Empirical: C19H32O3
Formula: C9H19C6H4(OCH2CH2)nOH, avg. n = 2
Properties: Yel. to almost colorless liq.; sol. in oil; nonionic
Toxicology: Moderately toxic by ingestion, skin contact; severe eye and mild skin irritant in humans; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Emulsifier, solubilizer in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 176.180, 176.210
Manuf./Distrib.: Aldrich
Nonoxynol-4
CAS 7311-27-5; 9016-45-9 (generic); 26027-38-3 (generic); 37205-87-1 (generic); 27176-97-2; 68412-54-4 (generic); EINECS/ELINCS 230-770-5
Synonyms: PEG-4 nonyl phenyl ether; PEG 200 nonyl phenyl ether; POE (4) nonyl phenyl ether
Classification: Ethoxylated alkyl phenol
Empirical: C23H40O5
Formula: C9H19C6H4(OCH2CH2)nOH, avg. n = 4
Properties: Yel. to almost colorless liq.; sol. in oil; HLB 8.9; nonionic
Toxicology: Moderately toxic by ingestion, skin contact; severe eye and mild skin irritant in humans; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Surfactant, emulsifier, solubilizer in pharmaceuticals, ophthalmics, topicals, vaginals; pharmaceutic aid
Regulatory: FDA 21CFR §175.105, 176.180, 176.210, 178.3400; FDA approved for ophthalmics, topicals, vaginals; Canada DSL
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Nonoxynol-5
CAS 9016-45-9 (generic); 20636-48-0; 26027-38-3 (generic); 26264-02-8; 37205-87-1 (generic); EINECS/ELINCS 247-555-7
Synonyms: 14-(Nonylphenoxo)-3,6,9,12-tetraoxatetradecan-1-ol; PEG-5 nonyl phenyl ether; POE (5) nonylphenol; POE (5) nonyl phenyl ether
Classification: Ethoxylated alkyl phenol
Empirical: C25H44O6
Formula: C9H19C6H4(OCH2CH2)nOH, avg. n = 5
Properties: Yel. to almost colorless liq.; sol. in oil; HLB 10.5; nonionic
Toxicology: Moderately toxic by ingestion, skin contact; severe eye and mild skin irritant in humans; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Surfactant, emulsifier, solubilizer in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 176.180, 176.210, 178.3400

Uses: Surfactant, detergent, emulsifier, wetting agent, dispersant, stabilizer, defoamer in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 176.180, 178.3400
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Synperonic® NP40

Nonoxynol-50
CAS 9016-45-9 (generic); 26027-38-3 (generic); 37205-87-1 (generic); 68412-54-4 (generic)
Synonyms: PEG-50 nonyl phenyl ether; POE (50) nonyl phenyl ether
Classification: Ethoxylated alkyl phenol
Formula: C_{9}H_{19}C_{6}H_{4}(OCH_{2}CH_{2})_{n}OH, avg. n = 50
Properties: Pale yel. to off-wh. pastes or waxes; nonionic
Toxicology: Moderately toxic by ingestion, skin contact; severe eye and mild skin irritant in humans; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Surfactant, detergent, emulsifier, wetting agent, dispersant, stabilizer, defoamer in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 176.180, 178.3400
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Synperonic® NP50

†=pharmaceutical grade
n-Nonyl acetate
CAS 143-13-5; EINECS/ELINCS 205-585-8
FEMA 2788
Synonyms: Acetate C-9; Acetic acid nonyl ester; Acetic acid n-nonyl ester; Nonanol acetate; Nonyl acetate (INCI); Nonyl ethanoate; n-Nonyl ethanoate; Pelargonyl acetate
Definition: Ester of nonyl alcohol and acetic acid
Empirical: C_{11}H_{22}O_2
Formula: CH_3COO(CH_2)_8CH_3
Properties: Colorless liq., pungent odor, suggestive of mushrooms, gardenia when dil.; sol. in abs. alcohol, ether; insol. in water; m.w. 186.29; dens. 0.864; b.p. 208-212 C; flash pt. > 153 F; ref. index 1.422
Precaution: Combustible liq.
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor and fragrance for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

3-Nonyl acrolein. See 2-Dodecenal

Nonyl alcohol
CAS 143-08-8; EINECS/ELINCS 205-583-7
FEMA 2789
Synonyms: Alcohol C-9; Nonanol; Nonan-1-ol; 1-Nonanol; n-Nonanol; n-Nonyl alcohol; Octyl carbinol; Pelargonic alcohol
Empirical: C_{9}H_{18}O
Formula: CH_3(CH_2)_{7}OH
Properties: Colorless to ylsh. liq., citronella oil odor; misc. with alcohol, ether, chloroform, oxygenated solvs.; pract. insol. in water; m.w. 144.26; dens. 0.8279 (20/4 C); m.p. -6 to -4 C; b.p. 210-213 C; flash pt. 98 C; ref. index 1.4338 (20 C)
Toxicology: LD50 (oral, mouse) 6400 mg/kg, (IP, rat) 800 mg/kg, (skin, rabbit) 5600 mg/kg; LC50 (inh., mouse, 2 h) 5500 mg/m^3; mildly toxic by ing., skin contact, inh.; irritant; experimental reproductive effector; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of l-
Uses: Antimicrobial, disinfectant cleaner in topical pharmaceuticals
Regulatory: FDA approved for topicals; Canada DSL
Trade Names: Bio-Surf I-20
Nonyl octylate

Definition: Ester of n-nonanol and n-octanoic acid

Empirical: C_{17}H_{34}O_{2}

Properties: Colorless oily liq., sweet rose odor; sol. in alcohol; insol. in water; m.w. 270.46; dens. 0.86; b.p. 315 C

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet rose mushroom odor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Degussa AG/Health & Nutrition

n-Nonyl octoate; Nonyl octylate. See Nonyl octanoate

2-(Nonylphenoxy) ethanol. See Nonoxynol-1

23-(Nonylphenoxy)-3,6,9,12,15,18,21-heptaoxaetricalicosan-1-ol. See Nonoxynol-8

Nopinen; Nopinene. See β-Pinene

Norbixin

INS160b; E160b

Synonyms: 6'-Methylhydrogen-9'-cis-6,6'-diapocarotene-6,6'-dioate, Na or K; 6'-Methylhydrogen-9'-trans-6,6'-diapocarotene-6,6'-dioate, Na or K

Empirical: C_{24}H_{28}Na_{2}O_{4} or C_{24}H_{28}K_{2}O_{4}

Properties: M.w. 426.46 (sodium salt) or 458.68 (potassium salt)

Uses: Natural colorant for pharmaceuticals

Features: Provides yellow tint

Manuf./Distrib.: AB R Lundberg

http://www.norfoods.se/lundberg;

Nonyl isovalerate

CAS 7786-47-2; EINECS/ELINCS 232-098-8

FEMA 2791

Empirical: C_{14}H_{28}O_{2}

Properties: Colorless cl. liq.; sol in alcohol and diopylene glycol; insol. in water; m.w. 228.37; b.p. 760.00 mm

Uses: Synthetic flavor for pharmaceuticals

Features: Fruity apple hazelnut citrus odor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Degussa AG/Health & Nutrition

Nonyl methyl ketone. See 2-Undecanone

Nonyl octanoate

CAS 7786-48-3; EINECS/ELINCS 232-099-3

FEMA 2790

Synonyms: Nonyl caprylate; n-Nonyl octoate;
### Chemical Component Cross-Reference

**See also** Anatto (Bixa orellana); Anatto (Bixa orellana) extract

2-Norbornanone, 1,3,3-trimethyl-  See d-Fenchone

Nordhausen acid.  See Sulfuric acid

Nordihydroguaiaretic acid

CAS **500-38-9**; EINECS/ELINCS **207-903-0**

**Synonyms:** 1,4-Bis (3,4-dihydroxyphenyl)-2,3-dimethylbutane; Dihydrodorguaiaretic acid; \(\beta,\gamma\)-Dimethyl-\(\alpha,\Delta\)-bis (3,4-dihydroxyphenyl)butane; 4,4'-(2,3-Dimethyl-1,4-butanediyl)bis [1,2-benzenediol]; 4,4'-(2,3-Dimethyltetramethylene) dipyracatechol; NDGA; Nordihydroguaiaretic acid

**Classification:** Organic compd.

**Empirical:** \(\text{C}_{18}\text{H}_{22}\text{O}_4\)

**Formula:** \([\text{CaH}_3(\text{OH})_2\text{CH}_2\text{CH(CH}_3)]_2\)

**Properties:** Cryst.; sol. in lipids, ethanol, methanol, ether, acetone, glycerin, propylene glycol, dil. alkalis; sl. sol. in hot water, chloroform; pract. insol. in benzene and petrol. ether; m.w. 302.36; m.p. 184-185 C

**Toxicology:** LD50 (oral, rat) 2620 mg/kg, (skin, rabbit) > 10 g/kg; highly toxic; mod. toxic by ing.; as little as 5 g can cause nausea, vomiting, and death; skin irritant; experimental teratogen, reproductive effects; mutagenic data; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**HMIS:** Health 1, Flammability 1, Reactivity 0

**Use Level:** 0.01-0.1%

**Use Level:** 0.01-0.1%

**Regulatory:** FDA 21CFR §175.300, 177.1010, 181.22, 181.24 (0.005% migrating from food pkg.), 189.165; Japan approved (0.1 g/kg max.)

**Nutmeg (Myristica fragrans) oil**

CAS **8008-45-5**

FEMA **2793**

**Synonyms:** East Indian nutmeg oil; Myristica fragrans; Myristica fragrans oil; Myristica oil; Nutmeg oil; Nutmeg oil, East Indian

**Definition:** Oil extracted from kernel of Myristica fragrans; consists of \(\alpha\)- and \(\beta\)-pinene, camphene, myristicin, dipentene, sabanene

**Properties:** Colorless to pale yel. liq., nutmeg odor and taste; very sol. in hot alcohol, chloroform, ether; sol. in fixed oils, min. oil; sl. sol. in cold alcohol; insol. in glycerin, propylene glycol, water; dens. 0.880-0.910; ref. index 1.474-1.488

**Toxicology:** LD50 (oral, rat) 2620 mg/kg, (skin, rabbit) > 10 g/kg; highly toxic; mod. toxic by ing.; as little as 5 g can cause nausea, vomiting, and death; skin irritant; experimental teratogen, reproductive effects; mutagenic data; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**HMIS:** Health 1, Flammability 1, Reactivity 0

**Storage:** Keep cool, well closed; light-sensitive

**Uses:** Natural flavor for pharmaceuticals; carminative; stomachic

**Regulatory:** FDA 21CFR §182.20, GRAS; FEMA GRAS; Japan approved; Europe listed (< 1 to 15 ppm safrole); BP, EP compliance; Canada DSL

Nylon 12
CAS 25038-74-8; 24937-16-4
Synonyms: Azacyclotridecan-2-one, homopolymer; Azacyclotridecan-2-one polyamide; PA 12; Polyamide 12; Poly (laurolactam)
Classification: Thermoplastic; polyamide
Definition: Polyamide derived from 12-aminododecanoic acid
Empirical: \((\text{C}_{12}\text{H}_{23}\text{NO})_n\)
Formula: \((\text{NH} (\text{CH}_2)_5 \text{CO})_n\)
Properties: Solid; dens. 1.010; m.p. 175 C; tens. str. 45 MPa; tens. mod. 1400 MPa; elong (@ break) 200%; exc. abrasion resist.; good elec. insulation props.
Uses: Raw material for pharmaceuticals; absorbent, carrier in personal hygiene prods.
Regulatory: FDA 21CFR §175.300, 177.1500, 177.2260; Canada DSL
Trade Names: Orgasol® 2002 D NAT COS; Orgasol® 2002 EX D NAT COS; Orgasol® 2002 UD NAT COS
Trade Names Containing: Liponyl 10 BN 6058; Liponyl 10 BN 6069; Liponyl 20LL

Nylon 612
CAS 24936-74-1; 26098-55-5
Synonyms: Nylon 6/12; PA 612; Polyamide 612; Poly (hexamethylenedodecanediamide)
Classification: Thermoplastic; polyamide
Formula: \([\text{NH} (\text{CH}_2)_6 \text{NHCO} (\text{CH}_2)_{10} \text{CO})_n\]
Properties: Solid; dens. 1.07 kg/l; m.p. 210 C; tens. str. (@ yield) 60 MPa
Uses: Thermoplastic resin
Regulatory: FDA 21CFR §172.510; FEMA GRAS
Manuf./Distrib.: Aldrich† http://www.sigma-aldrich.com
Trade Names Containing: Liponyl N30SA

Oak bark extract
FEMA 2794
Synonyms: Oak chips extract
Definition: Extract of the bark of oak trees, Quercus species
Uses: Natural flavor for pharmaceuticals
Regulatory: BP, EP compliance; FDA 21CFR §172.510; FEMA GRAS
Manuf./Distrib.: Grau Aromatics
Chemical Component Cross-Reference

†=pharmaceutical grade

**Oak chips extract.** See Oak bark extract

**OAP.** See Hexamethyldisilazane

**Oat (Avena sativa) kernel extract**

Synonyms: Avena sativa; Avena sativa kernel extract; Oat kernel extract

Definition: Extract of the kernel of oats, Avena sativa

Uses: Soothing agent

Trade Names Containing: Drago-Oat-Active 2/060900

**Oat kernel extract.** See Oat (Avena sativa) kernel extract

**OBCP.** See Chlorophene

**Ocel.** See Oleyl alcohol

**Ocimum basilicum; Ocimum basilicum oil.** See Basil (Ocimum basilicum) oil

**Ocimum basilicum oleoresin.** See Oleoresin basil

**Ocimum sanctum**

Synonyms: Basil, holy; Holy basil; Tulasí; Tuluí

Definition: Herb of the Lamiaceae (mint) family; red and green varieties; revered in India as sacred herb

Properties: Brn. powd. with characteristic odor; astringent taste; sol. in water (≤ 70%)

Storage: 2-yr. shelf life

Uses: Anti-inflammatory, antimicrobial, antispasmodic, reduces blood sugar levels in folk medicine; antidote for snake and scorpion bites

Manuf./Distrib.: Exotic Naturals http://www.exoticnatural.com

Trade Names Containing: Pronalen® Sensitive Skin

**Octaacetylsucrose.** See Sucrose octaacetate

**Octaaluminum zirconium pentachloride tricosahydroxide.** See Aluminum zirconium pentachlorohydrate

**Octacosanol**

CAS 557-61-9

Synonyms: 1-Octacosanol; n-Octacosanol; Octacosyl alcohol; Policosanol; Polycosanol

Definition: A constituent of vegetable waxes

Empirical: C28H58O

Formula: CH3(CH2)26CH2OH

Properties: Cryst.; sol. in carbon disulfide, other fat solvs., oils; insol. in water; m.w. 410.77; m.p. 83.4 C

Uses: Direct compression tableting aid for pharmaceuticals; nutrient in pharmaceuticals, dietary supplements, health foods

Trade Names: Lessstanol™ Natural Octacosanol 95%; Viobin Octacosanol

Trade Names Containing: Lessstanol™ Natural Octacosanol 30%; Lessstanol™ Natural Octacosanol GF; Lesstanol™ Natural Policosanol 60

1-Octacosanol; n-Octacosanol; Octacosyl alcohol. See Octacosanol

Octanaldehyde. See n-Octanal

Octanal dimethyl acetal
CAS 10022-28-3; EINECS/ELINCS 233-018-4
FEMA 2798
Synonyms: C-8 dimethylacetal; 1,1-Dimethoxyoctane; Octane, 1,1-dimethoxy-
Empirical: C\textsubscript{10}H\textsubscript{22}O\textsubscript{2}
Formula: CH\textsubscript{3}(CH\textsubscript{2})\textsubscript{6}CH(OCH\textsubscript{3})\textsubscript{2}
Properties: Colorless liq.; powerful green citrus waxy sweet odor; sol. in alcohol; insol. in water; m.w. 174.28; sp.gr. 0.841-40.852; b.p. 206-207 C; flash pt. (CC) 155 F; ref. index 1.410-1.420 (20 C)
Toxicology: May be harmful by ing., skin absorp.; may be irritating to eyes, skin, mucous membranes, upper respiratory tract; TSCA listed
Precaution: Combustible liq.; incompat. with strong oxidizing agents
Hazardous Decomp. Prods.: CO, CO\textsubscript{2}; emits toxic fumes under fire conditions

†=pharmaceutical grade

Storage: Store in cool, dry place; keep tightly closed; keep away from heat and open flame
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Bedoukian Research http://www.bedoukian.com
Octanal-3,7-dimethyl-7-hydroxy; Octanal, 7-hydroxy-3,7-dimethyl-. See Hydroxycitronellal
Octanal, 7-hydroxy-3,7-dimethyl-, dimethyl acetal. See Hydroxycitronellal dimethyl acetal
Octanal-, 2-methyl-. See 2-Methyloctanal
Octanamide, N-[2-[N-(2-carboxyethyl)]-N-[2-(2-carboxyethoxy) ethyl] aminoethyl]-, disodium salt. See Disodium caproloamphodipropionate
Octanaminium, N,N-dimethyl-N-octyl-, chloride; 1-Octanaminium, N-octyl-N,N-dimethyl-, chloride. See Diocetyl dimonium chloride
1-Octanecarboxylic acid. See Nonanoic acid
Octane, 1,1-dimethoxy-. See Octanal dimethyl acetal
Octanedioic acid: Octane-1,8-dioic acid. See Suberic acid
1,3-Octanediol. See Ethyl hexanediol
1,2-Octanediol, 3,7-dimethyl-. See Hydroxycitronellol
Octane, 1,1´-oxybis-. See Dioctyl ether
Octanoic acid; n-Octanoic acid. See Caprylic acid
Octanoic acid allyl ester. See Allyl octanoate
Octanoic acid, diester with 5-hydroxy-6-methyl-3,4-pyridinedimethanol. See Pyridoxine dicaprylate
Octanoic acid, diester with 1,2,3-propanetriol. See Glyceryl dicaprylate
Octanoic acid, 2,2-dimethyl-1,3-propanediol diester. See Neopentyl glycol dicaptoante
Octanoic acid ethyl ester. See Ethyl octanoate
Octanoic acid, hexyl ester. See Hexyl octanoate
Octanoic acid, 2-hydroxypropyl ester. See Propylene glycol caprylate
Octanoic acid, isopentyl ester; Octanoic acid, 3-methylbutyl ester. See Isoamyl octanoate
Octanoic acid, methyl ester. See Methyl caprylate
Octanoic acid, 1-methyl-1,2-ethanediyl ester.
Octanoic acid, monoester with 1,2-propanediol. See Propylene glycol caprylate

- Toxicology: LD₅₀ (oral, rat) > 3200 mg/kg; toxic; skin and eye irritant; inh. may cause nose/throat irritation, CNS depression symptoms; ing. may cause 'alcohol' intoxication symptoms; may cause severe lung damage, respiratory/cardiac arrest, and death if aspirated into lungs; TSCA listed

- Environmental: VOC; ThOD 1.84

- Precaution: Combustible liq.: can form explosive mixts. with air ≥ 80 C; incompat.
Chemical Component Cross-Reference

Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Octanone-3. See 3-Octanone

4-Octanone, 5-hydroxy-. See 5-Hydroxy-4-octanone

3-Octanone-1-ol
CAS 65405687; EINECS/ELINCS 2657395
FEMA 2804
Synonyms: Caproyl ethanol; Hexanoyl ethanol; 3-(hydroxymethyl) heptan-2-one;
Ketone alcohol; Methylol methyl amyl ketone

Empirical: C8H16O2
Properties: Colorless, cl. liq.; sol. in alcohol; very sl. sol. in water; m.w. 144.21; sp. gr. 0.94500 - 0.94900; b.p. 94.00-96.00 C @ 9.00 mm
Uses: Synthetic flavor for pharmaceuticals

Features: Fruity herbal spice odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS

n-Octyl acetate. See Octyl acetate
3,6,9,12,15,18,21,24-Octaoxahexacosane-1,26-diol. See PEG-9
1-Octene-3-ol. See 1-Octene-3-ol

1-Octene-3-ol
CAS 3391-86-4; EINECS/ELINCS 222-226-0
UN 2810; FEMA 2805
Synonyms: Amyl vinyl carbinol; 1-Octene-3-ol; Pentyl vinyl carbinol
Classification: aliphatic alcohol
Empirical: C₈H₁₆O
Formula: CH₃(CH₂)₄CH(OH)CH:CH₂
Properties: Colorless liq.; earthy mushroom odor; insol. in water; sol. in most org. solvs.; m.w. 128.22; dens. 0.837 (20/4 C); vapor dens. 4.4; b.p. 173-177 C; flash pt. 87 C; ref. index 1.437 (20 C); tenacity 8 hrs. on blotter

Toxicology: LD₅₀ (oral, rat) 340 mg/kg, (IV, mouse) 56 mg/kg, (skin, rabbit) 3300 mg/kg; toxic; poison by ing. and IV routes; mod. toxic by skin contact; skin and eye irritant; TSCA listed

Environmental: Do not contaminate water sources, sewers
Precaution: Combustible; wear protective gloves, splash-proof goggles; incompat. with strong oxidizers, acids
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 2, Flammability 1, Reactivity 0
Storage: Store in cool, dry place in tightly sealed containers, protected from heat, light
Uses: Synthetic flavor and fragrance for pharmaceuticals
Use Level: < 1%
Regulatory: FCC; FDA 21CFR §172.515; FEMA GRAS; EINECS, AICS, Canada DSL, ECL, PICCS listed

1-Octene-3-ol acetate. See 1-Octen-3-yl acetate
1-Octene-3-ol butyrate. See 1-Octen-3-yl butyrate

Octic acid. See Caprylic acid

Octocrylene

CAS 6197-30-4; EINECS/ELINCS 228-250-8

Synonyms: 2-Ethylhexyl 2-cyano-3,3-diphenylacrylate; 2-Ethylhexyl 2-cyano-3,3-diphenyl-2-propenoate; UV Absorber-3

Classification: Substituted acrylate

Empirical: C_{24}H_{27}NO_{2}

Formula: (C_{6}H_{5})_{2}C=C(CN)CO_{2}CH_{2}CH(C_{2}H_{5})(CH_{2})_{3}CH_{3}

Properties: Liq.; m.p. -10 C

Uses: OTC drug active; UV-B absorber/sunscreen

Regulatory: Canada DSL

Trade Names: Escalol® 597

Ooctic acid; n-Octoic acid. See Caprylic acid

Octoxyynol-1

CAS 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic); 2315-67-5; EINECS/ELINCS 264-520-1

Synonyms: Ethylene glycol octyl phenyl ether; PEG-1 octyl phenyl ether; 2-[p-(1,1,3,3-Tetramethylbutyl) phenoxy] ethanol
Chemical Component Cross-Reference

Classification: Ethoxylated alkyl phenol
Empirical: C_{16}H_{26}O_{2}
Formula: C_{8}H_{17}C_{6}H_{4}OCH_{2}CH_{2}OH
Properties: Nonionic
Toxicology: LD_{50} (oral, rat) 1800 mg/kg; mod.
toxic by ingestion and IV routes;
experimental reproductive effects; human
mutagenic data; eye and human skin
irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to
decomposition, emits toxic fumes of NOX
Uses: Surfactant, emulsifier in
pharmaceutical topicals; spermicide
Regulatory: FDA 21CFR §172.710, 175.105,
176.180, 176.210; FDA approved for topicals
Manuf./Distrib.: Aldrich http://www.sigma-
aldrich.com

Octoxynol-3
CAS 9002-93-1 (generic); 9004-87-9 (generic);
9036-19-5 (generic); 2315-62-0; 27176-94-9
Synonyms: Octyl phenol condensed with 3
moles ethylene oxide; Octylphenol EO (3);
PEG-3 octyl phenyl ether; POE (3) octyl
phenyl ether; 2-[2-[2-[p-(1,1,3,3-
Classification: Ethoxylated alkyl phenol
Empirical: C_{16}H_{34}O_{4}
Formula: C_{8}H_{17}C_{6}H_{4}(OCH_{2}CH_{2})_{n}OH, avg. n = 3
Properties: Nonionic
Toxicology: LD_{50} (oral, rat) 4000 mg/kg; mod.
toxic by ingestion; irritating to eyes; TSCA listed
Hazardous Decomp. Prods.: Heated to
decomposition, emits acrid smoke and irritating
fumes
Uses: Emulsifier, solubilizer in
pharmaceuticals; spermicide
Regulatory: FDA 21CFR §172.710, 175.105,

#### Octoxynol-10

- **CAS**: 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
- **Synonyms**: Octyl phenol EO (10); 29-(Octylphenoxy)-3, 6, 9, 12, 15, 18, 21, 24, 27-nonaioxanophonacosan-1-ol; PEG-10 octyl phenyl ether; PEG 500 octyl phenyl ether; POE (10) octyl phenyl ether
- **Classification**: Ethoxylated alkyl phenol
- **Empirical**: C_{32}H_{58}O_{10}
- **Formula**: C_{8}H_{17}C_{6}H_{4}(OCH_{2}CH_{2})_{n}OH, avg. n = 9
- **Properties**: Pale yel. clear visc. liq.; faint odor, bitter taste; sol. in benzene, toluene; misc. with water, alcohol, acetone; insol. in hexane; dens. 1.059-1.068; hyd. no. 85-101; cloud pt. 63-69 C; pH 6-8; nonionic
- **Toxicology**: TSCA listed
- **Uses**: Surfactant, detergent, wetting agent, solubilizer, emulsifier, dispersant in pharmaceuticals, topicals; spermicide
- **Regulatory**: FDA 21CFR §175.105, 176.180, 176.210, 178.3400; FDA approved for topicals; USP/NF compliance
- **Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)
- **Trade Names**: Triton® X-100

#### Octoxynol-11

- **CAS**: 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
- **Synonyms**: PEG-11 octyl phenyl ether; POE (11) octyl phenyl ether; 32-[4-(1,1,3,3-Tetramethylbutyl)phenoxy]-3, 6,9,12,15,18,21,24,27,30-decaoxadotriacontan-1-ol
- **Classification**: Ethoxylated alkyl phenol
- **Empirical**: C_{36}H_{66}O_{12}
- **Formula**: C_{8}H_{17}C_{6}H_{4}(OCH_{2}CH_{2})_{n}OH, avg. n = 11
- **Properties**: Nonionic
- **Toxicology**: TSCA listed
- **Uses**: Emulsifier, solubilizer in pharmaceuticals; spermicide
- **Regulatory**: FDA 21CFR §172.710, 175.105, 176.180, 176.210, 178.3400
- **Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)
- **Trade Names**: Triton® X-100

#### Octoxynol-13

- **CAS**: 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
- **Synonyms**: PEG-13 octyl phenyl ether; POE (13) octyl phenyl ether; 38-[4-(1,1,3,3-Tetramethylbutyl)phenoxy]-3, 6,9,12,15,18,21,24,27,30,33,36-dodecaoxaoctatriacontan-1-ol
- **Classification**: Ethoxylated alkyl phenol
- **Empirical**: C_{40}H_{74}O_{14}
- **Formula**: C_{8}H_{17}C_{6}H_{4}(OCH_{2}CH_{2})_{n}OH, avg. n = 13
- **Properties**: Nonionic
- **Toxicology**: TSCA listed
- **Uses**: Surfactant, emulsifier, solubilizer in pharmaceuticals
- **Regulatory**: FDA 21CFR §172.710, 175.105, 176.180, 176.210, 178.3400
- **Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)
Octoxynol-16
CAS 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
Synonyms: Octyl phenol condensed with 16 moles ethylene oxide; Octyl phenol EO (16); PEG-16 octyl phenyl ether; POE (16) octyl phenyl ether
Classification: Ethoxylated alkyl phenol
Formula: C₈H₁₇C₆H₄(OCH₂CH₂)ₙOH, avg. n = 16
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 2800 mg/kg; mod. toxic by ing.; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Emulsifier, solubilizer in pharmaceuticals; spermicide
Regulatory: FDA 21CFR §175.105, 176.180
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Octoxynol-20
CAS 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
Synonyms: PEG-20 octyl phenyl ether; PEG 1000 octyl phenyl ether; POE (20) octyl phenyl ether
Classification: Ethoxylated alkyl phenol
Formula: C₈H₁₇C₆H₄(OCH₂CH₂)ₙOH, avg. n = 20
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer in pharmaceuticals; spermicide
Regulatory: FDA 21CFR §175.105, 176.180
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Synerponic® OP20

Octoxynol-25
CAS 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
Synonyms: PEG-25 octyl phenyl ether; POE (25) octyl phenyl ether
Classification: Ethoxylated alkyl phenol
Formula: C₈H₁₇C₆H₄(OCH₂CH₂)ₙOH, avg. n = 25
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, solubilizer in pharmaceuticals

Octoxynol-30
CAS 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
Synonyms: PEG-30 octyl phenyl ether; POE (30) octyl phenyl ether
Classification: Ethoxylated alkyl phenol
Formula: C₈H₁₇C₆H₄(OCH₂CH₂)ₙOH, avg. n = 30
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer in pharmaceuticals; spermicide
Regulatory: FDA 21CFR §172.710, 175.105, 176.180, 178.3400
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Octoxynol-40
CAS 9002-93-1 (generic); 9004-87-9 (generic); 9036-19-5 (generic)
Synonyms: PEG-40 octyl phenyl ether; POE (40) octyl phenyl ether
Classification: Ethoxylated alkyl phenol
Formula: C₈H₁₇C₆H₄(OCH₂CH₂)ₙOH, avg. n = 40
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer in pharmaceuticals; spermicide
Regulatory: FDA 21CFR §172.710, 175.105, 176.180, 178.3400
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Synerponic® OP40 70%; Synerponic® OP40; Teric™ X40L

Octyacetate
CAS 112-14-1; EINECS/ELINCS 203-939-6
FEMA 2806
Synonyms: Acetate C-8; Acetic acid octyl ester; Caprylyl acetate; 1-Octanol acetate; n-Octanoyl acetate; 1-Octyl acetate; n-Octyl acetate; Octyl alcohol acetate
Classification: Carboxylic acid ester
Empirical: C₁₀H₂₀O₂

Octyldodecanol (INCI); 2-Octyl decanol. See 2-Octyl-1-decanol

2-Octyl-1-decanol
CAS 45235-48-1
Synonyms: 1-Decanol, 2-octyl; Octyldodecanol (INCI); 2-Octyl decanol; Octyldecyl alcohol
Classification: Aliphatic alcohol
Empirical: C_{18}H_{38}O
Precaution: Combustible
Uses: Emollient in pharmaceuticals
Manuf./Distrib.: Sea-Land http://www.sealandchem.com; Whyte Chems. Ltd http://www.whytechemicals.co.uk

Trade Names Containing: ISOFOL® 18E; ISOFOL® 18T; Jarcol™ I-18T

2-Octyl-1-decanol. See Isostearyl alcohol

Octyldecyl alcohol. See 2-Octyl-1-decanol

Octyl decyl dimethyl ammonium chloride. See Quaternium-24

Octyl dimethyl p-aminobenzoate; Octyl-p-(dimethylamino) benzoate. See Octyl dimethyl PABA

Octyl dimethyl PABA
CAS 21245-02-3; EINECS/ELINCS 244-289-3
Synonyms: 4-Dimethylaminobenzoic acid, ethylhexyl ester; 2-Ethylhexyl-4 (dimethylamino) benzoate; 2-Ethylhexyl p-dimethylaminobenzoate; Octyl dimethyl p-aminobenzoate; Octyl-p-(dimethylamino) benzoate; Padimate O
Definition: Ester of 2-ethylhexyl alcohol and dimethyl p-aminobenzoic acid
Empirical: C_{17}H_{27}NO_2
Properties: M.w. 277.4; sp.gr. 0.99-1.00; ref. index 1.5390-1.5430

2-Octyl dodecanoic acid
CAS 40596-46-1; EINECS/ELINCS 254-992-7
Classification: Nonaromatic carboxylic acid
Empirical: C_{20}H_{40}O_2
Properties: M.w. 312.54; dens. 0.846; m.p. 36-40 C

Toxicology: May be harmful by inh., ing., or skin absorption; irritating to eyes, skin, respiratory system; TSCA listed
Precaution: Incompat. with strong oxidizing agents
Uses: Pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Cambrex Karlskoga AB; Ruger http://www.rugerchemical.com; Spectrum Quality Prods.;† http://www.spectrumchemical.com

Trade Names: Jaric I-20

Octyldodecanol
CAS 5333-42-6; EINECS/ELINCS 226-242-9
Synonyms: 1-Dodecanol, 2-octyl-; Isoarachidyl alcohol; Isoeicosanol; Isoeicosyl alcohol; 2-Octyl dodecanol; 2-Octyl-1-dodecanol; 2-Octyldodecyl alcohol
Classification: Aliphatic alcohol
Empirical: C_{20}H_{42}O
Formula: CH_3(CH_2)_9CHCH_2OHCH_3(CH_2)_6CH_2
Properties: Water-wh. clear liq.; sol. in alcohol, ether; insol. in water; m.w. 298.62; sp.gr. 0.84-0.85; m.p. -40 C; acid no. 0.5 max.; iodine no. 8 max.; sapon. no. 5 max.; hyd. no. 175-190; flash pt. (COC) 180 C

Toxicology: Eye and severe skin irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Emollient, lubricant, solvent, vehicle, carrier, solubilizer for pharmaceuticals, topicals, vaginal creams
Features: Oleaginous
Chemical Component Cross-Reference

†=pharmaceutical grade

CH₃(CH₂)₁₂COOCH₂CH(CH₂)₉CH₂CH₂(CH₂)₆
CH₃

Uses: Emollient, plasticizer for pharmaceuticals; excipient for dermal/transdermal pharmaceuticals

Regulatory: Canada DSL
Trade Names: Exceparl OD-M; M.O.D.; Saboderm ODM; Wickenol® 142

Octyldodecyl erucate
CAS 22766-82-1; EINECS/ELINCS 245-204-2
Synonyms: 2-Octyldodecyl erucate; Stearic acid, 2-octyldodecyl ester
Definition: Ester of octyldodecanol and erucic acid
Empirical: C₃₈H₇₆O₂
Toxicology: TSCA listed
Uses: Base, emollient, moisturizer for pharmaceuticals
Regulatory: Canada DSL
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

2-Octyldodecyl stearate. See Octyldodecyl erucate

Octyldodecyl myristate
CAS 22766-83-2; 83826-43-1; EINECS/ELINCS 245-205-8; 255-623-2
Synonyms: Myristic acid, 2-octyldodecyl ester; Tetradecanoic acid, 2-octyldodecyl ester
Classification: Ester of octyldodecanol and myristic acid
Empirical: C₃₄H₆₆O₂

Uses: Emollient, visc. control agent, binder, dispersant, lubricant, mold release agent for pharmaceuticals, topicals, suppositories
Regulatory: Canada DSL
Trade Names: Ceraphyl® 847

Octyl enanethate. See Octyl heptanoate
Octylene glycol; 1,3-Octylene glycol. See Ethyl hexanediol
Octyl ether. See Dioctyl ether
Octyl formate
CAS 112-32-3; EINECS/ELINCS 203-959-5

2-Octyldodecanol; 2-Octyl-1-dodecanol; 2-Octyldodecyl alcohol. See Octyldodecanol
n-Octyl formate. See Octyl formate

Octyl heptanoate
cas 5132-75-2; einecs/elincs 225-882-6
Fema 2810
Synonyms: Heptanoic acid, octyl ester; Octyl enanther; Octyl heptoate
Empirical: C15H30O2
Properties: Colorless liq.; fruity, sl. fatty odor; m.w. 242.41; sp.gr. 0.85200 (20 C); b.p. 290.8 C; flash pt. > 130 C; ref. index 1.43488
Toxicology: Nontoxic
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib: Degussa
http://www.degussa.com; Grau Aromatics http://www.grau-aromatics.de
SAFC Specialties
http://www.safcspecialties.com

Octyl hydroxystearate benzoate
CAS 199277-69-5
Synonyms: Ethylhexyl hydroxystearate benzoate
Uses: Emollient, pigment wetting agent/dispersant in therapeutic prods.
Trade Names: Finsolv® BOHS-111

n-Octyl acid. See Caprylic acid

Octyl isobutyrate
cas 109-15-9; einecs/elincs 203-651-0
Fema 2808
Synonyms: Octyl 2-methylpropanoate
Empirical: C12H24O2
Properties: Colorless liq.; weak, fruity odor; insol. in water; sp.gr. 0.85200 (20 C); b.p. 290.8 C; flash pt. > 130 C; ref. index 1.43488
Toxicology: Skin, eye irritant; TSCA listed
Environmental: Keep run-off out of water sources, sewers
Precaution: Wear protective gloves, splash-proof eye goggles; incompat. with strong oxidizers
Hazardous Decomp. Prods.: COx
Storage: Keep away from heat, sparks, open flame; keep in original, tightly closed containers
Octyl isononanoate
CAS 71566-49-9; EINECS/ELINCS 275-637-2
Synonyms: 2-Ethylhexyl isononanoate; Isononanoic acid, 2-ethylhexyl ester
Definition: Ester of 2-ethylhexyl alcohol and a branched chain nonanoic acid
Empirical: C₁₇H₃₄O₂
Formula: CH₃(CH₃)₂CCH₂CH₃CHCH₂COOCH₂(CH₂CH₃)CH(CH₂)₃CH₃
Properties: Clear water-wh. liq.; typ. mild odor; sp.gr. 0.85; f.p. -34 °C; b.p. 200 °C; flash pt. (COC) 127 °C
Toxicology: Nontoxic
Precaution: Incompat. with oxidizing agents
Storage: Store away from strong oxidizing agents
Uses: Emollient, lubricant, solvent for pharmaceutical topicalcs, creams, lotions; antitackifier in antiperspirants
Manuf./Distrib.: A&E Connock
Trade Names: Pelemol® 89

Octyl isovalerianate. See Octyl isovalerate

Octyl methoxycinnamate
CAS 5466-77-3; EINECS/ELINCS 226-775-7
Synonyms: 2-Ethylhexyl methoxycinnamate; 2-Ethylhexyl p-methoxycinnamate; Ethylhexyl p-methoxycinnamate; 2-Ethylhexyl 3-(4-methoxyphenyl)-2-propenoate; 3-(4-Methoxyphenyl)-2-propenoic acid, 2-ethylhexyl ester; 2-Propenoic acid, 3-(4-methoxyphenyl)-, 2-ethylhexyl ester
Definition: Ester of 2-ethylhexyl alcohol and methoxycinnamic acid
Empirical: C₁₈H₂₆O₃
Properties: M.w. 290.40; b.p. 185-195 °C (1 mbar)
Toxicology: Minimal eye irritation, mild skin irritation; TSCA listed
Uses: UV absorber for pharmaceuticals; UV-B absorber for sunscreens; OTC drug active
Regulatory: Canada DSL
Manuf./Distrib.: A&E Connock; Adrian Amer.; Aldrich; Sigma-Aldrich; R.W. Greeff
Trade Names: Escalol® 557
Trade Names Containing: Lipo CD™-OMC; Nanospheres 100 O.M.C.; Unifilter U-41

Octyl 3-methyl butanoate; Octyl 3-methyl butyrate. See Octyl isovalerate

Octyl 2-methylpropanoate. See Octyl isobutyrate

Octyl-octadecyl dimethyl ethylbenzyl ammonium chlorides. See Benzalkonium chloride

Octyl octanoate
CAS 2306-88-9; 7425-14-1; EINECS/ELINCS 231-057-1
FEMA 2811
Synonyms: 2-Ethylhexyl-2-ethylhexanoate
Definition: Ester of 2-ethylhexanol and 2-ethylhexanoic acid
Empirical: C₁₆H₃₂O₂
Formula: CH₃(CH₂)₃CHCH₂CH₃COOCH₂CHCH₂CH₃(CH₂)₃CH₂CH₃
Chemical Component Cross-Reference

\[ \text{H}_2\text{C}_3\text{H}_3 \]

*Uses:* Synthetic flavor for pharmaceuticals; emollient, softener, moisture retention in skin care prods.

Empirical: C_{15}H_{22}O_{3}
Properties: M.w. 250.37
Toxicology: LD50 (parenteral, rabbit) > 4 g/kg; primary skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: OTC drug active; UV-B absorber for pharmaceuticals; solubilizer for benzophenone-3
Regulatory: Canada DSL
Trade Names: Escalol® 587

Octyl sodium sulfate. See Sodium octyl sulfate

Octyl stearate
CAS 22047-49-0; EINECS/ELINCS 244-754-0
Synonyms: 2-Ethylhexyl octadecanoate; 2-Ethylhexyl stearate; Octadecanoic acid, 2-ethylhexyl ester; Stearic acid, 2-ethylhexyl ester
Definition: Ester of 2-ethylhexyl alcohol and stearic acid
Empirical: C_{26}H_{52}O_{2}
Formula: CH_{3}(CH_{2})_{15}COOCH_{2}(CH_{2}CH_{3})CH(CH_{2})_{3}CH_{3}
Properties: Oily liq.; m.w. 396.71; cloud pt. 10-15 C
Toxicology: Skin and eye irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Emollient, superfatting agent, moisturizer, lubricant, spreading agent, detackifier, solubilizer, gloss aid, pigment wetting agent/dispersant for pharmaceutical topicals
Regulatory: Canada DSL
Manuf./Distrib.: A&E Connock http://www.connock.co.uk; ChemService
Octyl sulfate sodium salt. See Sodium octyl sulfate

Octynecarboxylic acid methyl ester. See Methyl-2-nonynoate

Oct-2-ynoic acid methyl ester. See Methyl-2-octynoate

ODO-L. See Caprylic/capric triglyceride

Odorless kerosene. See Deodorized kerosene

Oenanthal; Oenanthaldehyde. See Heptanal

Oenanthic acid. See Heptanoic acid

Oenanthaldehyde. See Heptanal

Oenanthic ether. See Ethyl heptanoate

Oenanthol. See Heptanal

Oenanthylic acid. See Heptanoic acid

Oenanthylidene acetone. See 3-Decen-2-one

Oil of egg; Oil of egg yolk. See Egg oil

‘Oil garlic’. See Allyl sulfide

Oil of grapes. See Ethyl heptanoate

Oil mist, mineral. See Mineral oil

Oil of niobe. See Methyl benzoate

Oil of Palma Christi. See Castor (Ricinus communis) oil

Oil red. See D&C Red No. 17; Solvent red 23

Oils, avocado. See Avocado (Persea gratissima) oil

Oil scarlet. See D&C Red No. 17; Solvent red 23

Oils, jojoba. See Jojoba (Buxus chinensis) oil

Oils, lanolin. See Lanolin oil

Oils, orange roughy. See Orange roughy oil

Oils, palm. See Palm (Elaeis guineensis) oil

Oils, palm, hydrogenated. See Hydrogenated palm oil

Oils, palm kernel. See Palm (Elaeis guineensis) kernel oil

Oils, palm kernel, hydrogenated. See Hydrogenated palm kernel oil

Oils, rice bran. See Rice (Oryza sativa) bran oil

Oils, soybean, maleated. See Maleated soybean oil

Oils, vegetable. See Vegetable oil

Oils, vegetable, hydrogenated. See Hydrogenated vegetable oil

Oil of vitriol. See Sulfuric acid

Oil of wintergreen. See Methyl salicylate

http://www.chemservice.com

Trade Names: Cetiol® 868; Exceparl EH-S; Memfluid Isostill Stearato; Saboderm OS; Tegosoft® OS

Wickenol® 156

Trade Names Containing: Wickenol® 161

Olealkonium chloride

CAS 37139-99-4; EINECS/ELINCS 253-363-4

Synonyms: N,N-Dimethyl-N-9-octadecenyllbenzenemethanaminium chloride; Oleyl benzyl dimethyl ammonium chloride; Oleyl dimethyl benzyl ammonium chloride

Classification: Quaternary ammonium salt

Empirical: C_{27}H_{48}N • Cl

Formula: C_{27}H_{48}N • Cl

Toxicology: TDLo (IP, mouse) 400 mg/kg

Uses: Conditioner in pharmaceuticals

Regulatory: FDA 21CFR §175.105, 178.1010; Canada DSL

Trade Names: AMMONYX® KP

Oleamide DEA

CAS 93-83-4; EINECS/ELINCS 202-281-7

Synonyms: N,N-Bis(2-hydroxyethyl)-9-octadecenamide; N,N-Bis (2-hydroxyethyl) oleamide; Diethanolamine oleic acid amide; Oleic acid diethanolamide; Oleic DEA; Oleic diethanolamide
Chemical Component Cross-Reference

†=pharmaceutical grade

Definition: Mixture of ethanolamides of oleic acid
Empirical: C_{22}H_{43}NO_{3}
Formula: CH_{3}(CH_{2})_{7}CH:CH(CH_{2})_{7}CON(CH_{2}CH_{2}OH)_{2}
Properties: Amber to brn. liq.; m.w. 369.59
Toxicology: TSCA listed
Uses: W/o emulsifier, lubricant, conditioner in pharmaceutical topicals
Regulatory: FDA 21CFR §175.105, 176.210, 177.2260, 177.2800; Canada DSL
Trade Names: Schercomid SO-A

Oleamide MEA
CAS 111-58-0; EINECS/ELINCS 203-884-8
Synonyms: N-(2-Hydroxyethyl)-9-octadecenamide; N-(2-Hydroxyethyl)oleamide; Monoethanolamine oleic acid amide; Oleic monoethanolamide; Oleoyl monoethanolamide
Definition: Mixture of ethanolamides of oleic acid
Empirical: C_{20}H_{38}NO_{2}
Formula: CH_{3}(CH_{2})_{7}CH:CH(CH_{2})_{7}CONHCH_{2}CH_{2}OH
Properties: Soft paste; m.w. 339.57; nonionic
Toxicology: TSCA listed
Uses: W/o emulsifier, conditioner, and thickener for topical pharmaceuticals
Regulatory: Canada DSL
Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Schercomid OME

Oleamide MIPA
CAS 111-05-7; EINECS/ELINCS 203-828-2
Synonyms: N-(2-Hydroxypropyl)-9-octadecenamide; N-(2-Hydroxypropyl)oleamide; Monoisopropanolamine oleic acid amide; Oleic monoisopropanolamide; Oleic isopropanolamide; Oleic monoisopropanolamide
Definition: Mixture of isopropanolamides of oleic acid
Empirical: C_{21}H_{41}NO_{2}
Formula: CH_{3}(CH_{2})_{7}CH:CH(CH_{2})_{7}CONHCH_{2}CH_{3}CHOH
Properties: Soft paste; m.w. 339.57; nonionic
Toxicology: TSCA listed
Uses: Slip agent, lubricant, emollient, softener on skin, for topical pharmaceuticals; emulsifier for creams and lotions
Regulatory: FDA 21CFR §175.105, 176.210, 177.2260, 177.2800; Canada DSL
Trade Names: Burcomide 61; Schercomid OMI

Olean-12-en-30-oic acid, 3-β-hydroxy-11-oxo-
See Glycyrrhetinic acid

Oleic acid
CAS 112-80-1; EINECS/ELINCS 204-007-1
FEMA 2815; INS570; E570
Synonyms: Elaic acid; 9-Octadecenoic acid; 9,10-Octadecenoic acid; cis-9-Octadecenoic acid; cis-Octadec-9-enoic acid; Oleinic acid; Red oil
Classification: Aliphatic carboxylic acid; unsaturated fatty acid
Empirical: C_{18}H_{34}O_{2}
Formula: CH_{3}(CH_{2})_{7}CH:CH(CH_{2})_{7}COOH
Properties: Colorless liq., odorless; darkens when exposed to oxygen; sol. in alcohol, ether, benzene, chloroform, fixed/volatile oils, oxygenated, chlorinated, and aromatic solvs.; insol. in water; m.w. 282.47; dens. 0.895; vapor pressure 1 mm (176.5 C); m.p. 6 C; b.p. 286 C (100 mm); HLB 1.0; acid no. 196-204; nonionic
Toxicology: LD50 (oral, rat) 74 g/kg, (IV, rat) 2400 µg/kg; poison by IV route; mildly toxic by ing.; irritant to skin, mucous membranes; human eye and skin irritant; questionable carcinogen; experimental tumorigen; mutagenic data; TSCA listed
Precaution: Combustible when exposed to heat or flame; incompatible with AI and perchloric acid
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 1, Flammability 1, Reactivity 0
Storage: Light-sensitive
Uses: Emulsifier, solubilizer, stabilizer, solvent in pharmaceuticals, inhalants, orals, topicals; pharmaceutic aid
Regulatory: FDA 21CFR §172.210, 172.860, 172.862, 173.315 (0.1 ppm max. in wash water), 173.340, 175.105, 175.320, 176.170, 176.180, 176.200, 176.210, 177.1010, 177.1200, 177.2260, 177.2600, 177.2800, 178.3570, 178.3910, 182.70, 182.90; Canada DSL; FEMA GRAS; FDA approved for inhalants, orals, topicals; USP/NF, BP, EP compliance
Manuf./Distrib.: AMRESCO†
Oleic acid diethanolamide. See Oleamide DEA

Oleic acid glycerol monoester. See Glycerol oleate

Oleic acid, 12-hydroxy-. See Ricinoleic acid

Oleic acid, lauryl ester. See Lauryl oleate

Oleic acid, methyl ester, cis-; cis-Oleic acid, methyl ester. See Methyl oleate

Oleic acid, monooester with decaglycerol. See Polyglyceryl-10 oleate

Oleic acid, monooester with oxybis (propanediol). See Polyglyceryl-2 oleate

Oleic acid, monooester with 1,2-propanediol. See Propylene glycol oleate

Oleic acid, monooester with triglycerol. See Polyglyceryl-3 oleate

Oleic acid monoglyceride. See Glycerol oleate

Oleic acid monoisopropanolamide. See Oleamide MIPA

Oleic acid poly (oxyethylene) ester. See PEG oleate

Oleic acid potassium salt. See Potassium oleate
Chemical Component Cross-Reference

Oleic DEA; Oleic diethanolamide. See Oleamide DEA

Oleic imidazolium methosulfate
CAS 72749-55-4
Synonyms: Methyl-1-alkyl amidoethyl-2-alkyl imidazolium methosulfate; 1-Methyl-2-heptadecenyl-3-oleylamidoethyl imidazolinium methosulfate; 1-Methyl-2-noroleyl-3-oleic acid-amido ethylimidazolium methysulfate
Classification: Quaternary ammonium compd.
Empirical: $\text{C}_{42}\text{H}_{80}\text{O}_{5}\text{N}_{3}\text{S}$
Properties: M.w. 739
Uses: Ingred. in biocides for pharmaceuticals, veterinary prods.
Regulatory: Canada DSL
Trade Names Containing: Bio-Gentle®

Formulation

Oleic isopropanolamide. See Oleamide MIPA
Oleic monoethanolamide. See Oleamide MEA
Oleic monoisopropanolamide. See Oleamide MIPA

Olein. See Triolein
Oleic acid. See Oleic acid
Oleol. See Oleyl alcohol

Oleoresin basil
CAS 977017-82-5; 8015-73-4
FEMA 2120
Synonyms: Basil oleoresin; Ocimum basilicum oleoresin
Definition: Obtained by solv. extraction of the dried plant of Ocimum basilicum
Properties: Dk. brn. or grn. semisolid; basil minty green tea odor
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS

Oleoresin black pepper
CAS 8002-56-0
FEMA 2846
Synonyms: Black pepper oleoresin, Pepper oleoresin; Pepper, black, oleoresin; Pepper oleoresin, black; Piper nigrum oleoresin
Definition: Obtained by solv. extraction of dried fruit of Piper nigrum
Properties: Yel., dk. grn., olive grn., or olive drab
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS; approved for orals; Canada DSL

†=pharmaceutical grade
liq. or semisolid; fresh ground blk. pepper odor
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS; Canada DSL

Oleoresin capsicum
CAS 8023-77-6
FEMA 2234
Synonyms: Capsicin; Capsicum frutescens; Capsicum frutescens oleoresin (INCI); Capsicum frutescens resin; Capsicum oleoresin; Oleoresin capsicum Africanus
Definition: Resinous material obtained by solv. extraction of dried pods of Capsicum frutescens
Properties: Clear red to dk. red somewhat visc. liq., chili, musty, hay, tobacco, sweet herbal odor; char. flavor; sol. in ethyl ether, most veg. oils, most fixed oils; partly sol. in alcohol; insol. in water
Toxicology: LD50 (oral, rat) > 3 g/kg, (IP, rat) 248 mg/kg
Uses: Natural flavor for pharmaceuticals, OTC drugs, orals; counterirritant in external analgesic prods.
Regulatory: FDA 21CFR §73.345, 182.10, 182.20, 582.10, 582.20, GRAS; FEMA GRAS; approved for orals; Canada DSL
Chemical Component Cross-Reference

Oleoresin capsicum Africanus. See Oleoresin capsicum

Oleoresin ginger
CAS 8002-60-6
FEMA 2523
Synonyms: Ginger oleoresin; Zingiber officinale oleoresin
Definition: Obtained by solv. extraction of dried rhizomes of Zingiber officinale
Properties: Dk. brn. visc. to highly visc. liq.; ginger earthy musty citrus odor; char. ginger flavor; cooling aftertaste; poor sol. in alcohol; sp/gr. 0.87500-0.885
Storage: Store air-tight in cool, dry place; protect from light
Uses: Natural flavor for pharmaceuticals
Features: Woody spice herbal ginger citrus/citral odor
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS; Canada DSL
Manuf./Distrib.: Advanced BioTech

Oleoresin marjoram
CAS 977038-85-9; 8016-33-9
FEMA 2659
Synonyms: Marjorana hortensis oleoresin; Marjoram oleoresin
Definition: Obtained by solv. extraction of the dried herb of Marjorana hortensis
Properties: Dk. grn. to brn. visc. liq. or semisolid; marjoram medicinal odor
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS

Oleoresin parsley leaf
CAS 8025-95-4
FEMA 2837
Synonyms: Parsley leaf oleoresin; Petroselinum crispum oleoresin
Definition: Obtained by solv. extraction of the dried herb Petroselinum crispum
Properties: Brn. to grn. liq.
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS

Oleoresin parsley seed
FEMA 2837
Synonyms: Parsley seed oleoresin; Petroselinum crispum oleoresin
Definition: Obtained by solv. extraction of the dried seeds of Petroselinum crispum
Chemical Component Cross-Reference

†=pharmaceutical grade

Handbook of Pharmaceutical Additives, Third Edition

Oleoresin turmeric
CAS 129828-29-1
FEMA 3087

Synonyms: Curcuma longa; Curcuma longa oleoresin; Turmeric oleoresin; Turmeric root oleoresin

Definition: Obtained by solv. extraction of the dried rhizomes of Curcuma longa

Properties: Bright yel. powd. or yel. orange to red brn. visc. liq.; soft spicy woody earth odor; mustard taste; misc. with water

Toxicology: Human mutagenic data

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Natural flavor for pharmaceuticals

Regulatory: FDA 21CFR §73.615, 182.20, GRAS; FEMA GRAS; Canada DSL

See also Turmeric (Curcuma longa)

Oleostearin. See Oleostearine

Oleostearine

Synonyms: Glycerides, tallow; Oleostearin

Definition: Mixt. of fatty acid triglycerides remaining after the physical separation of the low titer oils from beef tallow

Uses: Emollient in pharmaceutical waxes

Manuf./Distrib.: Anar; Geo. Pfau's Sons http://www.pfauoil.com; Norman, Fox

Oleovitamin A. See Retinol
Oleovitamin D. See Ergocalciferol
Oleoyl alcohol. See Oleyl alcohol
Oleoylglycerol. See Glyceryl olate
Oleoyl monoethanolamide. See Oleamide MEA

Oleoyl monoisopropanolamide disodium sulfosuccinate. See Disodium oleamido MIPA-sulfosuccinate

Oleoyl sarcosine
CAS 110-25-8; EINECS/ELINCS 203-749-3

Synonyms: N-Methyl-N-(1-oxo-9-octadecenyl) glycine; (Z)-N-Methyl-N-(1-oxo-9-octadecenyl) glycine; n-Oleoylsarcosine; Oleyl N-methylaminoacetic acid; Oleyl methylaminoethanoic acid; Oleyl N-methylglycine; Oleyl sarcosine; N-Oleyl sarcosine

Definition: Condensation prod. of oleic acid with N-methylglycine

Empirical: C_{21}H_{39}NO_{3}

Formula: CH_{3}(CH_{2})_{7}CH:CH(CH_{2})_{7}CON(CH_{3})CH_{2}COOH

Properties: Amber liq.; m.w. 353.55; dens. 0.955 (20/20 C); ref. index 1.4703 (20 C)

Toxicology: TSCA listed

Precaution: Combustible

Uses: Enhances antimicrobial effectiveness of ophthalmic compositions

Regulatory: FDA 21CFR §178.3130, 178.3570; Canada DSL

Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Sarkosyl® O

n-Oleoylsarcosine. See Oleoyl sarcosine

Oleth
CAS 9004-98-2 (generic)

Synonyms: Glycols, polyethylene, mono-9-octadecenyl ether, (Z)-; Oleyl alcohol EO condensate; Oleyl alcohol ethoxylates; Oleyl polyoxyethylene glycol ether; Polyoxyethylene glycol oleyl ether; Poly (oxy-1,2-ethanediyl), α-9-octadecenyl-ω-hydroxy-(Z)-; Polyoxyethylene monooleyl ether; Polyoxy oleyl ether

Classification: Nonaromatic ether

Definition: PEG ether of oleyl alcohol

Empirical: (C_{2}H_{4}O)_{x}C_{18}H_{37}O

Formula: CH_{3}(CH_{2})_{7}CH=CH(CH_{2})_{8}(OCH_{2}CH_{2})_{n}OH, n = 2-20
Chemical Component Cross-Reference

Properties: Pale yel. liq. to wh. waxy solid; HLB 4.9-15.3 (2-20 EO); nonionic
Toxicology: LD50 (IP, rat) 235 mg/kg; poison by IP route; eye irritant; may be reproductive effector; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Store in a tightly closed container in a cool, dry, well-ventilated area away from incompat. substances
Uses: Emulsifier
Trade Names: Nofable EAO-80; Nofable EAO-90; Nofable EAO-99

Oleth-2
CAS 9004-98-2 (generic); 5274-65-7
Synonyms: (Z)-α-9-Octadecenyl-ω-hydroxypoly (oxy-1,2-ethanediyl); 2-[2-(9-Octadecenyl)oxy] ethanol; Oleyl alcohol EO (2); PEG-2 oleyl alcohol; PEG-2 oleyl ether; PEG 100 oleyl ether; POE (2) oleyl ether
Definition: PEG ether of oleyl alcohol
Empirical: C22H44O3
Formula:
CH3(CH2)7CH=CH(CH2)7CH2(OCH2CH2)nOH, avg. n = 2
Properties: HLB 4.9; nonionic
Toxicology: LD50 (oral, rat) 25,800 mg/kg; mildly toxic by ing.; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Solubilizer, emulsifier, surfactant, dispersant, stabilizer, spreading agent, emollient, cosolvent for pharmaceuticals
Features: Lipophilic
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Chemonic® OE-2; Lipocol O-2; Ritoleth 2

Oleth-3
CAS 9004-98-2 (generic); 5274-66-8
Synonyms: 2-[2-[2-(9-Octadecenyl)oxy]ethoxy] ethanol; PEG-3 oleyl ether; POE (3) oleyl ether
Definition: PEG ether of oleyl alcohol
Empirical: C24H48O4
Formula:
CH3(CH2)7CH=CH(CH2)7CH2(OCH2CH2)nOH, avg. n = 3
Properties: Wh. soft semisolid or pale yel. liq., bland odor; sol. in water, alcohol; disp. in min. oil, propylene glycol; acid no. 1.0 max.; iodine no. 23-40; sapon. no. 3 max.; hyd. no. 75-95; nonionic
Toxicology: LD50 (oral, rat) 2700 mg/kg; mod. toxic by ing.; irritating to skin and eyes; TSCA listed
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Agnique FOH 5OC-5; Lipocol O-5; Ritoleth 5; Volpo 5; Volpo N5

Oleth-5
CAS 9004-98-2 (generic); 5353-27-5
Synonyms: PEG-5 oleyl ether; 3,6,9,12,15-Pentaoxatriacont-24-en-1-ol; POE (5) oleyl ether
Definition: PEG ether of oleyl alcohol
Empirical: C28H56O6
Formula:
CH3(CH2)7CH=CH(CH2)7CH2(OCH2CH2)nOH, avg. n = 5
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, lubricant, emollient, solubilizer for pharmaceuticals
Regulatory: FDA 21CFR §176.200
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Agnique FOH 5OC-5; Lipocol O-5; Ritoleth 5; Volpo 5; Volpo N5

Oleth-10
CAS 9004-98-2 (generic); 24871-34-9
Synonyms: Decaethoxy oleyl ether; 3,6,9,12,15,18,21,24,27,30-Decaooxatetracos-39-en-1-ol; Oleyl alcohol EO (10); PEG-10 oleyl ether; PEG 500 oleyl ether; POE (10) oleyl ether; Polyethylene glycol monooleoyl ether; Polyoxyyl 10 oleyl ether
Definition: PEG ether of oleyl alcohol
Empirical: C38H76O11
Formula:
CH3(CH2)7CH=CH(CH2)7CH2(OCH2CH2)nOH, avg. n = 10
Properties: Wh. soft semisolid or pale yel. liq., bland odor; sol. in water, alcohol; disp. in min. oil, propylene glycol; acid no. 1.0 max.; iodine no. 23-40; sapon. no. 3 max.; hyd. no. 75-95; nonionic
Toxicology: LD50 (oral, rat) 2700 mg/kg; mod. toxic by ing.; irritating to skin and eyes; TSCA listed
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Agnique FOH 5OC-5; Lipocol O-5; Ritoleth 5; Volpo 5; Volpo N5
Chemical Component Cross-Reference

Hazardous Decomp. Prods.: Heated to comp., emits acrid smoke
Uses: Surfactant, emulsifier, stabilizer, gellant, wetting agent, solubilizer for pharmaceuticals
Regulatory: FDA 21 CFR §176.200, 177.2800; USP/NF compliance
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Agrique FOH 5OC-10; Brij® 96 V; Chemonic® OE-10; Lipocol O-10; Ritoleth 10
Volpo 10; Volpo N10
Trade Names Containing: Lipowax R2

Oleth-12
CAS 9004-98-2 (generic)
Synonyms: PEG-12 oleyl ether; PEG 600 oleyl ether; POE (12) oleyl ether
Definition: PEG ether of oleyl alcohol
Formula: 
CH₃(CH₂)₇CH=CH(CH₂)₇CH₂(OCH₂CH₂)nOH,
avg. n = 12
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier for pharmaceuticals
Regulatory: FDA 21 CFR §176.200, 177.2800
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Oleth-16
CAS 9004-98-2 (generic); 25190-05-0 (generic)
Synonyms: PEG-16 oleyl ether; POE (16) oleyl ether
Definition: PEG ether of oleyl alcohol
Formula: 
CH₃(CH₂)₇CH=CH(CH₂)₇CH₂(OCH₂CH₂)nOH,
avg. n = 16
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier for pharmaceuticals
Regulatory: FDA 21 CFR §176.200, 177.2800
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Oleth-20
CAS 9004-98-2 (generic); 25190-05-0 (generic)

†=pharmaceutical grade

Synonyms: α-9-Octadecenyl-ω-hydroxypropyl (oxy-1,2-ethanediyl), (Z); Oleyl alcohol EO (20); PEG-20 oleyl ether; PEG 1000 oleyl ether; POE (20) oleyl ether
Definition: PEG ether of oleyl alcohol
Formula: 
CH₃(CH₂)₇CH=CH(CH₂)₇CH₂(OCH₂CH₂)nOH,
avg. n = 20
Properties: HLB 15.3; nonionic
Toxicology: LD₅₀ (oral, rat) 2770 mg/kg; mod. toxic by ing.; irritating to eyes; may cause human reproductive effects; TSCA listed
Hazardous Decomp. Prods.: Heated to comp., emits acrid smoke and irritating fumes
Uses: Surfactant, emulsifier, coupling agent, solubilizer, emulsion stabilizer for pharmaceutical topical
Regulatory: FDA 21 CFR §175.105, 176.180, 176.200, 177.1210, 177.2800; FDA approved for topicals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Brij® 98; Brij 98; Chemonic® OE-20; Lipocol O-20; Rhodasurf® ON-870; Rhodasurf® ON-877; Ritoleth 20; Simulsol® 98; Volpo 20; Volpo N20

Oleth-25
CAS 9004-98-2 (generic)
Synonyms: PEG-25 oleyl ether; POE (25) oleyl ether
Definition: PEG ether of oleyl alcohol
Formula: 
CH₃(CH₂)₇CH=CH(CH₂)₇CH₂(OCH₂CH₂)nOH,
avg. n = 25
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, wetting agent, emulsifier for pharmaceutical emulsions
Regulatory: FDA 21 CFR §176.180, 176.200, 177.2800
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Oleth-3 phosphate
CAS 39464-69-2 (generic)
Synonyms: Oleyl triethoxy mono diphosphate; PEG-3 oleyl ether phosphate; POE (3) oleyl ether phosphate
Definition: Complex mixture of esters of
Chemical Component Cross-Reference

phosphoric acid and oleth-3
Properties: Anionic
Toxicology: TSCA listed
Uses: Surfactant, conditioner, emulsifier, gellant for pharmaceuticals
Trade Names: Crodacos N3A

Oleth-10 phosphate
CAS 39464-69-2 (generic)
Synonyms: PEG-10 oleyl ether phosphate; PEG 500 oleyl ether phosphate; POE (10) oleyl ether phosphate
Definition: Complex mixture of esters of phosphoric acid and oleth-10
Properties: Anionic
Toxicology: TSCA listed
Uses: Surfactant, conditioner, emulsifier, gellant for pharmaceuticals; corrosion inhibitor and antigellant in aerosol antiperspirants

Oleth-20 phosphate
CAS 39464-69-2 (generic)
Synonyms: PEG-20 oleyl ether phosphate; PEG 1000 oleyl ether phosphate; POE (20) oleyl ether phosphate
Definition: Complex mixture of esters of phosphoric acid and oleth-20
Properties: Anionic
Toxicology: TSCA listed
Uses: Surfactant for pharmaceuticals

Oleum anisi. See Anise (Pimpinella anisum) oil
Oleum Gossypii seminis. See Cottonseed (Gossypium) oil
Oleum olivae. See Olive (Olea europaea) oil
Oleum papaveris. See Poppyseeds oil
Oleum ricini. See Castor (Ricinus communis) oil

Oleyl alcohol
CAS 143-28-2; EINECS/ELINCS 205-597-3
Synonyms: Ocel; Octadecenol; 1-Octadecenol; Octadec-9-en-1-ol; 9-Octadecen-1-ol; cis-9-Octadecen-1-ol; (Z)-Octadec-9-enol; (Z)-9-Octadecen-1-ol; Oleol; Oleyl alcohol; Oleyl fatty alcohol
Classification: Unsaturated fatty alcohol
Empirical: C18H36O
Formula: CH3(CH2)7CH=CH(CH2)8OH
Properties: Colorless to pale yel. oily visc. liq., faint char. odor, bland taste; sol. in alcohol, ether; insol. in water; m.w. 268.49; dens. 0.84; m.p. 13-19 C; b.p. 207 C (13 mm); acid no. 1 max.; iodine no. 85-95; hyd. no. 205-215;

Oleum alcohol EO (2). See Oleth-2
Oleum alcohol EO (10). See Oleth-10
Oleum alcohol EO (20). See Oleth-20
Oleum alcohol EO condensate; Oleyl alcohol ethoxylates. See Oleth
Oleyl benzyl dimethyl ammonium chloride; Oleyl dimethyl benzyl ammonium chloride. See Olealkonium chloride

†=pharmaceutical grade
cloud pt. ≤ 10 C; flash pt. > 110 C; ref. index 1.4582 (27.5 C); nonionic
Toxicology: Human skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Emollient, plasticizer, emulsifier, emulsion stabilizer, lubricant, antifoam, coupling agent, solubilizer, cosolvent, pigment dispersant, detergent in pharmaceutical topical; carrier for medicaments; astringent in poison ivy/poison oak preps.
Regulatory: FDA 21CFR §176.170, 176.210, 177.1010, 177.1210, 177.2800, 178.3910; FDA approved for topicals; USP/NF compliance; Canada DSL
Trade Names: Agnique FOH 9OC; Nofable AO-80; Nofable AO-90; Nofable AO-99; Novol

Handbook of Pharmaceutical Additives, Third Edition 1763
Oleyl erucate

**CAS**: 17673-56-2; EINECS/ELINCS 241-654-9

**Synonyms**: 13-Docosenoic acid, 9-octadecenyl ester; Erucic acid, oleyl ester; 9-Octadecenyl 13-docosenoate; (Z)-Octadec-9-enyl (Z)-docos-13-enoate

**Definition**: Ester of oleyl alcohol and erucic acid

**Empirical**: C_{40}H_{76}O_{2}

**Uses**: Emollient, lubricant, dispersant, solubilizer, solvent, carrier, vehicle for pharmaceuticals, topicalss

**Regulatory**: Canada DSL

**Manuf./Distrib.**: A&E Connock

**Trade Names**: Dynacerin® 660

---

Oleic acid

**CAS**: 17333-68-5; EINECS/ELINCS 156-75-7

**Synonyms**: 9-Octadecenoic acid; (Z)-Octadec-9-enoic acid

**Definition**: Ester of oleyl alcohol and oleic acid

**Empirical**: C_{36}H_{68}O_{2}

**Formula**: CH_{3}(CH_{2})_{7}CH=CH(CH_{2})_{7}COO(CH_{2})_{8}CH=CH(CH_{2})_{7}CH_{3}

**Properties**: Yel. liq.; insol. in water; m.w. 532.94; m.p. 14-16 C

**Toxicology**: TSCA listed

**Uses**: Emollient, lubricant, solubilizer for pharmaceuticals, topicalss; gloss aid, softener, lubricant in skin care preps.

**Regulatory**: FDA approved for topicalss; Canada DSL

**Manuf./Distrib.**: A&E Connock

---

Oleic alcohol

**CAS**: 112-80-1; EINECS/ELINCS 205-449-8

**Synonyms**: 9-Octadecenoic acid, 9-octadecenyl ester; (Z)-Octadec-9-enoic acid, (Z)-octadec-9-enyl ester

**Definition**: Ester of oleyl alcohol and oleic acid

**Empirical**: C_{36}H_{68}O_{2}

**Formula**: CH_{3}(CH_{2})_{7}CH=CH(CH_{2})_{7}COO(CH_{2})_{8}CH=CH(CH_{2})_{7}CH_{3}

**Properties**: Yel. liq.; insol. in water; m.w. 532.94; m.p. 14-16 C

**Toxicology**: TSCA listed

**Uses**: Emollient, lubricant, solubilizer for pharmaceuticals, topicalss; gloss aid, softener, lubricant in skin care preps.

**Regulatory**: FDA approved for topicalss; Canada DSL

**Manuf./Distrib.**: A&E Connock

---

Oleic ester

**CAS**: 222-980-4; EINECS/ELINCS 241-654-9

**Synonyms**: 9-Octadecenoic acid, 9-octadecenyl ester; (Z)-Octadec-9-enoic acid, (Z)-octadec-9-enyl ester

**Definition**: Ester of oleyl alcohol and oleic acid

**Empirical**: C_{36}H_{68}O_{2}

**Formula**: CH_{3}(CH_{2})_{7}CH=CH(CH_{2})_{7}COO(CH_{2})_{8}CH=CH(CH_{2})_{7}CH_{3}

**Properties**: Yel. liq.; insol. in water; m.w. 532.94; m.p. 14-16 C

**Toxicology**: TSCA listed

**Uses**: Emollient, lubricant, solubilizer for pharmaceuticals, topicalss; gloss aid, softener, lubricant in skin care preps.

**Regulatory**: FDA approved for topicalss; Canada DSL

**Manuf./Distrib.**: A&E Connock

---

Oleic methyl ester

**CAS**: 106-28-6; EINECS/ELINCS 200-547-6

**Synonyms**: 9-Octadecenoic acid, 9-octadecenyl ester; (Z)-Octadec-9-enoic acid, (Z)-octadec-9-enyl ester

**Definition**: Ester of oleyl alcohol and oleic acid

**Empirical**: C_{36}H_{68}O_{2}

**Formula**: CH_{3}(CH_{2})_{7}CH=CH(CH_{2})_{7}COO(CH_{2})_{8}CH=CH(CH_{2})_{7}CH_{3}

**Properties**: Yel. liq.; insol. in water; m.w. 532.94; m.p. 14-16 C

**Toxicology**: TSCA listed

**Uses**: Emollient, lubricant, solubilizer for pharmaceuticals, topicalss; gloss aid, softener, lubricant in skin care preps.

**Regulatory**: FDA approved for topicalss; Canada DSL

**Manuf./Distrib.**: A&E Connock
Chemical Component Cross-Reference

Olibanum resinoid. See Olibanum (Boswellia carterii) oil

Olive oil. See Olive (Olea europaea) oil

Olive oil PEG-6 esters
CAS 103819-46-1 (generic)
Definition: Complex mixture formed from the transesterification of olive oil and PEG-6
Properties: Oil; nonionic
Uses: Emollient, solubilizer, emulsifier for pharmaceuticals; amphiphilic agent improving drug delivery
Features: Hydrophilic

Olive (Olea europaea) oil
CAS 8001-25-0; EINECS/ELINCS 232-277-0
Synonyms: Azeite; Gomenoleo oil; Olea europaea; Olea europaea oil; Oleum olivae; Olive oil
Definition: Fixed oil obtained from the ripe fruit of Olea europaea, contg. glycerides of oleic acid, palmitic acid, linoleic acid, stearic acid, and arachidic acid
Properties: Yel. to lt. gmsh. liq., sl. olive odor, sl. char. taste; sl. sol. in alcohol; misc. with ether, chloroform, carbon disulfide; insol. in water; dens. 0.909-0.915 (25/25 C); m.p. -6 C; solid. pt. 17-26 C; iodine no. 187-196; flash pt. (CC) 437 F; ref. index 1.466-1.468; becomes rancid on exposure to air
Toxicology: LD50 (IV, mouse) 1320 mg/kg; mod. toxic by IP route; human skin irritant; devoid of side effects; TSCA listed
Precaution: Combustible exposed to heat or flame; can react with oxidizers; some spontaneous heating
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 0, Flammability 1, Reactivity 0
Storage: Photosensitive
Uses: Lubricant, emollient, cosolvent, conditioner, vehicle, solvent for pharmaceuticals, ointments, liniments, plasters, suspensions for injection; softener for ear wax, crusts of eczema and psoriasis; nutrient; FDA registered for one oral and one topical sol'n.
Features: Oleaginous
Regulatory: FDA 21CFR §175.105, 176.200, 176.210, GRAS; Japan approved (olive); USP/NF, BP, EP, JP compliance; Canada DSL

Omega-3 ethyl ester marine oil lipid
Classification: Lipid
Uses: Pharmaceutical orals and topicals

Omega-3 free fatty acid marine oil lipid
Classification: Lipid
Uses: Pharmaceutical orals and topicals

Omega-3 triglyceride marine oil lipid
Classification: Lipid
Uses: Pharmaceutical orals and topicals
Onion (Allium cepa) oil
CAS 8002-72-0
FEMA 2817
Synonyms: Allium cepa; Allium cepa oil; Onion oil
Definition: Oil from steam distillation of bulbs of Allium cepa
Properties: Amber clear liq.; strong pungent lasting odor, char. onion flavor; sol. in fixed oils, min. oil, alcohol; insol. in glycerin, propylene glycol
Toxicology: Skin irritant
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS; Canada DSL

Orange (Citrus aurantium dulcis) extract
CAS 84012-28-2
FEMA 2821
Synonyms: Citrus aurantium dulcis fruit extract; Citrus dulcis; Citrus sinensis extract; Orange extract; Orange fruit extract
Definition: Extract of the fruit of the orange, Citrus aurantium dulcis
Properties: Amber-yel. liq.; sol. in ethyl alcohol; insol. in water; sp. gr. 0.840-0.650; ref. index 1.455-1.475
Uses: Natural flavor for pharmaceuticals, orals
Features: Natural fresh sweet pressed oranges aldehydic odor
Regulatory: FDA approved for orals; Canada DSL
Manuf./Distrib.: Bio-Botanica http://www.biobotanica.com; Carrubba http://www.carrubba.com

Orange (Citrus aurantium dulcis) flower oil
CAS 8016-38-4; 8028-48-6; EINECS/ELINCS 232-433-8
Synonyms: Citrus aurantium dulcis; Citrus aurantium dulcis flower oil; Citrus aurantium dulcis oil; Neroli bigarade oil; Neroli bigarade oil, Tunisian; Neroli oil; Neroli oil, Tunisian; Orange flower oil; Orange flowers oil
Definition: Volatile oil obtained from flowers of the orange tree, Citrus aurantium dulcis
Properties: Ylsh. fluorescent liq., very intense pleasant odor; becomes brn. on exposure to light; sol. in 1.5-2 vols 80% alcohol; sl. sol. in water; dens. 0.86-0.88 (25/25 C); ref. index 1.475 (20 C)
Toxicology: LD50 (oral, rat) 4550 mg/kg; mildly toxic by ing.; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Keep cool, well closed; protect from light
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; Canada DSL
Orange (Citrus aurantium dulcis) oil

CAS 8008-57-9
FEMA 2821; 2825

Synonyms: Citrus oil; Citrus sinensis oil; Citrus sinensis peel oil; 5-Fold orange oil; Neat oil of sweet orange; Orange oil; Orange oil, coldpressed; Orange peel oil; Orange peel, sweet, oil; Sweet orange oil; Sweet orange peel oil

Definition: Volatile oil obtained by expression from the fresh peel of the ripe fruit Citrus sinensis, contg. mainly (+)-limonene

Properties: Yel. to deep orange liq., char. orange odor and taste; sol. in 2 vols 90% alcohol, 1 vol glc. acetic acid; sl. sol. in water; misc. with abs. alcohol, carbon disulfide; dens. 0.842-0.846; ref. index 1.472 (20 C)

Toxicology: TDLo (oral, mouse, 40 wks intermittent) 67 g/kg; skin irritant; inh. or frequent contact may cause headache, dizziness, shortness of breath, allergic reaction in hypersensitive persons; questionable carcinogen; experimental neoplastigen; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 0, Flammability 2, Reactivity 0

Storage: Keep well closed, cool, protected from light

Uses: Natural flavor, flavor enhancer, color enhancer in pharmaceuticals; expectorant; tonic; stomachic; carminative

Regulatory: FDA 21CFR §172.230, 182.20, GRAS; FEMA GRAS; Europe listed, no restrictions; FDA approved for orals; BP

†=pharmaceutical grade

Orange (Citrus aurantium dulcis) peel extract

CAS 8028-48-6; EINECS/ELINCS 232-433-8
FEMA 2825

Synonyms: Citrus aurantium dulcis; Citrus aurantium dulcis peel extract; Citrus dulcis; Orange peel extract; Sweet orange peel extract

Definition: Extract of the peel of oranges, Citrus aurantium dulcis

Properties: Deep orange-red liq.; insol. in water; flash pt. 112 F (TCC)

Precaution: Wear safety goggles and chemical protective gloves; incompat. with moisture, light, heat, strong oxidizing agents, strong reducing agents, strong bases

Hazardous Decomp. Prods.: COx

HMIS: Health 3, Flammability 3, Reactivity 0

Storage: Store in tightly sealed and preferably full containers in cool, dry and ventilated area protected from heat and light

Uses: Natural flavor for pharmaceuticals

Features: Sweet orange aldehydic tangerine

Ox bile
Uses: Nutritive pharmaceutical additive
Trade Names: Desiccated Ox Bile
Trade Names Containing: Iron Bile Salts

Ox bile extract
CAS 361-09-1; 8008-63-7; EINECS/ELINCS 206-643-5
Synonyms: Cholic acid, monosodium salt; Cholic acid sodium salt; Purified oxgall; Sodium cholate; Sodium cholic acid
Definition: Purified portion of the bile of an ox
Empirical: C_{24}H_{39}NaO_{5}
Properties: Ylsh.-green soft solid, partly sweet/partly bitter disagreeable taste; m.w. 430.57
Toxicology: LD_{50} (oral, mouse) 2400 mg/kg, (IP, mouse) 164 mg/kg, (IV, mouse) 200 mg/kg; poison by IP and IV routes; mod. toxic by ing.; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Na_{2}O
Uses: Nutritive pharmaceutical additive
Regulatory: FDA 21CFR §184.1560, GRAS; Canada DSL
Trade Names: Extract of Ox Bile NF XI

Oxidase glucose. See Glucose oxidase
Oxide of chromium. See Chromium oxide (ic)

Oxidized beeswax
CAS 138724-55-7
Synonyms: Beeswax, oxidized
Definition: Prod. obtained by the oxidation of beeswax
Uses: Visc. control agent
Trade Names: Koster Keunen Beeswax

Handbook of Pharmaceutical Additives, Third Edition 1770
Chemical Component Cross-Reference

AO2535
Oxidized cellulose
Synonyms: Cellulose, oxidized; Cellulosic acid; Oxycellulose
Definition: Cellulose produced by treatment with nitrogen dioxide
Properties: Sl. of-wh. gauze, lint, or powd.; sl. charred odor; acid taste; sol. in aq. org. bases, dil. alkali, ammonium hydroxide; insol. in water, acids, common org. solvs.
Precaution: Combustible; slowly degrades @ R.T.
Storage: Keep cool
Uses: Carrier for drugs and enzymes; controlled-release pharmaceuticals; hemostatic agent; bioabsorbable surgical sutures; kidney dialyzer membrane; surgical hemostatic agent; controlled-release pharmaceuticals; See Steramide MEA stearate
Regulatory: USP/NF compliance
Manuf./Distrib.: Eastman

2,2’-Oxybisethanol. See Diethylene glycol
2,2’-(Oxybis (ethylenoxy)) diethanol. See
PEG-4

1,1′-[Oxybis (methylene)] bis [benzene]. See Benzyl ether

1,1′-Oxybisoctane. See Dioctyl ether

Oxybis (trimethylsilane). See Hexamethyldisiloxane

Oxycellulose. See Oxidized cellulose

Oxychinolin. See 8-Hydroxyquinoline

Oxychlorosene

Formula: Ca(OCl)₂

Properties: Wh. to cream powd.; chlorine odor; disp. in water; dens. 1.21 g/cc (tapped); vapor pressure negligible

Toxicology: TLV 0.5 ppm (TWA), 1 ppm (STEL); may cause eye/skin irritation; may cause respiratory tract/mucous membrane irritation on inh.

Precaution: Reactive oxidizer; explosive when heated with org. matter, reducing agents, ammonia, etc.; incompat. with org. matter, acids, amines, ammonia, metals; avoid high temps. and humidity

Hazardous Decomp. Prods.: Cl₂, HOCI, HCl; emits toxic and irritating Cl₂ on heating above 175 C

Storage: Store under refrigeration (3-8 C)

Uses: Topical antimicrobial, antiseptic, bactericide, fungicide, and virucide for treating localized infections; debriding agent for wounds; deodorizer for necrotizing conditions (diabetic gangrene); irrigation of sinus tracts; cleansing and antisepsis of bed-sores

Regulatory: DOT nonregulated

Trade Names: Clorpactin WCS-90

2,2′-Oxydiethanol. See Diethylene glycol

Oxydimethylquinazine. See Antipyrine

Oxyethylated hexadecyl alcohol. See Ceteth

Oxyethylated tertiary octylphenol-formaldehyde polymer. See Tyloxapol

Oxyethylidenediphosphonic acid. See Etdronic acid

Oxymethylene. See Formaldehyde

Oxyneurine. See Betaine

Oxyphenalon. See 4-(p-Hydroxyphenyl)-2-butanone

Oxyphenic acid. See Pyrocatechol

Oxyphenylon. See 4-(p-Hydroxyphenyl)-2-butanone

Oxypropylated cellulose. See Hydroxpropylcellulose

Oxyquinoline (INCI); 8-Oxyquinoline. See 8-Hydroxyquinoline

†=pharmaceutical grade

Oxyquinoline benzoate (INCI). See 8-Hydroxyquinoline benzoate

Oxyquinoline sulfate (INCI). See 8-Hydroxyquinoline sulfate

5-Oxyresorcinol. See 1,3,5-Trihydroxybenzene

Oxy (salicylato) bismuth. See Bismuth subsalicylate

Oxytetracycline hydrochloride

CAS 2058-46-0; EINECS/ELINCS 218-161-2

Synonyms: 4-(Dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,5,6,10,12,12a-hexahydroxy-6-methyl-1,11-dioxo-2-naphthacenecarboxamide monohydrochloride; Hydrocyclin; 5-Hydroxytetracycline hydrochloride; 2-Naphthacenecarboxamide, 4-(dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,5,6,10,12a-hexahydroxy-6-methyl-1,11-dioxo-, monohydrochloride; Oxytetrin; Terramycin hydrochloride; Tetramine; Tetran hydrochloride

Empirical: C₂₂H₂₄N₂O₉ • HCl

Properties: Yel. powd.; odorless; bitter taste; sol. in water, propylene glycol; sol. < 1 mg/ml in DMSO, 95% ethanol, acetone; pract. insol. in chloroform, ether; insol. in abs. methanol; m.w. 496.90; m.p. 180 C (dec.)

Toxicology: LD₅₀ (oral, mouse) 6696 mg/kg, (subcut., rat) 800 mg/kg, (IV, rat) 302 mg/kg; highly toxic by IV route; mod. toxic by subcut. route; low toxicity by ing.; may cause nausea, anorexia, vomiting, diarrhea, dysphagia, tremors, edema, anaphylaxis, convulsions, pericarditis, exacerbation of systemic lupus erythematosus, hemolytic anemia, neutropenia, hypersensitivity, GI disturbances, liver damage, etc.; staphylococcal enterocolitis may occur suddenly, possibly fatally; reproductive hazard; TSCA listed

Precaution: Probably combustible; incompat. with bases; hydrolyzes in presence of water; sensitive to light; may be unstable above 25 C; darkens on exposure to sunlight or moist air above 90 C

Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of CO, CO₂, hydrogen chloride gas, and NOₓ; emits toxic fumes under fire conditions

Storage: Hygroscopic; store in tightly closed containers under inert atmosphere; store refrigerated; protect from light
Chemical Component Cross-Reference

Ozokerite. See Ozokerite

Ozokerite

CAS 8021-55-4; 12198-93-5; 8001-75-0; EINECS/ELINCS 265-134-5

Synonyms: Ceresin; Fossil wax; Mineral wax; Ozocerite; Ozokerite wax

Classification: Hydrocarbon wax

Definition: Hydrocarbon wax derived from mineral or petroleum sources

Properties: Yel.-brown to black or green translucent (pure), noxious odor; sol. in lt. petrol. hydrocarbons, benzene, turpentine, kerosene, ether, carbon disulfide; sl. sol. in alcohol; insol. in water; dens. 0.85-0.95; m.p. 55-110 C (usually 70 C)

Toxicology: No known toxicity; skin and eye irritant

Precaution: Combustible

Uses: Thickener in pharmaceuticals, orals, ointments

Regulatory: Japan approved; FDA approved for orals

Palmarosa (Cymbopogon martini) oil
CAS 8014-19-5
FEMA 2831

Synonyms: Cymbopogon martini oil; East Indian geranium oil; Geranium, East Indian, oil; Geranium oil, East Indian; Geranium oil, Turkish; Palmarosa oil

Definition: Oil derived from steam distillation of the grass, Cymbopogon martini; main constituent is geraniol

Properties: Yel. oily liq.; sweet rose-like odor with herbaceous undertone; sol. in alcohol, fixed oils, propylene glycol, min. oil; insol. in glycerin; dens. 0.879-0.892; ref. index 1.473-1.479 (20 C)

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Emollient in pharmaceutical waxes

Regulatory: FDA 21CFR §175.105, 176.200, 176.210, GRAS; BP compliance (fractionated); Canada DSL

Manuf./Distrib.: ABITEC

Trade Names Containing: Labrafil® M 2130 CS

Palm (Elaeis guineensis) oil
CAS 8002-75-3; EINECS/ELINCS 232-316-1

Synonyms: Elaeis guineensis; Elaeis guineensis seed oil; Oils, palm kernel; Palm kernel oil

Definition: Oil obtained from seeds of Elaeis guineensis

Properties: Ylsh. fatty solid, char. sweet nutty flavor; dens. 0.95 kg/l; m.p. 26-30 C; iodine no. 14-19; sapon. no. 240-250

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Emollient in pharmaceutical waxes

Regulatory: FDA 21CFR §175.105, 176.200, 176.210, GRAS; BP compliance (fractionated); Canada DSL

Manuf./Distrib.: ABITEC

Palm grease

Palm (Elaeis guineensis) oil
CAS 8002-75-3; EINECS/ELINCS 232-316-1

Synonyms: Elaeis guineensis; Elaeis guineensis seed oil; Oils, palm kernel; Palm kernel oil

Definition: Oil obtained from seeds of Elaeis guineensis

Properties: Ylsh. fatty solid, char. sweet nutty flavor; dens. 0.95 kg/l; m.p. 26-30 C; iodine no. 14-19; sapon. no. 240-250

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Emollient in pharmaceutical waxes

Regulatory: FDA 21CFR §175.105, 176.200, 176.210, GRAS; BP compliance (fractionated); Canada DSL

Handbook of Pharmaceutical Additives, Third Edition 1774
Palm glycerides
CAS 91744-64-8; 129521-59-1; EINECS/ELINCS 294-628-4
Synonyms: Glycerides, palm oil mono-, di- and tri-
Definition: Mixt. of mono-, di-, and triglycerides derived from palm oil
Uses: Emollient, emulsifier, stabilizer, dispersant, opacifier for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/

Palm grease. See Palm (Elaeis guineensis) oil

Palmitamine oxide
CAS 7128-91-8; EINECS/ELINCS 230-429-0
Synonyms: Alkyl dimethyl amine oxide; Cetamine oxide; Cetyl dimethyl amine oxide; N,N-Dimethyl-1-hexadecanamine-N-oxide; Hexadecyl dimethylamine oxide; Palmityl dimethylamine oxide
Classification: Tertiary amine oxide
Empirical: C_{18}H_{39}NO
Formula: CH_{3}(CH_{2})_{14}CH_{2}N(CH_{3})_{2}O
Properties: Amphoteric
Toxicology: TSCA listed
Uses: Emollient, conditioner, detergent, foam stabilizer, visc. builder for pharmaceuticals
Regulatory: Canada DSL
Trade Names: AMMONYX® CO

Palmitic acid
CAS 57-10-3; EINECS/ELINCS 200-312-9
FEMA 2832; INS570; E570
Synonyms: Cetylic acid; Hexadecanoic acid; n-Hexadecanoic acid; Hexadeccylic acid; 1-Pentadecanecarboxylic acid
Classification: Aliphatic organic compd.; saturated fatty acid
Definition: A mixt. of solid organic acids
Empirical: C_{16}H_{32}O_{2}
Formula: CH_{3}(CH_{2})_{14}COOH
Properties: Wh. cryst. scales, sl. char. odor/taste; sol. in hot alcohol, ether, propyl alcohol, chloroform, oxygenated, aromatic, and chlorinated solvs.; sl. sol. in cold alcohol, petrol. ether; insol. in water; m.w. 256.42; dens. 0.853 (62/4 C); m.p. 63-64 C; b.p. 215 C (15 mm); ref. index 1.4273 (80 C)
Toxicology: LD50 (IV, mouse) 57 mg/kg; acute poison by IV route; human skin irritant; questionable carcinogen; experimental neoplastic; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to
Palmitic acid, diester with 5-hydroxy-6-methylpyridine-3,4-dimethanol; Palmitic acid, diester with pyridoxol. See Pyridoxine dipalmitate

Palmitic acid, 2-ethylhexyl ester. See Octyl palmitate

Palmitic acid, hexadecyl ester; Palmitic acid, n-hexadecyl ester; Palmitic acid palmityl ester. See Cetyl palmitate

Palmitic acid sodium salt. See Sodium palmitate

Paprika (Capsicum annum)
   CAS 977006-45-3; 84625-29-6
   FEMA 2833; INS160c; E160c
   Synonyms: Capsicum annum; Paprika
   Definition: Deep red, sweet, pungent powd.
   obtained from the ground dried pod of mild
   capsicum, Capsicum annum
   Hazardous Decomp. Prods.: Heated to
   decomp., emits acrid smoke and irritating
   fumes
   Uses: Natural flavor for pharmaceuticals
   Regulatory: FDA 21CFR §73.340, 73.345,

†=pharmaceutical grade

101.22, 172.140, 182.10, 582.20, GRAS;

Paraffin
   CAS 8002-74-2; EINECS/ELINCS 232-315-6
   UN 1223; FEMA 3216; INS905c(ii)
   Synonyms: Hard paraffin; Paraffin wax;
   Paraffin waxes; Paraffin wax fume;
   Petroleum wax, crystalline; Poly
   (methylene) wax
   Classification: Aliphatic organic compd.;
   hydrocarbon
   Definition: Solid mixture of hydrocarbons
   obtained from petroleum fractions by solvent
   crystallization or by the sweating process;
   consists predominantly of straight-chain
   hydrocarbons > C20; characterized by
   relatively large crystals
   Empirical: CnH2n+2
   Properties: Colorless to wh. cryst. solid;
   odorless; tasteless; greasy feel; sol. in
   benzene, gasoline, chloroform, ether, carbon
   disulfide, oils; misc. with fats; insol. in water,
   alcohol; dens. ≈ 0.9; m.p. 50-57 C; flash pt.
   (CC) 190 C
   Toxicology: ACGIH TLV/TWA 2 mg/m3 (fume);
   TDL0 (implant, rat) 120 mg/kg; primary
   irritant; skin and eye irritant; anesthetic
   effect; chronic skin exposure can cause

Paraffin waxes. See Paraffin
Paraffin waxes and hydrocarbon waxes, microcrystalline. See Microcrystalline wax
Paraffin waxes and hydrocarbon waxes, microcrystalline, hydrotreated. See Hydrogenated microcrystalline wax
Paraffin wax fume. See Paraffin
Paraffin wax (petroleum), clay-treated
CAS 64742-43-4; EINECS/ELINCS 265-145-6
Synonyms: Paraffin wax
Definition: A complex combination of hydrocarbons obtained by treatment of a petroleum wax fraction with natural or modified clay to remove trace amounts of polar compounds and impurities; predominantly straight chain saturated hydrocarbons (C20-50)
Uses: Antioxidant
Regulatory: Canada DSL
Trade Names: AP™ 25, AP™ 35, AP™ 45
Paraform. See Paraformaldehyde; Formaldehyde

Paraformaldehyde
CAS 30525-89-4; EINECS/ELINCS 200-001-8
UN 2213 (DOT)
Synonyms: p-Formaldehyde; Paraform; Paraformic aldehyde; Polyoxymethylene; Trioxymethylene; Trioxymethylene
Classification: A polymer of formaldehyde in which n = 8-100
Empirical: (CH₂O)ₙ
Properties: Wh. cryst. powd.; formaldehyde odor; sol. in strong alkalies; mod. sol. in hot water (yielding formaldehyde); sl. sol. in cold water; insol. in ethanol; m.w. (30.03)ₙ; dens. 0.880; m.p. 132-136 °C; flash pt. 158 °F
Toxicology: LD₅₀ (oral, rat) 800 mg/kg; LDLo (skin, rabbit) 10,000 mg/kg; toxic; mod. toxic by ing.; primary irritant; severe eye and skin irritant; sensitiser; may cause allergic response; mutagen; TSCA listed
Precaution: Flamm. solid; can react with oxidizers; incompat. with liq. oxygen
Hazardous Decomp. Prods.: Heated to decom., emits toxic formaldehyde gas
HMIS: Health 3, Flammability 1, Reactivity 0
Storage: Moisture-sensitive; store @ 2-8 °C under argon or nitrogen
Uses: Preservative in root canal filling pastes; hardener and waterproofing agent for gelatin contraceptive creams
Features: Formaldehyde-releasing
Regulatory: FDA 21 CFR §175.105, 176.170, 177.1210; SARA reportable; Canada DSL

Parsley. See Parsley (Petroselinum crispum)
Parsley (Carum petroselinum) seed oil
CAS 8000-68-8; EINECS/ELINCS 281-677-1
FEMA 2836
Synonyms: Carum petroselinum; Parsley oil; Parsley seed oil; Petroselinum crispum

Handbook of Pharmaceutical Additives, Third Edition 1781
**seed oil; Petroselinum sativum seed oil**

*Definition:* Volatile oil obtained from seeds of the parsley, *Carum petroselinum*, contg. apiol, terpene, pinene

*Properties:* Colorless or yel. visc. liq.; parsley odor; sol. in 8 vols 80% alcohol; sol. in ether, fixed oils, min. oil; sl. sol. in propylene glycol; very sl. sol. in water; insol. in glyc erin; dens. 1.040-1.100 (15/15 C); ref. index 1.510-1.519 (20 C)

*Toxicology:* LD50 (oral, rat) 3300 mg/kg, (oral, mouse) 1520 mg/kg; mod. toxic by ing.; primary irritant; human skin irritant; TSCA listed

*Hazardous Decomp. Prods.:* Heated to decomp., emits acrid smoke and irritating fumes

*Uses:* Natural flavor for pharmaceuticals

*Regulatory:* FDA 21CFR §182.20, GRAS; FEMA GRAS; Japan approved

*Manuf./Distrib.:* Advanced BioTech, Aristal Ind., Astral Extracts, Berje, Buckton Page Ltd, Citrus and Allied Essences, Eramex Aromatics, Fleurchem, George Uhe, Janousek Industriale Srl, Lebermuth, Pangaea Sciences†, Penta Mfg. , Pharmline, SAFC Specialties, Sarcom, Treatt USA

*Parsley leaf oleoresin.* See Oleoresin parsley leaf

*Parsley oil.* See Parsley (Carum petroselinum) seed oil

*Parsley (Petroselinum crispum) seed oil*

*CAS:* 977051-58-3

*FEMA:* 2835

*Synonyms:* Parsley; Petroselinum crispum

*Definition:* Petroselinum crispum

*Properties:* Warm herbaceous fresh odor, warm spicy aromatic bitter taste

*Uses:* Natural flavor for pharmaceuticals

*Regulatory:* FDA 21CFR §101.22, 139.125, 139.160, 182.10, GRAS; FEMA GRAS; Japan approved

*Manuf./Distrib.:* Chart
http://www.chartcorp.com

*Parsley seed oil.* See Parsley (Carum petroselinum) seed oil

*Partridge vine oil China.* See Wintergreen (Gaultheria procumbens) oil

*Patchouli oil.* See Patchouli (Pogostemon cablin) oil

*Patchouli (Pogostemon cablin) extract*

*CAS:* 84238-39-1; EINECS/ELINCS 282-493-4

*FEMA:* 2838

*Synonyms:* Extract of patchouli; Pogostemon cablin; Pogostemon patchouli extract

*Definition:* Extract of the leaves of the patchouli, *Pogostemon cablin* bentham (labieae)

*Properties:* Pale yel. to dark brown liq.; sp. gr. 0.955-0.983; flash pt. ≤ 100 C; ref. index 1.505-1.512

*Uses:* Botanical antiseptic

*Features:* Woody, herbaceous, aromatic, spicy odor

*Manuf./Distrib.:* Biolandes, Carrubba

*Trade Names:* Actiphyte® of Patchouli

*Patchouli (Pogostemon cablin) oil*

*CAS:* 8014-09-3

*FEMA:* 2838

*Synonyms:* Patchouli oil; Patchouly oil; Pogostemon cablin; Pogostemon cablin oil; Pogostemon patchouli oil

*Definition:* Volatile oil derived from *Pogostemon cablin*; main constituent is patchoulol

*Properties:* Ylsh. to brownish oil; intense odor; sol. in alcohol; insol. in water; dens. 0.97-0.98 kg/l (15 C); vapor dens. > 1; b.p. 287 C; flash pt. 200 F

*Toxicology:* LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; sensitizer; TSCA listed

*Precaution:* Combustible liq.

*Hazardous Decomp. Prods.:* Heated to decomp., emits acrid smoke and irritating fumes

*HMIS:* Health 0, Flammability 1, Reactivity 0
Chemical Component Cross-Reference

Uses: Natural flavor for pharmaceuticals
Features: Old wood woody balsam weedy earthy odor; woody, aromatic, camphoreous, cooking and green with lime and citrus nuances taste
Regulatory: FDA 21CFR §172.510; FEMA GRAS; Japan approved; Canada DSL

Peach (Prunus persica) kernel oil
CAS 8002-78-6
Synonyms: Peach kernel oil; Peach nut oil; Peach oil, expressed; Persic oil; Prunus persica
Definition: Oil expressed from kernels of the peach, Prunus persica
Properties: Pale yel. oil; sol. in water; sl. sol. in alcohol; dens. ≈ 0.92 kg/l (15 C)
Uses: Emollient, excipient, natural flavor in pharmaceuticals
Regulatory: FDA 21CFR §182.40, GRAS; Canada DSL
Manuf./Distrib.: Arista Ind.† http://www.aristaindustries.com

P(EA/MAA). See Methacrylic acid/ethyl acrylate copolymer

Peanut (Arachis hypogaea) oil
CAS 8002-03-7; EINECS/ELINCS 232-296-4
Synonyms: Arachis hypogaea; Arachis oil; Earthnut oil; Groundnut oil; Indigenous peanut oil; Katchung oil; Peanut oil; Pecan shell powder
Definition: Refined fixed oil obtained from seed kernels of one or more cultivated varieties of Arachis hypogaea
Properties: Colorless to pale yel. liq., nutty odor, bland taste; sol. in benzene, ether, chloroform, CCl4, oils; misc. with carbon disulfide; sl. sol. in alcohol; insol. in alkalis; dens. 0.916-0.922; solid. pt. -5 C; iodine no. 84-100; sapon. no.

Pectin
CAS 9000-69-5; EINECS/ELINCS 232-553-0
INS 440; E 440
Synonyms: Citrus pectin
Classification: Polysaccharide
Definition: Purified carbohydrate prod. obtained from the dilute acid extract of the inner portion of the rind of citrus fruits or from apple pomace
Properties: Wh. to yel. powd. or syrupy conc., pract. odorless; sol. in water; insol. in alcohol, org. solvs.; m.w. 30,000-100,000
Toxicology: LD50 (subcut., mouse) 6400 mg/kg; low toxicity by subcut. route; nonallergenic; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Gellant, thickener, stabilizer, emulsifier, adsorbent, protective colloid, suspending agent for pharmaceuticals, topicals, encapsulated drugs; diarrhea treatments; hemostatic formulations; blood plasma substitute; detoxication; dietary fiber fortification; cholesterol reduction; glucose metabolism
Regulatory: FDA 21CFR §135.140, 145.116, 145.126, 145.131, 145.136, 145.171, 145.181, 150.110, 150.140, 150.141, 150.160, 150.161, 173.385, 184.1588, GRAS; Canada DSL; Japan approved; Europe listed; UK approved; FDA approved for dentals, topicals; USP/NF compliance

**PEG-8**

CAS **5117-19-1; 25322-68-3** (generic);
EINECS/ELINCS **225-856-4**

**Synonyms:** *3,6,9,12,15,18,21*-Heptaoxatricosane-1,23-diol; Macrocol 400; PEG 400; POE (8); Polyethylene glycol 400

**Definition:** Polymer of ethylene oxide

**Empirical:** C<sub>16</sub>H<sub>34</sub>O<sub>9</sub>

**Formula:** H(OCH<sub>2</sub>CH<sub>2</sub>)<sub>n</sub>OH, avg. n = 8

**Properties:** Visc. liq., sl. char. odor, minimal taste; m.w. 380-420; dens. 1.128 (25/25 C); visc. 7.3 cSt (210 F); m.p. 4-8 C; pH 4.5-7.5 (5%); nonionic

**Toxicology:** LD<sub>50</sub> (oral, rat) 30 ml/kg, (IP, rat) 9708 mg/kg, (IV, rat) 7313 mg/kg; low toxicity by ing., IV, IP routes; TSCA listed

**Health:** 0, **Flammability:** 1, **Reactivity:** 0

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com/belgium)

**Uses:** Pharmaceutical aid; coating agent, plasticizer, lubricant, solvent in pharmaceuticals; suppository base; tablet/capsule lubricant; bulking agent; solvent for active ingreds. in soft gelatin capsules, oral liqs., parenterals

**Trade Names: E400 NF; Carbowax® PEG 400; Carbowax® Sentry® PEG 400; Imbentin-PEG/400; Jeechee 400; Lipoxol® 400; Lipoxol® 400 MED; Lumulse® PEG 400 NF; Lutrol® E 400; Macrogol 400; Pluracol® E400; Pluracol® E400 NF; Pluracol® E400L; Pogol® 400; Renex® PEG 400; Super Refined® PEG-400 NF; Sympatens-PEG/400; Ultrapeg 400 USP**

**Super Refined® PEG-400**

**EINECS/ELINCS:** 229-859-1

**Formula:** H(OCH<sub>2</sub>CH<sub>2</sub>)<sub>n</sub>OH, avg. n = 9

**Properties:** Nonionic

**Toxicology:** LD<sub>50</sub> (oral, rat) 38,100 mg/kg; low toxicity by ing.; eye irritant; TSCA listed

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com/belgium)

**Uses:** Pharmaceutical aid; solvent for active ingreds. in soft gelatin capsules, oral liqs., parenterals; bulking agent

**Trade Names: E400 NF in Polyethylene Glycol 400 NF; Hair Complex Aquosum; Oxynex® K**

**PEG-9**

CAS **3386-18-3; 25322-68-3** (generic);
EINECS/ELINCS **222-206-1**

**Synonyms:** *3,6,9,12,15,18,21*-Octaoxahexacosane-1,26-diol; PEG 450; POE (9)

**Definition:** Polymer of ethylene oxide

**Empirical:** C<sub>18</sub>H<sub>38</sub>O<sub>10</sub>

**Formula:** H(OCH<sub>2</sub>CH<sub>2</sub>)<sub>n</sub>OH, avg. n = 10

**Properties:** Nonionic

**Toxicology:** TSCA listed

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com/belgium)

**Uses:** Pharmaceutical aid; solvent for active ingreds. in soft gelatin capsules, oral liqs., parenterals

**Trade Names: Docusate Sodium USP in Polyethylene Glycol 400 NF; Hair Complex Aquosum; Oxynex® K**

**PEG-12**

CAS **6790-09-6; 25322-68-3** (generic);
EINECS/ELINCS **229-859-1**

**Synonyms:** Macrogol 600; PEG 600; POE (12); Polyethylene glycol 600; 3,6,9,12,15,18,21,24,27,3,33-Undecaoxapentatriacontane-1,35-diol

**Definition:** Polymer of ethylene oxide

**Empirical:** C<sub>24</sub>H<sub>50</sub>O<sub>13</sub>

**Formula:** H(OCH<sub>2</sub>CH<sub>2</sub>)<sub>n</sub>OH, avg. n = 12

**Properties:** Visc. liq., char. odor; m.w. 570-630; dens. 1.128 (25/25 C); m.p. 20-25 C; visc. 10.5 cSt (210 F); pH 4.5-7.5 (5%); nonionic

**Toxicology:** LD<sub>50</sub> (oral, rat) 38,100 mg/kg; low toxicity by ing.; eye irritant; TSCA listed

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com/belgium)

**Uses:** Pharmaceutical aid; coating agent, plasticizer, lubricant, solvent in pharmaceuticals; suppository base; tablet/capsule lubricant; bulking agent; solvent for active ingreds. in soft gelatin capsules, oral liqs., parenterals

**Trade Names: Adeka PEG-400; Carbowax® E400 NF; Carbowax® PEG 400; Carbowax® Sentry® PEG 400; Imbentin-PEG/400; Jeechee 400; Lipoxol® 400; Lipoxol® 400 MED; Lumulse® PEG 400 NF; Lutrol® E 400; Macrogol 400; Pluracol® E400; Pluracol® E400 NF; Pluracol® E400L; Pogol® 400; Renex® PEG 400; Super Refined® PEG-400 NF; Sympatens-PEG/400; Ultrapeg 400 USP**

**Polypeg® PEG 400; Sympatens-PEG/400; Ultrapeg 400 USP**
Chemical Component Cross-Reference

NOF Am.; Ruger http://www.rugerchemical.com; Sigma http://www.sigma-aldrich.com
Trade Names: Adeka PEG-600; Carbowax® E600 NF; Carbowax® PEG 600; Carbowax® Sentry® PEG 600; Imbentin-PEG/600; Jeechem 600; Lipoxol® 600 MED; Lumulse® PEG 600 NF; Lutrol® E 600 Pluracol® E600; Pluracol® E600 NF; Pluracol® E600L; Super Refined® PEG-600 NF; Ultrapeg 600 USP

PEG-20
CAS 25322-68-3 (generic); EINECS/ELINCS 203-989-9
Synonyms: Macrogol 1000; PEG 1000; POE (20); Polyethylene glycol 1000; Polyglycol 1000
Definition: Polymer of ethylene oxide
Empirical: C₄₀H₈₂O₂₁
Formula: H(OCH₂CH₂)ₙOH, avg. n = 20
Properties: Solid; sp.gr. 1.085; visc. 16-19 cSt (99 C); pour pt. 37-40 C; flash pt. (COC) 265 C; pH 4.5-7.5 (5%); nonionic
Toxicology: LD₅₀ (oral, rat) 32 g/kg, (IP, rat) 15,570 mg/kg; LD₉₀ (IV, dog) 3000 mg/kg; mod. toxic by IP, IV routes; mildly toxic by ing.; questionable carcinogen; experimental tumorigen; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
NFPA: Health 0, Flammability 1, Reactivity 0
Uses: Pharmaceutical acid; film coating agent, solvent, plasticizer, lubricant in pharmaceuticals; tablet binder; tablet/capsule lubricant, plasticizer, solvent; base for ointments and suppositories; bulking agent
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Adeka PEG-1000; Carbowax® E1000 NF; Carbowax® PEG 900; Carbowax® PEG 1000; Carbowax® Sentry® PEG 900

PEG-14
CAS 25322-68-3 (generic)
Synonyms: PEG 700; POE (14)
Definition: Polymer of ethylene oxide
Empirical: C₂₈H₅₈O₁₅
Formula: H(OCH₂CH₂)ₙOH, avg. n = 14
Properties: Visc. 11.5-13.0 cSt; nonionic
Toxicology: TSCA listed
Uses: Pharmaceutical aid; lubricant, binder in pharmaceuticals; solvent for active ingreds. in soft gelatin capsules, oral liqs., parenterals; bulking agent
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Rhodasurf® PEG 600

PEG-16
CAS 25322-68-3 (generic)
Synonyms: PEG 800; POE (16)
Definition: Polymer of ethylene oxide
Empirical: C₃₂H₆₆O₁₇
Formula: H(OCH₂CH₂)ₙOH, avg. n = 16
Properties: Visc. 12.5-14.5 cSt; nonionic
Toxicology: TSCA listed
Uses: Pharmaceutical aid; humectant, consistency agent in pharmaceuticals; solvent for active ingreds. in soft gelatin capsules, oral liqs., parenterals; bulking agent
Trade Names: Adeka PEG-1000; Carbowax® E1000 NF; Carbowax® PEG 900; Carbowax® PEG 1000; Carbowax® Sentry® PEG 900

†=pharmaceutical grade

**PEG-32**

CAS: 25322-68-3 (generic); EINECS/ELINCS: 203-989-9

**Synonyms:** Macrogol 1540; PEG 1540; POE (32)

**Definition:** Polymer of ethylene oxide

**Empirical:** C₆₄H₁₃₀O₃₃

**Formula:** H(OCH₂CH₂)ₙOH, avg. n = 32

**Properties:** Wh. powd.; nonionic

**Toxicology:** LD₅₀ (oral, rat) 44,200 mg/kg; mildly toxic by ing.; human skin irritant; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Pharmaceutical aid in dentals, orals, rectals, topicals; film coating agent; ointment base; tablet binder, lubricant; bulking agent

**Manuf./Distrib.:** Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); NOF Am.; Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:** Pluracol® E2000

**PEG-60**

CAS: 25322-68-3 (generic)

**Synonyms:** PEG 3000; POE (60)

**Definition:** Polymer of ethylene oxide

**Formula:** H(OCH₂CH₂)ₙOH, avg. n = 60

**Properties:** Visc. 67-93 cSt; nonionic

**Toxicology:** TSCA listed

**Uses:** Humectant, consistency agent in pharmaceuticals; bulking agent; surfactant for suppository bases

**Regulatory:** FDA 21CFR §175.105; NF compliance

**Trade Names:** Lipoxol® 3000

**PEG-75**

CAS: 25322-68-3 (generic)

**Synonyms:** Macrogol 4000; PEG 4000; POE (75); Polyethylene glycol 4000; Polyglycol 4000

**Definition:** Polymer of ethylene oxide

**Formula:** H(OCH₂CH₂)ₙOH, avg. n = 75

**Properties:** Wh. powd. or creamy-wh. flakes; m.w. 3000-3700; dens. 1.212 (25/25 C); visc. 76-110 cSt (210 F); m.p. 54-58 C; pH 4.5-7.5 (5%); nonionic

**Toxicology:** LD₅₀ (oral, rat) 50 g/kg, (IP, rat) 11,550 mg/kg, (subcut., mouse) 18 g/kg, (IV, mouse) 16 g/kg; mildly toxic by ing.; skin irritant; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**NFPA:** Health 0, Flammability 1, Reactivity 0

**Uses:** Pharmaceutical acid; film coating agent, solvent, plasticizer in pharmaceuticals, injectables, orals, rectals, topicals, vaginals; tablet binder; tablet/capsule lubricant; base for ointments and
suppositories; bulking agent; active ingred.
in colonic lavage sol'n.
Trade Names: Carbowax® E3350 NF; Carbowax® PEG 3350; Carbowax® Sentry® PEG 3350; Lipoxol® 3350 MED; Lipoxol® 4000
Lipoxol® 4000 MED; Lumulse® PEG 3350; Lutrol® E 3350; Macrogol 4000; Pluracol® E4000
Renex® PEG 4000 Flake; Ultrapeg 4000 F USP
PEG-90
CAS 25322-68-3 (generic); EINECS/ELINCS 203-989-9
Synonyms: PEG (90); POE (90)
Definition: Polymer of ethylene oxide
Formula: H(OCH2CH2)nOH, avg. n = 90
Properties: Nonionic
Uses: Humectant, solvent in pharmaceuticals; tablet binder, coating agent
Regulatory: FDA 21CFR §175.105
Trade Names: Lutrol® E 4000
PEG (90). See PEG-90
PEG-100
CAS 25322-68-3 (generic); EINECS/ELINCS 203-989-9
Synonyms: PEG (100); POE (100)
Definition: Polymer of ethylene oxide
Formula: H(OCH2CH2)nOH, avg. n = 100
Properties: Nonionic
Uses: Pharmaceutical aid; film coating agent, solvent, vehicle in pharmaceuticals; ointment base; tablet binder, lubricant; bulking agent
†=pharmaceutical grade
PEG (100). See PEG-100
PEG-125
CAS 25322-68-3 (generic)
Definition: Polymer of ethylene oxide
Properties: Nonionic
Uses: Bioavailability enhancer for drugs that are insol. or sparingly sol. in water, e.g., steroids, fat-sol. vitamins; binder in mfg. of sugar-coated and uncoated tablets; controls release in sustained-release formulations; used with buffers in laxative formulations; antisticking agent, gloss aid for sugar-coated tablets; film-former, plasticizer in tablet coatings; base for ointments and suppositories
Trade Names: Lutrol® E 6000
PEG-150
CAS 25322-68-3 (generic); EINECS/ELINCS 203-989-9
Synonyms: Macrogol 6000; PEG 6000; POE (150)
Definition: Polymer of ethylene oxide
Formula: H(OCH2CH2)nOH, avg. n = 150
Properties: Creamy-wh. flaks or powd., waxy paraffin-like appearance; very sol. in water, methylene chloride; pract. insol. in alcohol, ether, fatty and min. oils; m.w. 5600-7000; dens. 1.21 (25/25 C); visc. 470-900 cSt (210 F); m.p. 56-63 C; hyd. no. 16-22; flash pt. > 887 F; nonionic
Toxicology: LDLo (oral, rat) 50 g/kg; LD50 (IP, rat) 6790 mg/kg; mildly toxic by ing.; skin irritant; mutagenic data; TSCA listed
Precaution: Combustible exposed to heat or flame
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
NFPA: Health 0, Flammability 1, Reactivity 0
Uses: Pharmaceutical aid; film coating agent, solvent, plasticizer in pharmaceuticals; base for ointments and suppositories; tablet binder; tablet/capsule lubricant; bulking agent
PEG-175
CAS 25322-68-3 (generic)
Uses: Humectant, fixing agent, viscosity control agent
Trade Names: Lipo Polyglycol 8000

PEG-180
CAS 25322-68-3 (generic)
Synonyms: PEG (180); POE (180)
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 180
Properties: Nonionic
Uses: Binder, lubricant for compressed tablets; humectant; coupling agent in creams and lotions
Trade Names Containing: Aquathik

PEG (180). See PEG-180

PEG-200
CAS 25322-68-3 (generic)
Synonyms: PEG 9000; POE (200)
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 200
Properties: Solid; nonionic
Toxicology: TSCA listed
Uses: Pharmaceutical aid; film coating agent in pharmaceuticals; ointment base; tablet binder, lubricant; bulking agent; intramuscular injectables, orals, topicals
Trade Names: Adeka PEG-1500

PEG 200. See PEG-4
PEG 300,000. See PEG-7M
Chemical Component Cross-Reference

Trade Names: Macrogol 1500

PEG 1540. See PEG-32
PEG-2000. See PEG-2M
PEG 2000. See PEG-40

PEG-90000. See PEG-90M

PEG-2M
CAS 25322-68-3 (generic)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 2000
Properties: Water-sol.; nonionic
Toxicology: TSCA listed
Uses: Binder, emulsion stabilizer, visc. control agent in pharmaceuticals; tablet coating; dispersant, antisetttling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid
Regulatory: FDA 21CFR §172.770, 173.310, 175.300, 178.3910; NF compliance
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Polyox® WSR N-10

PEG-4M
CAS 25322-68-3 (generic)
Synonyms: PEG-4000; POE (4000)
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 4000
Properties: Nonionic
Uses: Pharmaceutical dentals, injectables, orals, rectals, topicals, vaginals
Regulatory: FDA approved for dentals, injectables, orals, rectals, topicals, vaginals; NF compliance
Trade Names: Adeka PEG-4000

PEG-5M
CAS 25322-68-3 (generic)
Synonyms: PEG-5000; POE (5000)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 5000
Properties: Water-sol.; nonionic
Toxicology: LD₅₀ (oral, mouse) > 4 g/kg, (skin, rabbit) > 20 g/kg; TSCA listed
Uses: Binder, emulsion stabilizer, visc. control agent in pharmaceuticals; tablet coating; dispersant, antisetttling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid
Regulatory: FDA 21CFR §172.770, 173.310, 175.300, 178.3910; NF compliance
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Polyox® WSR N-80

PEG-6M
CAS 25322-68-3 (generic)
Synonyms: PEG-6000; POE (6000)
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 6000
Properties: Nonionic
Uses: Pharmaceutical orals, rectals, topicals, vaginals
Regulatory: FDA approved for orals, rectals, topicals, vaginals
Trade Names: Adeka PEG-6000

PEG-7M
CAS 25322-68-3 (generic)
Synonyms: PEG 300,000; PEG-7000; POE (7000)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 7000
Properties: Water-sol.; nonionic
Toxicology: TSCA listed
Uses: Binder, emulsion stabilizer, visc. control agent in pharmaceuticals; tablet coating; dispersant, antisetttling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid
Regulatory: FDA 21CFR §172.770, 173.310, 175.300, 178.3910; NF compliance
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Adeka PEG-7000

PEG-9M
CAS 25322-68-3 (generic)
Synonyms: PEG 300,000; PEG-9000; POE (9000)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 9000
Properties: Water-sol.; nonionic
Toxicology: TSCA listed
Uses: Binder, emulsion stabilizer, visc. control agent in pharmaceuticals; tablet coating; dispersant, antisetttling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid
Regulatory: FDA 21CFR §172.770, 173.310, 175.300, 178.3910; NF compliance
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Adeka PEG-9000
PEG-8M

CAS 25322-68-3 (generic)
Synonyms: PEG-8000; POE (8000)
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 8000
Properties: Nonionic
Uses: Binder for capsules/pills; suppository base; pharmaceutical ophthalmics, orals, rectals, topicals, vaginals
Regulatory: FDA approved for ophthalmics, orals, rectals, topicals, vaginals; NF compliance
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Polyox® WSR N-750

PEG-9M

CAS 25322-68-3 (generic)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 9000
Properties: Water-sol.; nonionic
Toxicology: LD₅₀ (oral, mouse) > 4 g/kg, (skin, rabbit) > 20 g/kg
Uses: Binder, emulsion stabilizer, visc. control agent, thickener, binder, emulsion stabilizer for pharmaceuticals; tablet coating; dispersant, antisettling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid
Regulatory: FDA 21CFR §172.770, 173.310, 175.300, 178.3910
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Ultrapeg 8000 F USP

PEG-10M

CAS 25322-68-3 (generic)
Synonyms: PEG-10000; POE (10000)
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 10,000
Properties: Nonionic
Uses: Wetting agent, emulsifier in pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

PEG-14M

CAS 25322-68-3 (generic)
Synonyms: PEG 600,000; PEG-14000; POE (14000)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 14,000
Properties: Water-sol.; nonionic
Toxicology: TSCA listed
Uses: Thickener, lubricant, binder, emulsion stabilizer for pharmaceuticals; tablet coating; dispersant, antisettling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid
Regulatory: FDA 21CFR §172.770, 173.310, 175.300, 178.3910
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Polyox® WSR 205

PEG-20M

CAS 25322-68-3 (generic); EINECS/ELINCS 225-856-4
Synonyms: PEG-20000; POE (20000)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 20,000
Properties: Water-sol.; nonionic
Toxicology: TSCA listed
Uses: Binder, emulsion stabilizer, visc. control agent in pharmaceuticals; tablet coating; dispersant, antisettling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid
Regulatory: FDA 21CFR §172.770, 173.310, 175.300, 178.3910
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Adeka PEG-20,000; Lipo Polyglycol 20000; Polyox® WSR 1105

PEG-23M

CAS 25322-68-3 (generic)
Synonyms: PEG-23000; POE (23000)
Classification: Thermoplastic resin
Definition: Polymer of ethylene oxide
Formula: H(OCH₂CH₂)ₙOH, avg. n = 23000
Properties: Water-sol.; nonionic
### Chemical Component Cross-Reference

**Toxicology:** 
LD50 (oral, mouse) > 4 g/kg, (skin, rabbit) > 20 g/kg

**Uses:**  
Binder, emulsion stabilizer, visc. control agent in pharmaceuticals; tablet coating; dispersant, antisettling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid

**Regulatory:**  
FDA 21CFR §172.770, 173.310, 175.300, 178.3910

**Manuf./Distrib.:**  
- Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:**  
- Polyox® WSR N-12K
- Polyox® WSR N-60K
- Polyox® WSR Coagulant

### PEG-35M

**CAS:** 25322-68-3 (generic)

**Synonyms:** PEG-3500; POE (35000)

**Definition:** Polymer of ethylene oxide

**Formula:** H(OCH₂CH₂)ₙOH, avg. n = 35,000

**Properties:** Nonionic

**Uses:** Wetting agent, emulsifier in pharmaceuticals

**Manuf./Distrib.:**  
- Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

### PEG-45M

**CAS:** 25322-68-3 (generic)

**Synonyms:** PEG-4500; POE (45000)

**Classification:** Thermoplastic resin

**Definition:** Polymer of ethylene oxide

**Formula:** H(OCH₂CH₂)ₙOH, avg. n = 45,000

**Properties:** Water-sol.; nonionic

**Toxicology:** LD50 (oral, mouse) > 4 g/kg, (skin, rabbit) > 20 g/kg

**Uses:** Lubricant, emollient, humectant in pharmaceuticals; tablet coating; dispersant, antisettling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid

**Regulatory:** FDA 21CFR §172.770, 173.310, 175.300, 178.3910

**Manuf./Distrib.:**  
- Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:**  
- Polyox® WSR N-12K
- Polyox® WSR N-60K
- Polyox® WSR Coagulant

### PEG-115M

**CAS:** 25322-68-3 (generic)

**Synonyms:** PEG-115000; POE (115000)

**Classification:** Thermoplastic resin

**Definition:** Polymer of ethylene oxide

**Formula:** H(OCH₂CH₂)ₙOH, avg. n = 115,000

**Properties:** Water-sol.; nonionic

**Uses:** Binder, emulsion stabilizer, visc. control agent in cosmetics, pharmaceuticals; tablet coating; dispersant, antisettling agent in calamine lotion; lubricant for rubbing alcohol; controlled-release drugs; contact lens fluid

**Regulatory:** FDA 21CFR §172.770, 173.310, 175.300, 178.3910

**Manuf./Distrib.:**  
- Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)
- Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:**  
- Polyox® WSR Coagulant

### PEG-20 almond glycerides

**Synonyms:** PEG 1000 almond glycerides; POE (20) almond glycerides

**Definition:** PEG deriv. of the mono and diglycerides from almond oil, avg. 20 moles EO

**Properties:** Nonionic

**Uses:** Emulsifier, wetting agent, solubilizer, dispersant, emollient in pharmaceuticals

**Manuf./Distrib.:**  
- DeWolf Chem. [http://www.dewolfchem.com](http://www.dewolfchem.com)

### PEG-60 almond glycerides

**Synonyms:** PEG 3000 almond glycerides; POE...
Chemical Component Cross-Reference

(60) almond glycerides
Definition: PEG deriv. of the mono and
diglycerides from almond oil, avg. 60 moles
EO
Properties: Nonionic
Uses: Emulsifier, wetting agent, solubilizer,
dispersant, emollient, counter-irritant in
pharmaceuticals
Trade Names: Crovol A-70
PEG 1000 almond glycerides. See PEG-20
almond glycerides
PEG 3000 almond glycerides. See PEG-60
almond glycerides
PEG-8 beeswax
Synonyms: PEG 400 beeswax; POE (8)
beeswax
Definition: PEG deriv. of beeswax with avg. 8
moles EO
Properties: Nonionic
Uses: Emulsifier, stabilizer, thickener in
pharmaceuticals; SE base for o/w
emulsions; excipient for
dermal/transdermal pharmaceuticals
Features: Structural base
Trade Names: Apifil®
PEG 400 beeswax. See PEG-8 beeswax
PEG-8 behenate
Synonyms: PEG 400 behenate; POE (8)
behenate
Definition: PEG ester of behenic acid
Empirical: C₃₈H₇₆O₁₀
Formula: CH₃(CH₂)₂₀CO(OCH₂CH₂)nOH, avg. n = 8
Uses: Tableting aid in pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/
Trade Names Containing: Compritol HD5 ATO
PEG-20 behenate
Synonyms: POE (20) behenate
Uses: Excipient, coating agent, emulsifier,
solubilizer, and wetting agent for
pharmaceuticals
PEG 400 behenate. See PEG-8 behenate
PEG-5 behenyl ether. See Beheneth-5
PEG-10 behenyl ether. See Beheneth-10
PEG-20 behenyl ether. See Beheneth-20
PEG-30 behenyl ether. See Beheneth-30
PEG 500 behenyl ether. See Beheneth-10
PEG 1000 behenyl ether. See Beheneth-20
PEG-12 C₁₂-₁₅ alcohol. See C₁₂-₁₅ pareth-12
PEG-2-C₁₂-₁₅ alcohols phosphate. See C₁₂-
₁₅ pareth-2 phosphate
PEG 400 caprylate/caprate glycerides. See
PEG-8 caprylate/caprate glycerides
PEG-6 caprylate/caprate glycerides
CAS 52504-24-2; 68954-97-2
Synonyms: PEG 300 caprylate/caprate
glycerides; POE (6) capryl/caprate
glycerides
Definition: PEG deriv. of a mixt. of mono-, di,-
and triglycerides of caprylic and capric acids
with avg. 6 moles EO
Formula: RCO–
OCH₂COHCH₂(OCH₂CH₂)ₙOH, RCO– =
mixt. of capryl/caprate radicals, avg. n = 6
Properties: Oily liq.; sol. in water, acetone, ethyl
acetate, butyl acetate; misc. with IPA, castor
oil; sapon. no. 90-100; nonionic
Uses: Emulsifier, emollient, refatting agent,
solubilizer, wetting agent for
pharmaceuticals
Trade Names: Acconon CC-6, EP; Estol 3684;
Glycerox 767; Softigen® 767; Softisan® 767
PEG-8 caprylate/caprate glycerides
CAS 57307-99-0; 85536-07-8
Synonyms: PEG 400 caprylate/caprate
glycerides; POE (8) caprylate/caprate
glycerides
Definition: PEG deriv. of a mixt. of mono-, di,-
and triglycerides of caprylic and capric acids
with avg. 8 moles EO
Properties: Oil; nonionic
Uses: Bioavailability enhancer, emulsifier,
solvent, solubilizer, excipient for
pharmaceuticals; surfactant for drug
delivery systems
Features: Hydrophilic
Trade Names: Acconon MC-8, EP/NF;
Labrasol®; L.A.S.
PEG 300 caprylate/caprate glycerides. See PEG-
6 caprylate/caprate glycerides
PEG castor oil
CAS 61791-12-6 (generic)
Synonyms: Castor oil ethoxylate
Properties: Pale yel. liq. to wh. solid (5-100 EO);
HLB 3.8-16.5 (5-100 EO); nonionic
Toxicology: Harmful; may cause sensitization
by inh. and skin contact
Storage: Store and use with adequate ventilation
Uses: Emulsifier, dispersant, solubilizer in
phytopharmaceuticals; solubilizer for
vitamins
Regulatory: FDA 21CFR §175.105 (for 4-84
moles EO)
PEG-3 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (3) castor oil
Definition: PEG deriv. of castor oil with avg. 3 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, hydrotrope for pharmaceuticals
Regulatory: FDA 21 CFR §175.300
Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Servirox® OEG 68.5

PEG-5 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (5) castor oil
Definition: PEG deriv. of castor oil with avg. 5 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, dispersant, solubilizer, visc. control agent for pharmaceuticals
Regulatory: FDA 21 CFR §175.105, 175.300
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: CO-3

PEG-8 castor oil
CAS 61791-12-6 (generic)
Synonyms: PEG 400 castor oil; POE (8) castor oil
Definition: PEG deriv. of castor oil with avg. 8 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, dispersant, solubilizer, visc. control agent for pharmaceuticals
Regulatory: FDA 21 CFR §175.105, 175.300, 176.210, 177.2800
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Acconon CA-5

PEG-9 castor oil
CAS 61791-12-6 (generic)
Synonyms: PEG 450 castor oil; POE (9) castor oil
Definition: PEG deriv. of castor oil with avg. 9 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, lubricant, dispersant, solubilizer, visc. control agent for pharmaceuticals
Regulatory: FDA 21 CFR §175.105, 175.300, 177.2800
Manuf./Distrib.: ABITEC† http://www.abiteccorp.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: CO-10

PEG-10 castor oil
CAS 61791-12-6 (generic)
Synonyms: PEG 500 castor oil; POE (10) castor oil
Definition: PEG deriv. of castor oil with avg. 10 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier for pharmaceuticals; solubilizer for essential oils
Regulatory: FDA 21 CFR §175.105, 175.300, 177.2800
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: CO-10

PEG-15 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (15) castor oil
Definition: PEG deriv. of castor oil with avg. 15 moles of EO
Properties: Nonionic
Uses: Surfactant, emulsifier, lubricant, dispersant, solubilizer, visc. control agent for pharmaceuticals
Regulatory: FDA 21 CFR §175.105, 175.300, 176.210, 177.2800
Manuf./Distrib.: ABITEC† http://www.abiteccorp.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

PEG-17 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (17) castor oil
Definition: PEG deriv. of castor oil with avg. 17 moles of EO
Properties: Nonionic
Uses: Surfactant in phytopharmaceuticals
Regulatory: FDA 21 CFR §175.105
Chemical Component Cross-Reference

Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Servirox® OEG 45

PEG-20 castor oil
CAS 61791-12-6 (generic)
Synonyms: PEG 1000 castor oil; POE (20)
castor oil
Definition: PEG deriv. of castor oil with avg. 20 moles of EO
Properties: Pale yel. oil; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer, dispersant in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2800
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: CO-20TX; Emalex C-20

PEG-25 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (25) castor oil
Definition: PEG deriv. of castor oil with avg. 25 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier in pharmaceuticals; solubilizer for essential oils, vitamins, and pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 177.2800
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Lumulse® GR-25; Sabopal EL 25

PEG-26 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (26) castor oil
Definition: PEG deriv. of castor oil with avg. 26 moles of EO
Properties: Nonionic
Uses: Emulsifier, dispersant, solubilizer in pharmaceuticals
Regulatory: FDA 21CFR §175.105
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

PEG-30 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (30) castor oil
Definition: PEG deriv. of castor oil with avg. 30 moles of EO
Properties: Nonionic
Uses: Solvent, emulsifier for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2800
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

PEG-32 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (32) castor oil
Definition: PEG deriv. of castor oil with avg. 32 moles of EO
Properties: Nonionic
Uses: Surfactant in phytopharmaceuticals
Regulatory: FDA 21CFR §175.105
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

PEG-33 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (33) castor oil
Definition: PEG deriv. of castor oil with avg. 33 moles of EO
Properties: Nonionic
Uses: Solvent, emulsifier for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2800
Manuf./Distrib.: Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

PEG-35 castor oil
CAS 61791-12-6 (generic)
Synonyms: Ethoxy (35) castor oil; POE (35) castor oil; Polyoxyl 35 castor oil
Definition: PEG deriv. of castor oil with avg. 35 moles of EO
Properties: Yel. oily liq., faint char. odor, sl. bitter taste; very sol. in water; sol. in alcohol, ethyl acetate; insol. in min. oils; sp.gr. 1.057; vapor pressure 6 2 mm Hg (20 C); acid no. 2 max.; iodine no. 25-35; sapon. no. 60-76; hyd. no. 65-80; nonionic
Toxicology: LD50 (IV, mouse) 6500 mg/kg; may be harmful by ing., inh., or skin absorption; may cause eye/skin/respiratory tract
CHEMICAL COMPONENT CROSS-REFERENCE

irritation; may cause sensitization by inh. and skin contact; may cause anaphylactic reactions; may cause a hepatitis-like reaction in large doses; may cause GI disturbances on exposure to lg. amts.; TSCA listed

Storage: Store and use with adequate ventilation

Uses: Surfactant, solubilizer, emulsifier, lubricant, emollient, superfattening agent, softener, detergent, wetting agent for pharmaceuticals, veterinary medicine; solvent for intravenous steroid anesthetic and for miconazole; emulsifier for essential oils

Regulatory: FDA 21CFR §175.105, 175.300, 177.2800; USP/NF compliance

Manufacturers/Distributors:
- Fluka http://www.sigma-aldrich.com
- Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Cremophor® EL; Cremophor® ELP; Etoxas 35 HV; Etoxas 35 NF; Sympatens-TR/350

PEG-36 castor oil
CAS 61791-12-6 (generic)
Synonyms: PEG 1800 castor oil; POE (36) castor oil
Definition: PEG deriv. of castor oil with avg. 36 moles of EO
Properties: Liq.; sol. in water, xylene; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, dispersant, solubilizer in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2800

Manufacturers/Distributors:
- Fluka http://www.sigma-aldrich.com
- Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Canasol R 3603

PEG-40 castor oil
CAS 61791-12-6 (generic)
Synonyms: PEG 2000 castor oil; POE (40) castor oil; Polyoxyol 40 castor oil
Definition: PEG deriv. of castor oil with avg. 40 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer, dispersant for vitamins, pharmaceuticals, parenterals
Regulatory: FDA 21CFR §175.105, 175.300, 176.170, 176.180, 176.210, 177.2800; FDA approved for parenterals

Manufacturers/Distributors:
- Fluka http://www.sigma-aldrich.com
- Sigma http://www.sigma-aldrich.com/belgium

PEG-50 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (50) castor oil
Definition: PEG deriv. of castor oil with avg. 50 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant for pharmaceuticals
Regulatory: FDA 21CFR §175.105

Manufacturers/Distributors:
- Fluka http://www.sigma-aldrich.com
- Sigma http://www.sigma-aldrich.com/belgium

Trade Names: CO-50TX; Emalex C-50

PEG-52 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (52) castor oil
Definition: PEG deriv. of castor oil with avg. 52 moles of EO
Properties: Nonionic
Uses: Surfactant for pharmaceuticals
Regulatory: FDA 21CFR §175.105

Manufacturers/Distributors:
- Fluka http://www.sigma-aldrich.com
- Sigma http://www.sigma-aldrich.com/belgium

PEG-56 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (56) castor oil
Definition: PEG deriv. of castor oil with avg. 56 moles of EO
Properties: Nonionic
Uses: Detergent, emulsifier, dispersant, solubilizer for pharmaceuticals
Regulatory: FDA 21CFR §175.105

Manufacturers/Distributors:
- Fluka http://www.sigma-aldrich.com
- Sigma http://www.sigma-aldrich.com/belgium

PEG-60 castor oil
CAS 61791-12-6 (generic)
Synonyms: POE (60) castor oil
Definition: PEG deriv. of castor oil with avg. 60 moles of EO
Properties: Nonionic
Toxicology: TSCA listed

†=pharmaceutical grade
### Chemical Component Cross-Reference

**Uses:** Surfactant, emulsifier, solubilizer, emollient, lubricant, superfatting agent, softener, detergent in pharmaceuticals  
**Regulatory:** FDA 21CFR §175.105, 175.300, 177.2800  
**Manuf./Distrib.:** Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)  
**Trade Names:** CO-60TX

### PEG-180 castor oil  
**CAS:** 61791-12-6 (generic)  
**Synonyms:** POE (180) castor oil  
**Definition:** PEG deriv. of castor oil with avg. 180 moles of EO  
**Properties:** Nonionic  
**Uses:** Emulsifier, dispersant, solubilizer for pharmaceuticals  
**Regulatory:** FDA 21CFR §175.300  
**Manuf./Distrib.:** Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)  
**Trade Names:** Servirox® OEG 90; Servirox® OEG 90/50

### PEG-200 castor oil  
**CAS:** 61791-12-6 (generic)  
**Synonyms:** PEG (200) castor oil; POE (200) castor oil  
**Definition:** PEG deriv. of castor oil with avg. 200 moles of EO  
**Properties:** Nonionic  
**Uses:** Emulsifier, dispersant, solubilizer for pharmaceuticals  
**Regulatory:** FDA 21CFR §175.300  
**Manuf./Distrib.:** Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)  
**Trade Names:** See PEG-200 castor oil

### PEG-20 cetyl/stearyl ether  
**See:** Ceteareth-20

### PEG-25 cetyl/stearyl ether  
**See:** Ceteareth-25

### PEG-30 cetyl/stearyl ether  
**See:** Ceteareth-30

### PEG-33 cetyl/stearyl ether; PEG (33) cetyl/stearyl ether  
**See:** Ceteareth-33

### PEG 100 cetyl/stearyl ether  
**See:** Ceteareth-2

### PEG 500 cetyl/stearyl ether  
**See:** Ceteareth-10

### PEG 24 cholesteryl ether  
**See:** Choleth-24

### PEG-3 cocamide MEA  
**Properties:** Nonionic  
**Uses:** Foam builder/stabilizer for pharmaceutical shampoos; solubilizer

### PEG-5 cocamine  
**CAS:** 61791-14-8 (generic)  
**Synonyms:** POE (5) coconut amine  
**Definition:** PEG deriv. of cocamine  
**Formula:** R-N(CH2CH2O)xH(CH2CH2O)yH, R rep. alkyl groups from coconut oil, avg. (x+y) = 5  
**Properties:** Cationic/nonionic  
**Toxicology:** LD50 (oral, rat) 750 mg/kg; mod. toxic by ing.; eye irritant; TSCA listed  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**Uses:** Emulsifier  
**Trade Names:** Protox™ C-5

†=pharmaceutical grade
PEG-15 cocamine
CAS 68439-72-5; 8051-52-3 (generic); 61791-14-8 (generic)
Synonyms: Amines, C14-18 and C16-18 unsaturated, alkyl, ethoxylated; POE (15) coconut amine
Definition: PEG deriv. of cocamine
Formula: R–N(CH2CH2O)xH(CH2CH2O)yH, R rep. alkyl groups from coconut oil, avg. (x+y) = 15
Properties: Cationic/nonionic
Toxicology: TSCA listed
Uses: Emulsifier for topical pharmaceuticals
Features: Hydrophilic
Trade Names: Ethomeen® C/25
Trade Names Containing: Lubrasil® DS
PEG-8 cocoate
CAS 61791-29-5 (generic)
Synonyms: PEG 400 cocoate; PEG 400 monococoate; POE (8) monococoate
Definition: PEG ester of coconut acid
Formula: RCO–(OCH2CH2)nOH, RCO– rep. fatty acids from coconut oil, avg. n = 8
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier
Regulatory: FDA 21CFR §175.105, 175.300, 176.170, 176.200, 176.210, 177.1210, 177.2260, 177.2800
Trade Names: Glicopol 123
PEG 400 cocoate. See PEG-8 cocoate
PEG-20 corn glycerides. See PEG-8 cocoate
PEG 1000 corn glycerides. See PEG-20 corn glycerides
PEG 3000 corn glycerides. See PEG-60 corn glycerides
PEG dilaurate
CAS 9005-02-1 (generic)
Synonyms: Polyethylene glycol dilaurate
Definition: PEG diester of lauric acid
Formula: CH3(CH2)10CO(OCH2CH2)nOCO(CH2)10CH3, n = 4-150
Properties: Yel. liq. to wh. solid; HLB 5.9-18.5 (4-150 EO); nonionic
Uses: Emulsifier for pharmaceuticals
PEG 4 dilaurate
CAS 9005-02-1 (generic)
Synonyms: PEG (4) dilaurate; PEG 200 dilaurate; POE (4) dilaurate; Polyoxyl 4 dilaurate
Definition: PEG diester of lauric acid
Empirical: C32H62O7
Formula: CH3(CH2)10CO(OCH2CH2)nOCO(CH2)10CH3, avg. n = 4
Properties: Sol. in alcohol; sol. warm in veg. and min. oils; disp. in water; nonionic
Toxicology: TSCA listed
HMIS: Health 1, Flammability 1, Reactivity 0
Uses: Surfactant, emulsifier, dispersant, solubilizer, visc. control agent, defoamer, lubricant, wetting agent, cosolvent for pharmaceuticals, topicals
Regulatory: FDA 21CFR §175.105, 175.300, 176.170, 176.180, 176.200, 176.210; FDA approved for topicals
Manuf./Distrib.: A&E Connock http://www.connock.co.uk; Mosselman NV http://www.mosselman.be; Ruger http://www.rugerchemical.com
Trade Names: Mapeg® 200 DL; STEPAN® PEG 200 DL
PEG-60 corn glycerides
Synonyms: PEG 3000 corn glycerides; POE (60) corn glycerides
Definition: PEG deriv. of corn glycerides, avg. 60 moles EO
Properties: Nonionic
Uses: Emulsifier, wetting agent, solubilizer, dispersant, emollient for pharmaceuticals

†=pharmaceutical grade
Regulatory: FDA 21CFR §175.300, 176.210
Trade Names: Crovol M-70
PEG 1000 corn glycerides. See PEG-20 corn glycerides
PEG 3000 corn glycerides. See PEG-60 corn glycerides
PEG dilaurate
CAS 9005-02-1 (generic)
Synonyms: Polyethylene glycol dilaurate
Definition: PEG diester of lauric acid
Formula: CH3(CH2)10CO(OCH2CH2)nOCO(CH2)10CH3, n = 4-150
Properties: Yel. liq. to wh. solid; HLB 5.9-18.5 (4-150 EO); nonionic
Uses: Emulsifier for pharmaceuticals
PEG 4 dilaurate. See PEG-4 dilaurate
PEG-6 dilaurate
CAS 9005-02-1 (generic)
Synonyms: PEG 300 dilaurate; POE (6) dilaurate
Definition: PEG diester of lauric acid
Formula: CH3(CH2)10CO(OCH2CH2)nOCO(CH2)10CH3, avg. n = 6
PEG-8 dilaurate
CAS 9005-02-1 (generic)
Synonyms: PEG 400 dilaurate; POE (8) dilaurate
Definition: PEG diester of lauric acid
Empirical: C₄₀H₇₈O₁₁
Formula:
\[ \text{CH}_3(\text{CH}_2)_{10}\text{CO(OCH}_2\text{CH}_2)_n\text{OCO(CH}_2)_{10}\text{CH}_3, \]
avg. \( n = 8 \)
Properties: Sol. in alcohol; sol. warm in veg. and min. oils; disp. in water; sp.gr. 1.030; m.p. 15 C; HLB 10.4; flash pt. (COC) 249 C; ref. index 1.459; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer, cosolvent, dispersant, wetting agent, lubricant, thickener, emollient, plasticizer, softener, release agent, coupling agent in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Ruger
http://www.rugerchemical.com
Trade Names: Glicopol 225; Lumulse® 42-L; Mapeg® 400 DL; Saboderm PDC; STEPAN® PEG 400 DL

PEG-12 dilaurate
CAS 9005-02-1 (generic)
Synonyms: PEG 600 dilaurate; POE (12) dilaurate
Definition: PEG diester of lauric acid
Empirical: C₄₈H₉₄O₁₅
Formula:
\[ \text{CH}_3(\text{CH}_2)_{10}\text{CO(OCH}_2\text{CH}_2)_n\text{OCO(CH}_2)_{10}\text{CH}_3, \]
avg. \( n = 12 \)
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Ruger
http://www.rugerchemical.com
Trade Names: Glicopol 225; Lumulse® 42-L; Mapeg® 400 DL; Saboderm PDC; STEPAN® PEG 400 DL
### PEG-150 dilaurate

**CAS**: 9005-02-1 (generic)

**Synonyms**: PEG 6000 dilaurate; POE (150) dilaurate

**Definition**: PEG diester of lauric acid

**Formula**: \( \text{CH}_3(\text{CH}_2)_{10}\text{CO(OCH}_2\text{CH}_2)_n\text{OCO(CH}_2\text{)10CH}_3, \text{avg. } n = 150 \)

**Properties**: Nonionic

**Toxicology**: TSCA listed

**Uses**: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.300

**Manuf./Distrib.**: A&E Connock [http://www.connock.co.uk]; Ruger [http://www.rugerchemical.com]

PEG-200 dilaurate

CAS: 9005-07-6 (generic); 52688-97-0 (generic); 134141-38-1

**Synonyms**: 9-Octadecenoic acid, oxybis (2,1-ethanediyoxy-2,1-ethanediyl) ester; PEG 200 dioleate; POE (4) dioleate

**Definition**: PEG diester of oleic acid

**Empirical**: \( \text{C}_{44}\text{H}_{82}\text{O}_7 \)

**Properties**: Nonionic

**Toxicology**: LD50 (oral, rat) 1900 mg/kg; TSCA listed

**Uses**: Surfactant, emulsifier, coemulsifier, thickener, solubilizer, cosolvent, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

---

**Chemical Component Cross-Reference**

**Definition**: PEG diester of lauric acid

**Formula**: \( \text{CH}_3(\text{CH}_2)_{10}\text{CO(OCH}_2\text{CH}_2)_n\text{OCO(CH}_2\text{)10CH}_3, \text{avg. } n = 75 \)

**Properties**: Nonionic

**Toxicology**: TSCA listed

**Uses**: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.300

**Manuf./Distrib.**: A&E Connock [http://www.connock.co.uk]; Ruger [http://www.rugerchemical.com]

PEG-150 dilaurate

**CAS**: 9005-02-1 (generic)

**Synonyms**: PEG 6000 dilaurate; POE (150) dilaurate

**Definition**: PEG diester of lauric acid

**Formula**: \( \text{CH}_3(\text{CH}_2)_{10}\text{CO(OCH}_2\text{CH}_2)_n\text{OCO(CH}_2\text{)10CH}_3, \text{avg. } n = 75 \)

**Properties**: Nonionic

**Toxicology**: TSCA listed

**Uses**: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.300

**Manuf./Distrib.**: A&E Connock [http://www.connock.co.uk]; Ruger [http://www.rugerchemical.com]

---

**PEG 6000 dilaurate**

**CAS**: 9005-02-1 (generic)

**Synonyms**: PEG 6000 dilaurate; POE (150) dilaurate

**Definition**: PEG diester of lauric acid

**Formula**: \( \text{CH}_3(\text{CH}_2)_{10}\text{CO(OCH}_2\text{CH}_2)_n\text{OCO(CH}_2\text{)10CH}_3, \text{avg. } n = 75 \)

**Properties**: Nonionic

**Toxicology**: TSCA listed

**Uses**: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.300

**Manuf./Distrib.**: A&E Connock [http://www.connock.co.uk]; Ruger [http://www.rugerchemical.com]

PEG-200 dilaurate

**CAS**: 9005-07-6 (generic); 134141-38-1

**Synonyms**: 9-Octadecenoic acid, oxybis (2,1-ethanediyoxy-2,1-ethanediyl) ester; PEG 200 dioleate; POE (4) dioleate

**Definition**: PEG diester of oleic acid

**Empirical**: \( \text{C}_{44}\text{H}_{82}\text{O}_7 \)

**Properties**: Nonionic

**Toxicology**: LD50 (oral, rat) 1900 mg/kg; TSCA listed

**Uses**: Surfactant, emulsifier, coemulsifier, thickener, solubilizer, cosolvent, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
PEG-6 dioleate

CAS 9005-07-6 (generic); 52688-97-0 (generic)
Synonyms: PEG 300 dioleate; POE (6) dioleate
Definition: PEG diester of oleic acid
Empirical: C_{48}H_{90}O_{9}
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 1900 mg/kg; TSCA listed
Uses: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
Regulatory: FDA 21 CFR §175.105, 175.300, 176.210
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Ruger
http://www.rugerchemical.com
Trade Names: Mapeg® 200 DO; STEPAN® PEG 200 DO

PEG-8 dioleate

CAS 9005-07-6 (generic); 52688-97-0 (generic)
Synonyms: PEG 400 dioleate; POE (8) dioleate
Definition: PEG diester of oleic acid
Empirical: C_{52}H_{98}O_{11}
Properties: Sol. in veg. and min. oils; partly sol. in alcohol; disp. in water; nonionic
Toxicology: LD₅₀ (oral, rat) 1900 mg/kg; TSCA listed
Uses: Emulsifier, solubilizer, cosolvent, lubricant, dispersant, defoamer, wetting agent for pharmaceuticals
Regulatory: FDA 21 CFR §175.105, 175.300, 176.210, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV
http://www.mosselman.be
http://www.rugerchemical.com
Trade Names: Mapeg® 400 DO; STEPAN® PEG 400 DO; Tilol 265-O

PEG-12 dioleate

CAS 9005-07-6 (generic); 52688-97-0 (generic); 85736-49-8; EINECS/ELINCS 288-459-5
Synonyms: PEG 600 dioleate; POE (12) dioleate
Definition: PEG diester of oleic acid
Properties: Sol. in alcohol, veg. and min. oils; disp. in water; m.p. 15-20 C; nonionic
Toxicology: LD₅₀ (oral, rat) 1900 mg/kg; TSCA listed
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Emulsifier, wetting agent, plasticizer, thickener, solubilizer, emollient, spreading agent, dispersant in pharmaceuticals
Regulatory: FDA 21 CFR §173.340, 175.105, 175.300, 176.210, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV
http://www.mosselman.be; Ruger
http://www.rugerchemical.com
Trade Names: Mapeg® 600 DO; STEPAN® PEG 600 DO; Tilol 267-O

PEG-20 dioleate

CAS 9005-07-6 (generic); 52688-97-0 (generic)
Synonyms: PEG 1000 dioleate; POE (20) dioleate
Definition: PEG diester of oleic acid
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 1900 mg/kg; TSCA listed
Uses: Surfactant, emulsifier, solubilizer, cosolvent, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
Regulatory: FDA 21 CFR §175.300, 176.210, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Ruger
http://www.rugerchemical.com

PEG-32 dioleate

CAS 9005-07-6 (generic); 52688-97-0 (generic)
Synonyms: PEG 1540 dioleate; POE (32) dioleate
Definition: PEG diester of oleic acid
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 1900 mg/kg; TSCA listed
Uses: Surfactant, emulsifier, solubilizer, cosolvent, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
Regulatory: FDA 21 CFR §175.300, 176.210, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Ruger
http://www.rugerchemical.com

PEG-75 dioleate

CAS 9005-07-6 (generic); 52688-97-0 (generic)
Synonyms: PEG 4000 dioleate; POE (75) dioleate
Definition: PEG diester of oleic acid
Properties: Sol. in alcohol, veg. and min. oils; disp. in water; m.p. 15-20 C; nonionic
Toxicology: LD₅₀ (oral, rat) 1900 mg/kg; TSCA listed
Uses: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
Regulatory: FDA 21 CFR §175.300, 176.210, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Ruger
http://www.rugerchemical.com

PEG-75 dioleate

CAS 9005-07-6 (generic); 52688-97-0 (generic)
Synonyms: PEG 4000 dioleate; POE (75) dioleate
PEG diester of oleic acid

**Definition:**
PEG diester of oleic acid

**Properties:**
- Nonionic

**Toxicology:**
- LD50 (oral, rat) 1900 mg/kg; TSCA listed

**Uses:**
- Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory:**
- FDA 21CFR §175.300

**Manuf./Distrib.:**
- A&E Connock
  - http://www.connock.co.uk
- Ruger
  - http://www.rugerchemical.com

**PEG-150 dioleate**

**PEG distearate**

**CAS:**
- 9005-08-7 (generic)

**Synonyms:**
- Heptadecanoic acid, compd. with ethane-1,2-diol; Polyethylene glycol distearate; Polyglycol distearate

**Definition:**
PEG diester of stearic acid

**Empirical:**
(C_{2}H_{4}O)_{n}C_{36}H_{70}O_{3}

**Formula:**
CH_{3}(CH_{2})_{16}CO(OCH_{2}CH_{2})_{n}OCO(CH_{2})_{16}CH_{3}, n = 9-14

**Physical:**
- Solid; HLB 7.7-10.1 (9-14 EO); nonionic

**Toxicology:**
- LD50 (IV, mouse) 365 mg/kg

**Hazardous Decomp. Prods.:**
- Heated to decomp., emits acrid smoke and irritating fumes

**Uses:**
- Emulsifier, thickener, opacifier in pharmaceuticals

**Trade Names:**
- Emanon 3299; Emanon 3299R; Nissan Nonion DS-60HN

**PEG-2 distearate**

**CAS:**
- 109-30-8; 9005-08-7 (generic); 9005-08-7 (generic)

**EINECS/ELINCS:**
- 203-663-6

**Synonyms:**
- Diethylene glycol distearate; PEG 100 distearate; POE (2) distearate

**Definition:**
PEG diester of stearic acid

**Empirical:**
C_{40}H_{78}O_{5}

**Formula:**
CH_{3}(CH_{2})_{16}CO(OCH_{2}CH_{2})_{n}OCO(CH_{2})_{16}CH_{3}, avg. n = 2

**Properties:**
- Sp.gr. 0.96; m.p. 48 C; nonionic

**Toxicology:**
- TSCA listed

**HMIS:**
- Health 0, Flammability 1, Reactivity 0

**Uses:**
- Emulsifier, emollient, detergent, emulsifier, opacifier, and bodying agent for pharmaceuticals, lotions

**Regulatory:**
- FDA 21CFR §175.105, 175.300, 176.210
- Canada DSL

### PEG-6 distearate

**CAS**: 9005-08-7 (generic)

**Synonyms**: PEG 300 distearate; POE (6) distearate

**Definition**: PEG diester of stearic acid

**Empirical**: C_{48}H_{94}O_{9}

**Formula**: 
\[ \text{CH}_3\text{(CH}_2\text{)}_{16}\text{CO(OCH}_2\text{CH}_2\text{)}_n\text{OCO(CH}_2\text{)}_{16}\text{CH}_3, \text{ avg. } n = 6 \]

**Properties**: M.p. 35-37 C; flash pt. > 110 C; nonionic

**Toxicology**: TSCA listed

**Uses**: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.105, 175.300, 176.210

**Manuf./Distrib.**: A&E Connock

**Trade Names**: Lumulse® 42-S; Mapeg® 400 DS; Monestriol 204-C; STEPAN® PEG 400 DS

### PEG-8 distearate

**CAS**: 9005-08-7 (generic)

**Synonyms**: PEG 400 distearate; POE (8) distearate

**Definition**: PEG diester of stearic acid

**Empirical**: C_{52}H_{102}O_{11}

**Formula**: 
\[ \text{CH}_3\text{(CH}_2\text{)}_{16}\text{CO(OCH}_2\text{CH}_2\text{)}_n\text{OCO(CH}_2\text{)}_{16}\text{CH}_3, \text{ avg. } n = 8 \]

**Properties**: M.p. 35-37 C; flash pt. > 110 C; nonionic

**Toxicology**: TSCA listed

**HMIS**: Health 0, Flammability 1, Reactivity 0

**Uses**: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800

**Manuf./Distrib.**: A&E Connock

**Trade Names**: Mapeg® 600 DS; STEPAN® PEG 600 DS

### PEG-12 distearate

**CAS**: 9005-08-7 (generic)

**Synonyms**: PEG 600 distearate; POE (12) distearate

**Definition**: PEG diester of stearic acid

**Formula**: 
\[ \text{CH}_3\text{(CH}_2\text{)}_{16}\text{CO(OCH}_2\text{CH}_2\text{)}_n\text{OCO(CH}_2\text{)}_{16}\text{CH}_3, \text{ avg. } n = 12 \]

**Properties**: M.p. 35-37 C; flash pt. > 110 C; nonionic

**Toxicology**: TSCA listed

**Uses**: Emollient, detergent, emulsifier, thickener, visc. builder, solubilizer, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800

**Manuf./Distrib.**: A&E Connock

### PEG-20 distearate

**CAS**: 9005-08-7 (generic)

**Synonyms**: PEG 1000 distearate; POE (20) distearate

**Definition**: PEG diester of stearic acid

**Formula**: 
\[ \text{CH}_3\text{(CH}_2\text{)}_{16}\text{CO(OCH}_2\text{CH}_2\text{)}_n\text{OCO(CH}_2\text{)}_{16}\text{CH}_3, \text{ avg. } n = 20 \]

**Properties**: M.p. 35-37 C; flash pt. > 110 C; nonionic

**Toxicology**: TSCA listed

**Uses**: Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory**: FDA 21CFR §175.300, 176.210, 177.2260, 177.2800

**Manuf./Distrib.**: A&E Connock

### PEG-32 distearate

**CAS**: 9005-08-7 (generic)

**Synonyms**: PEG 1540 distearate; POE (32) distearate
**Distearate**

**Definition:** PEG diester of stearic acid

**Formula:**
\[ CH_3(CH_2)_{16}CO(OCH_2CH_2)_nOCO(CH_2)_{16}CH_3, \text{ avg. } n = 32 \]

**Properties:** M.p. 35-37°C; flash pt. > 110°C; nonionic

**Toxicology:** TSCA listed

**Uses:** Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory:** FDA 21CFR §175.300, 176.210, 177.2800

**Manuf./Distrib.:** A&E Connock [http://www.connock.co.uk](http://www.connock.co.uk); Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Ruger [http://www.rugerchemical.com](http://www.rugerchemical.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**PEG-75 distearate**

**CAS:** 9005-08-7 (generic)

**Synonyms:** PEG 4000 distearate; POE (75) distearate

**Definition:** PEG diester of stearic acid

**Formula:**
\[ CH_3(CH_2)_{16}CO(OCH_2CH_2)_nOCO(CH_2)_{16}CH_3, \text{ avg. } n = 75 \]

**Properties:** M.p. 35-37°C; HLB 17.3; flash pt. > 110°C; nonionic

**Toxicology:** TSCA listed

**Uses:** Surfactant, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

**Regulatory:** FDA 21CFR §175.300, 176.210, 177.2800

**Manuf./Distrib.:** A&E Connock [http://www.connock.co.uk](http://www.connock.co.uk); Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Ruger [http://www.rugerchemical.com](http://www.rugerchemical.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**PEG 100 distearate.** See PEG-2 distearate

**PEG-125 distearate**

**CAS:** 9005-08-7 (generic)

**Synonyms:** PEG 6000 distearate; POE (150) distearate; Polyoxyl 150 distearate

**Definition:** PEG diester of stearic acid

**Formula:**
\[ CH_3(CH_2)_{16}CO(OCH_2CH_2)_nOCO(CH_2)_{16}CH_3, \text{ avg. } n = 150 \]

**Properties:** M.p. 35-37°C; flash pt. > 110°C; nonionic

**Toxicology:** TSCA listed

**HMIS:** Health 0, Flammability 1, Reactivity 0

**Uses:** Surfactant, emulsifier, solubilizer, thickener, spreading agent, wetting agent, dispersant in pharmaceuticals, topicals; melting pt. control agent in suppositories

**Regulatory:** FDA 21CFR §175.300; FDA approved for topicals

**Manuf./Distrib.:** A&E Connock [http://www.connock.co.uk](http://www.connock.co.uk); Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Ruger [http://www.rugerchemical.com](http://www.rugerchemical.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:** Mapeg® 6000 DS; Monestrol 216-C; Polypax PD 6000; Rewopal® PEG 6000 DS; STEPAN® PEG 6000 DS

**Trade Names Containing:** CustoBlend® BAC; CustoBlend® BAT

**PEG 200 distearate.** See PEG-4 distearate

**PEG 300 distearate.** See PEG-6 distearate

**PEG 400 distearate.** See PEG-8 distearate

**PEG 4000 distearate.** See PEG-75 distearate

**PEG 6000 distearate.** See PEG-150 distearate

**PEG-8 ditallate**

**CAS:** 61791-01-3 (generic)

**Synonyms:** PEG 400 ditallate; POE (8) ditallate

**Definition:** PEG diester of tall oil acid

**Formula:** RCO–(OCH_2CH_2)_nOCOR, RCO– rep. tall oil fatty radicals, avg. n = 8

**Properties:** Nonionic

**Toxicology:** TSCA listed

**Uses:** Emulsifier, dispersant in pharmaceuticals

**Regulatory:** FDA 21CFR §175.105, 175.300, 176.210, 177.1210, 177.2800

**Manuf./Distrib.:** A&E Connock [http://www.connock.co.uk](http://www.connock.co.uk); Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Ruger [http://www.rugerchemical.com](http://www.rugerchemical.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:** Mapeg® 400 DOT

**PEG-12 ditallate**

**CAS:** 61791-01-3 (generic)

**Synonyms:** PEG 600 ditallate; POE (12) ditallate

**Definition:** PEG diester of tall oil acid

**Formula:** RCO–(OCH_2CH_2)_nOCOR, RCO– rep. tall oil fatty radicals, avg. n = 12

**Properties:** Nonionic

**Toxicology:** TSCA listed

**Uses:** Emulsifier, dispersant in pharmaceuticals

**Regulatory:** FDA 21CFR §175.105, 175.300, 176.210, 177.1210, 177.2800

PEG 400 ditallate. See PEG-8 ditallate
PEG 600 ditallate. See PEG-12 ditallate

PEG-7 glyceryl cocoate
CAS 66105-29-1; 68201-46-7 (generic)
Synonyms: PEG (7) glyceryl monoglycolate; POE (7) glyceryl monoglycolate
Definition: PEG ether of glyceryl cocoate
Formula: RCO–
OCH2COHHCH2(OCH2CH2)nOH, RCO– rep. fatty acids from coconut oil, avg. n = 7
Properties: Nonionic
Uses: Surfactant, emollient, superfatting agent, emulsifier, solubilizer, coupling agent for pharmaceuticals; dispersant for biologically act. ingreds.
Regulatory: FDA 21CFR §175.300
Trade Names: Cetiol® HE; Glycerox HE; Mazol® 159; Milopol G-7; Saboderm HE
Tegosoft® GC
Trade Names Containing: Saboderm SHO

PEG-30 glyceryl cocoate
CAS 68201-46-7 (generic)
Synonyms: POE (30) glyceryl monoglycolate
Definition: PEG ether of glyceryl cocoate
Formula: RCO–
OCH2COOHCH2(OCH2CH2)nOH, RCO– rep. fatty acids from coconut oil, avg. n = 30
Properties: Nonionic
Uses: Surfactant, detergent, emollient, emulsifier, solubilizer, thickener, superfatting agent for pharmaceuticals; dispersant for surfactants
Features: Low irritation
Regulatory: FDA 21CFR §175.300, 177.2800
Manuf./Distrib.: A&E Connock http://www.connock.co.uk; ABITEC† http://www.abiteccorp.com
Trade Names: Rewoderm® LI 63

PEG-80 glyceryl cocoate
CAS 68201-46-7 (generic)
Synonyms: PEG (80) glyceryl monoglycolate; POE (80) glyceryl monoglycolate
Definition: PEG ether of glyceryl cocoate
Formula: RCOOCH2CHOHCH2(OCH2CH2)nOH, R = coconut fatty radical, avg. n = 80
Properties: Nonionic
Uses: Surfactant, detergent, emulsifier, solubilizer, thickener, superfatting agent for pharmaceuticals

†=pharmaceutical grade

Features: Surfactant, detergent, emulsifier, solubilizer, thickener, superfatting agent for pharmaceuticals; dispersant for surfactants
Regulatory: FDA 21CFR §175.300
Trade Names: Rewoderm® LI 67-75
PEG-7 glyceryl ether. See Glycereth-7
PEG-26 glyceryl ether. See Glycereth-26
PEG-7 glyceryl ether benzoate. See Glycereth-7 benzoate
PEG-5 glyceryl ether lactate. See Glycereth-5 lactate
PEG-7 glyceryl ether triacetate. See Glycereth-7 triacetate
PEG-10 glyceryl isostearate
Properties: Nonionic
Uses: Emulsifier, solubilizer
Trade Names: Emalex GWIS-110EX
PEG-15 glyceryl isostearate
CAS 68958-58-7 (generic)
Synonyms: POE (15) glyceryl isostearate
Definition: PEG ether of glyceryl isostearate
Formula: C17H35COOCH2COOHCH2(OCH2CH2)nOH, avg. n = 15
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emollient
Trade Names: Emalex GWIS-115
PEG-20 glyceryl isostearate
CAS 68958-58-7; 69468-44-6 (generic)
Synonyms: PEG 1000 glyceryl isostearate; POE (20) glyceryl isostearate
Definition: PEG ether of glyceryl isostearate
Formula: C17H35COOCH2CHOHCH2(OCH2CH2)nOH, avg. n = 20
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer for flavors, vitamin oils
Trade Names: Emalex GWIS-120EX
PEG-25 glyceryl isostearate
CAS 69468-44-6 (generic)
Synonyms: POE (25) glyceryl isostearate
Definition: PEG ether of glyceryl isostearate
Properties: Nonionic
Uses: Solubilizer
Trade Names: Emalex GWIS-125
PEG-30 glyceryl isostearate
CAS 68958-58-7; 69468-44-6 (generic)
Synonyms: POE (30) glyceryl isostearate

PEG-7 glyceryl oleate
Uses: Emollient, carrier for pharmaceuticals

PEG-20 glyceryl oleate
CAS 68889-49-6 (generic); 51192-09-7 (generic)
Synonyms: PEG-20 glyceryl monooleate; PEG 1000 glyceryl monooleate; POE (20) glyceryl oleate
Definition: PEG ether of glyceryl oleate
Formula: \( \text{CH}_3[(\text{CH}_2)_7]_2\text{COOCH}_2\text{CHOHCH}_2(\text{OCH}_2\text{CH}_2)_n\text{OH}, \text{avg. } n = 20 \)
Properties: Nonionic

Pionier® O2

PEG-32 glyceryl palmitostearate
Uses: Excipient, emulsifier for pharmaceuticals
Trade Names: Gelucire 50/13

PEG-5 glyceryl stearate
CAS 51158-08-8 (generic); 68153-76-4 (generic)
Synonyms: POE (5) glyceryl monostearate
Definition: PEG ether of glyceryl stearate
Empirical: \( \text{C}_31\text{H}_62\text{O}_9 \)
Formula: \( \text{CH}_3(\text{CH}_2)_{16}\text{COOCH}_2\text{COOHCH}_2(\text{OCH}_2\text{CH}_2)_n\text{OH}, \text{avg. } n = 5 \)
Properties: Nonionic
Uses: Surfactant, emulsifier, dispersant, thickener for pharmaceuticals
Regulatory: FDA 21CFR §175.300
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
Trade Names: Aldo® MS-20 KFG; Tagat® S2

PEG-30 glyceryl stearate
CAS 51158-08-8 (generic)
Synonyms: POE (30) glyceryl monostearate
Definition: PEG ether of glyceryl stearate
Formula: \( \text{CH}_3(\text{CH}_2)_{16}\text{COOCH}_2\text{COOHCH}_2(\text{OCH}_2\text{CH}_2)_n\text{O}, \text{avg. } n = 30 \)
Properties: Nonionic
Uses: Surfactant, solubilizer, emulsifier in pharmaceuticals, prep. of o/w emulsions/creams/lotions; solubilizer for flavors, perfumes, vitamin oils; dispersant
Regulatory: FDA 21CFR §175.300, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
Trade Names: Tagat® S
Trade Names Containing: Pionier® OEW-2; Pionier® OW 350

PEG-32 glyceryl stearate
Uses: Excipient for hard gelatin capsules; bioavailability enhancer in pharmaceuticals

PEG-80 glyceryl tallowate
CAS 68153-76-4 (generic)
Synonyms: POE (80) glyceryl monotallowate
Definition: PEG ether of tallow glyceride
Formula: \( \text{RCO–}(\text{OCH}_2\text{CH}_2)_n\text{OH}, \text{avg. } n = 80 \)
Properties: Nonionic
Uses: Surfactant, emulsifier, solubilizer, thickener, emollient, superfatting agent, anti-irritant in pharmaceuticals
Regulatory: FDA 21CFR §175.300
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
PEG-200 glyceryl tallowate
CAS 68153-76-4 (generic); 68553-11-7
Synonyms: POE (200) glyceryl monotallowate
Definition: PEG ether of tallow glyceride
Formula: RCO–OCH₂COHCH₂(OCH₂CH₂)nOH, RCO– rep. fatty acids from tallow, avg. n = 200
Properties: Nonionic
Uses: Surfactant, emulsifier, thickener for pharmaceuticals
Features: Mild
Regulatory: FDA 21CFR §175.300
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PEG-4 glyceryl tristearate
Uses: Oil-phase ingred. for pharmaceuticals
Trade Names: Emalex GWS-304

PEG-5 glyceryl tristearate
Uses: Oil-phase ingred. for ointments
Trade Names: Emalex GWS-305

PEG-5 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: POE (5) hydrogenated castor oil
Definition: PEG deriv. of hydrogenated castor oil with avg. 5 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, hydrotrope in pharmaceuticals
Trade Names: Emalex HC-5; HCO-5

PEG-7 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: POE (7) hydrogenated castor oil
Definition: PEG deriv. of hydrogenated castor oil with avg. 7 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, hydrotrope, emulsifier, softener in pharmaceuticals
Trade Names: Arlace® 989; Dehymuls® HRE 7; Emalex HC-7; Simulsol® 989
Trade Names Containing: Pionier® 1533; Pionier® L-15; Pionier® PIAH; Pionier® SVE Soft

PEG-10 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: PEG 500 hydrogenated castor oil; POE (10) hydrogenated castor oil
Definition: PEG deriv. of hydrogenated castor oil with avg. 10 moles of EO
Properties: Nonionic
Toxicology: TSCA listed

PEG-15 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: POE (15) hydrogenated castor oil
Definition: PEG deriv. of hydrogenated castor oil with avg. 15 moles of EO
Properties: Nonionic
Uses: Oil and wax emulsifier, solubilizer, thickener in pharmaceuticals

PEG-20 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: POE (20) hydrogenated castor oil
Definition: PEG deriv. of hydrogenated castor oil with avg. 20 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, plasticizer, hydrotrope, lubricant, wetting agent, dispersant, binder, thickener for pharmaceuticals
Regulatory: FDA 21CFR §177.2800
Trade Names: HCO-20

PEG-25 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: POE (25) hydrogenated castor oil
Definition: PEG deriv. of hydrogenated castor oil with avg. 25 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer in pharmaceuticals
Regulatory: FDA 21CFR §177.2800
Trade Names: Arlatone® G Pharma; Arlatone® G; Sabopal ELH 25; Simulsol® 1292

PEG-30 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: POE (30) hydrogenated castor oil
Definition: PEG deriv. of hydrogenated castor oil with avg. 30 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, hydrotrope in pharmaceuticals
Regulatory: FDA 21CFR §177.2800
Trade Names: HCO-30

PEG-40 hydrogenated castor oil
CAS 61788-85-0 (generic)
Synonyms: POE (40) hydrogenated castor oil;
**Polyoxyl 40 hydrogenated castor oil**  
*Definition:* PEG deriv. of hydrogenated castor oil with avg. 40 moles of EO  
*Properties:* Wh. to ylsh. paste or pasty liq., faint odor, sl. taste; very sol. in water; sol. in alcohol, ethyl acetate; insol. in min. oils; congeal pt. 20-30 C; acid no. 2 max.; iodine no. 2 max.; sapon. no. 45-69; hyd. no. 60-80; nonionic  
*Toxicology:* LD50 (IV, mouse) 5 g/kg; TSCA listed  
*Uses:* Surfactant, solubilizer, emulsifier, wetting agent, emollient for pharmaceuticals  
*Regulatory:* FDA 21CFR §177.2800; USP/NF compliance  
*Manuf./Distrib.:* Libraw Pharma†  
[http://www.pharma-excipients.com](http://www.pharma-excipients.com)  
*Trade Names:* Agnique CSO-40H; Canasol R 4000 H; Cremophor® RH 40; Croduret 40LD; Emalex HC-40; HCO-40; HCO-40 Pharm.; Lipocol HCO-40; Sabopal ELH 40; Simulsol® 1293; Tagat® CH 40  
*Trade Names Containing:* Solubilisant γ 2428  

PEG (45) hydrogenated castor oil  
*CAS:* 61788-85-0  
*Synonyms:* PEG (45) hydrogenated castor oil; POE (45) hydrogenated castor oil  
*Definition:* PEG deriv. of hydrogenated castor oil with avg. 45 moles of EO  
*Properties:* Nonionic  
*Toxicology:* TSCA listed  
*Uses:* Solubilizer for pharmaceuticals, essential oils  
*Regulatory:* FDA 21CFR §177.2800  
*Manuf./Distrib.:* Somerset Cosmetic Co.  

PEG (45) hydrogenated castor oil. See PEG-45 hydrogenated castor oil  

PEG-50 hydrogenated castor oil  
*CAS:* 61788-85-0  
*Synonyms:* POE (50) hydrogenated castor oil  
*Definition:* PEG deriv. of hydrogenated castor oil with avg. 50 moles of EO  
*Properties:* Nonionic  
*Toxicology:* TSCA listed  
*Uses:* Surfactant, solubilizer, hydrotrope, thickener, emulsifier for pharmaceuticals  
*Regulatory:* FDA 21CFR §177.2800  
*Trade Names:* Croduret 50 Special; Emalex HC-50; HCO-50; HCO-50 Pharm.  

PEG (50) hydrogenated castor oil. See PEG-45 hydrogenated castor oil  

PEG-60 hydrogenated castor oil  
*CAS:* 61788-85-0  
*Synonyms:* POE (60) hydrogenated castor oil  
*Definition:* PEG deriv. of hydrogenated castor oil with avg. 60 moles of EO  
*Properties:* Nonionic  
*Toxicology:* TSCA listed  
*Uses:* Surfactant, solubilizer, emulsifier, emollient for pharmaceuticals  
*Regulatory:* FDA 21CFR §177.2800  
*Trade Names:* Agnique CSO-60H; Emalex HC-60; HCO-60; HCO-60 Pharm.; Lipocol HCO-60; Tagat® CH 60  

PEG-80 hydrogenated castor oil  
*CAS:* 61788-85-0  
*Synonyms:* POE (80) hydrogenated castor oil  
*Definition:* PEG deriv. of hydrogenated castor oil with avg. 80 moles of EO  
*Properties:* Nonionic  
*Toxicology:* TSCA listed  
*Uses:* Surfactant, hydrotrope, thickener, emulsifier in pharmaceuticals  
*Trade Names:* HCO-80  

PEG-100 hydrogenated castor oil  
*CAS:* 61788-85-0  
*Synonyms:* PEG (100) hydrogenated castor oil; POE (100) hydrogenated castor oil  
*Definition:* PEG deriv. of hydrogenated castor oil with avg. 100 moles of EO  
*Properties:* Nonionic  
*Toxicology:* TSCA listed  
*Uses:* Surfactant, solubilizer, hydrotrope, emulsifier, emollient for pharmaceuticals  
*Trade Names:* HCO-100  

PEG (100) hydrogenated castor oil. See PEG-100 hydrogenated castor oil  

PEG 500 hydrogenated castor oil. See PEG-10 hydrogenated castor oil  

PEG-200 hydrogenated glyceryl palmate  
*CAS:* 67784-88-7  
*Definition:* PEG deriv. of hydrog. palm glyceride with an avg. of 200 moles of EO  
*Uses:* Emollient  
*Manuf./Distrib.:* Somerset Cosmetic Co.  
*Trade Names Containing:* Saboderm SHO  

PEG-20 hydrogenated lanolin  
*CAS:* 68648-27-1  
*Synonyms:* PEG 1000 hydrogenated lanolin; POE (20) hydrogenated lanolin  
*Definition:* PEG deriv. of hydrogenated lanolin
Chemical Component Cross-Reference

PEG-24 hydrogenated lanolin
CAS 68648-27-1 (generic)
Synonyms: POE (24) hydrogenated lanolin
Definition: PEG deriv. of hydrogenated lanolin with avg. 24 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emollient, conditioner, emulsifier, dispersant, solubilizer, surfactant, emulsifier, sec. stabilizer for pharmaceuticals, topicals
Trade Names: Fancol™ HL-24; Lipolan 31; Supersat AWS-24

PEG 1000 hydrogenated lanolin. See PEG-20 hydrogenated lanolin

PEG-50 hydrogenated tallowamide
CAS 68155-24-8 (generic); 68783-22-2 (generic)
Classification: Ethoxylated amide
Properties: Nonionic
Uses: Thickener, detergent, emulsifier, dispersant, foaming agent for pharmaceuticals, topicals; surfactant, emulsifier, sec. stabilizer for emulsion systems
Regulatory: Canada DSL
Trade Names: Schercomid HT-60

PEG-15 hydroxystearate
Synonyms: POE (15) hydroxystearate
Definition: PEG ester of hydroxystearic acid
Formula: \(CH_3(CH_2)_5CHOH(CH_2)_10CO(OCH_2CH_2)_nOH\), avg. \(n = 15\)
Uses: Solvent, solubilizer for injection sol’ns.
Trade Names: Solutol® HS 15

PEG-20 isocetyl ether. See Isoceteth-20
PEG-30 isocetyl ether. See Isoceteth-30
PEG 1000 isocetyl ether. See Isoceteth-20

PEG-6 isostearate
CAS 56002-14-3 (generic)
Synonyms: PEG 300 monoisostearate; POE (6) monoisostearate
Definition: PEG ester of isostearic acid
Empirical: \(C_{30}H_{60}O_8\)
Formula: \(C_{17}H_{35}CO(OCH_2CH_2)_nOH\), avg. \(n = 6\)
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer, superfatting agent, visc. builder, plasticizer, emollient, foam stabilizer, humectant in pharmaceuticals

PEG-27 lanolin
CAS 8051-81-8; 61790-81-6 (generic)
Synonyms: POE (27) lanolin
Definition: PEG deriv. of lanolin with avg. 27 moles of EO
Properties: Yel.-amber gel, faint, pleasant odor; disp. in water; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, conditioner, emollient, lubricant, dispersant, wetting agent, solubilizer, foam stabilizer for pharmaceuticals
Trade Names: Lanogel® 21

PEG-30 lanolin
CAS 61790-81-6 (generic)
Synonyms: POE (30) lanolin
Definition: PEG deriv. of lanolin with avg. 30 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer, emulsifier, emollient for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/
Trade Names Containing: Sebase

PEG-40 lanolin
CAS 8051-82-9; 61790-81-6 (generic)
Synonyms: PEG 2000 lanolin; POE (40) lanolin
Definition: PEG deriv. of lanolin with avg. 40 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, wetting agent, dispersant, solubilizer, foam stabilizer, superfatting agent for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PEG-60 lanolin
CAS 61790-81-6 (generic)
Synonyms: PEG 3000 lanolin; POE (60) lanolin
Definition: PEG deriv. of lanolin with avg. 60 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer, superfatting agent, visc. builder, plasticizer, emollient, foam stabilizer, humectant in pharmaceuticals

†=pharmaceutical grade

Uses: Solvent, emulsifier, emulsion stabilizer, dispersant, solubilizer for topical pharmaceuticals
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

PEG-27 lanolin
CAS 8051-81-8; 61790-81-6 (generic)
Synonyms: POE (27) lanolin
Definition: PEG deriv. of lanolin with avg. 27 moles of EO
Properties: Yel.-amber gel, faint, pleasant odor; disp. in water; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, conditioner, emollient, lubricant, dispersant, wetting agent, solubilizer, foam stabilizer for pharmaceuticals
Trade Names: Lanogel® 21

PEG-30 lanolin
CAS 61790-81-6 (generic)
Synonyms: POE (30) lanolin
Definition: PEG deriv. of lanolin with avg. 30 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer, emulsifier, emollient for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/
Trade Names Containing: Sebase

PEG-40 lanolin
CAS 8051-82-9; 61790-81-6 (generic)
Synonyms: PEG 2000 lanolin; POE (40) lanolin
Definition: PEG deriv. of lanolin with avg. 40 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, wetting agent, dispersant, solubilizer, foam stabilizer, superfatting agent for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PEG-60 lanolin
CAS 61790-81-6 (generic)
Synonyms: PEG 3000 lanolin; POE (60) lanolin
Definition: PEG deriv. of lanolin with avg. 60 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer, superfatting agent, visc. builder, plasticizer, emollient, foam stabilizer, humectant in pharmaceuticals

†=pharmaceutical grade

Uses: Solvent, emulsifier, emulsion stabilizer, dispersant, solubilizer for topical pharmaceuticals
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

PEG-27 lanolin
CAS 8051-81-8; 61790-81-6 (generic)
Synonyms: POE (27) lanolin
Definition: PEG deriv. of lanolin with avg. 27 moles of EO
Properties: Yel.-amber gel, faint, pleasant odor; disp. in water; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, conditioner, emollient, lubricant, dispersant, wetting agent, solubilizer, foam stabilizer for pharmaceuticals
Trade Names: Lanogel® 21

PEG-30 lanolin
CAS 61790-81-6 (generic)
Synonyms: POE (30) lanolin
Definition: PEG deriv. of lanolin with avg. 30 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer, emulsifier, emollient for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/
Trade Names Containing: Sebase

PEG-40 lanolin
CAS 8051-82-9; 61790-81-6 (generic)
Synonyms: PEG 2000 lanolin; POE (40) lanolin
Definition: PEG deriv. of lanolin with avg. 40 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, wetting agent, dispersant, solubilizer, foam stabilizer, superfatting agent for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PEG-60 lanolin
CAS 61790-81-6 (generic)
Synonyms: PEG 3000 lanolin; POE (60) lanolin
Definition: PEG deriv. of lanolin with avg. 60 moles of EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Solubilizer, superfatting agent, visc. builder, plasticizer, emollient, foam stabilizer, humectant in pharmaceuticals

PEG-5 laurate
CAS 9004-81-3 (generic)
Synonyms: POE (5) monolaurate
Definition: PEG ester of lauric acid
Formula: CH₃(CH₂)₁₀CO(OCH₂CH₂)₅OH, avg. n = 5
Properties: Nonionic
Toxicology: TSCA listed
Uses: Oil and wax emulsifier in pharmaceuticals

PEG-6 laurate
CAS 2370-64-1; 9004-81-3 (generic); EINECS/ELINCS 219-136-9
Synonyms: 17-Hydroxy-3,6,9,12,15-pentaoxaheptadec-1-yl dodecanoate; PEG 300 monolaurate; POE (6) monolaurate
Definition: PEG ester of lauric acid
Empirical: C₂₄H₄₈O₈
Formula: CH₃(CH₂)₁₀CO(OCH₂CH₂)₆OH, avg. n = 6
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, thickener, solubilizer, emollient, spreading agent, dispersant in pharmaceuticals
Features: Hydrophilic
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 178.3910

PEG-8 laurate
CAS 9004-81-3 (generic); 35179-86-3; 37318-14-2; EINECS/ELINCS 253-458-0
Synonyms: 23-Hydroxy-3,6,9,12,15,18,21-heptaoxatricos-1-yl dodecanoate; PEG 400 monolaurate; POE (8) lauric acid monoester; POE (8) monolaurate
Definition: PEG ester of lauric acid
Empirical: C₂₈H₅₆O₁₀
Formula: CH₃(CH₂)₁₀CO(OCH₂CH₂)₈OH, avg. n = 8
Properties: Insol. in water; HLB 16.5; nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, thickener, solubilizer, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals; solubilizer for perfumes
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.1200, 177.2260, 177.2800, 178.3910
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV
http://www.mosselman.be; Ruger
http://www.rugercosmetics.com
Trade Names: Glicopol 127; STEPAN® PEG 600 ML

PEG-12 laurate
CAS 9004-81-3 (generic)
Synonyms: PEG 600 monolaurate; POE (12) monolaurate
Definition: PEG ester of lauric acid
Formula: CH₃(CH₂)₁₀CO(OCH₂CH₂)₁₂OH, avg. n = 12
Properties: Sol. in water, alcohol, veg. oils; partly sol. in min. oils; m.p. 20-25 C; nonionic
Toxicology: TSCA listed
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Emulsifier, lubricant, dispersant, leveling agent, solubilizer, wetting agent, emollient, thickener in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.170, 176.210, 177.1200, 177.2260, 177.2800, 178.3910
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV
http://www.mosselman.be; Ruger
http://www.rugercosmetics.com
Trade Names: Glicopol 127; STEPAN® PEG 600 ML

PEG-20 laurate
CAS 9004-81-3 (generic)
Synonyms: PEG 1000 monolaurate; POE (20) monolaurate
Definition: PEG ester of lauric acid
Formula: CH₃(CH₂)₁₀CO(OCH₂CH₂)₂₀OH, avg. n = 20
Properties: Insol. in water; HLB 16.5; nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, thickener, solubilizer, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals; solubilizer for perfumes
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800, 178.3910
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Ruger
http://www.rugercosmetics.com
Trade Names: http://www.rugercosmetics.com

PEG-24 laurate
CAS 9004-81-3 (generic)
Synonyms: POE (24) monolaurate
Definition: PEG ester of lauric acid
Properties: Insol. in water; nonionic
Toxicology: TSCA listed
Uses: O/w emulsifier for pharmaceutical creams, lotions, ointments; wetting agent,
PEG-32 laurate
CAS 9004-81-3 (generic)
Synonyms: PEG 1540 monolaurate; POE (32) monolaurate
Definition: PEG ester of lauric acid
Formula: \( \text{CH}_3(\text{CH}_2)_{10}\text{CO} (\text{OCH}_2\text{CH}_2)_n\text{OH}, \text{avg. } n = 32 \)
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
Regulatory: FDA 21CFR §175.300, 176.210, 177.2260, 177.2800, 178.3910
Manuf./Distrib.: A&E Connock http://www.connock.co.uk; Ruger http://www.rugerchemical.com

PEG-40 laurate
CAS 9004-81-3 (generic)
Synonyms: POE (40) monolaurate
Definition: PEG ester of lauric acid
Formula: \( \text{CH}_3(\text{CH}_2)_{10}\text{CO} (\text{OCH}_2\text{CH}_2)_n\text{OH}, \text{avg. } n = 40 \)
Properties: Insol. in water; nonionic
Toxicology: TSCA listed
Uses: O/w emulsifier for pharmaceutical creams, lotions, and ointments; wetting agent, solubilizer for perfumes; dispersant

PEG-75 laurate
CAS 9004-81-3 (generic)
Synonyms: PEG 4000 monolaurate; POE (75) monolaurate
Definition: PEG ester of lauric acid
Formula: \( \text{CH}_3(\text{CH}_2)_{10}\text{CO} (\text{OCH}_2\text{CH}_2)_n\text{OH}, \text{avg. } n = 75 \)
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, dispersant, thickener, solubilizer, emollient, opacifier, spreading agent, wetting agent in pharmaceuticals
Regulatory: FDA 21CFR §175.300, 178.3910
Manuf./Distrib.: A&E Connock http://www.connock.co.uk; Ruger http://www.rugerchemical.com

PEG-100 laurate
CAS 9004-81-3 (generic)
Synonyms: PEG (100) monolaurate; POE (100) monolaurate
Definition: PEG ester of lauric acid
Chemical Component Cross-Reference

PEG-8 lauryl ether stearate
Definition: Stearic acid ester of POE lauryl ether
Uses: Self-emulsifying ingred., emollient, spreading agent, dispersant, emulsion stabilizer, gloss aid, water repellent for medical ointments
Trade Names: Emalex LWS-5

PEG-10 lauryl ether stearate
Definition: Stearic acid ester of POE lauryl ether
Uses: Self-emulsifying ingred., emollient, spreading agent, dispersant, emulsion stabilizer, gloss aid, water repellent for medical ointments
Trade Names: Emalex LWS-8

PEG-15 lauryl ether stearate
Definition: Stearic acid ester of POE lauryl ether
Uses: Self-emulsifying ingred., emollient, spreading agent, dispersant, emulsion stabilizer, gloss aid, water repellent for medical ointments
Trade Names: Emalex LWS-10

PEG (1-4) lauryl ether sulfate, ammonium salt. See Ammonium laureth sulfate
PEG (1-4) lauryl ether sulfate, sodium salt. See Sodium laureth sulfate
PEG methyl ether. See Methoxy PEG

PEG-120 methyl glucose dioleate
CAS 86893-19-8
Synonyms: Macrogol 120 methyl glucose dioleate; POE (120) methyl glucose dioleate
Definition: PEG ether of the diester of methyl glucose and oleic acid with avg. 120 moles of ethylene oxide
Properties: Nonionic
Uses: Thickener, emulsifier, solubilizer for pharmaceuticals, topicals; anti-irritant for surfactants
Regulatory: Canada DSL
Trade Names: Glucamate® DOE-120

PEG-10 methyl glucose ether. See Methyl gluceth-10
PEG-20 methyl glucose ether. See Methyl gluceth-20

PEG-20 methyl glucose sesquistearate
CAS 68389-70-8
Synonyms: PEG 1000 methyl glucose sesquistearate; POE (20) methyl glucose sesquistearate
Definition: PEG ether of the mono and diesters of methyl glucose and stearic acid with avg. 200 moles EO
Properties: Nonionic
Uses: O/w emulsifier, solubilizer for pharmaceuticals, topicals
Regulatory: Canada DSL
Trade Names: Glucamate® SSE-20

PEG 1000 methyl glucose sesquistearate. See PEG-20 methyl glucose sesquistearate
PEG methyl ether. See Methoxy PEG

PEG 1000 monostearate. See PEG-100 laurate

### Chemical Component Cross-Reference

**fumes**  
*Uses:* Emulsifier for pharmaceuticals  
*Trade Names:* Emanon 4110

#### PEG-2 olate

**CAS:** 106-12-7; 9004-96-0  
*Synonyms:* Diethylene glycol monooleate; Diglycol olate; 2-(2-Hydroxyethoxy) ethyl olate; 9-Octadecenoic acid, 2-(2-hydroxyethoxy) ethyl ester; PEG 100 monooleate; POE (2) monooleate  
*Definition:* PEG ester of oleic acid  
*Empirical:* C\(_{22}\)H\(_{42}\)O\(_4\)  
*Formula:* CH\(_3\)(CH\(_2\))\(_7\)CHCH(CH\(_2\))\(_7\)CO(OCH\(_2\)CH\(_2\))\(_n\)OH, avg. n = 2  
*Properties:* Amber liq.; m.w. 370.58; m.p. < 0°C; HLB 5.2; nonionic  
*Toxicology:* TSCA listed  
*Uses:* Emulsifier, dispersant  
*Regulatory:* FDA 21 CFR §175.105, 175.300, 176.210  
*Manuf./Distrib.:* A&E Connock  
http://www.connock.co.uk; A.P. Chems. Ltd  
http://www.chemial.com; ABITEC  
http://www.abiteccorp.com; Adept Sol'ns.†; Cognis/Chems. Group

http://www.lipochemicals.com; Lonza  
http://www.lonza.com; Penta Mfg.†  
http://www.pentamfg.com; Uniqema  
http://www.uniqema.com  
*Trade Names:* MYO-2

#### PEG-4 olate

**CAS:** 9004-96-0  
*Synonyms:* PEG (4) monooleate; POE (4) monooleate  
*Definition:* PEG ester of oleic acid  
*Empirical:* C\(_{26}\)H\(_{50}\)O\(_6\)  
*Formula:* CH\(_3\)(CH\(_2\))\(_7\)CHCH(CH\(_2\))\(_7\)CO(OCH\(_2\)CH\(_2\))\(_n\)OH, avg. n = 4  
*Properties:* Sol. in alcohol; partly sol. in veg. and min. oils; disp. in water; nonionic  
*Toxicology:* TSCA listed  
*Uses:* Surfactant, emulsifier in pharmaceuticals  
*Regulatory:* FDA 21 CFR §175.105, 175.300  
*Manuf./Distrib.:* A&E Connock  
http://www.connock.co.uk; Mosselman NV  
http://www.mosselman.be

#### PEG-6 olete

**CAS:** 9004-96-0  
*Synonyms:* PEG (6) monooleate; POE (6) monooleate  
*Definition:* PEG ester of oleic acid  
*Empirical:* C\(_{30}\)H\(_{58}\)O\(_8\)  
*Formula:* CH\(_3\)(CH\(_2\))\(_7\)CHCH(CH\(_2\))\(_7\)CO(OCH\(_2\)CH\(_2\))\(_n\)OH, avg. n = 6  
*Properties:* Sol. in alcohol, min. oils; disp. in water; m.p. 0°C; nonionic  
*Toxicology:* TSCA listed  
*Uses:* Surfactant, emulsifier, lubricant, antifoam, dispersant, thickener, solubilizer, emollient, spreading agent, wetting agent for pharmaceuticals  
*Regulatory:* FDA 21 CFR §175.105, 175.300  
*Manuf./Distrib.:* A&E Connock  
http://www.connock.co.uk; Mosselman NV  
http://www.mosselman.be

#### PEG-7 olete

**CAS:** 9004-96-0  
*Synonyms:* PEG (7) monooleate; POE (7) monooleate  
*Definition:* PEG ester of oleic acid  
*Empirical:* C\(_{32}\)H\(_{62}\)O\(_9\)  
*Formula:* CH\(_3\)(CH\(_2\))\(_7\)CHCH(CH\(_2\))\(_7\)CO(OCH\(_2\)CH\(_2\))\(_n\)OH, avg. n = 7  
*Properties:* Nonionic  
*Toxicology:* TSCA listed  
*Uses:* Surfactant, emulsifier in pharmaceuticals  
*Regulatory:* FDA 21 CFR §175.300  
*Manuf./Distrib.:* A&E Connock  
http://www.connock.co.uk

#### PEG-8 olete

**CAS:** 9004-96-0  
*Synonyms:* PEG (8) monooleate; POE (8) monooleate  
*Definition:* PEG ester of oleic acid  
*Empirical:* C\(_{34}\)H\(_{66}\)O\(_{10}\)  
*Formula:*
PEG-16 oleate
CAS 9004-96-0 (generic)
Synonyms: PEG (16) monooleate
Definition: PEG ester of oleic acid
Properties: Nonionic
Uses: Oil/wax emulsifier for pharmaceuticals; dispersant
Regulatory: FDA 21CFR §176.200
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PEG-20 oleate
CAS 9004-96-0 (generic)
Synonyms: PEG 1000 monooleate; POE (20) monooleate
Definition: PEG ester of oleic acid
Formula: CH₃(CH₂)₇CHCH(CH₂)₇CO(OCH₂CH₂)ₙOH, avg. n = 20
Properties: HLB 15.4; nonionic
Toxicology: LD₅₀ (IV, mouse) 500 mg/kg; mod. toxic by IV route; skin and eye irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Surfactant, emulsifier, thickener, solubilizer, solvent, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals
Regulatory: FDA 21CFR §176.200, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV
http://www.mosselman.be; Ruger
http://www.rugerchemical.com

PEG-32 oleate
CAS 9004-96-0 (generic)
Synonyms: PEG 1540 monooleate; POE (32) monooleate
Definition: PEG ester of oleic acid
Formula: CH₃(CH₂)₇CHCH(CH₂)₇CO(OCH₂CH₂)ₙOH, avg. n = 32
Properties: Dk. red oil; sol. in alcohol; disp. in water; misc. with cottonseed oil; nonionic
Toxicology: TSCA listed
Uses: Emulsifier, thickener, solubilizer, emollient, spreading agent, wetting agent,
## PEG-75 oleate

**CAS** 9004-96-0 (generic)

**Synonyms:** PEG 4000 monooleate; POE (75) monooleate

**Definition:** PEG ester of oleic acid

**Formula:**

\[
CH_3(CH_2)_7CHCH(CH_2)_7CO(OCH_2CH_2)_nOH, \quad \text{avg. } n = 75
\]

**Properties:** Dk. red oil; sol. in alcohol; disp. in water; misc. with cottonseed oil; nonionic

**Toxicology:** TSCA listed

**Uses:** Surfactant, detergent, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant, softener, lubricant for pharmaceuticals

**Regulatory:** FDA 21 CFR §175.300, 176.200, 177.2260, 177.2800

**Manuf./Distrib.:** A&E Connock

[http://www.connock.co.uk](http://www.connock.co.uk); Ruger

[http://www.rugerchemical.com](http://www.rugerchemical.com)

## PEG-150 oleate

**CAS** 9004-96-0 (generic)

**Synonyms:** PEG 6000 monooleate; POE (150) monooleate

**Definition:** PEG ester of oleic acid

**Formula:**

\[
CH_3(CH_2)_7CHCH(CH_2)_7CO(OCH_2CH_2)_nOH, \quad \text{avg. } n = 150
\]

**Properties:** Nonionic

**Toxicology:** TSCA listed

**Uses:** Surfactant, detergent, emulsifier, solubilizer, thickener, emollient, opacifier, spreading agent, penetrant, wetting agent, dispersant, softener, lubricant for pharmaceuticals

**Regulatory:** FDA 21 CFR §175.300, 176.200

**Manuf./Distrib.:** A&E Connock

[http://www.connock.co.uk](http://www.connock.co.uk); Ruger

[http://www.rugerchemical.com](http://www.rugerchemical.com)

## PEG-200 oleate

**CAS** 9004-96-0 (generic)

**Synonyms:** PEG-200 monooleate; POE (200) monooleate

**Definition:** PEG ester of oleic acid

**Formula:**

\[
CH_3(CH_2)_7CHCH(CH_2)_7CO(OCH_2CH_2)_nOH, \quad \text{avg. } n = 200
\]

**Properties:** Nonionic

**Uses:** O/w emulsifier, thickener, antifoam, dispersant, base for pharmaceuticals

**Regulatory:** FDA 21 CFR §176.200

**Trade Names:** M Mono oleato di PEG 200

**Manuf./Distrib.:** Chempri; JLK Ind.

[http://www.solaecom](http://www.solaecom)

## PEG-200 oleate

**Synonyms:** PEG-200 monooleate; POE (200) monooleate

**Definition:** PEG ester of oleic acid

**Formula:**

\[
CH_3(CH_2)_7CHCH(CH_2)_7CO(OCH_2CH_2)_nOH, \quad \text{avg. } n = 200
\]

**Properties:** Nonionic

**Uses:** O/w emulsifier, thickener, antifoam, dispersant, base for pharmaceuticals

**Regulatory:** FDA 21 CFR §176.200

**Trade Names:** M Mono oleato di PEG 200

**Manuf./Distrib.:** Chempri; JLK Ind.

[http://www.solaecom](http://www.solaecom)

## PEG-300 oleate

**CAS** 9004-96-0 (generic)

**Synonyms:** PEG-300 monooleate

**Definition:** PEG ester of oleic acid

**Properties:** Nonionic

**Uses:** O/w emulsifier, thickener, antifoam, dispersant, o/w emulsifier, detergent, defoamer, visc. modifier for pharmaceuticals

**Regulatory:** FDA 21 CFR §176.200

**Manuf./Distrib.:** Chempri; JLK Ind.

[http://www.solaecom](http://www.solaecom)

## PEG-400 oleate

**CAS** 9004-96-0 (generic)

**Synonyms:** PEG-400 monooleate; POE (400) monooleate

**Definition:** PEG ester of oleic acid

**Formula:**

\[
CH_3(CH_2)_7CHCH(CH_2)_7CO(OCH_2CH_2)_nOH, \quad \text{avg. } n = 400
\]

**Properties:** Nonionic

**Uses:** O/w emulsifier, thickener, antifoam, dispersant, base for pharmaceuticals

**Regulatory:** FDA 21 CFR §176.200

**Trade Names:** M Mono oleato di PEG 400

**Manuf./Distrib.:** Chempri; JLK Ind.

[http://www.solaecom](http://www.solaecom)

## PEG-500 oleate

**Synonyms:** PEG-500 monooleate

**Definition:** PEG ester of oleic acid

**Properties:** Nonionic

**Uses:** O/w emulsifier, thickener, antifoam, dispersant, base for pharmaceuticals

**Regulatory:** FDA 21 CFR §176.200

**Trade Names:** M Mono oleato di PEG 500

**Manuf./Distrib.:** Chempri; JLK Ind.

[http://www.solaecom](http://www.solaecom)

## PEG-800 oleate

**Synonyms:** PEG-800 monooleate

**Definition:** PEG ester of oleic acid

**Properties:** Nonionic

**Uses:** O/w emulsifier, thickener, antifoam, dispersant, base for pharmaceuticals

**Regulatory:** FDA 21 CFR §176.200

**Trade Names:** M Mono oleato di PEG 800

**Manuf./Distrib.:** Chempri; JLK Ind.

[http://www.solaecom](http://www.solaecom)
Chemical Component Cross-Reference

†=pharmaceutical grade

phosphate

PEG-20 oleyl ether phosphate. See Oleth-20 phosphate
PEG 500 oleyl ether phosphate. See Oleth-10 phosphate
PEG 1000 oleyl ether phosphate. See Oleth-20 phosphate
PEG-3 oleyl ether phosphate, diethanolamine salt. See DEA-oleth-3 phosphate
PEG-10 oleyl ether phosphate, diethanolamine salt; PEG 500 oleyl ether phosphate, diethanolamine salt. See DEA-oleth-10 phosphate
PEG-25 PABA
CAS 15716-30-0; 113010-52-9; 116242-27-4
Synonyms: 4-Bis (polyethoxy)-p-aminobenzoic acid polyethoxyethyl ester; POE (25) PABA

Definition: PEG deriv. of PABA
Uses: UV-B absorber for sunscreen prods.; pharmaceuticals; stabilizer for light-sensitive prods.
Trade Names: Unipabol U-17

PEG-5 phytosterol
CAS 68441-03-2 (generic)

Definition: PEG ether of phytosterol with an avg. ethoxylation value of 5
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant, emollient, foam stabilizer, visc. modifier, conditioner for pharmaceuticals
Trade Names: BPS-5

PEG-10 phytosterol
CAS 68441-03-2 (generic)

Definition: PEG ether of phytosterol with an avg. ethoxylation value of 10
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant, emollient, foam stabilizer, visc. modifier, conditioner for pharmaceuticals
Trade Names: BPS-10

PEG-15 phytosterol
CAS 68441-03-2 (generic)

Definition: PEG ether of phytosterol with an avg. ethoxylation value of 15
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant, emollient, foam stabilizer, visc. modifier, conditioner for pharmaceuticals
Trade Names: BPS-15

PEG-20 phytosterol
CAS 68441-03-2 (generic)

Definition: PEG ether of phytosterol with an avg. ethoxylation value of 20
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant, emollient, foam stabilizer, visc. modifier, conditioner for pharmaceuticals
Trade Names: BPS-20

PEG-25 phytosterol
CAS 68441-03-2 (generic)

Definition: PEG ether of phytosterol with an avg. ethoxylation value of 25
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant, emollient, foam stabilizer, visc. modifier, conditioner for pharmaceuticals
Trade Names: BPSH-25

PEG-30 phytosterol
CAS 68441-03-2 (generic)

Definition: PEG ether of phytosterol with an avg. ethoxylation value of 30
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant, emollient, foam stabilizer, visc. modifier, conditioner for pharmaceuticals
Trade Names: BPS-30

PEG/PPG-18/18 dimethicone
Trade Names Containing: Dow Corning® 5225C Formulation Aid

PEG-10-PPG-10 glyceryl stearate
CAS 68783-63-1

Definition: Polyoxypropylene, polyoxyethylene ether of glyceryl stearate with avg. propoxylation value of 10 and avg. ethoxylation value of 10
Properties: Nonionic
Uses: Surfactant, emulsifier, dispersant, solubilizer, visc. control agent, wetting agent, and foaming agent for pharmaceutical dermatologials

PEG-10 propylene glycol
CAS 9003-11-6 (generic)

Synonyms: PEG 500 propylene glycol; POE (10) propylene glycol

Definition: PEG ether of propylene glycol
Formula: \( \text{CH}_2(\text{OCH}_2\text{CH}_2)_x\text{OHCH(OCH}_2\text{CH}_2)_y\text{OHCH}_3, \)

Uses: Emulsifier, dispersant, solubilizer, visc. control agent for pharmaceuticals

PEG 500 propylene glycol. See PEG-10 propylene glycol
### PEG-8 propylene glycol cocoate

**CAS**: 126645-98-5  
**Synonyms**: PEG 400 propylene glycol cocoate; POE (8) propylene glycol cocoate  
**Definition**: PEG ether of propylene glycol cocoate  
**Formula**: RCO–OCH2CHCH3(OCH2CH2)nOH, RCO– rep. coconut fatty radical, avg. n = 8  
**Uses**: Surfactant, emulsifier in pharmaceutical ointments  
**Manuf./Distrib.**: Somerset Cosmetic Co.  
**Trade Names Containing**: Emulsynt® 1055

### PEG 400 propylene glycol cocoate

**CAS**: 126645-98-5  
**Synonyms**: PEG 400 propylene glycol cocoate; POE (8) propylene glycol cocoate  
**Definition**: PEG ether of propylene glycol cocoate  
**Formula**: RCO–OCH2CHCH3(OCH2CH2)nOH, RCO– rep. coconut fatty radical, avg. n = 8  
**Uses**: Surfactant, emulsifier in pharmaceutical ointments  
**Manuf./Distrib.**: Somerset Cosmetic Co.  
**Trade Names Containing**: Emulsynt® 1055

### PEG-8 propylene glycol stearate

**CAS**: 126645-98-5  
**Synonyms**: POE (8) propylene glycol stearate  
**Definition**: PEG ether of propylene glycol stearate  
**Formula**: CH3(CH2)16COOCH2CCH3H(OCH2CH2)nOH, avg. n = 8  
**Properties**: Liq.; sol. in water; sp.gr. 1.04; vapor pressure < 1.0 mm Hg (20 C); b.p. > 100 C; HLB 16.0; flash pt. (COC) > 148 C; nonionic  
**Toxicology**: May be harmful by inh., ing., or skin absorption; may cause eye/skin irritation  
**Precaution**: Incompat. with strong oxidizing agents  
**Hazardous Decomp. Prods.**: Toxic fumes of CO, CO2; emits toxic fumes under fire conditions  
**Uses**: Surfactant, emulsifier, visc. control agent, emollient for pharmaceuticals  
**Regulatory**: Canada DSL  
**Manuf./Distrib.**: A&E Connock

### PEG-12 propylene glycol stearate

**Synonyms**: POE (12) propylene glycol monostearate  
**Definition**: PEG ether of propylene glycol stearate  
**Formula**: CH3(CH2)16COOCH2CCH3H(OCH2CH2)nOH, avg. n = 12

### PEG-8 ricinoleate

**CAS**: 9004-97-1 (generic); 42426-59-5 (generic)  
**Synonyms**: PEG 400 ricinoleate; POE (8) ricinoleate  
**Definition**: PEG ester of ricinoleic acid  
**Empirical**: C34H66O11  
**Formula**: CHCH2COHH(CH2)5CH3CH(CH2)7CO(OCH2CH2)nOH, avg. n = 8  
**Properties**: Sol. in alcohol; partly sol. in veg. and min. oils; insol. in water; m.p. 2 C; nonionic  
**Uses**: Surfactant, emulsifier, wetting agent, plasticizer for pharmaceuticals  
**Regulatory**: FDA 21CFR §173.340, 176.200  
**Trade Names**: Rinolax 184

### PEG-12 ricinoleate

**CAS**: 9004-97-1 (generic)  
**Synonyms**: PEG (600) monoricinoleate; POE (12) monoricinoleate  
**Definition**: PEG ester of ricinoleic acid  
**Formula**: CHCH2COHH(CH2)5CH3CH(CH2)7CO(OCH2CH2)nOH, avg. n = 12  
**Properties**: Nonionic  
**Uses**: Surfactant in pharmaceuticals  
**Regulatory**: FDA 21CFR §173.340, 176.200  
**Trade Names**: Rinolax 184

### PEG 400 ricinoleate

**Synonyms**: PEG 400 ricinoleate; POE (8) ricinoleate  
**Definition**: PEG ester of ricinoleic acid  
**Formula**: CHCH2COHH(CH2)5CH3CH(CH2)7CO(OCH2CH2)nOH, avg. n = 8  
**Properties**: Sol. in alcohol; partly sol. in veg. and min. oils; insol. in water; m.p. 2 C; nonionic  
**Uses**: Surfactant, emulsifier, wetting agent, plasticizer for pharmaceuticals  
**Regulatory**: FDA 21CFR §173.340, 176.200  
**Trade Names**: Rinolax 184

### PEG-6 sorbitan beeswax

**CAS**: 8051-15-8  
**Synonyms**: PEG 300 sorbitan beeswax; POE (6) sorbitol beeswax  
**Definition**: Ethoxylated sorbitol deriv. of beeswax with avg. 6 moles EO  
**Properties**: Nonionic  
**Uses**: Surfactant, emulsifier, emulsion stabilizer for pharmaceuticals
Chemical Component Cross-Reference

Trade Names: GBW-25
PEG-8 sorbitan beeswax
Synonyms: PEG 400 sorbitan beeswax; POE (8) sorbitol beeswax
Definition: Ethoxylated sorbitan deriv. of beeswax with avg. 8 moles EO
Properties: Nonionic
Uses: Surfactant, emulsifier for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PEG-20 sorbitan beeswax
CAS 8051-73-8
Synonyms: PEG 1000 sorbitan beeswax; POE (20) sorbitol beeswax
Definition: Ethoxylated sorbitol deriv. of beeswax with avg. 20 moles EO
Properties: Nonionic
Uses: Surfactant, emulsifier, emulsion stabilizer for pharmaceuticals
Trade Names: GBW-125

PEG 300 sorbitan beeswax. See PEG-6 sorbitan beeswax
PEG 400 sorbitan beeswax. See PEG-8 sorbitan beeswax
PEG 1000 sorbitan beeswax. See PEG-20 sorbitan beeswax
PEG-40 sorbitan diisostearate
Synonyms: POE (40) sorbitan diisostearate
Definition: Ethoxylated sorbitan diester of isostearic acid with avg. 40 moles EO
Properties: Nonionic
Uses: Solubilizer for flavors in mouthwashes, germicides
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/
Trade Names Containing: Lubrasil® DS

PEG-50 sorbitan hexaoleate
CAS 9011-29-4; 57171-56-9 (generic)
Synonyms: PEG-50 sorbitol hexaoleate (INCI); POE (50) sorbitol hexaoleate
Definition: Oleic acid hexaester of ethoxylated sorbitol with an avg. 50 moles EO
Properties: HLB 11.4; nonionic
Uses: Surfactant for pharmaceuticals
Regulatory: FDA 21CFR §175.300
Trade Names: Hedipin-SHO/500

PEG-20 sorbitan isostearate
CAS 66794-58-9 (generic)
Synonyms: PEG 1000 sorbitan monoisostearate; POE (20) sorbitan monoisostearate; Polysorbate 120

†=pharmaceutical grade

Definition: Ethoxylated sorbitan monoester of isostearic acid with avg. 20 moles EO
Properties: Nonionic
Uses: Surfactant, emulsifier, solvent, wetting agent for pharmaceuticals, topicals, creams, lotions, ointments
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
Trade Names: Crillet 6

PEG-40 sorbitan lanolate
CAS 8036-77-9
Synonyms: PEG 2000 sorbitan lanolate; POE (40) sorbitol lanolate
Definition: Ethoxylated sorbitan deriv. of lanolin acid with avg. 40 moles EO
Properties: Nonionic
Uses: Surfactant, emulsifier for pharmaceuticals
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

PEG 2000 sorbitan lanolate. See PEG-40 sorbitan lanolate
PEG-4 sorbitan laurate. See Polysorbate 21

PEG-6 sorbitan laurate
CAS 9005-64-5 (generic)
Synonyms: POE (6) sorbitan monolaurate
Definition: Ethoxylated sorbitan ester of lauric acid with avg. 6 moles EO
Properties: Nonionic
Uses: Emulsifier
Trade Names: Rheodol TW-L106

PEG-20 sorbitan laurate. See Polysorbate 20

PEG-80 sorbitan laurate
CAS 9005-64-5 (generic)
Synonyms: PEG (80) sorbitan monolaurate; POE (80) sorbitan monolaurate
Definition: Ethoxylated sorbitan ester of lauric acid with avg. 80 moles EO
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, solubilizer, wetting agent, dispersant, stabilizer, visc. control agent, cleanser, counterirritant, foaming agent for pharmaceuticals
Features: Mild
Regulatory: FDA 21CFR §175.300
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Aldrich
http://www.sigma-aldrich.com; Fluka
http://www.sigma-aldrich.com; Sigma
http://www.sigma-aldrich.com/belgium
Trade Names: Lumisorb™ PSML-80; T-Maz®
PEG 1000 sorbitan monoisostearate. See PEG-20 sorbitan isostearate
PEG (80) sorbitan monolaurate. See PEG-80 sorbitan laurate
PEG 300 sorbitan monoooleate. See PEG-6 sorbitan oleate
PEG 300 sorbitan monostearate. See PEG-6 sorbitan stearate
PEG-5 sorbitan oleate. See Polysorbate 81

PEG-6 sorbitan oleate
CAS 9005-65-6 (generic)
Synonyms: PEG 300 sorbitan monooleate; POE (6) sorbitan oleate
Definition: Ethoxylated sorbitan ester of oleic acid with avg. 6 moles EO
Empirical: C_{36}H_{68}O_{11}
Properties: Nonionic
Toxicology: Moderately toxic by intravenous route; mildly toxic by ingestion; TSCA listed
Uses: Emulsifier, solubilizer for pharmaceuticals
Regulatory: FDA 21CFR §175.300, 176.210
Manuf./Distrib.: A&E Connock http://www.connock.co.uk; Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Emasol O-105R; Rheodol TW-O106; TO-106V

PEG-20 sorbitan oleate. See Polysorbate 80

PEG-40 sorbitan oleate
CAS 9005-65-6 (generic)
Synonyms: POE (40) sorbitan monooleate; POE (40) sorbitan oleate
Definition: Ethoxylated sorbitan ester of oleic acid with avg. 40 moles EO
Properties: Nonionic
Uses: Emulsifier, solubilizer for pharmaceuticals
Regulatory: Canada DSL
Trade Names: Emalex ET-8040

PEG-40 sorbitan peroleate
Synonyms: PEG 2000 sorbitan peroleate; POE (40) sorbitan peroleate; POE (40) sorbitol septaooleate
Definition: Mixture of oleic acid esters of sorbitol condensed with avg. 40 moles EO
Properties: Nonionic
Uses: W/o emulsifier, solvent, solubilizer, antistat, lubricant, spreading agent for pharmaceuticals
Regulatory: FDA 21CFR §175.300, 176.210
Manuf./Distrib.: A&E Connock http://www.connock.co.uk
Trade Names: GO-430V

PEG-40 sorbitan tetraoleate
CAS 63089-86-1 (generic)
Synonyms: POE (30) sorbitan tetraoleate; Sorbeth-30 Tetraoleate
Definition: Tetraester of oleic acid and a PEG ether of sorbitol, avg. 30 moles EO
Empirical: C_{17}H_{44}O_{8}
Properties: Nonionic
Uses: Emulsifier, solubilizer, wetting agent, antistat, stabilizer, dispersant, visc. modifier, suspending agent used in pharmaceuticals
Regulatory: FDA 21CFR §175.300
Manuf./Distrib.: A&E Connock http://www.connock.co.uk
Trade Names: GO-430V
ether of sorbitol, avg. 40 moles EO  
Formula: $(C_3H_6O \cdot C_2H_4O)_x$  
Properties: Nonionic  
Toxicology: Moderately toxic by ingestion and intraperitoneal route  
Uses: Emulsifier, solubilizer, superfatting agent for pharmaceuticals  
Regulatory: FDA 21CFR §175.300, 176.210  
Manuf./Distrib.: A&E Connock  
http://www.connock.co.uk; Aldrich  
http://www.sigma-aldrich.com; Fluka  
http://www.sigma-aldrich.com; Sigma  
http://www.sigma-aldrich.com/belgium  
Trade Names: GO-440V; Rheodol 440

PEG-60 sorbitan tetraoleate  
CAS 63089-86-1 (generic)  
Synonyms: POE (60) sorbitan tetraoleate; Sorbeth-60 Tetraoleate  
Definition: Tetraester of oleic acid and a PEG ether of sorbitol, avg. 60 moles EO  
Properties: Nonionic  
Uses: Emulsifier, solubilizer, superfatting agent for pharmaceuticals  
Regulatory: FDA 21CFR §175.300  
Manuf./Distrib.: A&E Connock  
http://www.connock.co.uk; Aldrich  
http://www.sigma-aldrich.com; Fluka  
http://www.sigma-aldrich.com; Sigma  
http://www.sigma-aldrich.com/belgium  
Trade Names: GO-460V; Rheodol 460

PEG 2000 sorbitan tetraoleate. See PEG-40 sorbitan tetraoleate

PEG-17 sorbitan trioleate  
CAS 9005-70-3 (generic)  
Definition: Triester of oleic acid and a PEG ether of sorbitol, avg. 17 moles EO  
Properties: Nonionic  
Toxicology: TSCA listed  
Uses: Emulsifier for pharmaceuticals  
Regulatory: Canada DSL  
Manuf./Distrib.: Aldrich  
http://www.sigma-aldrich.com; Fluka  
http://www.sigma-aldrich.com; Sigma  
http://www.sigma-aldrich.com/belgium

PEG-18 sorbitan trioleate  
CAS 9005-70-3 (generic)  
Definition: Triester of oleic acid and a PEG ether of sorbitol, avg. 18 moles EO  
Properties: M.w. 1838.60; dens. 1.028; flash pt. > 110 C; ref. index 1.4680 (20 C); nonionic  
Toxicology: TSCA listed  
Uses: Emulsifier for pharmaceuticals  
Manuf./Distrib.: Aldrich  
http://www.sigma-aldrich.com; Fluka  
http://www.sigma-aldrich.com; Sigma

PEG-20 sorbitan trioleate. See Polysorbate 85
PEG-20 sorbitan tristearate. See Polysorbate 65
PEG-20 sorbitan tritallate  
Definition: Triester of tall oil acid and a PEG ether of sorbitol, avg. 20 moles EO  
Uses: Emulsifier, solubilizer, wetting agent, viscosity modifier, stabilizer, dispersant in pharmaceuticals  
Regulatory: Canada DSL  
Manuf./Distrib.: Aldrich  
http://www.sigma-aldrich.com; Fluka  
http://www.sigma-aldrich.com; Sigma

PEG-20 sorbitol ether; PEG 1000 sorbitol ether. See Sorbeth-20

PEG-50 sorbitol hexaoleate (INCI). See PEG-50 sorbitan hexaoleate

PEG-75 soy glycerides  
CAS 61791-23-9  
Uses: Emulsifier, dispersant, solubilizer, viscosity control agent in pharmaceuticals  
Regulatory: Canada DSL  
Trade Names: Acconon® S-75

PEG stearate  
CAS 9004-99-3 (generic)  
Synonyms: Glycols, polyethylene, monostearate; α-1-(Oxooctadecyl)-ω-hydroxypropoly (oxy-1,2-ethanediyl); Polylethylene glycol monostearate; Polylethylene glycols monostearate; Polylethylene glycol stearate; Poly (oxy-1,2-ethanediyl), α-(1-oxooctadecyl)-ω-hydroxy-; Polyoxyethylene monostearate  
Definition: PEG ester of stearic acid  
Formula: $(C_2H_4O)_n \cdot C_{18}H_{36}O_2$  
Properties: Wh. or yel. paste to solid; insol. in water (@ < 8 EO); m.p. 31-33 C; HLB 7.5-18.0 (4-100 EO); nonionic  
Toxicology: LD50 (oral, rat) 53 ml/kg; very sl. toxic by ing.; may cause GI changes, liver changes, spleen changes; questionable carcinogen; experimental tumorigen, reproductive effects; TSCA listed  
Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and irritating fumes  
Uses: Emulsifier, dispersant in pharmaceuticals  
Trade Names: Emanon 3199

PEG-1 stearate. See Glycol stearate

PEG-2 stearate. See Glycol stearate

PEG-50 stearate  
CAS 106-11-6; 9004-99-3 (generic); 85116-97-8; EINECS/ELINCS 203-363-5; 285-550-1

†=pharmaceutical grade
**Chemical Component Cross-Reference**

**Synonyms:** Diethylene glycol, monooester with stearic acid; Diethylene glycol monostearate; Diethylene glycol stearate; Diglycol monooester; Diglycol stearate; Glyco stearin; 2-(2-Hydroxyethoxy) ethyl ester stearic acid; 2-(2-Hydroxyethoxy) ethyl stearate; PEG 100 monooester; Polyoxy 2 stearate; Stearic acid, 2-(2-Hydroxyethoxy) ethyl ester

**Definition:** PEG ester of stearic acid

**Empirical:** C_{22}H_{44}O_{4}

**Formula:** CH_{3}(CH_{2})_{16}CO(OCH_{2}CH_{2})_{n}OH, avg. n = 2

**Properties:** Wh. wax-like solid; faint fatty odor; sol. in hot alcohol, oils; m.w. 372.66; m.p. 45-55 C; HLB 4.3; nonionic

**Toxicology:** LD_{50} (IP, mouse) 200 mg/kg; poison by IV, IP routes; mildly toxic by ing.; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and fumes

**Uses:** Emulsifier, plasticizer, lubricant, wetting agent, binder, thickener, dispersant, antistat, opacifier, pearlescent, stabilizer, solubilizer in pharmaceuticals, topical; protective coating for hygroscopic materials (tablets)

**Regulatory:** FDA 21CFR §175.300, 176.210, 176.210; FDA approved for topicals; Canada DSL

**Trade Names:** Hydrine®; Lipo DGS; Lumulose® POE (100) MS; MYS-2V

**Trade Names Containing:** Sedefos 75®

**PEG-4 stearate**

**CAS:** 106-07-0; 9004-99-3 (generic); EINECS/ELINCS 203-358-8

**†=pharmaceutical grade**

**Synonyms:** 2-[2-(2-Hydroxyethoxy) ethoxy][ethoxy] ethyl octadecanoate; PEG 200 monostearate; POE (4) stearate

**Definition:** PEG ester of stearic acid

**Empirical:** C_{26}H_{52}O_{6}

**Formula:** CH_{3}(CH_{2})_{16}CO(OCH_{2}CH_{2})_{n}OH, avg. n = 4

**Properties:** Sol. in alcohol; partly sol. in min. oils; disp. warm in water; m.p. 30-40 C; HLB 8.0; nonionic

**Toxicology:** Poison by IV, IP route; mildly toxic by ingestion; TSCA listed

**Uses:** Emulsifier, wetting agent, emollient, lubricant, dispersant, leveling agent, spreading agent, solubilizer, thickener, visc. control agent, softener in pharmaceuticals

**Regulatory:** FDA 21CFR §175.340, 175.105, 175.300

**Manuf./Distrib.:** A&E Connock [http://www.connock.co.uk](http://www.connock.co.uk); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:** MYS-4

**PEG-5 stearate**

**CAS:** 9004-99-3 (generic)

**Synonyms:** POE (5) stearate

**Definition:** PEG ester of stearic acid

**Empirical:** C_{28}H_{50}O_{7}

**Formula:** CH_{3}(CH_{2})_{16}CO(OCH_{2}CH_{2})_{n}OH, avg. n = 5

**Properties:** Nonionic

**Toxicology:** Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed

**Uses:** Emulsifier in pharmaceuticals

**Regulatory:** FDA 21CFR §173.340, 175.105, 175.300

**Manuf./Distrib.:** A&E Connock [http://www.connock.co.uk](http://www.connock.co.uk); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)

**Trade Names:** Sabopal SE 6

**PEG-6 stearate**

**CAS:** 9004-99-3 (generic); 10108-28-8

**Synonyms:** 17-Hydroxy-3,6,9,12,15-pentaoxaheptadec-1-yl octadecanoate; PEG 300 monostearate; POE (6) stearate

**Definition:** PEG ester of stearic acid

**Empirical:** C_{30}H_{60}O_{8}

**Formula:** CH_{3}(CH_{2})_{16}CO(OCH_{2}CH_{2})_{n}OH, avg. n = 6

**Properties:** Sol. in alcohol; sol. warm in veg. and (generic)
Chemical Component Cross-Reference

min. oils; disp. in water; nonionic
Toxicology: Poison by IV, IP route; mildly toxic by ing.; TSCA listed
Uses: Emulsifier, thickener, solubilizer, emollient, spreading agent, wetting agent, dispersant in pharmaceuticals
Features: Waxy
Regulatory: FDA 21CFR §175.105, 175.300, 176.210
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV

PEG-8 stearate
CAS 9004-99-3 (generic); 70802-40-3
INS430
Synonyms: 23-Hydroxy-3,6,9,12,15,18,21-heptaoxatricos-1-yl octadecanoate; Macrogol ester 400; Macrogol stearate 400; PEG 400 monostearate; POE (8) stearate; Polyoxyl 8 stearate
Definition: PEG ester of stearic acid
Empirical: C_{34}H_{68}O_{10}
Formula: CH_3(CH_2)_{16}CO(OCH_2CH_2)nOH, avg. n = 8
Properties: Sol. in alcohol; partly sol. in veg. and min. oils; disp. warm in water; HLB 11.1-11.7; nonionic
Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Emulsifier, lubricant, dispersant, leveling agent, solubilizer, visc. control agent, emollient in pharmaceuticals, topicals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.1200, 177.2260, 177.2800
Europe listed; UK approved; FDA approved for topicals
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Sigma
http://www.sigma-aldrich.com/belgium
Trade Names: Cremophor® S 9; Monestriol 104

PEG-9 stearate
CAS 9004-99-3 (generic); 5349-52-0;
EINECS/ELINCS 226-312-9
Synonyms: 26-Hydroxy-3,6,9,12,15,18,21,24-octaoxahexacos-1-yl octadecanoate; PEG 450 monostearate; POE (9) monostearate; POE (9) stearate
Definition: PEG ester of stearic acid
Empirical: C_{36}H_{72}O_{11}
Formula: CH_3(CH_2)_{16}CO(OCH_2CH_2)nOH, avg. n = 9
Properties: Nonionic
Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed
Uses: O/w emulsifier, thickener, suspension stabilizer, lubricant, antitackifier for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Sigma
http://www.sigma-aldrich.com/belgium
Trade Names: MYS-10

PEG-10 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 500 monostearate; POE (10) stearate
Definition: PEG ester of stearic acid
Empirical: C_{36}H_{76}O_{12}
Formula: CH_3(CH_2)_{16}CO(OCH_2CH_2)nOH, avg. n = 10
Properties: Nonionic
Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed
Uses: Emulsifier, solubilizer for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 177.2260, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Sigma
http://www.sigma-aldrich.com/belgium
Trade Names: MYS-10

PEG-12 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 600 monostearate; POE (12) stearate
Definition: PEG ester of stearic acid
Formula: CH_3(CH_2)_{16}CO(OCH_2CH_2)nOH, avg. n = 12
Chemical Component Cross-Reference

†=pharmaceutical grade

Properties: Sol. in alcohol; partly sol. in veg. and min. oils; m.p. 35 C; HLB 13.6; nonionic

Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed

HMIS: Health 0, Flammability 1, Reactivity 0

Uses: Emulsifier, lubricant, dispersant, defoamer, leveling agent, visc. control agent, wetting agent, solubilizer, emollient, spreading agent in pharmaceuticals

Regulatory: FDA 21CFR §175.105, 175.300, 176.170, 176.210, 177.1200, 177.2260, 177.2800

Trade Names: Mapeg® 600 MS

PEG-20 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 1000 monostearate; POE (20) stearate; Polyoxy 20 stearate
Definition: PEG ester of stearic acid
Formula: CH₃(CH₂)₁₆CO(OCH₂CH₂)ₙOH, avg. n = 20

Properties: Sol. in ethanol; partly sol. in propylene glycol; disp. in glycerin; insol. in water; m.p. 39.5-42.5 C; sapon. no. 40-50; nonionic

Toxicology: Poison by IV, IP routes; mildly toxic by ing.; TSCA listed

HMIS: Health 0, Flammability 1, Reactivity 0

Uses: Surfactant, emulsifier, humectant, thickener, solubilizer, emollient, opacifier, wetting agent, dispersant, stabilizer, plasticizer in pharmaceutical orals

Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800; FDA approved for orals

Trade Names: Cerasynt® 840; Lumulse® 100-S; Myrj® 49P; Sabopal SE 20

PEG-24 stearate
CAS 9004-99-3 (generic)
Synonyms: POE (24) stearate
Definition: PEG ester of stearic acid
Formula: CH₃(CH₂)₁₆CO(OCH₂CH₂)ₙOH, avg. n = 24

Properties: Nonionic

Toxicology: TSCA listed

Uses: O/w emulsifier for pharmaceutical creams, lotions, and ointments; wetting agent, solubilizer for perfumes; dispersant

Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium

PEG-25 stearate
CAS 9004-99-3 (generic)
Synonyms: POE (25) stearate
Definition: PEG ester of stearic acid
Formula: CH₃(CH₂)₁₆CO(OCH₂CH₂)ₙOH, avg. n = 25

Properties: Nonionic

Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed

Uses: Emulsifier, solubilizer for pharmaceuticals

Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800

Manuf./Distrib.: A&E Connock http://www.connock.co.uk; Sigma http://www.sigma-aldrich.com/belgium

Trade Names: MYS-25V

PEG-30 stearate
CAS 9004-99-3 (generic)
Synonyms: POE (30) stearate
Definition: PEG ester of stearic acid
Formula: CH₃(CH₂)₁₆CO(OCH₂CH₂)ₙOH, avg. n = 30

Properties: Nonionic

Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed

Uses: Surfactant, o/w emulsifier, pearlescent, dispersant, emulsion stabilizer, thickener for pharmaceuticals

Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.2260, 177.2800

Trade Names: Myrj® 51

Trade Names Containing: Arlatone® 983S Pharma

PEG-32 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 1540 monostearate; PEG 1540 stearate; POE (32) monostearate
Definition: PEG ester of stearic acid
Formula: CH₃(CH₂)₁₆CO(OCH₂CH₂)ₙOH, avg. n = 32

Properties: Nonionic

Toxicology: TSCA listed

Uses: O/w emulsifier for pharmaceutical creams, lotions, and ointments; wetting agent, solubilizer for perfumes; dispersant

Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium

PEG-20 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 1000 monostearate; POE (20) stearate; Polyoxy 20 stearate
Definition: PEG ester of stearic acid
Formula: CH₃(CH₂)₁₆CO(OCH₂CH₂)ₙOH, avg. n = 20

Properties: Sol. in ethanol; partly sol. in propylene glycol; disp. in glycerin; insol. in water; m.p. 39.5-42.5 C; sapon. no. 40-50; nonionic

Toxicology: Poison by IV, IP routes; mildly toxic by ing.; TSCA listed

HMIS: Health 0, Flammability 1, Reactivity 0

Uses: Emulsifier, lubricant, dispersant, defoamer, leveling agent, visc. control agent, wetting agent, solubilizer, emollient, spreading agent in pharmaceuticals

Regulatory: FDA 21CFR §175.105, 175.300, 176.210, 177.1200, 177.2260, 177.2800

Trade Names: Mapeg® 600 MS

PEG-20 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 1000 monostearate; POE (20) stearate; Polyoxy 20 stearate
Definition: PEG ester of stearic acid
Formula: CH₃(CH₂)₁₆CO(OCH₂CH₂)ₙOH, avg. n = 20

Properties: Sol. in alcohol; partly sol. in veg. and min. oils; m.p. 35 C; HLB 13.6; nonionic

Chemical Component Cross-Reference

PEG-55 stearate
CAS 9004-99-3 (generic)
Synonyms: POE (55) stearate; Polyoxyl 55 stearate

Definition: PEG ester of stearic acid
Formula: \( \text{CH}_3(\text{CH}_2)_{16}\text{CO(OCH}_2\text{CH}_2)_n\text{OH} \), avg. \( n = 55 \)

Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer, wetting agent for pharmaceuticals

Manuf./Distrib.: Sigma [http://www.sigma-aldrich.com/belgium]
Trade Names: Myrj® 53 Pellets

PEG-75 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 4000 monostearate; POE (75) stearate

Definition: PEG ester of stearic acid
Formula: \( \text{CH}_3(\text{CH}_2)_{16}\text{CO(OCH}_2\text{CH}_2)_n\text{OH} \), avg. \( n = 75 \)

Properties: Nonionic
Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed
Uses: Surfactant, solubilizer, thickener, emollient, opacifier, spreading agent, wetting agent, dispersant for pharmaceuticals

Regulatory: FDA 21CFR §175.300
Manuf./Distrib.: A&E Connock [http://www.connock.co.uk]; Sigma [http://www.sigma-aldrich.com/belgium]
Trade Names: Canasol MJ 59; Crodet S100; Myrj® 59 P Pharma; Myrj® 59; Sabopal SE 100; Tego® Acid S 100 P

PEG-100 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG (100) monostearate; POE (100) stearate

Definition: PEG ester of stearic acid
Formula: \( \text{CH}_3(\text{CH}_2)_{16}\text{CO(OCH}_2\text{CH}_2)_n\text{OH} \), avg. \( n = 100 \)

Properties: Nonionic
Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed
Uses: Surfactant, emulsifier, emollient, solubilizer, thickener, wetting agent, dispersant for pharmaceuticals

Regulatory: FDA 21CFR §175.300, 176.210
Trade Names: Monestriol 114; Myrj® 59 P Pharma; Myrj® 59; Sabopal SE 100; Tego® Acid S 100 P

PEG-150 stearate
CAS 9004-99-3 (generic)
Synonyms: PEG 6000 monostearate; POE (150) stearate

Definition: PEG ester of stearic acid
Formula: \( \text{CH}_3(\text{CH}_2)_{16}\text{CO(OCH}_2\text{CH}_2)_n\text{OH} \), avg. \( n = 150 \)

Properties: Nonionic
Toxicology: Poison by intravenous, intraperitoneal route; mildly toxic by ingestion; TSCA listed
Uses: Surfactant, emulsifier, emollient, solubilizer, thickener, wetting agent, dispersant for pharmaceuticals

Regulatory: FDA 21CFR §175.300
Trade Names: STEPAN® PEG 6000 MS

PEG-300 stearate
CAS 9004-99-3 (generic)
Synonyms: POE (300) stearate

Definition: PEG ester of stearic acid
Properties: Nonionic
Uses: Wetting agent, lubricant, opacifier, dispersant, o/w emulsifier, detergent, defoamer, plasticizer, visc. modifier in pharmaceuticals

Manuf./Distrib.: Chempri

PEG-1500 stearate
CAS 9004-99-3 (generic)
Synonyms: POE (1500) stearate

Definition: PEG ester of stearic acid
Properties: Nonionic
Uses: Wetting agent, lubricant, opacifier, dispersant, o/w emulsifier, detergent, defoamer, plasticizer, visc. modifier in pharmaceuticals

Handbook of Pharmaceutical Additives, Third Edition 1830
PEG 1540 stearate. See PEG-32 stearate

PEG-2 stearate SE
CAS 106-11-6; 9004-99-3 (generic)
Synonyms: Diethylene glycol monostearate self-emulsifying; PEG 100 monostearate self-emulsifying; POE (2) monostearate self-emulsifying
Definition: Self-emulsifying grade of PEG-2 stearate
Properties: HLB 5.4; anionic
Toxicology: TSCA listed
Uses: Emulsifier in cosmetics, pharmaceuticals; protective coating for hygroscopic materials (tablets)

PEG-2 stearyl ether. See Steareth-2
PEG-7 stearyl ether. See Steareth-7
PEG-8 stearyl ether. See Steareth-8
PEG-10 stearyl ether. See Steareth-10
PEG-16 stearyl ether. See Steareth-16
PEG-20 stearyl ether. See Steareth-20
PEG-21 stearyl ether. See Steareth-21
PEG-25 stearyl ether. See Steareth-25
PEG-100 stearyl ether. See Steareth-100
PEG 100 stearyl ether. See Steareth-2
PEG 400 stearyl ether. See Steareth-8
PEG 500 stearyl ether. See Steareth-10
PEG 1000 stearyl ether. See Steareth-20

PEG-4 tallate
CAS 61791-00-2 (generic)
Synonyms: PEG 200 monotallate; POE (4) monotallate
Classification: Ethoxylated fatty acid ester
Definition: PEG ester of tall oil acid
Formula: RCO–(OCH2CH2)nOH, RCO– rep. fatty acids from tall oil, avg. n = 4
Properties: Liq.; nonionic
Toxicology: TSCA listed
Uses: Detergent, emulsifier, lubricant, softener, wetting agent for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.210
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

PEG-8 tallate
CAS 61791-00-2 (generic)
Synonyms: PEG 400 monotallate; POE (8) monotallate
Classification: Ethoxylated fatty acid ester
Definition: PEG ester of tall oil acid

PEG-12 tallate
CAS 61791-00-2 (generic)
Synonyms: PEG 600 monotallate; POE (12) monotallate
Classification: Ethoxylated fatty acid ester
Definition: PEG ester of tall oil acid
Formula: RCO–(OCH2CH2)nOH, RCO– rep. fatty acids from tall oil, avg. n = 12
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, dispersant defoamer for pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.300, 176.170, 176.180, 176.210, 177.2800
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
Trade Names: Lipo 142; Mapeg® 400 MOT

PEG-13 tallate
CAS 61791-00-2 (generic)
Synonyms: POE (13) monotallate; POE (13) tallate
Classification: Ethoxylated fatty acid ester
Definition: PEG ester of tall oil acid
Formula: RCO–(OCH2CH2)nOH, RCO– rep. fatty acids derived from tall oil, avg. n = 13
Properties: Nonionic
Uses: Oil and wax emulsifier in pharmaceuticals

PEG-23 tallate
CAS 61791-00-2 (generic)
Synonyms: POE (23) monotallate; POE (23) tallate
Classification: Ethoxylated fatty acid ester
Definition: PEG ester of tall oil acid
Formula: RCO–(OCH2CH2)nOH, RCO– rep. fatty acids derived from tall oil, avg. n = 23
Properties: Nonionic
Uses: Oil and wax emulsifier in pharmaceuticals

PEG-660 tallate
CAS 61791-00-2 (generic)
Chemical Component Cross-Reference

Synonyms: POE (66) montallate
Classification: Ethoxylated fatty acid ester
Definition: PEG ester of tall oil acid
Properties: Nonionic
Uses: Emulsifier, dispersant for pharmaceuticals

PEG-8 tallow ether. See Talloweth-8
PEG-11 tallow ether. See Talloweth-11
PEG-25 tallow ether. See Talloweth-25
PEG-10 tridecyl ether. See Trideceth-10

PEG-3 trimethylolpropane distearate
Trade Names: Emalex TPS-203
PEG-4 trimethylolpropane distearate
Uses: Oil-phase ingred.
Trade Names: Emalex TPS-204
PEG-5 trimethylolpropane distearate
Uses: Oil-phase ingred.
Trade Names: Emalex TPS-205
PEG-3 trimethylolpropane tristearate
Uses: Superfatting agent
Trade Names: Emalex TPS-303
PEG-5 trimethylolpropane tristearate
Uses: Superfatting agent
Trade Names: Emalex TPS-305
PEG-10 trimethylolpropane tristearate
Uses: Superfatting agent
Trade Names: Emalex TPS-310
Pelargic acid. See Nonanoic acid
Pelargonaldehyde. See Nonanal
Pelargonic acid (INCI). See Nonanoic acid
Pelargonic acid, methyl ester. See Methyl pelargonate
Pelargonic alcohol. See Nonyl alcohol
Pelargonic aldehyde. See Nonanal
Pelargonium graveolens oil. See Rose geranium (Pelargonium graveolens) oil
Pelargonyl acetate. See n-Nonyl acetate
Pelargonyl vanillylamide
CAS 2444-46-4; EINECS/ELINCS 219-484-1
UN 2811; FEMA 2787
Synonyms: N-(4-Hydroxy-3-methoxybenzyl) nonanamide; Nonanol 4-hydroxy-3-methoxybenzylamide; N-Nonanoyl vanillylamide; Synthetic capsicin
Empirical: C_{17}H_{27}NO_{3}
Properties: Wh. odorless crystals or powd.; sl.
†=pharmaceutical grade
sol. in water; easily sol. in methanol and diethyl ether; m.w. 293.41; m.p. 65 C
Toxicology: LD50 (oral, rat) 190 mg/kg, (dermal, mouse) 512 mg/kg; toxic to lungs, mucous membranes; very hazardous in case of skin contact (irritant), of ing., and inh.
Precaution: May be combustible at high temps.; wear splash goggles, lab coat, and dust respirator
HMIS: Health 3, Flammability 1, Reactivity 0
Uses: Synthetic flavor for pharmaceuticals; rubefacient for pharmaceutical topicals
Regulatory: FDA 21CFR §172.515; FEMA GRAS
Manuf./Distrib.: Sciencelab http://www.sciencelab.com
Pennyroyal, European, extract; Pennyroyal extract. See Pennyroyal (Mentha pulegium) extract
Pennyroyal (Mentha pulegium) extract
CAS 90064-00-9; EINECS/ELINCS 290-061-1
Synonyms: European pennyroyal extract; Lurk-in-the-Ditch; Mentha pulegium; Mentha pulegium extract; Pennyroyal, European, extract; Pennyroyal extract; Pudding Grass; Pulegium; Run-by-the-Ground
Definition: Extract of the flowering herb, Mentha pulegium
Uses: Natural flavoring agent
Regulatory: FDA 21CFR §172.510
Manuf./Distrib.: Bio-Botanica http://www.biobotanica.com; Carrubba http://www.carrubba.com
Trade Names Containing: Actiphyte® of Pennyroyal
Pennyroyal (Mentha pulegium) oil
CAS 8013-99-8
FEMA 2839
Synonyms: European pennyroyal oil; Mentha pulegium; Mentha pulegium oil; Pennyroyal oil; Pennyroyal oil, European
Definition: Volatile oil from steam distillation of Mentha pulegium, contg. 85% d-pulegone
Properties: Yel. to greenish-yel. liq., aromatic mint odor, aromatic taste; sol. in fixed oils, propylene glycol, min. oil; insol. in glycerin; dens. 0.960 (15/15 C); ref. index 1.475-1.496 (20 C)
Toxicology: LD50 (oral, rat) 400 mg/kg; experimental poison by ing.; skin irritant; TSCA listed
Pennyrroyal oil; Pennyrroyal oil, European.  
See Pennyrroyal (Mentha pulegium) oil

Pentaerythritylcocoate  

Uses:  
Ingred. in pharmaceuticals  
Trade Names Containing:  
Dehymuls® E  
Pentaerythritol oleate  

Definition:  
Ester of pentaerythritol and oleic acid  
Uses:  
Wetting agent, emulsifier for pharmaceuticals  
Manuf./Distrib.:  
A.P. Chems. Ltd  
http://www.chemial.com  
Pentaerythritol tetraacetate  
CAS 597-71-7; EINECS/ELINCS 209-907-8  
Synonyms:  
Acetic acid, tetraester with 2,2-bis(hydroxymethyl)-1,3-propanediol;  
2,2-Bis[(acycloxy) methyl]-1,3-propanediol diacetate;  
Normosterol; Pentaerythritol tetraacetate;  
1,3-Propanediol, 2,2-bis(acycloxy) methyl-, diacetate;  
Tetraacetylpenestriol  

Definition:  
Tetraester of pentaerythritol and acetic acid  
Empirical:  
C₁₃H₂₀O₈  
Formula:  
C(CH₂OOCCH₃)₄  
Properties:  
Wh. cryst. powd.; sol. in water, alcohol, ether; m.w. 304.30; m.p. 83-84 C; 
b.p. 225 C (30 mm)  
Toxicology:  
LD₅₀ (oral, mouse) 3500 mg/kg, (IP, mouse) 4850 mg/kg; mod. toxic by ing.; 
sl. toxic by IP route; TSCA listed  
Precaution:  
Combustible  
Hazardous Decomp. Prods.:  
Heated to decomp., emits acrid smoke and irritating vapors  
Uses:  
Antilipemic agent
Chemical Component Cross-Reference

n-Pentane
CAS 109-66-0; EINECS/ELINCS 203-692-4
UN 1265 (DOT)
Synonyms: Alkane C5; Amyl hydride; Normal pentane; Pentane (INCI)
Classification: Aliphatic hydrocarbon
Empirical: C5H12
Formula: CH3(CH2)3CH3
Properties: Colorless liq.; gasoline-like odor; sol. in alcohol, oxygenated, chlorinated, and hydrocarbon solv.s.; insol. in water; m.w. 72.17; dens. 0.62624; vapor pressure 400 mm Hg (18.5 C); f.p. -129.7 C; b.p. 36 C; flash pt. (CC) -49 C; autoignition temp. 260 C; surf. tens. 15.48 dynes/cm; KB value 26; dielec. const. 1.841
Toxicology: ACGIH TLV/TWA 600 ppm; STEL 750 ppm; LD50 (IV, mouse) 446 mg/kg; mod. toxic by inh. and IV routes; narcotic in high concs. (dizziness, headache); prolonged skin contact may cause itching, redness, pigmentation, swelling, burning, pain; extreme exposure can cause nausea, confusion, persistent gasoline taste, unconsciousness; lethal @ 130,000 ppm; relatively low oral toxicity unless aspirated into lungs (severe lung irritation or damage can occur); TSCA listed
Environmental: VOC; ThOD 3.56; zero ozone depletion
Precaution: Highly flamm.; LEL 1.5%; UEL 7.8%; severe explosion hazard exposed to heat or flame; shock can shatter metal containers; incompat. with strong oxidizing agents (increases fire and explosion hazard)
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
NFPA: Health 1, Flammability 4, Reactivity 0
Storage: Store in cool, dry, well-ventilated area, out of direct sunlight; limit quantities in use; avoid generating mists; refrigerated storage

### 3-Pentanol

**CAS:** 584-02-1; EINECS/ELINCS 209-526-7  
**UN:** 2706 (DOT)  
**Synonyms:** n-Amyl alcohol; Diethyl carbinol; 1-Ethyl-1-propanol; Pentanol-3; Pentan-3-ol  
**Classification:** Sec. aliphatic alcohol  
**Empirical:** C₅H₁₂O  
**Formula:** (C₂H₅)₂CHOH  
**Properties:** Colorless visc. liq.; char. odor; sl. sol. in water; sol. in alcohol, ether; m.w. 88.15; sp.gr. 0.819 (20/4 C); m.p. < -75 C; b.p. 114-116 C; flash pt. (CC) 41 C; ref. index 1.410  
**Toxicology:** ACGIH TLV/TWA 100 ppm; STEL 125 ppm; LD₅₀ (oral, rat) 1.87 g/kg, (skin, rabbit) 1.87 g/kg, (eye, rabbit) 2520 mg/kg; inh. may cause double vision, deafness, delirium, severe nervous symptoms, fatalities; ing. may produce 'alcohol' intoxication symptoms; may cause severe lung damage, cardiac arrest, death if aspirated into lungs; TSCA listed  
**Precaution:** Flamm.; dangerous fire and explosion hazard exposed to heat, flame, oxidizers; incomp. with oxidizing agents (increases fire/explosion hazard), hydrogen trisulfide (explosive reaction possible)  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**NFFA:** Health 1, Flammability 2, Reactivity 0  
**Storage:** Store in cool, dry, well-ventilated area  
**Uses:** Solvent in pharmaceuticals  
**Regulatory:** Canada DSL  

**Trade Names:**  
- Pentan-3-ol. See 3-Pentanol  
- n-Pentanol. See n-Amyl alcohol  
- t-Pentanol. See t-Amyl alcohol  
- 1-Pentanol acetate. See Amyl acetate

- 2-Pentanone. See Methyl propyl ketone  
- 3-Pentanone; Pentanone-3. See Diethyl ketone

### Pentasodium pentetate

**CAS:** 140-01-2; EINECS/ELINCS 205-391-3  
**Synonyms:** N,N-Bis[2-[bis (carboxymethyl) amino] ethyl] glycine, pentasodium salt; Diethylenetriaminepentaacetic acid, pentasodium salt; DTPAN; DTPANa5; Na₅DTPA; Pentasodium (carboxylatomethyl) iminobis (ethylenenitrilo) tetraacetate; Pentasodium diethylene triamine pentaacetate; Pentasodium DTPA; Pentetate pentasodium; Sodium DTPA  
**Classification:** Inorganic salt  
**Empirical:** C₁₄H₁₈N₃O₁₀ • 5Na  
**Formula:** C₁₄H₁₈N₃O₁₀ • 5Na  
**Properties:** M.w. 503.25  
**Toxicology:** Mod. irritating to skin and mucous membranes; ing. can cause violent purging; TSCA listed  
**Uses:** Chelating agent, sequestrant for pharmaceuticals, intravenous, drug stabilization; antibiotic mfg.  
**Regulatory:** FDA 21CFR §175.105, 176.150; FDA approved for intravenous; Canada DSL  
**Trade Names:** Versenex 80

**18-Pentatriacontanone; Pentatriacontan-18-one. See Sterane**

### 4-Pentenoic acid

**CAS:** 591-80-0; EINECS/ELINCS 209-732-7  
**FEMA:** 2843  
**Synonyms:** Allyl acetate; Allylacetic acid; 3-Vinylpropionic acid  
**Empirical:** C₅H₈O₂  
**Formula:** CH₂:CHCH₂CH₂COOH

---

**Handbook of Pharmaceutical Additives, Third Edition** 1836
Chemical Component Cross-Reference

Properties: Colorless liq., cheesy odor; sol. in alcohol, ether; sl. sol. in water; m.w. 100.12; dens. 0.978 (20/4 C); m.p. -22 c; b.p. 187-189 C; flash pt. 193 F; ref. index 1.429 (20 C)

Toxicology: LD50 (oral, rat) 470 mg/kg, (IP, mouse) 315 mg/kg, (subcut., mouse) 315 mg/kg; toxic; poison by subcut. and IP routes; mod. toxic by ing.; corrosive; irritating to eyes, respiratory system; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

2-Pentenoic acid, 2-methyl-. See 2-Methyl-2-pentenoic acid

1-Penten-3-ol
CAS 616-25-1; EINECS/ELINCS 210-472-1
UN 1987; FEMA 3584
Synonyms: Ethyl vinyl carbinol; Pent-1-en-3-ol
Empirical: C5H10O
Formula: CH3CH2CH(OH)CH:CH2

Properties: Liq., butter mild green odor; sl. sol. in water; misc. with alcohol, ether, m.w. 86.14; dens. 0.838 (20/4 C); b.p. 114-116 C; flash pt. 128 C; ref. index 1.425 (20 C); dens. 0.753 (20/4 C); m.p. -55 C; b.p. 102-104 C; sol. in dimethylsulfoxide; m.w. 87.19; dens. 0.978 (20/4 C); m.p. -22 C; b.p. 187-189 C; flash pt. 193 F; ref. index 1.429 (20 C)

Precaution: Flamm.

HMIS: Health 1, Flammability 2, Reactivity 0

Storage: 24 mos. when stored in tight glass, aluminum, or double lined containers in a cool area away from direct heat

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Pent-1-en-3-ol. See 1-Penten-3-ol
1-Penten-3-one, 1-(2,6,6-trimethyl-1-cyclohexen-1-yl)-. See Methyl β-ionone
1-Penten-3-one, 1-(2,6,6-trimethyl-2-cyclohexen-1-yl) -. (R-(E))- See Methyl α-ionone

Pentate calcium trisodium. See Calcium trisodium pentetate
Pentate pentasodium. See Pentasodium pentetate
Pentate trisodium calcium. See Calcium trisodium pentetate
Pentiformic acid. See Caproic acid
Pentosanpolysulfate sodium
Synonyms: PPS
Definition: A semi-synthetic glucosaminoglycan analog of heparin with anticoagulant, chondroprotective, anti-inflammatory, antiangiogenic and antiviral properties
Uses: Pharmaceutical topicals; treatment of veterinary interstitial cystitis

Regulatory: FDA approved for topicals

Pentyl acetate; 1-Pentyl acetate; n-Pentyl acetate. See Amyl acetate
Pentyl acetate (all isomers). See 2-Methylbutyl acetate
Pentyl alcohol; n-Pentyl alcohol. See n-Amyl alcohol
s-Pentyl alcohol. See s-Amyl alcohol
t-Pentyl alcohol. See t-Amyl alcohol
α-Pentylaldehyde. See α-Amylinaldehyde
1-Pentylallyl acetate. See 1-Octen-3-yl acetate
1-Pentylallyl butyrate. See 1-Octen-3-yl butyrate

Pentylamine
CAS 110-58-7; EINECS/ELINCS 203-780-2
UN 1106; 2733 (DOT); 2734 (DOT)
Synonyms: Amine C5; 1-Aminopentane; Amylamine; n-Amylamine; Monoamylamine; 1-Pentanamine; 1-Pentylamine; n-Pentylamine

Classification: Sat. aliphatic amine

Empirical: C5H13N

Formula: CH3(CH2)4NH2

Properties: Colorless liq.; ammoniacal odor; very sol. in water, ethanol, acetone, ether, benzene; sol. in dimethylsulfoxide; m.w. 87.19; dens. 0.753 (20/4 C); m.p. -55 C; b.p. 102-104 C; flash pt. (CC) -1 C; ref. index 1.412 (20 C); mod. strong base

Toxicology: LDLo (IP, rat) 37,500 µg/kg; poison by IP route; corrosive, toxic; can cause burns of skin; can be absorbed through skin in toxic amts.; eye irritant; possible permanent eye injury, 'halo vision'; inh. of vapor can cause nose/throat irritation.
coughing; chest pain; difficulty breathing; high concs. may cause potentially fatal pulmonary edema; ing. may cause burning of mouth, throat, digestive tract; headache, nausea; anxiety; TSCA listed

Precaution: Highly flamm.; dangerous fire risk; incompat. with oxidizing agents, acids, acid chlorides, acid anhydrides, calcium or sodium hypochlorite, nitromethane, nitrosyl perchlorate; violent/explosive reactions possible

Hazardous Decomp. Prods.: Heated to decomp., emits toxic vapors of NOx

NFPA: Health 2, Flammability 3, Reactivity 0

Storage: Store in cool, dry, well-ventilated area, out of direct sunlight

Uses: Pharmaceutical topicals

Regulatory: FDA approved for topicals; Canada DSL

1-Pentylamine; n-Pentylamine. See Pentylamine

Pentyl butanoate; Pentyl butyrate. See Amyl butyrate

Pentyl caproate. See Amyl hexanoate

Pentylcarbinol. See Hexyl alcohol

Pentyl-2-furoate. See Amyl 2-furoate

Pentyl 2-furyl ketone

CAS 14360-50-0; EINECS/ELINCS 238-333-0

†=pharmaceutical grade

FEMA 3418

Synonyms: Apricot ketone; 1-(2-Furanyl)-1-hexanone; 1-(2-Furyl) hexanone; 1-(2-Furyl)-1-hexanone; 2-Hexanoyl furan; Pentyl 2-furyl ketone

Classification: aliphatic ketone

Empirical: C10H14O2

Properties: Yel. to brown cl. liq.; sol. in alcohol; insol. in water; m.w. 166.22; dens. 0.995; b.p. 65-67 C (0.5 mm); flash pt. 25 F

Uses: Synthetic flavor for pharmaceuticals

Features: Apricot, peach-like flavor

Regulatory: FEMA GRAS; Canada DSL

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com

Pentyl 2-furyl ketone. See Pentyl 2-furyl ketone

Pentyl heptanoate. See Amyl heptanoate

Peppermint leaf; Peppermint leaves. See Peppermint (Mentha piperita) leaves

Peppermint (Mentha piperita) leaves

CAS: 977018-19-1

FEMA 2847

Synonyms: Mentha piperita; Mentha piperita leaf; Mentha piperita leaves; Peppermint; Peppermint leaf; Peppermint leaves

Definition: Dried leaves and tops of the
Chemical Component Cross-Reference

peppermint, *Mentha piperita*

Properties: Aromatic char. odor, pungent taste producing a cooling sensation in the mouth

Uses: Natural flavor in pharmaceuticals; stimulant; stomachic; carminative

Regulatory: FDA 21CFR §182.10, GRAS; FEMA GRAS; Japan approved (peppermint); USP/NF, BP, EP compliance

Manuf./Distrib.: Alfa Chem†
http://www.alfachelm.com; Chr. Hansen Inc
http://www.chr-hansen.com; Ruger†
http://www.rugerchemical.com

Peppermint (Mentha piperita) oil

CAS 8006-90-4; EINECS/ELINCS 308-770-2

FEMA 2848

Synonyms: Mentha piperita; Mentha piperita oil; Peppermint oil

Definition: Volatile oil from steam distillation of *Mentha piperita*, contg. menthol, and menthyl esters incl. menthyl acetate, and menthone

Properties: Colorless to pale yel. liq., strong penetrating peppermint odor, pungent taste producing sensation of cold when air is drawn into mouth; sol. in 4 vols 90% alcohol; very sl. sol. in water; dens. 0.896-0.908; flash pt. (CC) 80 C; ref. index 1.460-1.471 (20 C); tenacity 8 hrs. on blotter

Toxicology: LD50 (oral, rat) 2426 mg/kg, (IP, rat) 819 mg/kg; mod. toxic by ing. and IP routes; can cause allergic reactions, hay fever, skin rash; mutagenic data; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 1, Flammability 2, Reactivity 0

Storage: Light-sensitive; store in cool, dry place in tightly sealed containers, protected from heat

Uses: Pharmaceutic aid; natural flavor for pharmaceuticals, toothpaste, tooth powds., mouthwashes, buccals, orals, eye lotions; perfume; carminative; vehicle in peppermint water

Use Level: < 3%

Regulatory: FDA 21CFR §172.230, 182.20, GRAS; 27CFR §21.65, 21.151; FEMA GRAS; Europe listed (pulegone levels: 25 ppm in food to 350 ppm in mint confectionery); FDA approved for buccals, orals; USP/NF, BP, EP compliance; Canada DSL; Australia; Philippines PICCS

### Peppermint oil
- **Trade Names:** Custosense PM
- **Uses:** Flavor and fragrance for pharmaceuticals

### Peppermint spirit
- **CAS:** 8030-00-0
- **UN:** 1170
- **Definition:** Contains peppermint oil and alcohol
- **Uses:** Flavor and fragrance for pharmaceuticals

### Pepper oil, black
- **Trade Names:** Pepsin 1:3000 Powder; Pepsin 1:6000; Pepsin 1:10,000 Powd. or Gran.; Pepsin 1:15,000 Powd.

### Pepsin
- **CAS:** 9001-75-6; EINECS/ELINCS 232-629-3
- **Synonyms:** Lactated pepsin; Pepsin A; Pepsinum
- **Definition:** A digestive enzyme of gastric juice which hydrolyzes certain linkages of proteins to produce peptones
- **Properties:** Wh. or ylsh. wh. powd. or lustrous transparent or translucent scales, odorless; sol. in water; insol. in alcohol, chloroform, ether; m.w. ≈ 36,000
- **Toxicology:** Mutagen; TSCA listed
- **HMIS:** Health 1, Flammability 0, Reactivity 0
- **Storage:** Hygroscopic; keep under argon
- **Uses:** Proteolytic enzyme for pharmaceuticals; medicine (digestive ferment)
- **Regulatory:** FDA 21CFR §247.406, 184.1595, GRAS; Canada, Japan approved; BP, EP compliance
- **Manuf./Distrib.:** AMRESCO† http://www.amresco-inc.com; Aceto† http://www.aceto.com; Alfa Chem

### Peracetic acid
- **CAS:** 79-21-0; EINECS/ELINCS 201-186-8
- **Synonyms:** Acetyl hydroperoxide; Ethaneperoxic acid; PAA; Peroxyacetic acid
- **Classification:** Nonaromatic carboxylic acids
- **Empirical:** C₂H₄O₃
- **Formula:** CH₃COOOH
- **Properties:** Colorless liq.; strong acrid odor; sol. in water, alcohol, sulfuric acid, oxygenated solvs.; m.w. 76.06; dens. 1.15 (20 C); f.p. -30 C; b.p. 105 C; flash pt. 40.5 C; ref. index 1.3876
- **Toxicology:** LD50 (oral, rat) 1540 µl/ kg, (oral, mouse) 210 mg/kg; poison by ing.; mod. toxic by inh. and skin contact; strong irritating to skin, mucous membranes; inh. can cause coughing, burning sensation; ing. causes burning, irritation; tumorigen; TSCA listed
- **Environmental:** No environmental hazards; rapidly dec. to acetic acid, oxygen, and water; non-bioaccumulative
- **Precaution:** Flamm.; strong oxidizing agent;
Chemical Component Cross-Reference

Perillyl acetate
See Perillyl alcohol

Perillyl alcohol
See Perillyl alcohol

Perillaldehyde
CAS 2111-75-3; 18031-40-8 (L-(-)); EINECS/ELINCS 218-302-8
FEMA 3557

Synonyms: 4-Isopropenylcyclohex-1-ene carbaldehyde; 4-Isopropenyl-1-cyclohexene-1-carboxaldehyde; p-Mentha-1,8-dien-7-ol; 1,8-p-Menthadien-7-ol; (S)-4-[(1-Methylene) 1-cyclohexene-1-carboxaldehyde; L-4-(1-Methylene) 1-cyclohexene-1-carboxaldehyde; DL-Perillaldehyde; (S)-(-)-Perillaldehyde; Perillyl aldehyde

Empirical: C10H14O

Properties: Green oily fatty cherry odor; m.w. 150.22; dens. 0.965; b.p. 104-105 C (10 mm); flash pt. 204 F; ref. index 1.5072

Toxicology: Irritant; mutagen

†=pharmaceutical grade

HMIS: Health 1, Flammability 1, Reactivity 0

Uses: Synthetic flavor for pharmaceuticals

Features: Cherry-like flavor

Use Level: 0.1% max. in finished cosmetics

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Japan approved as flavoring; Canada DSL

DL-Perillaldehyde; (S)-(-)-Perillaldehyde. See Perillaldehyde

Perillol. See Perillyl alcohol

Perillyl acetate
CAS 15111-96-3; EINECS/ELINCS 239-162-4
FEMA 3561

Synonyms: Acetic acid perillyl ester; Dihydrocuminyl acetate; 4-Isopropenyl-1-cyclohexene carbinol acetate; Menthadien-7-carbinyl acetate; 1-8-p-Menthadien-7-yl acetate; p-Mentha-1,8-dien-7-yl acetate; 4-Methyl vinyl cyclohexene-1-methyl acetate; Perilla acetate

Empirical: C12H18O2

Properties: Ylsh. to orange yel.; rich, spicy,
hearbaceous odor; practically insol. in water;
sol. in alcohol, oils; m.w. 194.28; sp.gr. 0.978-0.986; flash pt. 93 C; ref. index 1.475-1.485

Storage: 24 mos. when stored in tight glass,
aluminum, or double lined containers in a cool
area away from direct heat

Uses: Synthetic flavor for pharmaceuticals

Features: Rich spicy herbal odor

Regulatory: FDA 21CFR §172.515; FEMA
GRAS; Canada DSL

Manuf./Distrib.: Citrus and Allied Essences http://www.citrusandallied.com; Degussa AG/Health & Nutrition

Perillyl alcohol
CAS 536-59-4; EINECS/ELINCS 208-639-9
FEMA 2664

Synonyms: Cyclohex-1-ene-1-methanol, 4-{1-methylene}; Dihydrocuminyl alcohol; 1-Hydroxymethyl-4-isopropenyl-1-cyclohexene; 4-Isopropenyl-cyclohex-1-ene-1-methanol; 4-Isopropenylcyclohex-1-en-1-ylmethanol; p-Mentha-1,8-dien-7-ol;

Petitgrain oil saponified. See Petitgrain oil
Petrol. See Isopropyl alcohol

Petrolatum
CAS 8009-03-8 (NF); 8027-32-5 (USP);
EINECS/ELINCS 232-373-2
INS905b
Synonyms: Mineral grease (petrolatum);
Mineral jelly; Paraffin jelly; Petrolatum amber;
Petrolatum white; Petroleum jelly; Vaseline;
White petrolatum; White soft paraffin; Yellow vaseline
Classification: Petroleum hydrocarbons
Definition: Semisolid mixture of hydrocarbons
obtained from dewaxing residual oil; consists
predominantly of sat. crystalline and liq.
hydrocarbons with > C25
Properties: Ylsh. to lt. amber or wh. semisolid,
umeuxious mass; pract. odorless and tasteless;
sol. in benzene, chloroform, ether, petrol.
ether, oils; pract. insol. in water; insol. in
alcohol; dens. 0.820-0.865 (60/25 C); m.p. 38-
54 C; soften. pt. 65-70 C; ref. index 1.460-
1.474 (60 C)
Toxicology: LD50 (IP, mouse) > 50 g/kg; can
cause allergic skin reactions in hypersensitive persons; generally nontoxic;
TSCA listed
Hazardous Decomp. Prods.: Heated to
decomps., emits acrid smoke and irritating
fumes
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Excipient, ointment base, filler, solvent,
emollient, skin protectant in pharmaceuticals, topicals, ophthalmics,
orals, otics, suppositories, veterinary
prods.; laxative base
Features: Protects skin from irritation
Regulatory: FDA 21CFR §172.880, 172.884,

methyl-1,3-cyclohexadiene; p-Mentha-1,5-
diene; 2-Methyl-5-isopropyl-1,3-
cyclohexadiene; 2-Methyl-5-(1-methylethyl)-
1,3-cyclohexadiene
Classification: Monocyclic terpene
Empirical: C_{10}H_{16}
Formula: CH₃C:CHCH₂CH[CH(CH₂)₂]CH:CH
Properties: Colorless to pale yel. mobile oil or
liq.; minty herbaceous odor; sol. in alcohol,
ether; insol. in water; m.w. 136.24; dens.
0.850; b.p. 175 C; flash pt. 117 F; ref. index
1.471-1.477; tenacity 2 hrs. on blotter
Toxicology: LD₅₀ (oral, rat) 5700 mg/kg; mildly
toxic by ing.; ing. can cause vomiting,
diarrhea; can be irritating to, and absorbed
trough, skin; severe human skin irritant;
TSCA listed
Precaution: Flamm. liq. exposed to heat,
sparks, or flame; incompat. with air
Hazardous Decomp. Prods.: Heated to
decomp., emits acrid smoke and irritating
fumes
Storage: Store in cool, dry place in tightly sealed
containers, protected from heat, light
Uses: Synthetic flavor for pharmaceuticals
Features: Minty flavor

Use Level: 1-5%
Regulatory: FDA 21CFR §172.515; FEMA
GRAS; Australia; Canada DSL; Japan ENCS
(no. 3-2243); Philippines PICCS

Phenethyl alcohol
CAS 60-12-8; EINECS/ELINCS 200-456-2
UN 2810 (DOT; UN IATA); FEMA 2858
Synonyms: Benzeneethanol; Benzyl carbinol;
Ethanol, 2-phenyl-; β-Hydroxyethylbenzene;
Methanol, benzyl-; Orange oil; PEA; β-PEA;
Phenethanol; β-Phenethanol; 2-Phenethyl
alcohol; β-Phenethyl alcohol; 2-
Phenylethanol; β-Phenylethanol;
Phenyethol alcohol; 2-Phenethyl alcohol;
β-Phenylethyl alcohol; Rose oil
Classification: Aromatic alcohol
Empirical: C₆H₄O
Formula: C₆H₅CH₂CH₂OH
Properties: Colorless liq., floral rose odor,
burning taste; sol. in fixed oils, glycerin,
propylene glycol, oxygenated solvs.; misc. with alcohol, ether; sl. sol. in water; m.w. 122.18; dens. 1.0245 (15 C); vapor pressure 1 mm (58 C); m.p. -27 C; b.p. 220 C; flash pt. 102 C; ref. index 1.532 (20 C)

**Toxicology:** LD50 (oral, rat) 1790 mg/kg, (skin, rabbit) 790 mg/kg; mod. toxic by ing., skin contact; harmful by inh.; skin, eye, and respiratory system irritant; may cause severe CNS injury; may cause anestheisa, ataxia, coma, gastritis, fetal death; may cause burning sensation, coughing, wheezing, laryngitis, shortness of breath, headache, nausea, vomiting; experimental teratogen, reproductive effector; mutagenic data; target organs: CNS; TSCA listed

**Precaution:** Combustible when exposed to heat or flame; incompat. with strong oxidizing agents, strong acids; reactive with oxidizing materials

**Hazardous Decomp. Prods.:** Toxic fumes of CO, CO2; emits toxic fumes under fire conditions

**NFPA:** Health 1, Flammability 1, Reactivity 0

**Storage:** 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air

**Uses:** Antimicrobial, preservative, solvent for pharmaceuticals, ophthalmics, otics, topicals, vaginals; flavor and fragrance for pharmaceuticals; topical antiseptic; local anesthetic

**Features:** Honey-like flavor

**Regulatory:** USP/NF compliance; FDA 21CFR §172.515, CIR approved, EPA reg.; FEMA GRAS; JSCI listed; FDA approved for ophthalmics, otics, topicals, vaginals; Australia AICS; Canada DSL

**Manuf./Distrib.:** ADA Int'l. 
Phenethyl anthranilate

CAS: 133-18-6; EINECS/ELINCS: 205-098-0
FEMA: 2859

Synonyms: 2-Aminobenzoic acid phenethyl ester; Anthranilic acid, phenethyl ester; Benzoic acid, 2-amino-, 2-phenylethyl ester; Benzyl carbinyl anthranilate; Phenethyl 2-aminobenzoate; β-Phenethyl-o-aminobenzoate; 2-Phenylethyl-o-aminobenzoate; Phenylethyl anthranilate; 2-Phenylethyl anthranilate

Classification: Aromatic ester

Definition: Ester of anthranilic acid and phenylethyl alcohol

Empirical: C₁₅H₁₅NO₂

Formula: H₂NC₆H₄COOC₂H₄C₆H₅

Properties: Wh. to yel. cryst. mass; odor of grape and orange; insol. in water; m.w. 241.29; dens. 1.14; m.p. 39-44 C; b.p. 226 C; flash pt. > 230 F

Toxicology: Primary skin irritant; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOₓ

Storage: Store under nitrogen

Uses: Synthetic flavor for pharmaceuticals

Features: Honey-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenethyl benzoate

CAS: 94-47-3; EINECS/ELINCS: 202-336-5
FEMA: 2860

Synonyms: Benzoic acid phenethyl ester; Benzyl carbinyl benzoate; Phenethyl alcohol, benzoate; Phenylethyl benzoate; 2-Phenylethyl benzoate; β-Phenethylbenzoate

Classification: Aromatic ester

Empirical: C₁₅H₁₄O₂

Properties: Colorless to ylsh. oily liq., rose honey-like odor; insol. in water; m.w. 192.26; dens. 0.994; b.p. 260 C; flash pt. > 230 F; ref. index 1.488-1.492

Toxicology: LD₅₀ (oral, rat) 4600 µl/kg; mod. toxic by ing.; primary skin irritant; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet grape, strawberry-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenethyl butanoate

CAS: 103-52-6; EINECS/ELINCS: 203-119-8
FEMA: 2861

Synonyms: Benzylcarbinyl butyrate; Butyric acid phenethyl ester; Phenethyl butanoate; 2-Phenethyl butanoate; β-Phenethyl-n-butanoate; Phenylethyl butyrate; 2-Phenylethyl butyrate

Classification: Aromatic ester

Empirical: C₁₂H₁₆O₂

Properties: Colorless liq., rose-like odor, sweet honey-like taste; insol. in water; m.w. 192.26; dens. 0.994; b.p. 260 C; flash pt. > 230 F; ref. index 1.488-1.492

Toxicology: LD₅₀ (oral, rat) 4600 µl/kg; mod. toxic by ing.; primary skin irritant; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet grape, strawberry-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenethyl caproate. See Phenethyl hexanoate
Phenethyl carbinol. See Hydrocinnamic alcohol
Phenethyl cinnamate
CAS 103-53-7; EINECS/ELINCS 203-120-3
FEMA 2863
Synonyms: Benzyl carbinyl cinnamate; Benzyl carbinyl 3-phenyl propenoate; Cinnamic acid phenethyl ester; β-Phenethyl cinnamate; Phenylethyl cinnamate; 2-Phenylethyl cinnamate; 3-Phenyl-2-propenoic acid 2-phenyl ethyl ester
Classification: Aromatic ester
Empirical: C17H16O2
Formula: C6H5CH=CHCO2CH2CH2C6H5
Properties: Wh. cryst. solid, sweet balsamic odor; sol. in hot alcohol; insol. in water; m.w. 252.32; m.p. > 300 C; flash pt. (TCC) > 212 F
Toxicology: LD50 (oral, rat) 5 g/kg, (oral, guinea pig) 4500 mg/kg; mildly toxic by ing.; irritating to skin; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Rose green hyacinth watercress herbal odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

β-Phenethyl cinnamate. See Phenethyl cinnamate
Phenethyl 3,3-dimethylacrylate. See Phenethyl senecioate
Phenethylene. See Styrene
Phenethyl ester isovaleric acid. See Phenethyl isovalerate
Phenethyl ethanoate. See 2-Phenylethyl acetate
Phenethyl formate
CAS 104-62-1; EINECS/ELINCS 203-220-7
FEMA 2864
Synonyms: Benzylcarbinyl formate; Benzyl carbinyl methanoate; Formic acid phenethyl ester; Phenethyl alcohol, β-formate; 2-Phenylethyl formate; β-Phenylethyl formate
Classification: Aromatic ester
Empirical: C9H10O2
Formula: HCO2CH2CH2C6H5
Properties: Colorless liq.; sol. in alcohol; sl. sol. in water; m.w. 150.17; b.p. 226 C; acid no. 1.0 max.; ref. index 1.506-1.510
Toxicology: LD50 (oral, rat) 3220 mg/kg, (skin, rabbit) > 5 g/kg; mod. toxic by ing.; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Rose green hyacinth watercress herbal odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenethyl hexanoate
CAS 6290-37-5; EINECS/ELINCS 228-538-3
FEMA 3221
Synonyms: Benzyl carbinyl caproate; Benzyl carbinyl hexanoate; Hexanoic acid phenethyl ester; Hexanoic acid phenyl ethyl ester; Phenethyl caproate; 2-Phenyl ethyl caproate; 2-Phenyl ethyl hexanoate
Classification: Aromatic ester
Empirical: C14H20O2
Properties: M.w. 220.31; dens. 0.971; flash pt. > 230 F
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity banana, pineapple-like flavor
Regulatory: FEMA GRAS; Canada DSL
Manuf./Distrib.: SAFC Specialties http://www.safcspecialties.com

Phenethyl isobutyrate
CAS 103-48-0; EINECS/ELINCS 203-116-1
FEMA 2862
Synonyms: Benzylcarbinol isobutyrate;
Chemical Component Cross-Reference

Benzylcarbinyl isobutyrate; Isobutyric acid phenethyl ester; Phenylethyl isobutyrate; 2-Phenylethyl isobutyrate; β-Phenylethyl isobutyrate; Phenylethyl 2-methylpropanoate; 2-Phenylethyl-2-methylpropanoate

Classification: Aromatic ester

Empirical: C_{12}H_{16}O_{2}

Formula: (CH_{3})_{2}CHCOOC_{2}H_{4}C_{6}H_{5}

Properties: Colorless to lt. yel. liq.; pleasant rosy odor; sol. in alcohol, ether, fixed oils; insol. in water @ 230 C; m.w. 192.26; dens. 0.988; b.p. 250 C; flash pt. 227 F; ref. index 1.488 (20 C)

Toxicology: LD50 (oral, rat) 5200 mg/kg; mildly toxic by ing.; TSCA listed

Precaution: Combustible liq.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Features: Fruity flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Classification: Aromatic ester
Empirical: C_{13}H_{16}O_{2}
Properties: Colorless cl. liq.; sol. in alcohol; insol. in water; m.w. 204.27; solid. pt. 41 C; m.p. 44 C; acid no. 1.0 max.; flash pt. > 212 F
Toxicology: TSCA listed
Uses: Synthetic flavor for pharmaceuticals
Features: Deep sweet herbal wine odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Degussa http://www.degussa.com; Grau Aromatics http://www.grau-aromatics.de

Phenethyl tiglate
†=pharmaceutical grade
CAS 55719-85-2; EINECS/ELINCS 259-774-5
FEMA 2870
Synonyms: Benzyl carbinyl tiglate; 2-Methyl-but-2-enolic acid phenethyl ester; Phenethyl 2-methylcrotonate; Phenylethyl (2E)-2-methyl-2-butenoate; Phenylethyl-α-methylbutenoate; Phenylethyl tiglate; 2-Phenylethyl tiglate
Classification: Aromatic ester
Empirical: C_{13}H_{16}O_{2}
Properties: Colorless liq., warm rose-like odor, sweet winey taste; sol. in alcohol; insol. in water; m.w. 204.27; dens. 1.018; b.p. 259 C; flash pt. > 230 F; ref. index 1.5140
Toxicology: Primary skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenethyltris (trimethylsiloxy) silane. See Phenyl trimethicone
Phenic acid. See Phenol
Phenmerzyl nitrate. See Phenylmercuric nitrate, basic
Phenododecinium bromide. See Domiphen bromide

Phenol
CAS 108-95-2; EINECS/ELINCS 203-632-7
UN 1671 (solid); UN 2312 (fused); UN 2821 (sol'n.); FEMA 3223
Synonyms: Benzenol; 'Carbolic acid'; Hydroxybenzene; Liquid phenol; Monohydroxybenzene; Monophenol; Oxybenzene; Phenic acid; Phenol alcohol; Phenol, liquefied; Phenyl hydrate; Phenyl hydroxide; Phenyllic acid; Phenyllic alcohol
Classification: Aromatic organic compd.; carbolic acid
Empirical: C_{6}H_{5}O
Formula: C_{6}H_{5}OH
Properties: Colorless to lt. pink needle-shaped cryst.; char. odor of coal tar and wood; burning taste; sol. in alcohol, glycerin, chloroform, ether, water; misc. with oxygenated and chlorinated solvs.; sl. sol. in min. oil; m.w. 94.11; dens. 1.07; m.p. 40-42 C; b.p. 182 C;
flash pt. 79 C; darkens on exposure to lt., air

Toxicology: ACGIH TLV/TWA 5 ppm (skin);
LD50 (oral, rat) 317 mg/kg, (subcut., rat) 460 mg/kg, (IV, mouse) 112 mg/kg, (skin, rabbit) 850 mg/kg; poison by ing., subcut., IV, IP routes; human poison by ing.; mod. toxic by skin contact; severe eye/skin irritant; ing. of even sm. amts. may cause vomiting, circulatory collapse, paralysis, convulsions, coma, grnsh. urine, necrosis of mouth and GI tract; death results from respiratory failure; may cause serious skin burns; possible carcinogen; human mutagen; TSCA listed

Precaution: Combustible; vapor is flamm.; DOT: poisonous material; explosive and violent reactions possible; polymerizes violently when combined with isocyanates

Hazardous Decomp. Prods.: CO, CO2; heated to decomp., emits acrid smoke and irritating fumes

NFPA: Health 4, Flammability 2, Reactivity 0

Storage: Hygroscopic; deliq.; moisture- and light-sensitive; store frozen

Uses: Antimicrobial, preservative for pharmaceuticals, topicals, parenterals, injectables, insulin prods.; disinfectant, anesthetic for skin; active ingred. in deodorant soaps and mouthwash

Use Level: 0.5% (topicals), 0.2-5% (parenterals), 1% max. (soaps, shampoos)

Regulatory: FDA 21CFR §175.105, 175.300, 175.380, 175.390, 176.170, 177.1210, 177.1580, 177.2410, 177.2600, 27CFR §21.65, 21.151; FEMA GRAS; SARA reportable; HAP; FDA approved for injectables, parenterals, topicals; Canada DSL; USP/NF, BP, EP compliance

UN 1803 (DOT)
Synonyms: Benzenesulfonic acid, hydroxy-; Hydroxybenzenesulfonic acid; Phenol sulfonic acid liquid; Sulfoarabic acid
Classification: Aromatic organic compd.
Empirical: C₆H₆O₄S
Formula: HOC₆H₄SO₃H
Properties: Ylsh. liq. (brown in air); sol. in water, alcohol; m.w. 174.18
Toxicology: LD₅₀ (oral, rat) 1900 mg/kg,
(subcut., rat) 4 g/kg, (IP, mouse) 140 mg/kg;
poison by subcut, and IP routes; mod. toxic by ing.; irritant to skin and tissues; TSCA listed
Precaution: DOT: Corrosive material
Hazardous Decomp. Prods.: Heated to decomp., emits toxic vapors of SO₂
Uses: Mfg. of pharmaceuticals
Regulatory: Canada DSL

Phenol sulfonic acid liquid. See Phenolsulfonic acid
Phenol-4-sulfonic acid sol'n. See p-Phenol sulfonic acid
1-Phenyl-4-sulfonic acid zinc salt. See Zinc phenolsulfonate
Phenol, 4-(1,1,3,3-tetramethylbutyl)-, polymer with formaldehyde and oxirane. See Tyloxapol
Phenol, 2,2' thiobis (4,6-dichloro- See 2,2'-Thiobis (4,6-dichlorophenol)
Phenomerborum. See Phenylmercuric borate
Phenomercuric acetate. See Phenylmercuric acetate
Phenopyridine. See 8-Hydroxyquinoline
Phenothiazine
CAS 92-84-2; EINECS/ELINCS 202-196-5
Synonyms: Dibenzoarathiazine; Dibenzothiazine; Dibenzo-1,4-thiazine; Phenthiazine; PTZ; Thiodiphenylamine
Empirical: C₁₂H₉NS
Formula: C₆H₄NHC₆H₄S
Properties: Grayish-green to greenish-yel.
powd., gran., or flakes; sl. odor; tasteless; sol. in benzene, ether, hot acetic acid, 21% in acetone, 15% in ethyl amyl ketone, 11% in ethyl acetate, aromatic solvs.; sl. sol. in alcohol, min. oils; pract. insol. in water, chloroform, petrol. ether; m.w. 199.26; m.p.
Phenothiazin-5-ium, 3,7-bis (dimethylamino)-, chloride, trihydrate
See Methylene blue trihydrate
Phenoxethol; Phenoxetol. See Phenoxyethanol
Phenoxyacetic acid
CAS 122-59-8; EINECS/ELINCS 204-556-7
FEMA 2872
Synonyms: Glycolic acid phenyl ether; Glycolic acid phenyl ether; Phenoxyethanoic acid; α-Phenylglycolic acid; Phenylum
Classification: aromatic acid
Empirical: C₆H₅OCH₂COOH
Formula: C₆H₅OCH₂COOH
Properties: Off-wh. cryst. solid, sour odor, honey-like taste; readily sol. in alcohol, ether, benzene, CS₂, glacial acetic acid, oxygenated and aromatic solvs.; sl. sol. in water; m.w. 152.14; m.p. 95 °C; b.p. 285 °C (some decomp.)
Toxicology: LD₅₀ (oral, rat) 1500 mg/kg, (IP, rat) 323 mg/kg; harmful solid; poison by IP route; mod. toxic by ing.; mild irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals; pharmaceutical intermediate (keratin exfoliative to soften calluses, corns); precursor in antibiotic fermentations esp. penicillin V
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Phenoxyacetic acid sodium salt. See Sodium phenoxy acetate
Phenoxybenzene. See Diphenyl oxide
3-Phenoxy-1,2-epoxypropane. See Phenyl glycidyl ether
Phenoxyethanoic acid. See Phenoxyacetic acid
Phenoxyethanol
CAS 122-99-6; EINECS/ELINCS 204-589-7
Synonyms: Ethylene glycol monophenyl ether; Ethylene glycol phenyl ether; Glycol monophenyl ether; β-Hydroxyethyl phenyl ether; 1-Hydroxy-2-phenoxyethane; Phenoethol; Phenoexol; 2-Phenoxyethanol; β-Phenoxyethanol; Phenoxyethyl alcohol; Phenoxytol; Phenylglycol; Phenylglycol ether; Phenylmonoglycol ether; Rose ether
Classification: Aromatic ether alcohol
Definition: Phenol polyglycol ether
Empirical: C₆H₅OPO₂
Formula: C₆H₅OCH₂CH₂OH
Properties: Yel.-brn. or clear liq.; faint aromatic rose-like odor; burning taste; sol. in alcohol,
2-Phenoxyethanol; β-Phenoxyethanol; Phenoxyethyl alcohol. See Phenoxyethanol

β-Phenoxyethylidimethyldodecylammonium bromide. See Domiphen bromide

Phenoxyethyl isobutyrate

CAS 103-60-6; EINECS/ELINCS 203-127-1

FEMA 2873

Synonyms: Isobutyric acid 2-phenoxyethyl ester; 2-Phenoxyethyl isobutyrate; 2-Phenoxyethyl 2-methylpropanoate; 2-Phenoxyethyl 2-methylpropionate; Propanoic acid, 2-methyl-, 2-phenoxyethyl ester

Empirical: C_{12}H_{16}O_3

Properties: Colorless liq., honey rose-like odor, sweet peach-like taste; misc. in alcohol, chloroform, ether; insol. in water; m.w. 208.26; dens. 1.044; b.p. 265 °C; flash pt. > 212 °F; ref. index 1.492

Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Features: Honey-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Advanced Synthesis Tech.

Phenoxyisopropanol
CAS 770-35-4; EINECS/ELINCS 212-222-7
Synonyms: β-Phenoxyisopropanol; 1-Phenoxy-2-propanol; 1-Phenoxypropan-2-ol; 2-Propanol, 1-phenoxy-; α-Propylene glycol 1-phenyl ether; Propylene phenoxyetol; Propylene phenoxythol; Propylene phenoxytol
Classification: Aromatic ether alcohol
Empirical: C9H12O2
Properties: Colorless oily liq., becomes more visc. on standing; hyacinth, lilac odor; sol. in alcohol, ether, propylene glycol, oxygenated solvs.; sl. sol. in water; m.w. 152.16; dens. 1.0123-1.030; m.p. 33-34 C; b.p. 194-196 C; flash pt. 68 C; ref. index 1.525-1.545
Toxicology: LD50 (oral, rat) 1550 mg/kg; mod. toxic by ing.; human skin irritant; TSCA listed
Precaution: Combustible liq.

Phenylacetaldehyde 2,3-butylene glycol acetal
CAS 5468-06-4; FEMA 2875
Synonyms: 4,5-Dimethyl-2-benzyl-1,3-dioxolan
Empirical: C12H16O2
Properties: Colorless visc. liq., earthy fragrance, fruity flavor; sol. in alcohol; insol. in water; m.w. 192.26
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenylacetaldehyde
CAS 122-78-1; EINECS/ELINCS 204-574-5; FEMA 2874
Synonyms: Benzeneacetaldehyde; Hyacinthin; PAA; Phenylacetic aldehyde; Phenylethanalan; α-Toluualdehyde; α-Toluic aldehyde
Classification: aromatic compd.
Empirical: C8H8O
Formula: C5H5CH2CHO
Properties: Colorless oily liq., becomes more visc. on standing; hyacinth, lilac odor; sol. in alcohol, ether, propylene glycol, oxygenated solvs.; sl. sol. in water; m.w. 120.16; dens. 1.0123-1.030; m.p. 33-34 C; b.p. 194-196 C; flash pt. 68 C; ref. index 1.525-1.545
Toxicology: LD50 (oral, rat) 1550 mg/kg; mod. toxic by ing.; human skin irritant; TSCA listed
Precaution: Combustible liq.
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor and fragrance for pharmaceuticals
Features: Apricot, berry-like flavor and fragrance
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenylacetaldehyde 2,3-butylene glycol acetal
CAS 5468-06-4; FEMA 2875
Synonyms: 4,5-Dimethyl-2-benzyl-1,3-dioxolan
Empirical: C12H16O2
Properties: Colorless visc. liq., earthy fragrance, fruity flavor; sol. in alcohol; insol. in water; m.w. 192.26
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Handbook of Pharmaceutical Additives, Third Edition 1856
Phenylacetaldehyde diisobutyl acetal
CAS 68345-22-2; EINECS/ELINCS 269-851-5
FEMA 3384
Synonyms: (2,2-Bis(2-methyl propoxy)ethyl) benzene; 1,1-Diisobutoxy-2-phenylethane
Definition: Synthetic acetal aromatic
Empirical: C₁₆H₂₆O₂
Properties: Colorless cl. liq.; sol. in alcohol; sl. sol. in water; m.w. 250.38; b.p. 240.00 °C @ 760.00 mm
Uses: Synthetic flavor for pharmaceuticals
Features: Sweet floral green odor/taste
Regulatory: FEMA GRAS; Canada DSL

Phenylacetaldehyde dimethyl acetal
CAS 101-48-4; EINECS/ELINCS 202-945-6
FEMA 2876
Synonyms: (2,2-Dimethoxyethyl)-benzene; 1,1,-Dimethoxy-2-phenylethane; PADMA; Phenacetaldehyde dimethyl acetal; α-Tolyl aldehyde dimethyl acetal; Viridine
Classification: aromatic compd.
Empirical: C₁₀H₁₄O₂
Formula: C₆H₅CH₂CH(OCH₃)₂
Properties: Colorless liq., strong rose-like odor; sol. in fixed oils, propylene glycol; insol. in glycerin; m.w. 166.24; dens. 1.000-1.006; b.p. 95-98 °C (10 mm); flash pt. 89 °C; ref. index 1.493
Toxicology: LD₅₀ (oral, rat) 3500 mg/kg; mod. toxic by ing.; IP routes; skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Use Level: 1-10%
Regulatory: Canada DSL

Phenylacetaldehyde glyceryl acetal
CAS 5694-72-4; EINECS/ELINCS 227-164-8
FEMA 2877
Synonyms: 2-Benzyl-1,3-dioxolan-4-ylmethanol; 2-Benzyl-4-hydroxyethyl-1,3-dioxane; 2-Benzyl-4-hydroxyethyl-1,3-dioxolane; 2-Benzyl-4-methanol-1,3-dioxane; 1,2-O-Phenyldieneglycerol; Phenylacetaldehyde glyceryl 1,2-cyclic acetal
Empirical: C₁₁H₁₄O₃
Properties: Colorless to pale yel. visc. liq., faint sweet rosy odor, sweet green flavor; insol. in water; m.w. 194.23; dens. 1.1650-1.1680 (15 °C); flash pt. 95 °C; ref. index 1.5315-1.5345
Toxicology: LD₅₀ (oral, rat) 1720 mg/kg, (IP, mouse) 523 mg/kg; mod. toxic by ing. and IP routes; skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Synthetic flavor for pharmaceuticals
Use Level: 1-10%
Regulatory: Canada DSL

Phenylacetaldehyde glyceryl cyclic acetals
CAS 29895-73-6; EINECS/ELINCS 249-934-2
FEMA 2877
Synonyms: Benzeneacetaldehyde, cyclic acetal with glycerol; Phenylacetaldehyde glyceryl acetal
Empirical: C₁₁H₁₄O₃
Properties: Colorless sl. visc. liq.; tenacious, honey, cyclamen, rose odor; m.w. 194.23; dens. 1.154-1.162; ref. index 1.529-1.534
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Phenylacetaldehyde glyceryl cyclic acetals
CAS 103-82-2; EINECS/ELINCS 203-148-6
UN 1759 (DOT; UN IATA); FEMA 2878
Synonyms: Benzenacetic acid; Benzenacetic acid; \(\omega\)-Phenylacetic acid; \(\alpha\)-Toluic acid; \(\alpha\)-Tolylic acid

Classification: Aromatic acid

Empirical: \(\text{C}_8\text{H}_8\text{O}_2\)

Formula: \(\text{C}_8\text{H}_8\text{CH}_2\text{COOH}\)

Properties: Wh. cryst. or flakes; disagreeable geranium odor; sol. in alcohol, ether, hot water, oxygenated and chlorinated solvs.; sl. sol. in cold water; m.w. 136.16; dens. 1.0809; m.p. 77-78 C; b.p. 265.5 C; flash pt. > 100 C

Toxicology: LD50 (oral, rat) 2250 mg/kg, (IP, rat) 1600 mg/kg, (subcut., mouse) 1500 mg/kg; mod. toxic by ing., subcut., IP routes; experimental teratogen; causes burns; risk of serious damage to eyes; TSCA listed

Precaution: Combustible; wear suitable protective clothing; incompat. with strong oxidizers, reducers

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

NFPA: Health 1, Flammability 1, Reactivity 0

Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

Uses: Synthetic flavor for pharmaceuticals; precursor in mfg. of penicillin G

Features: Honey-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

DL-Phenylalanine

CAS 150-30-1; EINECS/ELINCS 205-765-7

FEMA 3726

Synonyms: \(\alpha\)-Amino-\(\beta\)-phenylpropionic acid; DL-\(\alpha\)-Amino-\(\beta\)-phenylpropionic acid

Classification: Amino acid

Empirical: \(\text{C}_9\text{H}_{11}\text{NO}_2\)

Properties: Wh. cryst. platelets, odorless; sol. in water; sl. sol. in alcohol; m.w. 165.19

HMIS: Health 0, Flammability 1, Reactivity 0

Uses: Flavor for pharmaceuticals; nutrient; dietary supplement

Regulatory: FEMA GRAS; Canada DSL

Manuf./Distrib.: Aceto† http://www.aceto.com; Advanced Synthesis Tech.
Chemical Component Cross-Reference

L-Phenylalanine
CAS 63-91-2; EINECS/ELINCS 200-568-1
FEMA 3585
Synonyms: Alanine, phenyl-; Alanine, 3-phenyl-; L-Alanine, phenyl-; (S)-α- Aminobenzenepropanoic acid; α- Aminoacidinonic acid; α-Amino-β- phenylpropionic acid; L-α-Amino-β-phenylpropionic acid; PAL; Phenylalanine (INCI); 3-Phenylalanine; 3-Phenyl-L-alanine; Phenyl-α-alanine; β-Phenylalanine; β-Phenyl-α-alanine
Classification: Amino acid
Definition: Avail. commercially as the naturally occurring L(+)-enantiomer
Empirical: C9H11NO2
Formula: C9H11NO2
Properties: Wh. crys. or crys. powd., sl. odor, bitter taste; sol. in water; very sl. sol. in alcohol, ether; m.w. 165.21; m.p. 275-283 C (dec.)

†=pharmaceutical grade
Toxicology: LD50 (IP, rat) 5287 mg/kg; mildly toxic by IP route; experimental reproductive effects; human mutation data; hazard to PKU individuals; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Nutrient, dietary supplement, flavor for pharmaceuticals; ingred. of aspartame; raw material for peptide drugs; infusion sol’ns.; diagnostic aids
Regulatory: FDA 21CFR §172.320, 5.8% max.; FEMA GRAS; Japan approved; BP, EP compliance; Canada DSL
Manuf./Distrib.: ADA Int’l.
3-Phenylallyl acetate; γ-Phenylallyl acetate. See Cinnamyl acetate 3-Phenylallyl alcohol; γ-Phenylallyl alcohol. See Cinnamyl alcohol 3-Phenylallyl butanoate. See Cinnamyl butyrate Phenylallyl cinnamate. See Cinnamyl cinnamate 3-Phenylallyl isovalerate. See Cinnamyl butyrate
Chemical Component Cross-Reference

†=pharmaceutical grade

**FEMA 2880**

**Synonyms:** Homocinnamyl alcohol; Methyl styryl carbinol; 2-Phenyl-3-butenol

**Empirical:** C_{10}H_{12}O

**Properties:** Colorless cl. liq.; sol in alcohol; insol. in water; m.w. 148.20; sp. gr. 1.00600-1.01200; b.p. 140.00 C @ 12.00 mm; ref. index 1.55800-1.56700

**Uses:** Synthetic flavor for pharmaceuticals

**Features:** Sweet fruity floral balsam odor

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenylethyl tiglate; 2-Phenylethyl tiglate. See Phen ethyl tiglate
2-Phenylethyl-α-tolu late. See Phen ethyl phenylacetate
Phenyl formic acid. See Benzoic acid
Phenyl glycidyl ether
CAS 122-60-1; EINECS/ELINCS 204-557-2
Synonyms: 1,2-Epoxy-3-phenoxy propane; 2,3-Epoxypropyl phenyl ether; Glicidyl phenyl ether; Glycidyl phenyl ether; Oxirene, (phenoxy methyl)-; PGE; Phenol glycidyl ether; 3-Phenoxy-1,2-epoxypropane; Phenoxypropene oxide; Phenoxypropylene oxide; Phenyl-2,3-epoxypropyl ether
Classification: Aromatic epoxy ether
Empirical: C₉H₁₀O₂
Formula: H₂COCH₇OC₆H₅
Properties: Colorless liq.; completely sol. in acetone, toluene; sol. in ethanol; mod. sol. in water; m.w. 150.19; dens. 1.113 (20/4°C); m.p. 3.5°C; b.p. 245°C; flash pt. 114°C
Toxicology: ACGIH TLV/TWA 1 ppm (skin); LD₅₀ (oral, rat) 4260 mg/kg, (subcut., mouse) 760 mg/kg, (dermal, rabbit) 1500 mg/kg; mod. toxic by ing., skin contact, subcut. routes; severe eye and skin irritant; may cause sensitization by skin contact; confirmed carcinogen; tumorigen; mutagen; reproductive effector; TSCA listed
Precaution: Incompat. with acids, alkalis, amines, oxidizing agents
Hazardous Decomp. Prods.: CO, hydrocarbons; heated to decomp., emits acrid smoke and irritating fumes
Uses: Intermediate for pharmaceuti cals
Regulatory: FDA 21CFR §177.2280; Canada DSL
Manuf./Distr ib.: Aldrich http://www.sigma aldrich.com; Fluka http://www.sigma aldrich.com; Monomer-Polymer & Dajac Labs http://www.monomerpolymer.com; Raschig; Rhodia HPCII http://www.rhodia hpcii.com

Phenylmercuricborate. See Phenylmercuric borate
Phenylmercuric acetate
CAS 62-38-4; EINECS/ELINCS 200-532-5
UN 1674 (DOT)
Synonyms: (Acetato) phenyl mercury; (Acetoxymercuri) benzene; Acetoxyphenylmercury; Mercuriphenyl acetate; Mercury, (acetato) phenyl-; Phenomercuric acetate; Phenylmercuric acetate; Phenylmercury acetate; PMA; PMAC; PMA S
Classification: Metallo-organic compd.
Empirical: C₈H₉HgO₂
Formula: C₈H₅HgOCCOCH₃
Properties: Wh. to cream prisms or clear sol'n.;
Chemical Component Cross-Reference

Phenylmercuric borate

**Classification:** Metallo-organic compd.; phenylmercuric salt

**Empirical:** C₆H₇BHgO₃

**Properties:** Wh. fine cryst. or grayish powd.; sl. sol. in alcohol, glycerin; very sl. sol. in water; insol. in ether; m.w. 339.71; m.p. 176-186 C dec.

**Toxicology:** ACGIH TLV/TWA 0.1 mg(Hg)/m³ (skin); LDLo (IV, rabbit) 5 mg/kg; poison by IV route; toxic by ingestion, inhalation, and skin absorption; irritant; causes burns; irritating to respiratory system; TSCA listed

**HMIS:** Health 3, Flammability 1, Reactivity 2

**Storage:** Light-sensitive

**Uses:** Antimicrobial, preservative, antibacterial, antifungal for pharmaceuticals, parenterals, ophthalmics, intramuscular injectables; spermicide; OTC drug active

---

Phenylmercuric nitrate

**Classification:** Metallo-organic compd.; phenylmercuric salt

**Empirical:** C₆H₅HgN0₃

**Properties:** Wh. fine cryst. or grayish powd.; sl. sol. in alcohol, glycerin; very sl. sol. in water; insol. in ether; m.w. 339.71; m.p. 176-186 C dec.

**Toxicology:** ACGIH TLV/TWA 0.1 mg(Hg)/m³ (skin); LDLo (IV, rabbit) 5 mg/kg; poison by IV route; toxic by ingestion, inhalation, and skin absorption; irritant; causes burns; irritating to respiratory system; TSCA listed

**HMIS:** Health 3, Flammability 1, Reactivity 2

**Storage:** Light-sensitive

**Uses:** Antimicrobial, preservative, antibacterial, antifungal for pharmaceuticals, parenterals, ophthalmics, intramuscular injectables; spermicide; OTC drug active
### Chemical Component Cross-Reference

**Features:** Its use in topical eye preps. and as an intravaginal contraceptive may cause concerns of mercurial poisoning  

**Use Level:** 0.001% (parenterals); 0.002-0.004% (ophthalmics)  

**Regulatory:** FDA approved for intramuscular injectables; USP/NF, BP, EP compliance

### Phenylmercury nitrate, basic

**CAS:** 8003-05-2  
**Synonyms:** Hydroxyphenyl-mercury compd. with nitrato-phenymercury (1:1); Merphenyl nitrate; (Nitrato-O)-phenymercury; Phemernite; Phen mercury nitrate  
**Empirical:** C₁₂H₁₁Hg₂NO₄  
**Formula:** C₆H₅HgO • C₆H₅HgNO₃  
**Properties:** Wh. fine cryst. or grayish powd.; mod. sol. in glycerol; sl. sol. in alcohol and water; insol. in ether; m.w. 634.40; m.p. 187-190 (dec.)  
**Toxicology:** ACGIH TLV/TWA 0.1 mg(Hg)/m³ (skin); LD₅₀ (IV, mouse) 0.027 mg/g, (subcut., rat) 56 mg/kg; highly toxic; toxic by ing., inh., and skin contact; poison by IV, subcut. routes; readily absorbed through skin; irritating to respiratory system; causes burns; neurologic hazard  
**Hazardous Decomp. Prods.:** Heated to decomp., emits very toxic fumes of Hg and NOₓ  
**Storage:** Light-sensitive  
**Uses:** Antimicrobial in pharmaceuticals; antiseptic; disinfectant  
**Manuf./Distrib.:** Aldrich  
  - [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com)

</table>
3-Phenylpropyl cinnamate
CAS 122-68-9; EINECS/ELINCS 204-565-6
FEMA 2894
Synonyms: Cinnamic acid, 3-phenylpropyl ester; Hydrocinnamyl cinnamate; 3-Phenyl-2-propenoic acid 3-phenylpropyl ester; Phenylpropyl cinnamate; 3-Phenylpropyl 3-phenyl-2-propenoate; 2-Propenoic acid, 3-phenyl-, 3-phenylpropyl ester
Empirical: C18H18O2
Properties: M.w. 266.36
Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenylpropyl formate. See 3-Phenylpropyl formate

3-Phenylpropyl formate
CAS 104-64-3; EINECS/ELINCS 203-222-8
FEMA 2895
Synonyms: Hydrocinnamyl formate; Hydrocinnamyl methanoate; Phenylpropyl formate; 3-Phenyl-1-propyl formate; β-Phenyl propyl formate
Empirical: C10H12O2
Properties: Colorless liq.; sol. in alcohol; insol. in water; m.w. 164.22; b.p. 238.00 C @ 760.00 mm; acid no. 1 max.
Toxicology: LD50 (oral, rat) 4090 mg/kg; mildly toxic by ing.; skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and fumes
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

3-Phenyl-1-propyl formate; β-Phenyl propyl formate. See 3-Phenylpropyl formate

3-Phenylpropyl hexanoate
CAS 6281-40-9
FEMA 2896
Synonyms: Hydrocinnamyl hexanoate
Empirical: C15H22O2
Properties: Sol. in alcohol; very sl. sol. in water; m.w. 220.31; dens. 0.980; b.p. 285 C; flash pt.
Phenyl propyl ketone. See Butyrophenone

β-Phenyl propyl 3-methyl butanoate. See 3-Phenylpropyl isovalerate

3-Phenylpropyl 2-methylpropanoate; 3-Phenylpropyl 2-methylpropionate. See 3-Phenylpropyl isobutyrate

3-Phenylpropyl 3-phenyl-2-propenoate. See 3-Phenylpropyl cinnamate

3-Phenylpropyl propanoate; Phenylpropyl propionate. See 3-Phenylpropyl propionate

3-Phenylpropyl propionate

CAS 122-74-7; EINECS/ELINCS 204-571-9

FEMA 2897

Synonyms: Benzene propanol, propanoate; Hydrocinnamyl propionate; 3-Phenylpropyl propanoate; Phenylpropyl propanoate; β-Phenylpropyl propionate

Empirical: C_{12}H_{16}O_2

Properties: M.w. 192.28

Toxicology: LD_{50} (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; skin irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 1, Flammability 1, Reactivity 0

Storage: Protect from sunlight

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

β-Phenylpropyl propionate. See 3-Phenylpropyl propionate

2-Phenylpropyltetrahydrofuran. See 2-(3-Phenylpropyl) tetrahydrofuran

2-(3-Phenylpropyl) tetrahydrofuran

CAS 3208-40-0; EINECS/ELINCS 221-715-6

FEMA 2898

Synonyms: 2-Hydrocinnamyl tetrahydrofuran; 2-Phenylpropyltetrahydrofuran

Empirical: C_{13}H_{18}O

Properties: Colorless to pale straw-yel. liq.; sweet, fruity aroma; very sl. sol. in water; m.w. 190.28; b.p. 107 n C (1 mm Hg); acid no. 1 max.; ref. index 1.511-1.516

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Phenyl salicylate

CAS 118-55-8; EINECS/ELINCS 204-259-2

FEMA 3960

Synonyms: 2-Hydroxybenzoic acid phenyl ester; Phenyl-2-hydroxybenzoate; Salol

Empirical: C_{13}H_{10}O_3

Formula: C_6H_4OHCO_2C_6H_5

Properties: Wh. cryst. powd.; faint aromatic odor and taste; sol. in alcohol, ether, chloroform, benzene, fixed or volatile oils, org. solvs.; sparingly sol. in water; m.w. 214.22; dens. 1.2614; m.p. 62 C; b.p. 172-173 C (12 mm); flash pt. > 110 C; absorbs light

Toxicology: LD_{50} (oral, rat) 3 g/kg, (IP, mouse) > 500 mg/kg; mod. toxic by ing.; irritant; possible sensitizer; possible teratogen, reproductive effector; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 1, Flammability 1, Reactivity 0

Storage: Protect from sunlight

Uses: Flavor for pharmaceuticals; drug coatings; medicine (analgesic, antipyretic, anti-inflammatory)

Features: Fruity flavor

Regulatory: FDA 21CFR §177.1010, 27CFR §21.65, 21.151; FEMA GRAS; Canada DSL

### Phenyltrimchlorosilane

**CAS**: 98-13-5; **EINECS/ELINCS**: 202-640-8

**UN**: 1804 (DOT)

**Synonyms**: Phenyltrimchlorosilane; Silane, phenylchlororosilane; Silane, trichlorophenylsilane; Silicon phenyl trichloride; Trichlorophenylsilane

**Empirical**: C₆H₅Cl₃Si

**Properties**: Colorless liq.; sol. in benzene, ether, perchloroethylene; hydrolyzed by water releasing hydrogen chloride; m.w. 211.55; dens. 1.321; vapor pressure 10 mm (75°C); b.p. 201°C; flash pt. 91°C; ref. index 1.5247 (20°C); sp. heat 0.24 cal/g/C

**Toxicology**: LD₅₀ (oral, rat) 2390 mg/kg, (IV, mouse) 100 mg/kg, (skin, rabbit) 890 mg/kg; LC₅₀ (inh., mouse, 2 h) 330 mg/m³; highly toxic; poison by inh., IV routes; mod. toxic by ing. and skin contact; corrosive; causes burns; lachrymator; irritating to skin, eyes, mucous membranes; readily absorbed thru skin; may be fatal if inhaled; harmful by ing., skin absorp.; inh. may cause spasm/inflamm./edema of larynx/bronchi, chem. pneumonitis, pulmonary edema; TSCA listed

**Precaution**: Flamm.; incompat. with strong oxidizing agents, strong acids, strong bases; may dec. on exposure to moist air or water; may dec. under fire conditions to form flamm./explosive mixts. in air

**Hazardous Decomp. Prods.**: Toxic fumes of CO, CO₂, silicon oxide, hydrogen chloride gas, formaldehyde; emits toxic fumes under fire conditions

**HMIS**: Health 3, Flammability 2, Reactivity 1

**Storage**: Store in cool, dry place; keep tightly closed; moisture-sensitive; store under nitrogen; keep away from heat, open flame

**Uses**: Surface modifier for pharmaceuticals

**Features**: Stable

**Regulatory**: Canada DSL

### Phenyltrimethicone

**CAS**: 2116-84-9; **EINECS/ELINCS**: 218-320-6

**Synonyms**: 1,1,5,5,5-Hexamethyl-3-phenyl-3-[(trimethylsilyl) oxy] trisiloxane; Methyl phenyl polysiloxane; Phenethyltris (trimethylsiloxy) silane; Phenyltris (trimethylsiloxy) silane; Phenyl trisiloxane siloxysilane; Polyphenylmethyl siloxane; Trisiloxane, 1,1,1,5,5,5-hexamethyl-3-phenyl-3-(trimethylsilyl) oxy)-; Tris (trimethylsiloxy) phenylsilane

**Classification**: Siloxane polymer

**Definition**: Phenyl substituted silicone fluid

**Empirical**: C₁₅H₃₂O₃Si₄

**Properties**: M.w. 372.76; dens. 0.97; vapor pressure 1 mm (105°C); m.p. < -60°C; b.p. 264-266°C; flash pt. 127°C; ref. index 1.459; surf. tens. 27.2 dynes/cm

**Toxicology**: LDLo (oral, rat) > 34,500 mg/kg; irritating to eyes, skin, respiratory system; TSCA listed

**HMIS**: Health 1, Flammability 1, Reactivity 0

**Storage**: Moisture-sensitive; keep under argon

**Uses**: Emollient, conditioner, film-former for pharmaceuticals; antiperspirants; oil-phase ingred.

**Regulatory**: FDA 21CFR §175.105, 175.300; Canada DSL

**Trade Names Containing**: Actiprime® 100

**Phenyltris (trimethylsiloxy) silane; Phenyl**...
tristtrimethyl siloxysilane. See Phenyltrimethicone

Philosopher's wool. See Zinc oxide

Phlogopite. See Mica

Phloroglucin; Phloroglucine; Phloroglucinol. See 1,3,5-Trihydroxybenzene

Phloxeine B. See D&C Red No. 28

Phosboric acid, 2-hydroxy-3-[3-(1-octadecylamino)propyl] dimethylammonio] propyl triester, trichloride. See Stearamidopropyl PG-dimonium chloride phosphate

Phosphate crosslinked starch. See Distarch phosphate

Phosphate, sodium hexametaphosphate. See Sodium hexametaphosphate

Phosphatides. See Phospholipids

Phosphatidylcholine CAS 97281-47-5

Synonyms: Phosphatidyl-N-trimethylethanolamine

Definition: Purified grade of lecithin containing no less than 95% of the phospholipid

Formula: $RCO–OCH_2CHOOCRCH_2OPOO–OCH_2CH_2N+(CH_3)_3$, where $RCO–$ rep. various naturally occurring fatty acids

Uses: Emulsifier, dispersant, wetting agent, penetrant, antioxidant for pharmaceuticals, liposomes; choline enrichment, carrier for dietetics, pharmaceuticals, encapsulation

Trade Names Containing: Anti-Irritant Liposomes; Centella Phytosome®; Escin/β-Sitosterol Phytosome®; Glycyrrhetic Acid Phytosome®; Thiosome (P) Vitamin A, C & E Liposomes

See also Lecithin

Phospholipin. See Phospholipids

Phosphonic acid, (1-hydroxyethylidene) bis-, tetraysodium salt. See Tetrasodium etidronate

Phosphoric acid CAS 7664-38-2; EINECS/ELINCS 231-633-2 UN 1805 (DOT); FEMA 2900; INS338

Synonyms: Orthophosphoric acid; Phosphoric acid, pure

Classification: Inorganic mineral acid
Chemical Component Cross-Reference

**Empirical:** $\text{H}_3\text{O}_4\text{P}$

**Formula:** $\text{H}_3\text{PO}_4$

**Properties:** Colorless liq. or rhombic crystals, odorless; sol. in water, alcohol; misc. with many org. solvs.; m.w. 97.99; dens. 1.70 (20/4 C); vapor pressure 0.0285 mm (20 C); m.p. 42.4 C; b.p. 158 C; starts to dec. above 200 C forming polyphosphoric acids

**Toxicology:** ACGIH TLV/TWA 1 mg/m³; STEL 3 mg/m³; LD50 (oral, rat) 1530 mg/kg, (skin, rabbit) 2740 mg/kg; mod. toxic by skin contact; human poison by ing.; corrosive irritant to eyes, skin, mucous membranes; systemic irritant by inh.; common air contaminant; TSCA listed

**Environmental:** Environmentally hazardous

**Precaution:** DOT: Corrosive material; strong acid; mixts. with nitromethane are explosive; incompat. with alkalis; corrosive to many metals; violent reaction possible with sodium tetrahydroborate

**Hazardous Decomp. Pros.:** Heated to decomp., emits toxic fumes of POx

**NFPA:** Health 3, Flammability 0, Reactivity 0

**Uses:** Pharmaceutic aid; acidifier, buffer in pharmaceuticals, parenterals, intramuscular injectables, orals, topicals, vaginals; dental cements and etchants; dil. as tonic, for treatment of nausea, vomiting

**Regulatory:** FDA 21CFR §73.85, 73.275, 131.144, 133.123, 133.124, 133.129, 133.169, 133.173, 133.178, 133.179, 163.110, 163.111, 163.112, 175.300, 177.2260, 178.1010, 178.3520, 182.1073, GRAS; USDA 9CFR §318.7.; Canada DSL; 381.147 (0.01% max. in lard, shortening, poultry fat); FEMA GRAS; SARA reportable; Japan approved; Europe listed; UK approved; FDA approved for parenterals, intramuscular injectables, orals, topicals, vaginals; USP/NF, BP, EP compliance

Phosphorus oxychloride
CAS 10025-87-3; EINECS/ELINCS 233-046-7
UN 1810 (DOT)
Synonyms: Phosphorus oxytrichloride; Phosphoryl chloride; Phosphoryl trichloride; Trichlorophosphine oxide; Trichlorophosphorous oxide

Empirical: Cl₃OP
Formula: POCl₃
Properties: Colorless fuming liq., pungent odor; dec. by water and alcohol with evolution of heat; m.w. 153.35; dens. 1.675 (20/20 C); m.p. 1.2 C; b.p. 107.2 C; dens. 1.675 (20C); ref. index 1.461 (20C)
Toxicology: ACGIH TLV/TWA 0.1 ppm; LD50 (oral, rat) 380 mg/kg; LC50 (inh., rat, 4 h) 32 ppm; toxic by ing. and inh.; strong irritant to skin and tissue; TSCA listed
Precaution: DOT: Corrosive material; dec. by water and alcohol with evolution of heat; potentially explosive reaction with water evolving HCl and phosphate; other explosive/violent reactions possible; incomp. with CS₂, dimethyl formamide, zinc, etc.
Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of Cl⁻ and PO₅
Storage: Moisture-sensitive
Uses: Mfg. of pharmaceuticals
Regulatory: FDA 21CFR §172.892; Canada DSL
Phosphorus oxytrichloride; Phosphoryl chloride; Phosphoryl trichloride. See Phosphorus oxychloride

Phthalic acid, diethyl ester. See Diethyl phthalate
Phthalic acid, dioctyl ester. See n-Dioctyl phthalate
o-Phthalic imide. See Phthalimide
Phthalimide
CAS 85-41-6
Synonyms: 1,3-Isindole-1,3-dione; Isoindole-1,3-dione; 1,3-Isoindolinedione; o-Phthalic imide
Empirical: C₈H₅NO₂
Properties: Wh. to lt. tan powd. or flakes; sol. in
Hazardous Decomp. Prods.: Heat to decomp., emits toxic fumes of NOx.

Toxicology:
- Hazardous Decomp. Prods.: Hydrogen
- Hazardous Decomp. Prods.: Reproductive effector
- Precautions against dust formation: Take precautions against dust formation; avoid static discharge if dust formation occurs
- Storage: Refrigerate
- Uses: Colorant for contact lenses

Regulatory:
- FDA 21 CFR §73.3124, 178.3297; exempt from certification, permanently listed for use in medical devices; OSHA nonhazardous; Canada DSL

Manuf./Distrib.: Aceto [Link]

Phthalo green. See Phthalocyanine green
Phthalol. See Diethyl phthalate
Phylloquinone; α-Phylloquinone; trans-Phylloquinone; Phyloquinone. See Vitamin K1
Phytocalcium. See Calcium phytoate
Phytodione. See Vitamin K1
Phytoglycogen. See Glycogen
Phytomenadione; Phytonadione (INCI): 3-Phytomenadione. See Vitamin K1
Piazone. See Pyrazine
PIB. See Polysobutene
Picea glauca; Picea mariana; Picea oil. See Spruce oil
2-Picoline. See α-Picoline
3-Picoline. See β-Picoline
4-Picoline. See γ-Picoline

α-Picoline
CAS 109-06-8; EINECS/ELINCS 203-643-7
UN 2924 (DOT)
Synonyms: 2-Methylpyridine; α-Methylpyridine; 2-Picoline; o-Picoline
Empirical: C6H7N
Formula: C6H4N(CH3)
Properties: Colorless liq., strong unpleasant odor; very sol. in water; misc. with alcohol, ether, oxygenated solvs.; m.w. 93.13; dens. 0.943; vapor pressure 10 mm Hg (24.4 C); m.p. -70 C; b.p. 128-129 C; flash pt. 26 C; ref. index 1.500
Toxicology:
- LD50 (oral, rat) > 5 mg/kg; nonirritating to eyes, skin; mutagen; TSCA listed
Precaution: Probably combustible; airborne dust may be an explosion hazard; avoid dust formation; take precautions against static discharge if dust formation occurs

Hazardous Decomp. Prods.: Hydrogen chloride can be formed in fire
Storage: Refrigerate
Uses: Colorant for contact lenses
Regulatory: FDA 21 CFR §73.3124, 178.3297; exempt from certification, permanently listed for use in medical devices; OSHA nonhazardous; Canada DSL

Manuf./Distrib.: Aceto [Link]

Phthalocyanine green
CAS 1328-53-6; EINECS/ELINCS 215-524-7
Synonyms: Brilliant green phthalocyanine; CI 74260; Copper phthalocyanine green; Cyanine green toner; Pacific green no. 6491; Phthalocyanine brilliant green; Phthalo green; Pigment green 7; Pigment green phthalocyanine; Polychloro copper phthalocyanine; Thalo green No. 1
Classification: Phthalocyanine color
Empirical: C32Cl16CuN8
Properties: Grn. powd.; odorless; sol. in conc. H2SO4; sol. (mg/ml): < 1 mg in water, DMSO, 95% ethanol, acetone (21 C); m.w. 1127.21
Toxicology:
- LD50 (oral, mouse) 5 g/kg, (IP, mouse) 1175 mg/kg; mildly toxic by IP route; mildly toxic by ing.; experimental teratogen, reproductive effector; TSCA listed
- Precaution: Flammable exposed to heat and flame; mixts. with hydrogen peroxide + iron

Manuf./Distrib.: Aceto [Link]
Chemical Component Cross-Reference

(II) sulfate + sulfuric acid may ignite and explode

Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of NOx

Uses: Organic intermediate for pharmaceuticals

Regulatory: Canada DSL

β-Picoline
CAS 108-99-6; EINECS/ELINCS 203-636-9
UN 2924 (DOT)

Synonyms: 3-Methylpyridine; 3-Picoline; m-Picoline; Pyridine, 3-methyl-

Empirical: C₆H₇N

Properties: Colorless liq.; sweetish, not unpleasant odor; sol. in water, alcohol, ether; m.w. 93.13; dens. 0.957; f.p. -18 C; b.p. 144 C; flash pt. 36 C; ref. index 1.5050

Toxicology: LCLo (inh., rat, 2 h) 8700 ppm; LD₅₀ (oral, rat) 400 mg/kg, (IP, rat) 150 mg/kg; poison by IV and IP routes; mod. toxic by ing.; mildly toxic by inh.; severe primary irritant to eyes and skin; TSCA listed

Precaution: Flamm. exposed to heat, flames, oxidizers

Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of NOx

Uses: Solvent in synthesis of pharmaceuticals; raw material in the production of vitamin B₃

Regulatory: Canada DSL

m-Picoline. See β-Picoline

α-Picoline. See α-Picoline

γ-Picoline. See γ-Picoline

o-Picoline. See α-Picoline

3-Picoline-N-oxide. See 3-Methylpyridine-1-oxide

Picolinic acid
CAS 98-98-6; EINECS/ELINCS 202-719-7

Synonyms: 2-Carboxypyridine; 2-Pyridinecarboxylic acid; Pyridine-2-carboxylic acid; α-Pyridinecarboxylic acid; o-Pyridinecarboxylic acid

Classification: 6-membered aromatic heterocyclic

Empirical: C₆H₅NO₂

Properties: Red needles; very sol. in glac. acetic acid; sol. in hot water, alcohol; pract. insol. in ether, chloroform, CS₂; m.w. 123.12; m.p. 139-142 C, sublimes

Toxicology: LD₅₀ (IP, mouse) 360 mg/kg, (IV, mouse) 487 mg/kg; poison by ing. and IP routes; mod. toxic by IV route; irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of NOx

Uses: Intermediate for the production of pharmaceuticals (local anesthetics) and metal salts that are used as nutritional supplements

Regulatory: Canada DSL

3-Picolinic acid. See Nicotinic acid
Picrasma excelsa. See Quassia

Pimenta oil. See Allspice (Pimenta officinalis) leaf oil
Pimenta (Pimenta officinalis) leaf oil
CAS 8016-45-3; 977157-17-7
FEMA 2901
Synonyms: Pimenta leaf oil; Pimenta officinalis; Pimenta officinalis leaf oil; Pimento leaf oil
Definition: Oil form steam distillation of Pimenta officinalis, contg. mainly eugenol
Properties: Pale yel. to brn. liq.; spicy odor; sol. in fixed oils, propylene glycol; insol. in glycerin, min. oil; dens. 1.037-1.050; ref. index 1.531 (20 C)
Toxicology: LD50 (oral, rat) 3600 mg/kg; mod. toxic by ing.; severe skin irritant
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS

Synonyms: 6,6-Dimethyl-2-methylenebicyclo[3.1.1] heptane; 6,6-Dimethyl-2-methylene[3.1.1] heptane; Nopinene; Nopinene; 2(10)-Pinene; Pseudopinene; Pseudopinene

Classification: cyclic terpene hydrocarbon

Definition: Most commonly avail. as (-) isomer
### Chemical Component Cross-Reference

**Empirical:** C_{10}H_{16}

**Properties:** Colorless liq., terpene odor; sol. in alcohol, chloroform, ether, most org. solvs.; insol. in water; m.w. 136.24; dens. 0.859; m.p. -61 C; b.p. 165-167 C; soften. pt. 112-118 C; flash pt. 32 C; ref. index 1.4763; tenacity 2 hrs. on blotter

**Toxicology:** LD50 (oral, rat) 4700 mg/kg; mildly toxic by ing.; irritating to eyes, skin, respiratory system; TSCA listed

**Precaution:** Flammable; fire risk

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Store in cool, dry place in tightly sealed containers, protected from heat, light

**Uses:** Synthetic flavor for pharmaceuticals; moisture barrier on soft gelatin capsules and on powders of ascorbic acid or its salts

**Use Level:** 1-10%

**Regulatory:** FDA 21CFR §172.280, 172.515, 175.300, 175.320; FEMA GRAS; Canada DSL

**Uses:** Natural flavor for pharmaceuticals  
**Regulatory:** FDA 21CFR §172.510; FEMA GRAS

### Pine (Pinus pumilio) needle oil

**CAS:** 8000-26-8  
**UN:** NA 1993 (DOT); FEMA 2904  
**Synonyms:** Dwarf pine needle oil; Knee pine oil; Mountain pine oil; Pine needle oil; Dwarf, oil; Pine needle oil; Pine needle oil, dwarf; Pine montana oil; Pinus mugo oil; Pinus pumilio oil; Siberian fir oil  
**Definition:** Oil from steam distillation of needles of Pinus pumilio  
**Properties:** Colorless to pale yel. liq.; pleasant odor; bitter pungent taste; very sol. in chloroform, ether; sol. in 5-8 vols. 90% alcohol; insol. in water; dens. 0.853-0.871; ref. index 1.475 (20 C)  
**Toxicology:** LD50 (oral, rat) 6880 mg/kg; mildly toxic by ing.; primary irritant; a human skin irritant; TSCA listed  
**Precaution:** Flammable exposed to heat or flame; can react vigorously with oxidizers  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**HMIS:** Health 1, Flammability 2, Reactivity 0  
**Storage:** Keep cool, well closed; protect from light  
**Uses:** Natural flavor and fragrance in pharmaceuticals, topicals

### Pine (Pinus sylvestris) needle oil

**CAS:** 8000-26-8  
**FEMA:** 2906  
**Synonyms:** Fir-wood oil; Pine needle oil, Scotch; Pine needle oil, Scotch type; Pine needle, Scotch, oil; Scotch fir oil; Scotch pine needle oil  
**Definition:** Volatile oil from needles and twigs from Pinus sylvestris, contg. dipentene, pinene, sylvestrene, cadinene, bornyl acetate  
**Properties:** Ylsh. liq.; sol. in fixed oils, min. oil, 10 vol. 90% alcohol; sl. sol. in propylene glycol; insol. in water, glycerin; dens. 0.884-0.886 (15/15 C); b.p. 200-220 C; flash pt. (CC) 172 F; ref. index 1.473 (20 C)  
**Toxicology:** LD50 (oral, rat) 6880 mg/kg; mildly toxic by ing.; mild irritant; weak allergen; TSCA listed  
**Precaution:** Combustible  
**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes  
**HMIS:** Health 1, Flammability 2, Reactivity 0  
**Storage:** Keep cool, well closed; protect from light

Piperin.  See Piperine

Piperine  CAS 94-62-2; EINECS/ELINCS 202-348-0
FEMA 2009
Synonyms: 1-[5-(1,3-Benzodioxol-5-yl)-1-oxo-2,4-pentadienyl] piperidine (E,E)-; 1,3-Benzodioxol-5-yl-oxo-2,4-pentadienyl piperine; 5-Benzo [1,3] dioxol-5-yl-1-piperidin-1-yl-penta-2,4-dien-1-one; Piperin; 1-Piperoylpiperidine
Empirical: C17H19NO3
Properties: Prisms, tasteless with burning aftertaste; sol. in benzene, acetic acid; 1 g sol. in 15 ml alcohol, 36 ml ether; pract. insol. in water, petrol. ether; m.w. 285.33; m.p. 130 C
Toxicology: LD50 (oral, rat) 514 mg/kg, (IP, rat) 34 mg/kg; toxic by ing. and IP routes; experimental teratogen, reproductive effects; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Piperitone  α-Piperitone.  See d-Piperitone

d-Piperitone  CAS 89-81-6; 6091-50-5 (α-); EINECS/ELINCS 201-942-7
FEMA 2910
Synonyms: 3-Carvomenthene; 4-Isopropyl-1-methyl-1-cyclohexen-3-one; 6-Isopropyl-3-methylcyclohex-2-ene; 1-p-Menth-3-one; p-Menth-1-en-3-one; 1-Methyl-4-isopropyl-1-cyclohexen-3-one; 3-Methyl-6-(1-methylethyl)-2-cyclohexen-1-one; Piperitone; α-Piperitone
Empirical: C10H16O
Properties: Colorless liq., camphor-like odor, sharp minty flavor; sol. in alcohol; insol. in water; m.w. 152.23; dens. 0.926 (20/4 C); b.p. 233 C; sp.gr.0.9344; m.p. -20.2 C; b.p. 245 C (0 mm); flash pt. (CC) 98 C; ref. index 1.4848;
Tenacity 12 hrs. on blotter
Toxicology: LD50 (oral, rat) 2100 mg/kg; mod. toxic by ing.; skin irritant; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Store in cool, dry place in tightly sealed containers, protected from heat and light
Uses: Synthetic flavor for pharmaceuticals
Features: Cherry, strawberry-like flavor
Use Level: < 2%
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia; Canada DSL; Japan ENCS (no. 5-513); Philippines PICCS
Piperonyl aldehyde. See Heliotropine

Piperonyl isobutyrate
CAS 5461-08-5; EINECS/ELINCS 226-745-3
FEMA 2913
Synonyms: 1,3-Benzodioxol-5-yl methyl isobutyrate; Heliotropyl isobutyrate; Heliotropin isobutyrate; 3,4-Methylenedioxybenzyl isobutyrate; Piperonyl isobutyrate; Piperonyl 2-methyl propanoate
Empirical: C_{12}H_{14}O_{4}
Properties: Colorless oily liq., fruity berry odor; sol. in alcohol; insol. in water; m.w. 222.24; dens. 1.154; b.p. 91-92 °C (0.005 mm); flash pt. > 230 °F
Uses: Synthetic flavor for pharmaceuticals
Features: Berry, jam-like flavor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Piperonyl isobutyrate; Piperonyl 2-methyl propanoate. See Piperonyl isobutyrate

1-Piperonylpiperidine. See Piperine

PIPP. See p-Isopropylphenol

Piroctone olamine
CAS 68890-66-4; EINECS/ELINCS 272-574-2
Synonyms: 1-Hydroxy-4-methyl-6-(2,4,4-trimethylpentyl)-2-(1H)-pyridinone, 2-aminoethanol salt; 1-Hydroxy-4-methyl-6-(2,4,4 trimethylpentyl)pyridin-2-(1H)-one, compd. with 2-aminoethanol (1:1)
Classification: Amine salt
Empirical: C_{14}H_{23}NO_2 • C_{2}H_{7}NO
Properties: Wh. to ylsh. powd.; sol. in aq. alcoholic sol'ns., surfactants; m.p. 135 °C (dec.)
Toxicology: Irritating to skin, respiratory system; risk of serious eye damage
Uses: Preservative
Regulatory: Canada DSL
Trade Names: Octopirox®
Pivalic acid chloride; Pivaloyl chloride. See Pivaloyl chloride

†=pharmaceutical grade

Pivaloyl chloride
Pivaloyl chloride
CAS 3282-30-2; EINECS/ELINCS 221-921-6
UN 2438 (DOT)
Synonyms: 2,2-Dimethylpropanoyl chloride; 2,2-Dimethylpropionyl chloride; Neopantanoyl chloride; Pivalic acid chloride; Pivaloyl chloride; Pivalyl chloride; Trimethylacetyl chloride
Empirical: C_{5}H_{10}ClO
Formula: (CH_{3})_{3}CCOCl
Properties: Liq.; sol. in ether; hydrolyzed by water and alcohol; m.w. 120.58; dens. 0.979; b.p. 105-106 °C; flash pt. 19 °C; ref. index 1.4120
Toxicology: Toxic; corrosive irritant to eyes, skin, mucous membranes; lachrymator; TSCA listed
Precaution: Liq. is flamm. exposed to heat, flame, or oxidizers; reacts violently with water
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Cl^–
Storage: Hygroscopic
Uses: Coupling agent in mfg. of antibiotics

†=pharmaceutical grade
Polacriline potassium
CAS 39394-76-5
Synonyms: Methacrylic acid polymer with divinylbenzene, potassium salt
Definition: Potassium salt of a low crosslinked carboxylic cation-exchange resin prepared from methacrylic acid and divinylbenzene
Properties: Wh. to off-wh. free-flowing powd., odorless to faint odor, tasteless; pract. insol. in water and in most liqs.
Uses: Tablet disintegrant in pharmaceutical orals
Regulatory: FDA approved for orals; NF compliance

Polianthes tuberosa: Polianthes tuberosa oil.
See Tuberose (Polianthes tuberosa) oil

Policosanol. See Octacosanol

Polidronium chloride
CAS 75345-27-6
Empirical: C₁₆H₃₆N₂O₆
Uses: Antistat, film-former for pharmaceuticals; preservative in soft lens prods.
Trade Names Containing: ONAMER® M

Poloxamer 105
CAS 9003-11-6 (generic)
Classification: Polyoxymethylene, polyoxypropylene block polymer
Formula: HO(CH₂CH₂O)x(CCH₃H₂CH₂O)y(CH₂CH₂O)₂H, avg. x = 11, y = 16, z = 11
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Surfactant for pharmaceuticals; emulsifier, wetting agent, solubilizer, stabilizer in flavor concs.
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 108
CAS 9003-11-6 (generic)
Classification: Polyoxymethylene, polyoxypropylene block polymer
Formula: HO(CH₂CH₂O)x(CCH₃H₂CH₂O)y(CH₂CH₂O)₂H, avg. x = 46, y = 16, z = 46
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Surfactant, emulsifier, wetting agent, solubilizer for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 123
CAS 9003-11-6 (generic)
Classification: Polyoxymethylene, polyoxypropylene block polymer
Formula: HO(CH₂CH₂O)x(CCH₃H₂CH₂O)y(CH₂CH₂O)₂H, avg. x = 7, y = 21, z = 7
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Surfactant, wetting agent, emulsifier, solubilizer for pharmaceuticals
Regulatory: FDA 21CFR §176.210
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Handbook of Pharmaceutical Additives, Third Edition
1890
Poloxamer 124
CAS 9003-11-6 (generic)
Classification: Polyoxethylene, polyoxypropylene block polymer
Formula: \[ \text{HO(CH}_2\text{CH}_2\text{O})_x\text{(CH}_3\text{CH}_2\text{O})_y\text{(CH}_2\text{CH}_2\text{O})_z\text{H}, \quad \text{avg. } x = 11, y = 21, z = 11 \]
Properties: Colorless liq., mild odor; sol. in water, alcohol, IPA, propylene glycol, xylene; m.w. 2090-2360; m.p. 16 C; pH 5.0-7.5 (1 in 40); nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Surfactant, emulsifier, wetting agent for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Pluronic® L44NF; Synperonic® PE/L44

Poloxamer 181
CAS 9003-11-6 (generic); 53637-25-5
Classification: Polyoxethylene, polyoxypropylene block polymer
Formula: \[ \text{HO(CH}_2\text{CH}_2\text{O})_x\text{(CH}_3\text{CH}_2\text{O})_y\text{(CH}_2\text{CH}_2\text{O})_z\text{H}, \quad \text{avg. } x = 3, y = 30, z = 3 \]
Properties: Nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Surfactant, emulsifier in pharmaceuticals; emulsifier, solubilizer, wetting agent, stabilizer in flavor concs.
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Synperonic® PE/L61

Poloxamer 184
CAS 9003-11-6 (generic)
Classification: Polyoxethylene, polyoxypropylene block polymer
Formula: \[ \text{HO(CH}_2\text{CH}_2\text{O})_x\text{(CH}_3\text{CH}_2\text{O})_y\text{(CH}_2\text{CH}_2\text{O})_z\text{H}, \quad \text{avg. } x = 13, y = 30, z = 13 \]
Properties: Dens. 1.018; flash pt. > 110 C; nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names Containing: Lubrajel® WA

Poloxamer 185
CAS 9003-11-6 (generic)
Classification: Polyoxethylene, polyoxypropylene block polymer
Formula: \[ \text{HO(CH}_2\text{CH}_2\text{O})_x\text{(CH}_3\text{CH}_2\text{O})_y\text{(CH}_2\text{CH}_2\text{O})_z\text{H}, \quad \text{avg. } x = 19, y = 30, z = 19 \]
Properties: Nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg;
Chemical Component Cross-Reference

†=pharmaceutical grade

Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 188
CAS 9003-11-6 (generic)
Synonyms: Poloxalene
Classification: Polyoxyethylene, polyoxypropylene block polymer

Formula: 
\[ \text{HO(CH}_2\text{CH}_2\text{O)}_x\text{(CC}_3\text{H}_3\text{HCH}_2\text{O)}_y\text{(CH}_2\text{CH}_2\text{O)}_z\text{H} \]
avg. \( x = 75 \), \( y = 30 \), \( z = 75 \)

Properties: Whh. flakeable solid, nearly odorless; sol. in water, alcohol; m.w. 3850; m.p. 50 C min.; cloud pt. > 100 C (10% aq.); pH 5-7.5 (1 in 40); nonionic

Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed

Uses: Surfactant, emulsifier, solubilizer, wetting agent, stabilizer in pharmaceuticals, intravenous, orals

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Synperonic® PE/L81

Poloxamer 197
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer

Formula: 
\[ \text{HO(CH}_2\text{CH}_2\text{O)}_x\text{(CC}_3\text{H}_3\text{HCH}_2\text{O)}_y\text{(CH}_2\text{CH}_2\text{O)}_z\text{H} \]
avg. \( x = 52 \), \( y = 35 \), \( z = 52 \)

Properties: Nonionic

Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed

Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 234
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer

Formula: 
\[ \text{HO(CH}_2\text{CH}_2\text{O)}_x\text{(CC}_3\text{H}_3\text{HCH}_2\text{O)}_y\text{(CH}_2\text{CH}_2\text{O)}_z\text{H} \]
avg. \( x = 22 \), \( y = 39 \), \( z = 22 \)

Properties: Nonionic

Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed

Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 231
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer

Empirical: \( (\text{C}_3\text{H}_7\text{O} \cdot \text{C}_2\text{H}_4\text{O})_x \)

Formula: 
\[ \text{HO(CH}_2\text{CH}_2\text{O)}_x\text{(CC}_3\text{H}_3\text{HCH}_2\text{O)}_y\text{(CH}_2\text{CH}_2\text{O)}_z\text{H} \]
avg. \( x = 6 \), \( y = 39 \), \( z = 6 \)

Properties: Nonionic

Toxicology: LD50 (oral, rat) 2300 mg/kg; (IP, rat) 1140 mg/kg; mod. toxic by ing., IP route; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Synperonic® PE/L81
### Poloxamer 235

**CAS**: 9003-11-6 (generic)<br>
**Classification**: Polyoxyethylene, polyoxypropylene block polymer<br>
**Formula**: \( \text{HO(\(\text{CH}_2\text{CH}_2\text{O}\)\(_x\)(\(\text{CCH}_3\text{HCH}_2\text{O}\)\(_y\)(\(\text{CH}_2\text{CH}_2\text{O}\)\(_z\)\text{H, avg. } x = 27, y = 39, z = 27\)

**Properties**: Nonionic<br>
**Toxicology**: LD\(_{50}\) (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed<br>
**Uses**: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.<br>
**Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium)<br>
**Trade Names**: Synperonic® PE/P85

### Poloxamer 237

**CAS**: 9003-11-6 (generic)<br>
**Classification**: Polyoxyethylene, polyoxypropylene block polymer<br>
**Formula**: \( \text{HO(\(\text{CH}_2\text{CH}_2\text{O}\)\(_x\)(\(\text{CCH}_3\text{HCH}_2\text{O}\)\(_y\)(\(\text{CH}_2\text{CH}_2\text{O}\)\(_z\)\text{H, avg. } x = 62, y = 39, z = 62\)

**Properties**: Wh. prilled or cast solid, odorless to mild odor; sol. in water, alcohol; sparingly sol. in IPA, xylene; m.w. 6840-8830; m.p. 49 C; pH 5.0-7.5 (1 in 40); nonionic<br>
**Toxicology**: LD\(_{50}\) (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed<br>
**Uses**: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.<br>
**Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium); Spectrum Quality Prods.† [http://www.spectrumchemical.com](http://www.spectrumchemical.com)<br>
**Trade Names**: Pluronic® F87NF; Synperonic® PE/F87

### Poloxamer 238

**CAS**: 9003-11-6 (generic)<br>
**Classification**: Polyoxyethylene, polyoxypropylene block polymer<br>
**Formula**: \( \text{HO(\(\text{CH}_2\text{CH}_2\text{O}\)\(_x\)(\(\text{CCH}_3\text{HCH}_2\text{O}\)\(_y\)(\(\text{CH}_2\text{CH}_2\text{O}\)\(_z\)\text{H, avg. } x = 10, y = 47, z = 10\)

**Properties**: Nonionic<br>
**Toxicology**: LD\(_{50}\) (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed<br>
**Uses**: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.<br>
**Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium); Spectrum Quality Prods.† [http://www.spectrumchemical.com](http://www.spectrumchemical.com)<br>
**Trade Names**: Pluronic® F87NF; Synperonic® PE/F87

### Poloxamer 282

**CAS**: 9003-11-6 (generic)<br>
**Classification**: Polyoxyethylene, polyoxypropylene block polymer<br>
**Formula**: \( \text{HO(\(\text{CH}_2\text{CH}_2\text{O}\)\(_x\)(\(\text{CCH}_3\text{HCH}_2\text{O}\)\(_y\)(\(\text{CH}_2\text{CH}_2\text{O}\)\(_z\)\text{H, avg. } x = 21, y = 47, z = 21\)

**Properties**: Nonionic<br>
**Toxicology**: LD\(_{50}\) (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed<br>
**Uses**: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.<br>
**Manuf./Distrib.**: Aldrich [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Fluka [http://www.sigma-aldrich.com](http://www.sigma-aldrich.com); Sigma [http://www.sigma-aldrich.com/belgium](http://www.sigma-aldrich.com/belgium); Spectrum Quality Prods.† [http://www.spectrumchemical.com](http://www.spectrumchemical.com)<br>
**Trade Names**: Pluronic® F87NF; Synperonic® PE/F87

### Poloxamer 284

**CAS**: 9003-11-6 (generic)<br>
**Classification**: Polyoxyethylene, polyoxypropylene block polymer<br>
**Formula**: \( \text{HO(\(\text{CH}_2\text{CH}_2\text{O}\)\(_x\)(\(\text{CCH}_3\text{HCH}_2\text{O}\)\(_y\)(\(\text{CH}_2\text{CH}_2\text{O}\)\(_z\)\text{H, avg. } x = 21, y = 47, z = 21\)

**Properties**: Nonionic<br>
**Toxicology**: LD\(_{50}\) (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed<br>
**Uses**: Emulsifier, solubilizer, wetting agent in...}
Chemical Component Cross-Reference

pharmaceuticals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 288
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer
Formula:
\[
\text{HO(CH}_2\text{CH}_2\text{O})_x(C\text{CH}_3\text{HCH}_2\text{O})_y(C\text{CH}_2\text{CH}_2\text{O})_z\text{H},
\text{avg. } x = 122, y = 47, z = 122
\]
Properties: Nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 331
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer
Formula:
\[
\text{HO(CH}_2\text{CH}_2\text{O})_x(C\text{CH}_3\text{HCH}_2\text{O})_y(C\text{CH}_2\text{CH}_2\text{O})_z\text{H},
\text{avg. } x = 7, y = 54, z = 7
\]
Properties: Colorless liq.; sol. in alcohol; very sl. sol. in water; m.w. 3800; dens. 1.018 (25/25 C); visc. 756 cp; cloud pt. 11 C (10% aq.); nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and irritating fumes
Uses: Surfactant, emulsifier, solubilizer, wetting agent in pharmaceuticals, orals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 333
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer
Formula:
\[
\text{HO(CH}_2\text{CH}_2\text{O})_x(C\text{CH}_3\text{HCH}_2\text{O})_y(C\text{CH}_2\text{CH}_2\text{O})_z\text{H},
\text{avg. } x = 20, y = 54, z = 20
\]
Properties: Nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Poloxamer 334
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer
Formula:
\[
\text{HO(CH}_2\text{CH}_2\text{O})_x(C\text{CH}_3\text{HCH}_2\text{O})_y(C\text{CH}_2\text{CH}_2\text{O})_z\text{H},
\text{avg. } x = 31, y = 54, z = 31
\]
Properties: Nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Pluronic® F108NF; Synperonic® PE/L121

Poloxamer 401
CAS 9003-11-6 (generic)
Classification: Polyoxylene, polyoxypropylene block polymer
Formula: HO(CH₂CH₂O)x(CCH₃HCH₂O)y(CH₂CH₂O)zH, avg. x = 6, y = 67, z = 6
Properties: Nonionic
Toxicology: LD₅₀ (oral, rat) 2300 mg/kg; moderately toxic by ingestion,
Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium
Trade Names: Synperonic® PE/L121
Poloxamer 407
CAS 9003-11-6 (generic)
Classification: Polyoxyethylene, polyoxypropylene block polymer
Formula: 
\[ \text{HO(CH}_2\text{CH}_2\text{O})_x(\text{CCH}_3\text{HCH}_2\text{O})_y(\text{CH}_2\text{CH}_2\text{O})_z\text{H}, \]
\[ \text{avg. } x = 98, \text{ } y = 67, \text{ } z = 98 \]
Properties: Wh. prilled or cast solid, odorless to mild odor; sol. in water and alcohol; m.w. 9840-14,600; m.p. \( \approx 56 \) C; pH 5.0-7.5 (1 in 40); nonionic
Toxicology: LD50 (oral, rat) 2300 mg/kg; moderately toxic by ingestion, intraperitoneal route; TSCA listed
Uses: Emulsifier, solubilizer, wetting agent in pharmaceuticals; solubilizer, stabilizer in flavor concs.
Trade Names: Lutrol® F 127; Lutrol® F micro 127; Lutrol® F micro 68; Pluronic® F127NF; Synperonic® PE/F127

Poloxamine 304
CAS 11111-34-5 (generic)
Definition: Polyoxyethylene, polyoxypropylene block polymer of ethylene diamine
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, thickener, wetting agent, dispersant, solubilizer, stabilizer for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
Trade Names: Tetronic® 304
See also EO/PO ethylenediamine block copolymer

Poloxamine 504
CAS 11111-34-5 (generic)
Definition: Polyoxyethylene, polyoxypropylene block polymer of ethylene diamine
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, thickener, wetting agent, dispersant, solubilizer, stabilizer for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
Trade Names: Tetronic® 504
See also EO/PO ethylenediamine block copolymer

Poloxamine 701
CAS 11111-34-5 (generic)
Definition: Polyoxyethylene, polyoxypropylene block polymer of ethylene diamine
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, thickener, wetting agent, dispersant, solubilizer, stabilizer for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
Trade Names: Synperonic® T/701; Tetronic® 701
See also EO/PO ethylenediamine block copolymer

Poloxamine 702
CAS 11111-34-5 (generic)
Definition: Polyoxyethylene, polyoxypropylene block polymer of ethylene diamine
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, thickener, wetting agent, dispersant, solubilizer, stabilizer for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
Trade Names: Synperonic® T/702
See also EO/PO ethylenediamine block copolymer

Poloxamine 704
CAS 11111-34-5 (generic)
Definition: Polyoxyethylene, polyoxypropylene block polymer of ethylene diamine
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, thickener, wetting agent, dispersant, solubilizer, stabilizer for pharmaceuticals
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com
Trade Names: Synperonic® T/704
See also EO/PO ethylenediamine block copolymer

Poloxamine 707
CAS 11111-34-5 (generic)
Definition: Polyoxyethylene, polyoxypropylene

**dispersant, solubilizer, stabilizer for pharmaceuticals**

Manuf./Distrib.: Aldrich [http://www.sigma-aldrich.com]

See also EO/PO ethylenediamine block copolymer

Poly (N-acetyl-D-glucosamine). See Chitin

Polyacrylamide

CAS 9003-05-8

Synonyms: Acrylamide homopolymer; Acrylamide, polymers; PAA; 2-Propanamide, homopolymer

Definition: Polyamide of acrylic monomers contg. not more than 0.2% acrylamide monomer

Empirical: \((C_3H_5NO)_x\)

Formula: \([\text{CH}_2\text{CHCONH}_2]^x\)

Properties: Wh. solid; water-sol. high polymer; m.w. 10,000-18,000,000; dens. 1.302

Toxicology: LD50 (oral, mouse) 12,950 mg/kg, (IP, rat) 3600 mg/kg; mod. toxic by IP route; low toxicity by ing.; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Storage: Hygroscopic

Uses: Film-former in imprinting gelatin capsules; ingred. in antibiotic gels

Regulatory: FDA 21CFR §172.255, 173.10, 173.315 (10 ppm in wash water), 175.105, 176.170, 176.180; Canada DSL

Trade Names: Synthalen® K; Synthalen® M

Trade Names Containing: Sepigel™ 305

Poly (acrylamide-sodium acrylate). See Acrylamide/sodium acrylate copolymer

Polyacrylate. See Polyacrylic acid

Polyacrylic acid

CAS 9003-01-4 (generic)
Chemical Component Cross-Reference

Polyalkyleneoxide modified polydimethylsiloxane
CAS 68440-66-4
Uses: Surfactant, antifoam, dispersant, emulsifier, leveling agent, flow control agent, lubricant, slip agent for pharmaceuticals
Regulatory: Canada DSL
Trade Names: Silwet® L-7500
Trade Names Containing: Sag 471; Silwet® L-7602

Polyamide
CAS 9012-24-2; 25038-54-4
Synonyms: Nylon
Classification: Polymer
Definition: A high m.w. polymer in which amide linkages (-CONH) occur along the molecular chain; may be either natural or synthetic; natural polyamides include casein, soybean and peanut proteins, zein; synthetic polyamides typified by various nylon
Empirical: (C₆H₁₁NO)x
Properties: M.w. 22,000-45,000; dens. 1.20; m.p. 283-319 C
Toxicology: Poison by inhalation; tumorigen; TSCA listed
Uses: In membranes for liq. separations for medical applcs., pharmaceutical mfg. for reverse osmosis and nanofiltration processes
Regulatory: FDA 21CFR §175.300, 177.1200, 177.2600, 178.3570; Canada DSL
Ashley Polymers http://www.ashleypoly.com; Avachem; BASF http://www.basf.com; Bayer http://www.bayerus.com; CarboMer† http://www.carbomer.com

Polyamide 6. See Nylon 6
Polyamide 12. See Nylon 12
Polyamide 612. See Nylon 612

Polyaminopropyl biguanide
CAS 28757-47-3; 70170-61-5
Classification: Organic compd.
Regulatory: USA not restricted; Europe listed

Polyarabinogalactan. See Arabinogalactan

Polybutene
CAS 9003-28-5; 9003-29-6; EINECS/ELINCS 500-004-7
Synonyms: Butene, homopolymer; 1-Butene, homopolymer; Butene polymer; Butene, polymers; PB; Poly-1-butene; Polybutene-1; Polybutene resin; Poly-1-butene resin; Polybutenes; Polybutylene; Polybutylene resin; Polymerized 1-butene
Classification: Polymer
Definition: A semicrystalline thermoplastic formed by polymerization of 1-butene
Empirical: (C₄H₈)x
Formula: [CH₂CH(CH₃)₂]ₙ
Properties: Colorless visc. liq.; misc. with min. oil; insol. in water; m.w. 500-75,000; dens. 0.910; pour pt. -60 to 50 C
Toxicology: May asphyxiate; TSCA listed
Precaution: Combustible
Uses: Plasticizer in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.125, 175.1570, 177.2600, 178.3570; Canada DSL
Poly-1-butene: Polybutene-1. See Polybutene
Polybutene, hydrogenated. See Hydrogenated polybutene
Polybutene resin; Poly-1-butene resin; Polybutenes. See Polybutene

Polylulate
CAS 24936-97-8
Classification: Polyester
Uses: Pharmaceuticals (implants)
Regulatory: FDA approved for implants

Polybutylene. See Polybutene
Polybutylene glycol; Poly (butylene oxide). See Polytetramethylene ether glycol
Polybutylene resin. See Polybutene
Polycoprolactam. See Nylon 6

Polycarbonate
CAS 24936-68-3
Synonyms: PC; PC resin; Polycarbonate resin
Classification: Polyester
Definition: Thermoplastic resin derived from bisphenol A and phosgene or diphenyl carbonate; noncorrosive; resist. to weather, ozone, heat; high impact str.; high dielec. str.; dimensionally stable; stable to min. acids; poor solv. resist.
Empirical: \((\text{C}_6\text{H}_{12}\text{O}_3)\)_n
Formula: \((\text{COOCH}_3)(\text{CH}_3)\text{C}_6\text{H}_5\text{O})_n\)
Properties: Transparent; sol. in chlorinated hydrocarbons; insol. in aliphatic alcohols; dens. 1.2 kg/l; ref. index 1.5850; tens. str. 65 MPa; tens. mod. 2400 MPa; elong. 80-120% (break)

Precaution: Combustible but self-extinguishing; attacked by strong alkalis and aromatic hydrocarbons
Uses: Medical apps.
Regulatory: FDA 21CFR §177.1200, 177.1580, 178.1005
Trade Names: Calibre™ 2060-10; Calibre™ 2060-15; Calibre™ 2060-22

Polycarbonate resin. See Polycarbonate

Polycarbophil
CAS 9003-01-4 (generic)
Definition: Acrylic acid polymer crosslinked with divinyl glycol
Properties: Wh. to creamy wh. gran., char. ester-like odor; swells in water; insol. in water, dil. acids, dil. alkalis, common org. solvs.
Uses: Rheology control agent, bioadhesive for pharmaceuticals; controlled-release tablet binder; moisture enhancer; drug delivery matrix; adsorbent in antidiarrheal prods.
Regulatory: Canada DSL
Trade Names: Noveon® AA-1 Polycarbophil, USP

Polychloro copper phthalocyanine. See Phthalocyanine green
Poly (chloroethylene). See Polyvinyl chloride
Polycosanol. See Octacosanol

**Polycosanol**

See Octacosanol

**Polydecene**

CAS 37309-58-3

**Synonyms**: Decene, homopolymer

**Definition**: Polymer formed by polymerization of decene

**Empirical**: \((C_{10}H_{20})_x\)

**Formula**: \((CHCH_3(CH_2)_7CH_2)_x\)

**Uses**: Binder in pharmaceutical topicals

**Manuf./Distrib.**: Somerset Cosmetic Co.

http://www.makingcosmetics.com/

**Trade Names Containing**: Pionier® 17106

**Polydextrorse**

CAS 68424-04-4

INS1200; E1200

**Definition**: Random polymer formed from condensation of D-glucose

**Properties**: Off-wh. to lt. tan amorphous powd.; bland, nonsweet taste; very sol. in water; partly sol. in glycerin, propylene glycol; insol. in ethanol; m.p. > 130 C

**Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating fumes

**Storage**: Hygroscopic

**Uses**: Humectant, bulking agent, bodying agent, texturizer in pharmaceuticals

**Features**: Replaces bulk and mouthfeel of sugar and/or fat

**Regulatory**: FDA 21CFR §172.841; Canada DSL

**Manuf./Distrib.**: AB R Lundberg

http://www.norfoods.se/lundberg; Agric. & Chem. Prods. Ltd; Arnaud S.A.

Spectrum Quality Prods.

**Trade Names**: Sta-Lite® 370; Sta-Lite® III; Sta-Lite® III F

**Trade Names Containing**: Xylitab® 100

**Polydimethylsiloxane**

CAS 9016-00-6; 63148-62-9

INS900a

**Synonyms**: Dimethylpolysiloxane; Methyl silicone; Methyl silicone resin; PDMS; Poly (oxy (dimethylsilylene)); Silicone fluid; Silicone oil

**Definition**: Polymer with silicone backbone (Si-O) with methyl groups (CH₃) attached; most common polymer in silicone industry

**Empirical**: \((C_2H_6OSi)_x\)

**Properties**: Colorless clear visc. oily liq.; insol. in water; m.w. (74.15)x; dens. 0.980; vapor pressure 5 mm Hg (20 C); flash pt. 235 F; ref. index 1.4040

**Toxicology**: LD (IP, rat) > 2 g/kg; TDLo (implant, rat) 1500 mg/kg; may cause eye, skin, respiratory and digestive tract irritation; may be harmful by inh., ing., or skin absorp.; questionable carcinogen; tumorigen; experimental neoplastigen; experimental reproductive effector; mutagenic data; target organs: lungs, thorax, respiratory, endocrine

**Precaution**: Flamm.; incompat. with strong oxidizers, strong acids, strong bases, boiling water

**Hazardous Decomp. Prods.**: CO, CO₂, silicon oxide; heated to decomp., emits acrid smoke and irritating fumes; emits toxic fumes under fire conditions

**Storage**: Store in cool, dry place in tightly closed container

**Uses**: Antifoam for drug fermentations

**Regulatory**: FDA 21CFR §145.180, 146.185, 173.340, 175.105, 175.200, 176.1200, 176.170, 176.210, 177.1200, 177.2260, 177.2800, 178.3570, 178.3910, 181.28; Canada DSL

**Manuf./Distrib.**: Acros Org.

Chemical Component Cross-Reference

- Phosphate. See Dimethicone copolyol phosphate
- Polydimethylsiloxypolymethoxy undecylate. See Dimethicone copolyol undecylate
- Poly (dimethylsiox) among other terms. See Stearoxydimethicone
- Poly (divinylbenzene-co-trimethyl) (vinylbenzyl) ammonium chloride). See Chloromethylated aminated styrene-divinylbenzene resin

Polyester adipate
- Uses: Plasticizer in pharmaceuticals; skin patch drug delivery
- Manufacturer/Distributor: C.P. Hall
  - Trade Names: Admex® 760

Polyester, linear, high m.w. See Polyethylene terephthalate

Polyether glycol. See Polyethylene glycol

Polymers, epoxy resins. See Epoxy resin

Polyethylene
- CAS: 9002-88-4; EINECS/ELINCS 200-815-3
- Synonyms: Ethene, homopolymer; Ethene polymer; Ethylene-homopolymer; Ethylene latex; Ethylene polymer; Ethylene polymers; Ethylene resin; PE; Polyethylene resins; Polyethylene wax; Polythene
- Definition: Thermoplastic resin obtained by polymerizing ethylene
- Empirical: \((\text{C}_2\text{H}_4)_x\)
- Formula: \[[\text{CH}_2\text{CH}_2]_x\]
- Properties: Wh. translucent partially cryst./partially amorphous plastic solid, odorless; sol. in hot benzene; insol. in water; m.w. 1500-100,000; dens. 0.92 (20/4 C); m.p. 85-110 C
- Toxicology: LC50 (inh., mouse, 30M) 12 g/m³; TDLo (implant, rat) 33 mg/kg; no known skin toxicity; ing. of lg. oral doses has produced kidney and liver damage; suspected carcinogen and tumorgen by implants; TSCA listed
- Precaution: Combustible; reacts violently with F₂
- Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
- Storage: Store in well closed containers
- Uses: Excipient emollient, humectant, film-former, abrasive for pharmaceuticals, dentals, ophthalmics, orals, topicals, vaginals; thickener for gels

†=pharmaceutical grade
- Features: Nonirritating abrasive
- Regulatory: FDA 21 CFR §172.260, 172.615 (m.w. 2000-21,000), 173.20, 175.105, 175.300, 176.180, 176.200, 176.210, 177.1200, 177.1390, 177.1395, 177.1520, 177.1615, 177.1620, 177.2210, 177.2600, 178.1005, 178.3570, 178.3850; FDA approved for dentals, ophthalmics, orals, topicals, vaginals

Polyethylene, high-density
CAS 9002-88-4; EINECS/ELINCS 200-815-3
Synonyms: HDPE
Definition: Thermoplastic linear polyethylene
Empirical: \((C_2H_4)_x\)
Formula: \([CH_2CH_2]_x\)
Properties: Beads; swollen by hydrocarbon and chlorinated solvs.; insol. in water, cold org. solvs.; m.w. 50,000; tens. str. 24-28 MPa; tens. mod. 1050-1500 MPa; elong. 350-400% (break)
Toxicology: LD50 (oral, rat) > 3 g/kg; LC50 (inh., mouse, 30 min) 12 g/m²; cancer suspect agent; TSCA listed
Uses: Wax additive for pharmaceuticals

†=pharmaceutical grade

Trade Names: ACumist® B-6

Polyethylene, linear low density
CAS 9002-88-4
Synonyms: LLDPE; Polyethylene-LLD
Definition: Thermoplastic with linear structure with short side-chains produced by the comonomer
Formula: \([CH_2CH_2]_x\)
Properties: Beads; swollen by hydrocarbon and chlorinated solvs.; insol. in water, cold org. solvs.; m.w. varies widely; dens. 0.91-0.94 kg/l; m.p. 122-124 C; tens. str. 18-25 MPa; tens. mod. 350-500 MPa; elong. 300-400% (break)
Uses: In pharmaceutical ointments

Trade Names: Petrothene® GA 818-073

Polyethylene-LLD. See Polyethylene, linear low density
Poly (ethylene oxide). See Polyethylene glycol
Polyethylene oxide cetyl ether; Polyethylene oxide hexadecyl ether. See Ceteth
Polyethylene oxide monooleate; Poly
### Polyethylene terephthalate

**CAS**: 25038-59-9  
**Synonyms**: Ethylene terephthalate polymer; PET; Polyester, linear, high m.w.; Polymethylpentene terephthalate film; Poly (oxy-1,2-ethanedioloxycarbonyl-1,4-phenylene-carbonyl); Poly (oxyethyleneoxyterephthaloyl); Terephthalic acid-ethylene glycol polyester  
**Classification**: Organic compd.; polymer  
**Empirical**: \((\text{C}_10\text{H}_8\text{O}_4)_n\)  
**Properties**: Solid; sol. in hot m-cresol, trifluoroacetic acid, o-chlorophenol; dens. 1.38; dec. \(\approx 250\) C; tens. str. 140 MPa (biaxially-oriented film), 50 MPa (molding grades); Vicat soften. pt. 261 C  
**Toxicology**: Irritant; experimental tumorigen; questionable carcinogen; mutagen; TSCA listed  
**Hazardous Decomp. Prods.**: Heated to decomp., emits acrid smoke and irritating fumes  
**Uses**: Surgical aid  
**Regulatory**: FDA 21CFR §177.1630, 177.2260, 177.2800, 178.1005; Canada DSL  
**Trade Names**: Eastar™ PETG Copolyester 6763  
**Polyethylene terephthalate film**: See Polyethylene terephthalate

### Polyethylene wax

**CAS**: 9002-88-4; EINECS/ELINCS 200-815-3  
**Synonyms**: Polyethylene resin  
**Empirical**: \((\text{C}_2\text{H}_4)_n\)  
**Formula**: \((-\text{CH}_2\text{CH}_2\_)_n\)
Chemical Component Cross-Reference

**Decaester with decaglycerol**

*Definition:* Decaester of oleic acid and polyglycerin-10

*Empirical:* C_{210}H_{382}O_{31}

*Properties:* HLB 3.0; nonionic

*Uses:* Emulsifier, dispersant, lubricant, solubilizer, emollient for pharmaceuticals, delivery/absorp. enhancement, dermatologicals, suppositories

*Regulatory:* FDA 21CFR §172.854; Canada DSL

*Manuf./Distrib.:* A&E Connock

[http://www.connock.co.uk](http://www.connock.co.uk); ABITEC† http://www.abiteccorp.com

*Trade Names:* Caprol® 10G10O

*Trade Names Containing:* DREWPOL® 10-10-O Polyglyceryl-10 decastearate

*CAS:* 39529-26-5; EINECS/ELINCS 254-495-5

*Synonyms:* Decaglycerol decastearate; Decaglyceryl decastearate; Octadecanoic acid, decaester with decaglycerol

*Definition:* Decaester of stearic acid and polyglycerin-10

*Empirical:* C_{210}H_{402}O_{31}

*Properties:* Nonionic

*Uses:* Emulsifier, solubilizer, dispersant for pharmaceuticals

*Regulatory:* FDA 21CFR §172.854

*Manuf./Distrib.:* A&E Connock

[http://www.connock.co.uk](http://www.connock.co.uk)

*Polylglyceryl-3 diisostearate*  

*CAS:* 63705-03-3 (generic); 66082-42-6; 85404-84-8; EINECS/ELINCS 291-548-1

*Synonyms:* Isooctadecanoic acid, diester with 1,2,3-propanetriol trimer; Isooctadecanoic acid, diester with triglycerol; Triglycerol diisostearate

*Definition:* Diester of isostearic acid and polyglycerin-3

*Empirical:* C_{45}H_{86}O_{9}

*Properties:* Nonionic

*Toxicology:* TSCA listed

*Uses:* Emulsifier, emollient, thickener, solvent for pharmaceuticals, creams, lotions; excipient

*Manuf./Distrib.:* A&E Connock

[http://www.connock.co.uk](http://www.connock.co.uk)

*Trade Names:* Lameform® TGI; Plurol® Diisostearique

*Trade Names Containing:* Pionier® KW 2020 Pharma; Pionier® KWH-Pharma

*Polylglyceryl-2 dioleate*  

*CAS:* 67965-56-4; 60219-68-3

*Synonyms:* Diglyceryl dioleate; 9-Octadecenoic acid, diester with oxybis[propanediol]; 9-Octadecenoic acid, diester with 3,3'-oxybis[1,2-propanediol]

*Definition:* Diester of oleic acid and diglycerol

*Empirical:* C_{42}H_{78}O_{7}

*Properties:* Nonionic

*Uses:* W/o emulsifier for pharmaceuticals

*Trade Names:* DGDO Polyglyceryl-6 dioleate

*CAS:* 9007-48-1 (generic); 76009-37-5; EINECS/ELINCS 278-358-4

*Synonyms:* Dioleic acid, diester with hexaglycerol; Hexaglycerol dioleate; Hexaglycerol dioleate; 9-Octadecenoic acid, diester with hexaglycerol

*Definition:* Diester of oleic acid and polyglycerin-6

*Empirical:* C_{54}H_{102}O_{15}

*Properties:* Nonionic

*Uses:* Dispersant, emollient, emulsifier, solubilizer, humectant, wetting agent for pharmaceuticals, delivery/absorp. enhancement, dermatologicals, suppositories

*Regulatory:* FDA 21CFR §172.854

*Manuf./Distrib.:* A&E Connock

[http://www.connock.co.uk](http://www.connock.co.uk)

*Trade Names:* Caprol® MPGO; Plurol® Oleique Polyglyceryl-10 dioleate  

*CAS:* 9007-48-1 (generic); 33940-99-7; EINECS/ELINCS 291-548-1

*Synonyms:* Dioleic acid, diester with hexaglycerol; Hexaglycerol dioleate; Dioleic acid, diester with triglycerol; 9-Octadecenoic acid, diester with triglycerol

*Definition:* Diester of oleic acid and polyglycerin-10

*Empirical:* C_{54}H_{102}O_{15}

*Properties:* Nonionic

*Uses:* Emulsifier, surfactant in medicinals, pharmaceuticals, skin care prod.

*Manuf./Distrib.:* Somerset Cosmetic Co.

*Polylglyceryl-6 dipalmitate*  

*Uses:* Emulsifier in medicinals, pharmaceuticals, skin care prods.

*Polylglyceryl-10 dipalmitate*  

*Synonyms:* Decaglycerol dipalmitate

*Properties:* Nonionic

*Uses:* Emulsifier, surfactant in medicinals,
### Polyglyceryl-2 dipolyhydroxystearate
- **CAS**: 144470-58-6; 156531-21-4
- **Trade Names**: Polyaldo® 10-2-P
- **Synonyms**: Disteeric acid, diester with hexaglycerol; Hexaglycerol diesterate; Hexaglyceryl diesterate; Octadecanoic acid, diester with hexaglycerol
- **Definition**: Diester of stearic acid and polyglycerin-2
- **Empirical**: C_{54}H_{106}O_{15}
- **Properties**: Nonionic
- **Uses**: W/o emulsifier, coupling agent, bodying agent, emulsifier, visc. modifier for delivery/absorp. enhancement, dermatologicals, suppositories; excipient
- **Regulatory**: FDA 21CFR §172.854
- **Manuf./Distrib.**: DeWolf Chem. [http://www.dewolfchem.com](http://www.dewolfchem.com)
- **Trade Names Containing**: Eumulgin® VL 75

### Polyglyceryl-6 distearate
- **CAS**: 9009-32-9 (generic); 34424-97-0; 61725-93-7 (generic); EINECS/ELINCS 252-010-1
- **Synonyms**: Disteeric acid, diester with hexaglycerol; Hexaglycerol diesterate; Hexaglyceryl diesterate; Octadecanoic acid, diester with hexaglycerol
- **Definition**: Diester of stearic acid and polyglycerin-6
- **Empirical**: C_{54}H_{106}O_{15}
- **Properties**: Nonionic
- **Uses**: Coupling agent, bodying agent, emulsifier, visc. modifier for delivery/absorp. enhancement, dermatologicals, suppositories; excipient
- **Regulatory**: FDA 21CFR §172.854
- **Manuf./Distrib.**: DeWolf Chem. [http://www.dewolfchem.com](http://www.dewolfchem.com)
- **Trade Names**: Polyaldo® 10-6-O KFG

### Polyglyceryl-10 distearate
- **CAS**: 9009-32-9 (generic); 12764-60-2; 61725-93-7 (generic)
- **Synonyms**: Decaglycerin distearate; Decaglyceryl distearate; Octadecanoic acid, diester with decaglycerol
- **Definition**: Diester of stearic acid and polyglycerin-10
- **Empirical**: C_{54}H_{106}O_{15}
- **Properties**: Nonionic
- **Uses**: W/o emulsifier for topical pharmaceuticals
- **Regulatory**: FDA 21CFR §172.854
- **Manuf./Distrib.**: DeWolf Chem. [http://www.dewolfchem.com](http://www.dewolfchem.com)
- **Trade Names**: Polyaldo® 10-6-O KFG

### Polyglyceryl-10 laurate
- **CAS**: 34406-66-1
- **Synonyms**: Decaglycerin monoester; Decaglyceryl monoester; ISO-octanoic acid, monoester with hexaglycerol
- **Definition**: Ester of isostearic acid and polyglycerin-4
- **Empirical**: C_{36}H_{72}O_{14}
- **Properties**: Nonionic
- **Uses**: Emulsifier, solubilizer, dispersant for pharmaceuticals
- **Regulatory**: FDA 21CFR §172.854
- **Manuf./Distrib.**: Somerset Cosmetic Co. [http://www.makingcosmetics.com/](http://www.makingcosmetics.com/)
- **Trade Names**: Polyaldo® 10-6-O KFG

### Polyglyceryl-10 hexaoleate
- **Synonyms**: Decaglycerin hexaoleate
- **Definition**: Hexaester of oleic acid and polyglycerin-10
- **Properties**: Nonionic
- **Uses**: W/o and o/w emulsifier, emollient, and lubricant for pharmaceuticals
- **Regulatory**: FDA 21CFR §172.854
- **Manuf./Distrib.**: Somerset Cosmetic Co. [http://www.makingcosmetics.com/](http://www.makingcosmetics.com/)
- **Trade Names**: Polyaldo® 10-6-O KFG

### Polyglyceryl-10 isostearate
- **CAS**: 133738-23-5
- **Synonyms**: Decaglycerin monoester; ISO-octadecanoic acid, monoester with hexaglycerol
- **Definition**: Ester of isostearic acid and polyglycerin-10
- **Empirical**: C_{48}H_{96}O_{22}
- **Properties**: Nonionic
- **Uses**: Emulsifier, solubilizer, dispersant for pharmaceuticals
- **Regulatory**: FDA 21CFR §172.854
- **Manuf./Distrib.**: Somerset Cosmetic Co. [http://www.makingcosmetics.com/](http://www.makingcosmetics.com/)
- **Trade Names**: Polyaldo® 10-6-O KFG
Chemical Component Cross-Reference

acid, monoester with decaglycerol

Definition: Ester of lauric acid and polyglycerin-10
Empirical: C_{42}H_{84}O_{22}
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant for pharmaceuticals
Regulatory: FDA 21CFR §172.854
Trade Names: Decaglyn 1-L

Polyglyceryl-10 linoleate
CAS 102643-06-1
Synonyms: Decaglycerin monolinoleate
Definition: Ester of linoleic acid and polyglycerin-10
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant for pharmaceuticals
Regulatory: FDA 21CFR §172.854
Trade Names: Decaglyn 1-LN

Polyglycerylmethacrylate. See Glyceryl polymethacrylate

Polyglyceryl-3 methyl glucose distearate
Definition: Diester of stearic acid and the condensation prod. of methylglucose and polyglycerin-3
Properties: Nonionic
Uses: O/w emulsifier for topical pharmaceuticals, creams/lotions, sun prod s.
Trade Names: TEGO® Care 450

Polyglyceryl-10 myristate
CAS 87390-32-7
Synonyms: Decaglycerin monomyristate; Tetradecanoic acid, monoester with decaglycerol
Definition: Ester of myristic acid and polyglycerin-10
Empirical: C_{44}H_{88}O_{22}
Properties: Nonionic
Uses: Emulsifier, solubilizer, dispersant for pharmaceuticals
Regulatory: FDA 21CFR §172.854
Trade Names: Decaglyn 1-M

Polyglyceryl-10 octaoleate
CAS 66734-10-9
Synonyms: Decaglycerol octaoleate; Decaglyceryl octaoleate
Definition: Octaester of oleic acid and polyglycerin-10
Properties: HLB 4.0; nonionic
Uses: Emulsifier, solubilizer, dispersant for pharmaceuticals, w/o and o/w emulsions, creams, lotions, internal use
Regulatory: FDA 21CFR §172.854

Polyglyceryl-4 oleate
CAS 9007-48-1 (generic); 71012-10-7
Synonyms: 9-Octadecenoic acid, monoester with tetraglycerol; Polyglyceryloleate; Tetraglyceryl monooleate
Definition: Ester of oleic acid and polyglycerin-4

Polyglyceryloleate. See Polyglyceryl-4 oleate

Polyglyceryl-2 oleate
CAS 9007-48-1 (generic); 9009-31-8; 49553-76-6; EINECS/ELINCS 256-367-4
Synonyms: Diglyceryl monooleate; 9-Octadecenoic acid, ester with 1,2,3-propanetriol (1:2); 9-Octadecenoic acid, monoester with oxybis [propanediol]; Oleic acid, monoester with oxybis (propanediol)
Definition: Ester of oleic acid and diglycerin
Empirical: C_{24}H_{46}O_{6}
Properties: Nonionic
Toxicology: TSCA listed
Uses: W/o emulsifier for pharmaceuticals
Regulatory: FDA 21CFR §172.854
Trade Names: DGMO-CV; Nofable PGO-902L; Nofable PGO-992L

Polyglyceryl-3 oleate
CAS 33940-98-6; EINECS/ELINCS 251-749-7
Synonyms: 9-Octadecenoic acid, monoester with triglycerol; Oleic acid, monoester with triglycerol; Triglyceryl monooleate; Triglyceryl oleate
Classification: Polyglycerol ester
Definition: Ester of oleic acid and polyglycerin-3
Empirical: C_{27}H_{52}O_{8}
Properties: Yel. liq.; HLB 6.5; nonionic
Toxicology: Nonirritant to eyes; not a serious irritant to skin; vapors from heated material sl. irritating by inh.; noncarcinogenic; nonmutagenic; TSCA listed
Hazardous Decomp. Prods.: COx
Storage: Store in dry area away from heat and sparks; keep containers closed when not in use; maintain good ventilation
Uses: Emulsifier, solubilizer, dispersant for pharmaceuticals, w/o and o/w emulsions, creams, lotions, internal use
Regulatory: FDA 21CFR §172.854
Manuf./Distrib.: A&E Connock http://www.connock.co.uk; ABITEC† http://www.abiteccorp.com
Trade Names: Caprol® 3GO; Cremophor® GO31; Isolan® GO 33; Lumulse® PGO K; Mazol® PGO-31 K
Trade Names Containing: Protegin® W; Protegin® WX

Polyglyceryl-4 oleate
CAS 9007-48-1 (generic); 71012-10-7
Synonyms: 9-Octadecenoic acid, monoester with tetraglycerol; Polyglyceryloleate; Tetraglyceryl monooleate
Definition: Ester of oleic acid and polyglycerin-4

†=pharmaceutical grade
Chemical Component Cross-Reference

Empirical: C_{30}H_{58}O_{10}
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier in pharmaceutical ointments
Regulatory: FDA 21CFR §172.854
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
Trade Names: Nofable PGO-904L; Nofable PGO-904M; Nofable PGO-994L; Nofable PGO-994M
Trade Names Containing: Emulsynt® 1055

Poliglyceryl-6 olate
CAS 9007-48-1 (generic); 79665-92-2
Synonyms: Hexaglycerin monooleate; Hexaglyceryl oleate; 9-Octadecenoic acid, monoester with hexaglycerol; 1,2,3-Propanetriol, homopolymer, (Z)-9-octadecenoate
Definition: Ester of oleic acid and poliglycerin-6
Empirical: C_{36}H_{70}O_{14}
Properties: Nonionic
Toxicology: TSCA listed
Uses: O/w emulsifier for pharmaceuticals
Regulatory: FDA 21CFR §172.854
Trade Names: Nofable PGO-906L; Nofable PGO-906M; Nofable PGO-996L; Nofable PGO-996M; Plurol® Oleique CC 497

Poliglyceryl-8 olate
CAS 9007-48-1 (generic); 75719-56-1
Synonyms: 9-Octadecenoic acid, monoester with octaglycerol; Octaglycerol oleate; 1,2,3-Propanetriol, homopolymer, (Z)-9-octadecenoate
Definition: Ester of oleic acid and poliglycerin-8
Empirical: C_{42}H_{82}O_{18}
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier
Regulatory: FDA 21CFR §172.854
Trade Names: Nofable PGO-908L; Nofable PGO-908M; Nofable PGO-998L; Nofable PGO-998M; Polyaldo® 10-1-O

Poliglyceryl-10 olate
CAS 9007-48-1 (generic); 79665-93-3; EINECS/ELINCS 279-230-0
Synonyms: Decaglycerin monooleate; Decaglyceryl monooleate; 9-Octadecenoic acid, monoester with decaglycerol; Oleic acid, monoester with decaglycerol
Definition: Ester of oleic acid and poliglycerin-10
Empirical: C_{48}H_{94}O_{22}
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, solubilizer, dispersant for pharmaceuticals
Regulatory: FDA 21CFR §172.854
Trade Names: Caprol® PGE860; Decaglyyn 1-OV; Nofable PGO-900L; Nofable PGO-900M; Nofable PGO-990L; Nofable PGO-990M; Polyaldo® 10-1-O

Poliglyceryl-2-PEG-4 stearate
Synonyms: Diglyceryl PEG-4 stearate
Definition: Ether of PEG-4 stearate and diglycerin
Empirical: C_{32}H_{64}O_{10}
Properties: Nonionic
Uses: Emulsifier, thickener for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

Poliglyceryl polyricinoleate
INS476; E476
Synonyms: Glyceran esters of condensed castor oil fatty acids; Glycerol esters of condensed castor oil fatty acids; PGPR; Polyglycerol esters of interesterified ricinoleic acid; Polyglycerol esters of polycondensed fatty acids from castor oil
Definition: Polyglycerol esters of interesterified ricinoleic acid
Properties: Lt. brn. highly visc. liq.; sol. in edible oils and fats; insol. in cold and hot water; does not crystallize @ 0 C; nonionic
Uses: Emulsifier, stabilizer in pharmaceuticals
Regulatory: Europe listed; UK approved; ADI 0-7.5 mg/kg body wt. (FAO/WHO)
Trade Names: Tilol GCT-R

Poliglyceryl-3 polyricinoleate
CAS 29894-35-7
Properties: Nonionic
Uses: Emulsifier
Trade Names: Imwitor® 600

Poliglyceryl-2 sesquisostearate
CAS 67938-21-0; EINECS/ELINCS 267-821-6
Synonyms: Diglycerol sesquisostearate; Di(iso octadecanoic) acid, diester with oxydi(propanediol); Isooctadecanoic acid, sesquiester with diglycerol
Definition: Mixture of mono and diesters of isostearic acid and a dimer of glycerin
Properties: Nonionic
Uses: Emulsifier for pharmaceuticals
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk
Trade Names Containing: Pionier® 1533;
Polyglyceryl-6 sesquioleate
Synonyms: Hexaglycerol sesquioleate; Hexaglyceryl sesquioleate
Properties: Nonionic
Uses: Emulsifier for pharmaceuticals

Polyglyceryl-2 sesquioleate
Synonyms: Diglycerine sesquioleate; Diglyceryl sesquioleate; 9-Octadecenoic acid, sesquiolester with diglycerol
Definition: Mixture of mono and diesters of oleic acid and a dimer of glycerin
Properties: HLB 3.5; nonionic
Uses: Emulsifier for pharmaceuticals

Polyglyceryl-3 shortening
Synonyms: Triglycerol monoshortening; Triglyceryl monoshortening
Properties: Nonionic
Uses: Emulsifier for medicinals, pharmaceuticals, skin care prods.
Trade Names: Polyaldo® TGMSH

Polyglyceryl-2 stearate
CAS 9009-32-9 (generic); 12694-22-3; EINECS/ELINCS 235-777-7
Synonyms: Diglycerol monostearate; Octadecanoic acid, monoester with diglycerol; 9-Octadecanoic acid, monoester with oxybis [propanediol]; Stearic acid, monoester with oxybis (propanediol)
Definition: Ester of stearic acid and diglycerin
Empirical: C_{24}H_{48}O_{6}
Properties: Nonionic
Uses: W/o emulsifier for pharmaceuticals
Trade Names: DGMS

Polyglyceryl-3 stearate
CAS 37349-34-1 (generic); 27321-72-8; 26855-43-6; 61790-95-2; EINECS/ELINCS 248-403-2
Synonyms: Octadecanoic acid, monoester with triglycerol; Octadecanoic acid, monoester with tri-1,2,3-propanetriol diether; Stearic acid, monoester with triglycerol; Triglyceryl stearate
Definition: Ester of stearic acid and polyglycerin-
Chemical Component Cross-Reference

Polyglycol 1000. See PEG-20
Polyglycol 4000. See PEG-75
Polyglycol distearate. See PEG distearate
Polyglycol monooleate. See PEG oleate
Poly (hexamethylenedodecanediamide). See Nylon 612
Poly (iminocarbonylpentamethylene); Poly [imin (1-oxo-1,6-hexanediyl)]. See Nylon 6
Polyisobutylene. See Hydrogenated polyisobutylene

Polyisobutylene
CAS 9003-27-4

Synonyms: Isobutene homopolymer; Isobutylene polymer; Isobutylene homopolymer; Isobutylene polymer; Isobutylene resin; 2-Methyl-1-propene, homopolymer; 2-Methylpropene polymer; PIB; Polyisobutylene; Polymerized 2-methylpropene; 1-Propene, 2-methyl-, homopolymer; Propene, 2-methyl-, polymers

Classification: Polymer
Definition: Homopolymer of isobutylene
Empirical: \((C_4H_8)_x\)
Formula: \([\text{CH}_2\text{C(CH}_3\text{)CHCH}_2]_x\)

Properties: M.w. (56.11)x; dens. 0.920; ref. index 1.5045

Toxicology: May cause eye/skin/digestive/respiratory tract irritation; TSCA listed
Precaution: Incompat. with strong oxidizing agents

Hazardous Decomp. Prods.: CO, CO₂
Storage: Store in cool, dry place in tightly closed container

Uses: Excipient, emollient, carrier in pharmaceuticals, injectables

Regulatory: FDA 21CFR §172.615 (min. m.w. 37,000), 175.105, 175.125, 175.300, 176.180, 177.1200, 177.1210, 177.1390, 177.1420, 177.2800, 178.1005, 178.1010, 178.3570, 178.3740, 178.3910; Japan approved; FDA approved for injectables; Canada DSL

†=pharmaceutical grade

Trade Names Containing: Fancorsil P

Polyisoprene

CAS 9003-31-0

Synonyms: 1,3-Butadiene, 2-methyl-, homopolymer; IR; Isoprene rubber; 2-Methyl-1,3-butadiene, homopolymer; cis-Polyisoprene; cis-1,4-Polyisoprene; trans-Polyisoprene; cis-1,4-Polyisoprene rubber

Classification: Thermoplastic elastomer
Definition: Polymer of isoprene; major component of natural rubber, also made synthetically; avail. in range of std., oil-extended and carbon blk.-filled grades; props. vary with catalysts used in mfg. (lithium, titanium)

Empirical: \((C_5H_8)_x\)
Formula: \([\text{CH}_2\text{C(CH}_3\text{)CHCH}_2]_x\)
Properties: M.w. (68.118)x; dens. 0.90-0.94 kg/l

Toxicology: TSCA listed
Precaution: Supports combustion
Uses: Elastomer in pharmaceuticals

Regulatory: FDA 21CFR §175.105, 175.125, 176.180, 177.2600; Canada DSL

Trade Names Containing: Heyplast NC 90 Z trans-Polyisoprene. See Polyisoprene; Gutta percha
cis-1,4-Polyisoprene rubber. See Polyisoprene

Poly (lactic acid)

CAS 26100-51-6

Synonyms: PLA; Poly-L-lactic acid; Poly-L-lactide

Definition: Synthesized from lactic acid monomer which is mostly produced by carbohydrate fermentation of corn dextrose

Properties: Dens. 1.250 kg/m³; m.p. 130-180 C

Environmental: Biodeg.
Uses: Material for drug delivery systems; surgical implants

Manuf./Distrib.: ABCR http://www.abcr.de; Absorbable Polymers† http://www.durect.com; Aldrich† http://www.sigma-aldrich.com; Alkermes† http://www.alkermes.com; CarboMer†
Poly (DL-lactic acid)
Synonyms: PLA
Classification: Aliphatic polyester polymer
Properties: M.w. 6,000-600,000; hygroscopic
Environmental: Biodeg.
Storage: Protect from moisture; long-term storage @ 4°C
Uses: Biocompatible polymer for use in medicine, controlled-release implants, microspheres, microcapsules, sustained-release coatings
Features: Sterilizable

Poly-L-lactic acid. See Poly (lactic acid)

Poly (lactic acid-glycolic acid)
CAS 34346-01-5
Classification: Biopolymer
Environmental: Biodeg.
Uses: Material for drug delivery systems, medical applics., sutures, bone pins, periodontal membranes
Manuf./Distrib.: DuPont http://www.dupont.com

Poly-L-lactide. See Poly (lactic acid)

Poly (laurolactam). See Nylon 12

Polylysine
Synonyms: Poly-l-lysine
Classification: Polyamide
Empirical: (C6H12N2O)x
Formula: [NHCHCO(CH2)4NH2]x
Toxicology: May cause allergic skin sensitivity reactions; may have histamine-releasing props. under certain conditions
Uses: Coating agent for pharmaceuticals
Trade Names: Peptide CPC®

Poly-l-lysine. See Polylysine

Poly (maleic anhydride-methyl vinyl ether). See PVM/MA copolymer

Polymannuronic acid. See Alginic acid

†=pharmaceutical grade

Polymeric sodium metaphosphate. See Sodium metaphosphate
Polymerized 1-butene. See Polybutene
Polymerized 2-methylpropene. See Polysobutene
Polymerized siloxane. See Silicone

Polymethylacrylate
Uses: Cation exchange resin for prep. of antibiotics, medicines, and purification of pharmaceuticals
Trade Names: Diaion® WK10; Diaion® WK11; Diaion® WK100; Diaion® WT01S

Poly (methylene) wax. See Paraffin

Polymethyl methacrylate
CAS 9011-14-7
Synonyms: Methacrylic acid methyl ester polymers; Methyl methacrylate homopolymer; Methyl methacrylate polymer; Methyl methacrylate polymers; Methyl methacrylate resin; 2-Methyl-2-propenoic acid methyl ester homopolymer; PMM; PMMA; 2-Propenoic acid, 2-methyl-, methyl ester, homopolymer
Classification: Thermoplastic polymer
Definition: Polymer of methyl methacrylate; hard transparent amorphous material
Empirical: (C5H8O2)x
Formula: [CH2CCH3COOCH3]n
Properties: Powd., gran., cast sheet and block; sol. in ethyl acetate, chlorinated solvs.; m.w. 60,000 (molding grades), 1,000,000 (cast sheet); dens. 1.188; ref. index 1.4100; tens. str. 72 MPa; tens. mod. 2400 MPa
Toxicology: TDLo (implant, rat) 127 mg/kg; toxic; severe irritant; questionable carcinogen; experimental tumorigen by implant; target organ: liver, kidneys, bladder; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Thermoplastic resin used extensively in medicine and dentistry
Regulatory: FDA 21CFR §175.105, 175.300, 176.180, 177.1010, 178.3790; Canada DSL
Chemical Component Cross-Reference

Poly (methyl vinyl ether-alt-maleic acid). See Methyl vinyl ether/maleic acid copolymer

Poly (methyl vinyl ether-alt-maleic anhydride); Poly(methyl vinyl ether/maleic anhydride). See PVM/MA copolymer

Polyols
Classification: Polyhydric alcohol
Formula: CH$_2$OH(CHOH)$_n$CH$_2$OH
Properties: Solid (m.w. > 1000), liq. (m.w. < 600)
Toxicology: Low toxicity; high doses can cause kidney damage
Uses: Moisture absorbent in dental prods.
Regulatory: FDA approved for dentals

Polyorganosiloxanes. See Silicone
Polysiloxane. See Silicone, hydrated
Polyox. See Polyethylene glycol
Poly[1-(2-oxo-1-pyrrolidinyl) ethylene]. See PVP
Poly (1-(2-oxo-1-pyrrolidinyl) ethylene) iodine complex. See PVP-iodine
Poly (oxy-1,4-butenediyl)-α-hydro-ω-hydroxy-; Poly (oxybutylene) glycol; Poly (oxy-1,4-butylene) glycol. See Polytetramethylene ether glycol
Poly (oxy (dimethlysilylene)). See Dimethyldimethylsiloxane; Polymethylpolysiloxane
Poly [oxy (dimethlysilylene)]. α-hydro-ω-hydroxy-. See Dimethiconol
Polyoxy (dimethlysilylene), α-(trimethylsilyl)-ω-hydroxy. See Dimethylsiloxane
Poly (oxy (dimethlysilylene)), α-(trimethylsilyl)-ω-methyl-. See Dimethicone
Poly(oxy-1,2-ethanediyl), α-(3-carboxy-1-oxo-3-sulfo propyl)-ω-(dodecyl oxy)-, disodium salt. See Disodium laureth sulfoxuccinate
Poly (oxy-1,2-ethanediyl), α-(4-(3,4-dihydro-2,5,7,8-tetramethyl-2-(4,8,12-trimethyltridecyl)-2H-1-benzopyran-6-yl)oxy)-1,4-ioxobutyl)-ω-hydroxy-, (2R-(2R(4R,8R)))-. See Tocophersolan
Poly (oxy-1,2-ethanediyl), α-hexadecyl-ω-hydroxy-. See Ceteth
Poly (oxy-1,2-ethanediyl), α-hydro-ω-hydroxy-. See Polyethylene glycol

†=pharmaceutical grade

Poly (oxy-1,2-ethanediyl), α-9-octadecenyl-ω-hydroxy-, (Z)-. See Oleth
Poly (oxy-1,2-ethanediyl), α-(1-oxooctadecyl)-ω-hydroxy-. See PEG stearate
Poly (oxy-1,2-ethanediolxyloxy carbonyl-1,4-phenylenecarbonyl). See Polyethylene terephthalate
Poly(oxy-1,2-ethanediyl), α-sulfo-ω-(dodecyloxy)-, sodium salt. See Sodium laureth sulfate
Polyoxyethylene-grafted polydimethylsiloxane. See Dimethicone copolyol
Poly (oxyethylene) hexadecyl ether; Poly (oxyethylene) monocetyl ether. See Ceteth
Polyoxyethylene monoglycerides. See Ethoxylated mono- and diglycerides
Poly (oxyethylene) monooleate. See PEG oleate
Polyoxyethylene monooleyl ether. See Oleth
Polyoxyethylene monostearate. See PEG stearate
Poly (oxyethylene) oleate; Poly (oxyethylene) oleic acid ester. See PEG oleate
Poly (oxyethylenoxytetraphthaloyl). See Polyethylene terephthalate
Poly (oxyethylene) palmityl ether. See Ceteth
Polyoxyethylene/polyoxypropylene copolymer. See EO/PO block polymer or copolymer
Polyoxyethylene (4) Sorbitan Monolaurate. See Polysorbate 21
Polyoxyyl 35 castor oil. See PEG-35 castor oil
Polyoxyyl 40 castor oil. See PEG-40 castor oil
Polyoxyyl 20 cetostearyl ether. See Ceteareth-20
Polyoxyyl 4 dilaurate. See PEG-4 dilaurate
Polyoxyyl 150 distearate. See PEG-150 distearate
Polyoxyyl 40 hydrogenated castor oil. See PEG-40 hydrogenated castor oil
Polyoxyyl 75 lanolin. See PEG-75 lanolin
Polyoxyyl oleyl ether. See Oleth
Polyoxyyl 10 oleyl ether. See Oleth-10
Polyoxyyl 2 stearate. See PEG-2 stearate
Polyoxyyl 8 stearate. See PEG-8 stearate
Polyoxyyl 20 stearate. See PEG-20 stearate
Polyoxyyl 40 stearate. See PEG-40 stearate
Polyoxyyl 50 stearate. See PEG-50 stearate
Polyoxyyl 55 stearate. See PEG-55 stearate
Polyoxyethylmethylen. See Paraformaldehyde
Polyoxyethylene glycols. See Formaldehyde
Polyoxymethylene (9). See PP-G-9
Polyoxymethylene (26). See PP-G-26
Polyoxymethylene/polyoxyethylene block polymer;
Polyoxymethylene/polyoxyethylene copolymer. See EO/PO block polymer or copolymer
Poly (oxytetramethylene); Poly (oxytetramethylene) diol. See Polytetramethylene ether glycol
Polyphenylmethyl siloxane. See Phenyl trimethicone
Polypropene. See Polypropylene
Polypropylene
CAS 9003-07-0
Synonyms: Atactic polypropylene; Isotactic polypropylene; Polypropene; PP; Propathene; 1-Propene, homopolymer; Propene polymer; Propene polymers; Propylene polymer; Syndiotactic polypropylene
Classification: Thermoplastic polymer
Definition: Polymer of propylene monomers;
three forms: isotactic (fiber-forming), syndiotactic, atactic (amorphous)
Empirical: (C₃H₆)x
Formula: [CH₂(CH₃)CH]x
Properties: Wh. translucent solid; m.w. > 40,000; dens. 0.90; m.p. 168-171 C; Isotactic: solid; pract. insol. in cold org. solvs.; sol. in hot decalin, hot tetralin, boiling tetrachloroethane; dens. 0.090-0.92; m.p. 165 C; tens. str. 28-35 MPa; flex. mod. 1000-1700 MPa
Toxicology: LD₅₀ (oral, mouse) 3200 mg/kg, (IP, rat) > 110 g/kg, (IV, rat) > 99 g/kg; mod. toxic by ing. and IP routes; questionable carcinogen; tumorigen; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Excipient in pharmaceuticals, injectables
Regulatory: FDA 21 CFR §175.105, 175.300, 177.1200, 177.1520, 179.45; FDA approved for injectables; Canada DSL
Manuf./Distrib.: A. Schulman

Polypropylene glycol
CAS 25322-69-4 (generic); EINECS/ELINCS 200-338-0
Synonyms: α-Hydro-ω-hydroxypropoly [oxy (methyl-1,2-ethanediyl)]; α-Hydro-ω-hydroxypropylene (oxypropylene); Oxirane, methyl-, homopolymer; Poly (propylene oxide); PPG; Propylene oxide homopolymer
Classification: Aliphatic organic compd.
Empirical: (C₃H₆O₂)n
Formula: HO(C₃H₆O)nH, n = 4-70
Properties: Colorless clear visc. liq., sl. bitter taste; sol. in water, aliphatic ketones, alcohol; insol. in ether, aliphatic hydrocarbons; m.w. 400-2000; dens. 1.001-1.007; m.p. does not cryst.; flash pt. > 390 F
Toxicology: LD₅₀ (oral, rat) 4190 mg/kg; mildly toxic by ing.; skin and eye irritant; linked to sensitive reactions; TSCA listed
Precaution: Combustible exposed to heat or flame; reactive with oxidizers
Polyol (propylene oxide). See Polypropylene glycol

Poly (propylene oxide). See Polypropylene glycol

Polyquaternium-1
CAS 68518-54-7
Classification: Polymeric quaternary ammonium salt
Uses: Antistat, film-former for pharmaceuticals; preservative in soft lens prods.
Trade Names Containing: ONAMER® M

Polysilicic acid. See Silica, hydrated

Polysilicone-2
Synonyms: Polysilicone II
Definition: Polymer formed by reaction of tetradecene with polymerized tetramethylcyclotetrasiloxane
Uses: Humectant
Manuf./Distrib.: Siltech LLC

†=pharmaceutical grade

http://www.sigma-aldrich.com

Polysilicone II. See Polysilicone-2

Polysilicone-3
Synonyms: Glythiosilanetriol acetyl methionate
Definition: Prepared from an alkylthiosulfate substituted N-acetylthiethanol silanol by hydrolysis in the presence of dextran
Uses: Emollient
Trade Names: Methisol C+

Polysiloxane polyether copolymer. See Dimethicone copolyol

Polysiloxane PCA. See Polysiloxo pyrrolidone carboxylic acid

Polysiloxo pyrrolidone carboxylic acid
Synonyms: Polysiloxo PCA
Classification: Organosilicone
Uses: Emollient, conditioner
Trade Names: Monasil® PCA

Poly (sodium metaphosphate). See Sodium metaphosphate

Polysorbate 20
CAS 9005-64-5 (generic); 68154-33-6
FEMA 2915; INS432
Synonyms: PEG-20 sorbitan laurate; POE (20) sorbitan monolaurate; Sorbitmacrogol laurate 300; Sorbitan, monododecanoate, poly(oxy-1,2-ethanediyl) derivs.
Definition: Mixture of laurate esters of sorbitol and sorbitol anhydrides, with ≈ 20 moles ethylene oxide
Empirical: C₅₈H₁₁₄O₂₆
Properties: Lemon to amber liq., char. odor, bitter taste; sol. in water, alcohol, ethyl acetate, methanol, dioxane; insol. in min. oil, min. spirits; m.w. 1227.72; HLB 16.9; acid no. 0-2; sapon. no. 40-50; hyd. no. 60-108; nonionic
Toxicology: LD₅₀ (oral, rat) 37 g/kg, (IV, mouse) 1420 mg/kg, (IP, rat) 3850 mg/kg; mod. toxic by IP, IV route; mildly toxic by ing.; human skin irritant; experimental teratogen, reproductive effects; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Surfactant, o/w emulsifier, solubilizer, wetting agent in pharmaceuticals, intravenous, parenterals, ophthalmics, orals, topicals, vaginals
Use Level: 1-15% (emulsifier for pharmaceuticals)
Chemical Component Cross-Reference

†=pharmaceutical grade

Regulatory: FDA 21 CFR §172.515, 173.310, 175.105, 175.300, 178.3400; FEMA GRAS; Europe listed; FDA approved for intravenous, parenterals, ophthalmics, orals, topicals, vaginals; USP/NF, BP, EP compliance

Sorbilene L; Sorbithom TL; Tego® SML 20; T-Maz® 20
TWEEN® 20 Pharma

Trade Names Containing: Retinol P 50;
Solubilisant γ 2420; Solubilisant γ 2428;
Sorbithom TL-L; Vitamin F Water-Soluble CLR

Polysorbate 21
CAS 9005-64-5 (generic)
Synonyms: PEG-4 sorbitan laurate; POE (4) sorbitan monolaurate; Polyoxyethylene (4) Sorbitan Monolaureate

Definition: Mixture of laurate esters of sorbitol and sorbitol anhydrides, with ≈ 4 moles ethylene oxide

Properties: Yellow oily liquid; hydroxyl value 220-250; sapon. value 100-115; acid value 3.0; HLB 13.3; nonionic

Toxicology: Moderately toxic by intraperitoneal, intravenous routes; mildly toxic by ing.; skin irritant; TSCA listed

Uses: Emulsifier, solubilizer, wetting agent for pharmaceuticals

Regulatory: FDA 21 CFR §175.300

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com
Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Sorbithom TL-1

Polysorbate 40
CAS 9005-66-7 (generic)
INS434

Synonyms: POE (20) sorbitan monopalmitate; Sorbimacrogol palmitate 300; Sorbitan, monohexadecanoate, poly(oxy-1,2-ethanediyl) derivs.

Definition: Mixture of palmitate esters of sorbitol and sorbitol anhydrides, with ≈ 20 moles of ethylene oxide

Empirical: C₆₂H₁₂₂O₂₆

Properties: Yel. liq., faint char. odor; sol. in water, alcohol; insol. in min. and veg. oils; m.w. 1283.84; HLB 15.6; acid no. 2.2 max.; sapon. no. 41-52; hyd. no. 89-105; nonionic

Toxicology: LD50 (IV, rat) 1580 mg/kg; mod. toxic by IV route; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: O/w emulsifier, solubilizer, wetting agent in pharmaceuticals, parenterals, intramuscular injectables, orals, topicals

Regulatory: FDA 21 CFR §175.105, 175.300, 178.3400; Europe listed; UK approved; FDA approved for parenterals, intramuscular injectables, orals, topicals; USP/NF, BP, EP compliance

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com

Trade Names: Montanox® 40 DF; Rheodol TW-P120; Ritabate 40; Sabolen MPE; Sabosorb MPE
Sorbilene P; Tween® 40 Pharma; Tween® 40

Polysorbate 60
CAS 9005-67-8 (generic)
FEMA 2916; INS435

Synonyms: PEG-20 sorbitan stearate; POE (20) sorbitan monostearate; Sorbimacrogol
Chemical Component Cross-Reference

stearate 300; Sorbitan, monoctadecanoate, poly (oxy-1,2-ethanediyl) derivs.

Definition: Mixture of stearate esters of sorbitol and sorbitol anhydrides, with ≈ 20 moles ethylene oxide

Empirical: C_{64}H_{126}O_{26}

Properties: Lemon to orange oily liq., faint char. odor, bitter taste; sol. in water, alcohol, aniline, ethyl acetate, toluene; insol. in min. and veg. oils; m.w. 1311.90; HLB 14.9; acid no. 2 max.; sapon. no. 45-55; hyd. no. 81-96; nonionic

Toxicology: LD50 (IV, rat) 1220 mg/kg; mod. toxic by IV route; questionable carcinogen; experimental tumorigen, reproductive effects; TSCA listed

Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and irritating fumes

Uses: Surfactant, emulsifier, solvent, solubilizer, wetting agent in pharmaceuticals, creams, rectals, topicals, vaginals; pharmaceutical and veterinary drug

Synonyms: PEG-4 sorbitan stearate; POE (4) sorbitan monostearate

Definition: Mixture of stearate esters of sorbitol and sorbitol anhydrides, with ≈ 4 moles EO

Empirical: C_{64}H_{126}O_{26}

Properties: Yellow oily liquid; m.w. 1311.70; dens. 1.044; flash pt. > 110 C; hydroxyl value 165-195; sapon. value 95-115; acid value 3.0; nonionic

Toxicology: Moderately toxic by intravenous route; TSCA listed

Uses: Emulsifier, solubilizer, lubricant for pharmaceuticals, suppositories, flavors, vitamins

Regulatory: FDA 21CFR §175.300

Trade Names: Avapol™ 60; Avapol™ 60K; Crillet 3; Crillet 3 NF; Crillet 3 Super; Eumulgin® SMS 20; Hetsorb S-20; Kotilen-S/1; Liposorb S-20K; Monopol TWS-1030; Montanox® 60 DF; Rheoldol TW-S120; Rheodol Super TW-S120; Ritabate 60; Sabolen MSE; Sorbilene S; Sorbitol T 60 P; Sorbithom TE-P; Sorgen TW60V; TS-10V; T-Maz® 60K; Tween® 60 Pharma

Trade Names Containing: Aquabase NF;
### Chemical Component Cross-Reference

| Trade Names: | Avapoi™ 65; Crillet 35; Kotilen-S/3; Liposorb TS-20A; Liposorb TS-20K; Rheodol TW-S320; Sabolen TSE; Sorbosorb TSE; Sorbithom TE-5; TS-30V; T-Maz® 65K |

Polysorbate 120. See PEG-20 sorbitan isostearate
Polysorbate 80 acetate
CAS 89964-07-8
Synonyms: POE (20) sorbitan monooleate acetate
Definition: Acetyl ester of polysorbate 80
Uses: Emulsifier in pharmaceuticals
Regulatory: Canada DSL
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/
Polystyrene
CAS 9003-53-6; EINECS/ELINCS 202-851-5
UN 2211
Synonyms: Atactic polystyrene; Benzene, ethenyl-, homopolymer; Ethenylbenzene homopolymer; Polystyrene latex;
Polystyrene resin; Polystyrol; PS; Styrene polymer; Styrene, polymerized; Vinylbenzene polymer
Classification: Hydrocarbon polymer
Definition: High molecular weight thermoplastic resin produced by free radical polymerization of styrene; grades: crystal, impact, expandable
Empirical: \((\text{C}_6\text{H}_5)\text{x}\)
Formula: \((\text{CH}(	ext{C}_6\text{H}_5)\text{CH}_2)_x\)
Properties: Colorless to ylsh. glassy solid or soft
t=pharmaceutical grade
colorless foam, penetrating odor; sol. in alcohol; sl. sol. in water; m.w. 2500-250,000;
dens. 1.047 kg/l; m.p. 86-91 C; soften. pt. 80-102 C; ref. index 1.5916; tens. str. 52 MPa;
tens. mod. 3900 MPa
Toxicology: TDLo (IV, rat, 2 wk intermittent) 200 mg/kg, (implant, rat) 1 mg/kg; severe eye irritant; may cause irritation to mucous membranes; can be narcotic in high concs.; questionable carcinogen; experimental tumorigen by implant; TSCA listed
Hazardous Decomp. Prods.: Heated to comp., emits acrid smoke and irritating fumes
Uses: Excipient in pharmaceuticals
Regulatory: FDA 21CFR §175.105, 175.125, 175.300, 175.320, 176.180, 177.1200, 177.1640, 177.2600, 178.1005

**Polysulfone resin**
CAS 25135-51-3
Synonyms: PSU
Definition: Amorphous engineering thermoplastic with high resist. to acids, alcohols and salt solns.; resist. to heat, oxidation, detergents; low flamm. and smoke emission; self-extinguishing; good creep resist. and elec. props.; dimensionally stable
Properties: Transparent hard rigid solid; sol. in aromatic hydrocarbons, ketones, chlorinated hydrocarbons; m.w. 30,000; dens. 1.24 kg/l; ref. index 1.6330; tens. str. 70 N/mm²; tens. mod. 2.5 N/mm²; elong. 75% (break)
Precaution: Combustible, but self-extinguishing
Uses: In membranes for liq. separations for medical applics., pharmaceutical mfg. for reverse osmosis and nanofiltration processes
Regulatory: FDA 21CFR §177.1655
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; BASF http://www.basf.com; CarboMer† http://www.carbomer.com
Trade Names Containing: Filmtec®

**Polyterpene resin.** See Terpene resin
Poly (tetramethylene ether) Poly (tetramethylene ether) diol. See Polytetramethylene ether glycol

**Polytetramethylene ether glycol**
CAS 25190-06-1
Synonyms: Glycols, polytetramethylene; Polybutylene glycol; Poly (butylene oxide); Poly (oxy-1,4-butanediyl)-α-hydro-α-hydroxy-; Poly (oxybutylene) glycol; Poly (oxy-1,4-butenylene) glycol; Poly (oxytetramethylene). Poly (oxytetramethylene) diol; Poly (tetramethylene ether); Poly (tetramethylene ether) diol; Poly (tetramethylene ether) glycol; Poly (tetramethylene glycol). Poly (tetramethylene oxide). Poly (tetramethylene oxide) glycol; PTMEG; PTMG; Tetrahydrofuran homopolymer
Classification: Polyether glycol
Empirical: (C4H8O)n • H2O
Formula: HO[(CH2)4O]nH
Properties: Wh. waxy solid melting to clear visc.

†=pharmaceutical grade

**Poly (tetramethylene ether) glycol; Poly (tetramethylene oxide); Poly (tetramethylene oxide) glycol.** See Polytetramethylene ether glycol

**Polythene.** See Polyethylene

**Polyurethane elastomer, thermoplastic**
Synonyms: Thermoplastic polyurethane elastomer; TPU
Classification: Thermoplastic elastomer
Definition: Polymer consistg. of hard segments embedded in a soft, elastomeric polyol phase; exc. abrasion/impact resist.; high str.; wide working temp. range; good hydrolytic stability; two types: polyether- or polyester-based
Properties: Solid
Trade Names: Pellethane® 2102-55D; Pellethane® 2102-65D; Pellethane® 2102-75A; Pellethane® 2102-80A; Pellethane® 2102-85A

Polyvidone; Polyvidonum. See PVP
Polyvidonum insoluble, crosslinked. See Crospovidone
Polyvinol. See Polyvinyl alcohol

Polyvinyl acetate
CA$ 9003-20-7
Synonyms: Acetic acid, ethenyl ester, homopolymer; Acetic acid, vinyl ester, polymer; Acetic acid vinyl ester polymers; Ethenyl acetate, homopolymer; Poly (vinylacetate); Polyvinyl acetate homopolymer; Polyvinyl acetate resin; PVA; PVAc; Vinyl acetate homopolymer; Vinyl acetate polymer; Vinyl acetate resin
Classification: Homopolymer

Definition: Homopolymer of vinyl acetate
Empirical: (C4H6O2)X
Formula: [CH2CHOOCOCH3]X
Properties: Water-wh. clear solid resin; sol. in benzene, acetone; insol. in water; dens. 1.191; ref. index 1.4670
Toxicology: LD (oral, rat) > 25 g/kg, (oral, mouse) > 25 g/kg; very low toxicity by ing.; tumorigen; TSCA listed
Hazardous Decomp. Prods.: Heated to decom., emits acrid smoke and irritating fumes
Storage: Refrigerate
Uses: Binder, emulsion stabilizer, film-former

†=pharmaceutical grade

for pharmaceuticals, orals

Regulatory: BP, EP compliance; FDA 21 CFR §73.1, 172.615 (m.w. 2000 min.), 175.105, 175.300, 175.320, 176.170, 176.180, 177.1200, 177.2260, 177.2800, 181.22, 181.30; Japan approved; FDA approved for orals; Canada DSL

Trade Names Containing: Kollicoat® SR 30 D; Kollidon® SR

Poly (vinylacetate). See Polyvinyl acetate
Poly (vinyl acetate-co-crotonic acid): Poly (vinyl acetate-crotonic acid). See Vinyl acetate/crotonic acid copolymer

Polyvinyl acetate homopolymer. See Polyvinyl acetate

Polyvinyl acetate phthalate
Synonyms: PVAP
Definition: Reaction prod. of phthalic anhydride and a partially hydrolyzed polyvinyl acetate
Properties: Wh. free-flowing powd., sl. acetic acid odor; sol. in methanol, alcohol; insol. in water, methylene chloride, chloroform; visc. 7-11 cps
Uses: Film-former, coating agent, visc. modifier for pharmaceutical tablets, enteric drug release

Regulatory: USP/NF compliance
Trade Names: Opaseal®; pHthalavin™
Trade Names Containing: Sureteric™

Polyvinyl acetate resin. See Polyvinyl acetate
Polyvinyl alcohol

CAS 9002-89-5 (super and fully hydrolyzed);
EINECS/ELINCS 209-183-3

Synonyms: Ethanol homopolymer; Polyvinol;
Polyvinyl alcohol, hydrolyzed; Polyvinyl alcohol resin; Polval; PVA; PVAl; PVAL, hydrolyzed; PVOH; Vinyl alcohol polymer

Classification: Polymer; aliphatic organic compd.

Definition: Water-sol. synthetic thermoplastic avail. as cast film, fiber or aq. sol'n.; film is characterized by oil resist., toughness, and high tens. str.

Empirical: (C2H4O)x

Formula: [CH2CHOH]x, avg. x = 500-5000

Properties: Wh. to cream amorphous powd. or gran., odorless; sol. in water; insol. in petrol. solvs.; m.w. (44.05)x, avg. 120,000; dens. 1.329; softens at 200 C with dec.; flash pt. (OC) 175 F; ref. index 1.49-1.53; pH 5-8 (4%)

Toxicology: TDLo (subcut., rat) 2500 mg/kg, (implant, rat) 10 g/kg; questionable carcinogen; experimental tumorigen by implant; TSCA listed

Precaution: Flamm. exposed to heat or flame; reactive with oxidizers; dust exposed to flame presents sl. explosion hazard

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 2, Flammability 2, Reactivity 1

Uses: Suspending agent, visc. builder in pharmaceuticals, ophthalmics, orals, injectables, topicals, vaginals; pharmaceutical finishing; ophthalmic lubricant; emulsifier; hydrogel for controlled-drug delivery; artificial tear prods.

Regulatory: FDA 21CFR §73.1, 175.105, 175.300, 175.320, 176.170, 176.180, 177.1200, 177.1670, 177.2260, 177.2800, 178.3910, 181.22, 181.30; Canada DSL; FDA approved for ophthalmics, orals, injectables, topicals, vaginals; USP/NF, BP, EP compliance

Trade Names Containing: Kollicoat® Protect

Polyvinyl alcohol, hydrolyzed. See Polyvinyl alcohol

Polyvinyl alcohol (partially hydrolyzed)

CAS 25213-24-5

Synonyms: Acetic acid ethenyl ester, polymer with ethenol; partially saponified PVOH

Uses: Binder, carrier, compounding agent

Regulatory: Canada DSL

Trade Names: Gohsenol GH-17; Gohsenol GL-05

Polyvinyl alcohol-polyethylene glycol copolymer

CAS 96734-39-3

Synonyms: PVA-PEG copolymer

Uses: Used in pharmaceutical coating
Chemical Component Cross-Reference

**Empirical:**
Definition:
Trade Names Containing: Kollicoat® IR; Kollicoat® IR White; Kollicoat® Protect

Polyvinyl alcohol resin. See Polyvinyl alcohol Poly (n-vinylbutyrolactam). See PVP

Polyvinyl chloride
CAS 8063-94-3; 9002-86-2; 51248-43-2; 93050-82-9; EINECS/ELINCS 208-750-2
Synonyms: Atactic poly (vinyl chloride); Chloroethene homopolymer; Chloroethylene polymer; Ethene, chloro-, homopolymer; Ethylene, chloro-, polymer; Expanded polyvinyl chloride; Poly (chloroethylene); Polyvinyl chloride latex; Polyvinyl chloride resin; PVC; Vinyl chloride homopolymer; Vinyl chloride polymer; Vinyl chloride resin; Vinyon

Definition: Synthetic thermoplastic high polymer in rigid, plasticized, std. and high impact grades; resist. to weathering, moisture, most acids, fats, petrol. hydrocarbons, fungus; dimensionally stable; good dielec. props.

Empirical: \((C_2H_3Cl)_n\)

Formula: \([CH_2CHClCH_2CHCl]_n\)

Properties: Wh. powd. or colorless gran.; m.w. 60,000-200,000; dens. 1.406; ref. index 1.54; Rigid: dens 1.35 kg/l; soften. pt. 58-80 C; tens. str. 35-50 MPa; elong. 35-40% (break); Plasticized: pellets; dens. 1.15-1.50 kg/l; tens. str. 10-25 MPa

Hazardous Decomp. Prods.: CO, CO2, hydrogen chloride, irritating/toxic fumes and gases; heated to decomp., emits toxic fumes of Cl- and phosgene

Storage: Store in cool, dry place; keep container closed when not in use

Toxicology: LC50 (inh., rat, 2 h) 171 g/m3; TDLo (oral, rat, 30 wks. continuous) 210 mg/kg, (implant, rat) 75 mg/kg; irritant; chronic inh. of dusts can cause pulmonary changes, blood effects, abnormal liver function; may cause necrotizing or contact dermatitis; questionable carcinogen; suspected tumorigen by ing. and implant; TSCA listed

Precaution: Incompat. with strong oxidizing agents, heat, light; reacts violently with F2

Uses: Excipient in pharmaceuticals, parenterals, topicals, dialysis

Regulatory: FDA 21CFR §175.300, 175.320, 176.180, 177.1200; FDA approved for parenterals

Potassium acetate
CAS 127-08-2; EINECS/ELINCS 204-822-2
FEMA 2920; INS261(i); E261
Synonyms:  Acetic acid potassium salt; Diuretic salt
Chemical Component Cross-Reference

Classification: Aliphatic organic compd.
Definition: Potassium salt of acetic acid
Empirical: \( \text{C}_2\text{H}_3\text{KO}_2 \)
Formula: \( \text{CH}_3\text{COOK} \)

Properties:
- Colorless lustrous crist. or wh. crist. powd. or flakes, odorless or faint acetous odor, saline taste; sol. in water, alcohol, oxygenated solvs.; insol. in ether; m.w. 98.14; dens. 1.57; m.p. 292°C; dec. on heating
- Toxicology: LD50 (oral, rat) 3.25 g/kg; mod. toxic by ing.; TSCA listed
- Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of K2O

HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Deliq.; keep tightly closed; store @ R.T.
Uses:
- Synthetic flavor for pharmaceuticals;
- raw material for pharmaceuticals, medicine, ophthalmics, rectals; diuretic drug;
- penicillin purification reagent
Regulatory:
- FDA 21CFR §172.515; FEMA GRAS; Europe listed; FDA approved for ophthalmics, rectals; BP, EP compliance; Canada DSL

Potassium acid carbonate. See Potassium bicarbonate
Potassium acid phosphate. See Potassium phosphate
Potassium acid sulfite. See Potassium bisulfite
Potassium acid tartrate
CAS 868-14-4; EINECS/ELINCS 212-769-1
INS336(i)
Synonyms:
- Acid potassium tartrate;
- Butanedioic acid, 2,3-dihydroxy-,
  monopotassium salt; Cream of tartar; 2,3-
  Dihydroxyssuccinic acid, potassium salt;
- Dipotassium L-(-)-tartrate; Monopotassium tartrate;
- Monopotassium L-(-)-tartrate;
- Potassium bitartrate; Potassium hydrogen tartrate;
- Potassium tartrate; Tartar; Tartar cream; L-Tartaric acid monopotassium salt

Definition: Salt of L(+)-tartaric acid
Empirical: \( \text{C}_4\text{H}_6\text{KO}_6 \)
Formula: \( \text{KHC}_4\text{H}_4\text{O}_6 \)

Properties:
- Colorless or sl. opaque crist. or wh. crist. powd., pleasant acid taste; sol. in water, sl. sol. in alcohol; m.w. 188.18; dens. 1.984
- Toxicology: LDLo (oral, rat) 22 g/kg; low toxicity by ing.; TSCA listed
- Precaution: Mixts. with carbon + nitrogen oxide ignite below 400°C

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of K2O
Uses: Cathartic; laxative; diuretic
Regulatory:
- FDA 21CFR §150.141, 150.161, 184.1077, GRAS; USDA 9CFR §318.7; BATF 27CFR §240.1051 (limitation 25 lb/1000 gal grape wine); Europe listed; UK approved;
Potassium alginate
CAS 9005-36-1
INS402; E402
Synonyms: Alginic acid, potassium salt; Potassium polymannuronate
Definition: Potassium salt of alginic acid
Empirical: (C_6H_7O_6K)_x
Properties: Wh. gran., odorless, tasteless; sol. in water; insol. in alcohol, chloroform, ether; m.w. 214.22
Toxicology: TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Gellant, thickener, suspending agent, emulsifier, stabilizer, bodying agent in creams, lotions, tablets, dental impression compds.
Regulatory: FDA 21CFR §184.1610, GRAS;
Europe listed; UK approved; Canada DSL
Trade Names: KELMAR®

Potassium alum. See Potassium alum dodecahydrate
Potassium alum dodecahydrate
CAS 7784-24-9; EINECS/ELINCS 233-141-3 INS522
Synonyms: Alum; Alum flour; Aluminum potassium sulfate; Alum meal; Alum; potassium; Cube alum; Kalinite; Potash alum; Potassium aluminum sulfate; Sulfuric acid, aluminum potassium salt (2:1:1), dodecahydrate
Classification: Inorganic aluminum salt
Empirical: AlH₂₄KO₂₀S₂
Formula: KA(SO₄)₂ • 12H₂O (dodecahydrate)
Properties: Transparent cryst. or wh. cryst. powd., odorless, sweetish astringent taste; sol. in glycerin; sol. 1 g/7.2 ml water; insol. in alcohol; m.w. 474.38; dens. 1.725; m.p. 92.5 C; b.p. loses 18 H₂O @ 64.5 C; pH 3.3 (0.2M aq.)
Toxicology: TDLo (oral, rat) 1120 mg/kg; irritant; nuisance dust
HMIS: Health 1, Flammability 0, Reactivity 0
Uses: OTC drug active; astringent; hardener for gelatin
Regulatory: FDA 21CFR §133.102, 133.106, 133.111, 133.141, 133.165, 133.181, 133.183, 133.195, 137.105, 137.155, 137.160, 137.165, 137.170, 137.175, 137.180, 137.185, 178.3120, 182.90, 182.1129, GRAS; Japan approved except for miso; BP, Ph.Eur. compliance
Potassium aluminum sulfate. See Potassium alum dodecahydrate

Potassium benzoate
CAS 582-25-2 (anhyd.); EINECS/ELINCS 209-481-3
INS212; E212
Synonyms: Benzoic acid potassium salt
Definition: Potassium salt of benzoic acid; avail. as the trihydrate
Empirical: C7H5KO2
Formula: C6H5COOK
Properties: Wh. gran. or cryst. powd., odorless or prac. odorless; sol. in water; sparingly sol. in alcohol; m.w.160.22; m.p. > 300 C; stable in air
Toxicology: Mild irritant to skin, eyes, and mucous membranes; TSCA listed
Precaution: Combustible exposed to heat or flame
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Storage: Hygroscopic
Uses: Antimicrobial, preservative for pharmaceuticals; lubricant for pharmaceutical tablets
Regulatory: FDA 21 CFR §166.110, 177.1210; USDA 9 CFR §318.7 (limitation 0.1%); BATF 27 CFR §240.1051 (limitation 0.1% in wine); Europe listed; USP/NF compliance; Canada DSL

Trade Names: Standard KCl; Superfine KCl
Trade Names Containing: Gelcarin® DG 3252

Potassium citrate
CAS 866-84-2 (anhyd.); 6100-05-6
(monohydrate); EINECS/ELINCS 212-755-5;
231-905-0 (monohydrate)
INS332(ii); E332

Synonyms: Citric acid, tripotassium salt; 2-
Hydroxy-1,2,3-propanetricarboxylic acid, tripotassium salt; Potassium citrate tertiary
1,2,3-Propanetricarboxylic acid, 2-hydroxy,
tripotassium salt; Tripotassium citrate;
Tripotassium citrate monohydrate;
Tripotassium 2-hydroxypropane-1,2,3-
tricarboxylate

Classification: Nonaromatic acid salt

Definition: Potassium salt of citric acid

Empirical: C₆H₅O₇ • 3K (anhyd.); C₆H₅K₃O₇ •
H₂O (monohydrate)

Properties: Colorless or wh. cryst. or powd.,
odorless, cooling saline taste; sol. in water,
glycerol; insol. in alcohol; m.w. 306.41
(anhyd.), 324.42 (monohydrate); dens. 1.98;
dec. 230 C; pH 8.5; loses water of cryst. @
180 C, dec. @ 230 C

Toxicology: LD50 (IV, dog) 167 mg/kg; poison
by IV route; TSCA listed

Hazardous Decomp. Prods.: Heated to
decomp., emits toxic fumes of K₂O, acrid
smoke and irritating fumes

Storage: Deliq.; hygroscopic

Uses: Potassium and citrate source, buffer,
antacid in pharmaceuticals, orals,
extended-release tablets; antiurolithic;
urinary alkalizer; buffer, chelating agent in
oral care

Regulatory: FDA 21CFR §133.169, 133.173,
133.179, 150.141, 150.161, 175.300, 181.29,
184.1625, GRAS; USDA 9CFR §318.7;
Canada DSL; BATF 27CFR §240.1051
(limitation 25 lb/1000 gal wine); Japan
Potassium citrate tertiary. See Potassium citrate

Potassium cocoate
CAS 61789-30-8; EINECS/ELINCS 263-049-9
Synonyms: Coco fatty acids, potassium salts; Coconut acid, potassium salt; Coconut oil acids, potassium salts; Fatty acids, coconut oil, potassium salts; Fatty acids, coco, potassium salts; Potassium cocoanlate
Definition: Potassium salt of coconut acid
Properties: Anionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, detergent, foaming agent in medicinal soaps
Features: Flash foamer
Regulatory: FDA 21CFR §175.105, 176.170, 176.200, 177.1200, 177.2600, 177.2800, 178.3910; Canada DSL
Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

Potassium coconate. See Potassium cocoate

Potassium dihydrogen orthophosphate; Potassium dihydrogen phosphate. See Potassium phosphate

Potassium dimethicone copolyol phosphate
CAS 150522-09-1
Definition: Potassium salt of dimethicone copolyol phosphate
Uses: Humectant, o/w emulsifier for pharmaceuticals, topicals
Trade Names: Pecosil® PS-100K
Chemical Component Cross-Reference

Potassium diphasphate. See Potassium phosphate

Potassium disulfite. See Potassium metabisulfite

Potassium ethyl 4-oxidobenzoate. See Potassium ethylparaben

Potassium ethylparaben
CAS 36457-19-9; EINECS/ELINCS 253-048-1
Synonyms: Ethyl-4-hydroxybenzoate potassium salt; Ethylparaben, potassium salt; Potassium ethyl 4-oxidobenzoate
Definition: Potassium salt of ethylparaben
Empirical: C9H10O3 • K
Uses: Preservative, fungicide, bactericide for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

Potassium gluconate.
See Potassium D-gluconate

Potassium D-gluconate
CAS 299-27-4; EINECS/ELINCS 206-074-2
INS577; E577
Synonyms: D-Gluconic acid monopotassium salt; Gluconic acid potassium salt; D-Gluconic acid potassium salt; Monopotassium D(-)-pentahydroxy capronate; Potassium gluconate; Potassium pentahydroxycaproinat 
Potassium gluconate

Synonyms:
1,2,3-Propanetriol, monophosphate, dipotassium salt
Empirical: C3H7K2O6P
Formula: HOCH2(CHOH)3COO−K+
Properties: Wh. or ylsh. fine powd., odorless, sl. bitter taste; sol. in water, glycerin; insol. in alcohol, ether, chloroform, benzene; m.w. 234.3; m.p. 180 C (dec.)
Toxicology: LD50 (oral, rat) 10,380 mg/kg, (IP, rat) 2664 mg/kg, (subcut., rat) 9650 mg/kg; mod. toxic by IP route; mildly toxic by ing.; TSCA listed
Precaution: Avoid dust formation
Hazardous Decomp. Pros.: Heated to decom., emits toxic fumes of K2O
Uses: Mineral source, potassium carrier, nutrient, dietary supplement for pharmaceuticals, tablets, vitamin tablets
Regulatory: USDA 9CFR §318.7; Europe listed; UK approved; Canada DSL
Manuf./Distrib.: AAA Int'l.

Potassium iodide. See Potassium iodine

Potassium iodine
CAS 7681-11-0; EINECS/ELINCS 231-659-4

Synonyms: Potassium iodide
Classification: Inorganic salt
Definition: Potassium salt of hydriodic acid
Empirical: \( \text{KI} \)
Formula: \( \text{KI} \)

Properties: Colorless to wh. cryst. granules or powd.; odorless; strong bitter saline taste; sol. in water, alcohol, acetone, glycerol, oxygenated solvs.; m.w. 166.02; dens. 3.123; m.p. 723 C; b.p. 1420 C; pH 7-9

Toxicology: LDLo (oral, mouse) 1862 mg/kg, (IV, rat) 167 mg/kg; Iodine salts can cause deformity, illness, and death of a fetus; may cause eye and skin irritation; ing. causes GI irritation with nausea, vomiting and diarrhea; inh. may cause respiratory tract irritation; chronic exposure can lead to iodism; TSCA listed

Environmental: Moderate potential to affect aquatic organisms

Precaution: Explosive reaction with charcoal + ozone; incompat. with oxidants, BrF3, FCIO, metallic salts

Hazardous Decomp. Prods.: Oxides of potassium, iodine; Heated to decomp., emits very toxic fumes of \( \text{K}_2\text{O} \) and \( \text{I}^- \)

Storage: Sl. hygroscopic; moisture- and light-sensitive; store @ R.T.

Uses: Source of dietary iodine in pharmaceuticals; antiseptic

Regulatory: FDA 21CFR §100.155, 172.375, 178.1010, 184.1634, 582.80, GRAS; BP, EP compliance; Canada DSL

Trade Names: Purasal® HiPure P

Potassium metabisulfite
CAS 4429-42-9; 16731-55-8; EINECS/ELINCS 240-795-3
UN NA 2693 (DOT); INS224; E224
Synonyms: Dipotassium disulfite; Dipotassium pyrosulfite; Disulfurous acid dipotassium salt; KMS; Potassium disulfite; Potassium pyrosulfite
Classification: Inorganic salt
Empirical: K₂O₅S₂
Formula: K₂S₂O₅
Properties: Colorless to wh. gran. or powd., pungent sharp odor; sol. in water, insol. in alcohol; m.w. 222.32; dens. 2.3; m.p. > 300 C; dec. at 150-190 C; oxidizes in air and moisture to sulfate
Toxicology: TDLo (oral, rat) 35 g/kg; low toxicity; irritant; experimental tumorigen, reproductive effects; mutagen; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of SOx and K₂O
HMIS: Health 1, Flammability 0, Reactivity 2
Storage: Moisture-sensitive; keep dry and well closed
Uses: Antiseptic, preservative, antioxidant in pharmaceuticals, injectables, parenterals, intravenous, otics, rectals
Regulatory: FDA approved for injectables, parenterals, intravenous, otics, rectals; USP/NF compliance; Canada DSL
Manuf./Distrib.: Aldrich† http://www.sigma-aldrich.com; Allchem Ind.

Potassium metaphosphate
CAS 7790-53-6; EINECS/ELINCS 232-212-6
Synonyms: Metaphosphoric acid potassium salt; Monopotassium metaphosphate; Potassium Kurrol’s salt; Potassium polymetaphosphate
Classification: Mineral salt
Definition: Straight-chain polyphosphate
Empirical: KO₃P
Formula: KPO₃
Properties: Wh. powd., odorless; sol. in dil. sodium salt sol’ns.; pract. insol. in water; m.w. 118.07; dens. 2.45; m.p. 807 C
Toxicology: Nuisance dust
Storage: Store in cool, dry place; protect against moisture
Uses: Buffer in pharmaceuticals, orals; microencapsulation systems
Regulatory: FDA approved for orals; USP/NF compliance; Japan approved; Canada DSL
Manuf./Distrib.: BK Giulini Chemie http://www bk-giulini.com/e-index1.htm;
Spectrum Quality Prods.
http://www.spectrumchemical.com

Trade Names Containing: Lipothix™ 100-B; Lipothix™ 200-S

Potassium 6-methyl-1,2,3-oxathiazine-4(3H)-1,2,2-dioxide. See Acesulfame potassium

Potassium methylparaben
CAS 26112-07-2; EINECS/ELINCS 247-464-2
Synonyms: 4-Hydroxybenzoic acid, methyl ester, potassium salt; Methylparaben, potassium salt
Definition: Potassium salt of methylparaben
Empirical: C₆H₉O₃ • K
Uses: Preservative, bactericide, fungicide in pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

Potassium monochloride; Potassium muriate. See Potassium chloride

Potassium octadecanoate. See Potassium
Chemical Component Cross-Reference

stearate
Potassium 9-octadecenoate; Potassium cis-9-octadecenoic acid. See Potassium oleate

Potassium oleate
CAS 143-18-0; EINECS/ELINCS 205-590-5
INS 470; E470a
Synonyms: 9-Octadecenoic acid, potassium salt; 9-Octadecenoic acid (Z)-, potassium salt; Oleic acid potassium salt; Potassium 9-octadecenoate; Potassium cis-9-octadecenoic acid
Definition: Potassium salt of oleic acid
Empirical: C18H33O2 • K
Formula: CH3(CH2)7CH=CH(CH2)7COOK
Properties: Ylsh., gray-tan, or brownish paste; sol. in water, alcohol; m.w. 320.56; HLB 20.0; anionic
Toxicology: Eye irritant; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of K2O
Uses: Surfactant, emulsifier
Regulatory: FDA 21CFR §172.863, 175.105, 175.300, 176.170, 176.200, 176.210, 177.1200, 177.2260, 177.2600, 177.2800, 178.3910, 181.22, 181.29; Canada DSL
Manuf./Distrib.: A&E Connock

Potassium orthophosphate. See Potassium phosphate

Potassium PCA
CAS 4810-50-8; EINECS/ELINCS 225-373-9
Synonyms: L-Proline, 5-oxo-, monopotassium salt
Definition: Potassium salt of PCA
Empirical: C5H7NO3 • K
Formula: CH3(CH2)7CH=CH(CH2)7COOK
Properties: Sol. in water; m.w. 167.2
Toxicology: Very sl. irritating to eyes; nonirritant to skin
Uses: Moisturizer for dermatological soaps
Trade Names: Kalidone®
Chemical Component Cross-Reference

Int'l.† http://www.dastech.com; Fluka http://www.sigma-aldrich.com
Trade Names: Cairox® Potassium Permanganate USP Grade

Potassium peroxydisulfate; Potassium peroxydisulfate. See Potassium persulfate

Potassium persulfate
CAS 7727-21-1; EINECS/ELINCS 231-781-8
UN 1492 (DOT); INS922
Synonyms: Dipotassium persulfate; Peroxydisulfuric acid dipotassium salt; Potassium peroxydisulfate; Potassium peroxydisulfate
Empirical: $\text{K}_2\text{O}_8\text{S}_2$
Formula: $\text{K}_2\text{S}_2\text{O}_8$
Properties: Colorless or wh. cryst., odorless; sol. in 50 parts water with gradual decomp.; insol. in alcohol; m.w. 270.33; dens. 2.477; m.p. 100 C (dec.)
Toxicology: ACGIH TLV/TWA 5 mg(S$_2$O$_5$)/m$^3$; mod. toxic; irritant; allergen; TSCA listed
Precaution: Powerful oxidizer; flamm. when exposed to heat or by chemical reaction; reactive with reducing materials; liberates oxygen above 100 C (dry), 50 C (sol'n.)
Hazardous Decomp. Prods.: Heated to decomp., emits highly toxic fumes of SO$_x$ and K$_2$O
Storage: Keep well closed in cool place
Uses: Oxidizing agent in pharmaceuticals; antiseptic

†=pharmaceutical grade

Regulatory: FDA 21CFR §172.210, 175.105, 175.210, 176.170, 177.1210, 177.2600; USDA 9CFR §381.147; Canada DSL

Potassium phosphate
CAS 7778-77-0; EINECS/ELINCS 231-913-4 INS340(i)
Synonyms: MKP; Monopotassium orthophosphate; Monopotassium phosphate; Phosphoric acid monopotassium salt; Potassium acid phosphate; Potassium biphosphate; Potassium dihydrogen orthophosphate; Potassium dihydrogen phosphate; Potassium diphosphate; Potassium orthophosphate; Potassium phosphate monobasic; Potassium phosphate primary
Classification: Inorganic salt
Empirical: $\text{H}_2\text{K}_2\text{O}_4\text{P}$
Formula: $\text{H}_2\text{O}_4\text{P} \cdot \text{K}$
Properties: Colorless cryst. or wh. cryst. powd., odorless; acid in reaction; sol. in water; insol. in alcohol; m.w. 136.09; dens. 2.338; m.p. 253 C; pH 4.5 (1%); stable in air; anionic
Toxicology: No known toxicity; nuisance dust
Precaution: Corrosive
HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Hygroscopic; store @ R.T.
Uses: Buffer, sequestrant in pharmaceuticals,
### Chemical Component Cross-Reference

**injectables, parenterals, intravenous, ophthalmics, orals, otics; nutrient in antibiotic prod.; urinary acidifier**

**Regulatory:** FDA 21CFR §101.9, 160.110, 175.105; USDA 9CFR §318.7, 381.147; Japan approved; Europe listed; UK approved; FDA approved for injectables, parenterals, intravenous, ophthalmics, orals, otics; USP/NF, BP, EP compliance; Canada DSL

**Manuf./Distrib.:** AB R Lundberg

**Potassium phosphate dibasic**

CAS **7758-11-4** (anhyd.); **16788-57-1** (trihydrate); EINECS/ELINCS **231-834-5**

**INS340(ii)**

**Synonyms:** Dibasic potassium phosphate; Dipotassium hydrogen orthophosphate; Dipotassium hydrogen phosphate; Dipotassium monophosphate; Dipotassium orthophosphate; Dipotassium phosphate; DKP; Phosphoric acid dipotassium salt

**Classification:** Inorganic salt

**Empirical:** HK$_2$O$_4$P

**Formula:** K$_2$HPO$_4$

**Properties:** Colorless or wh. cryst. or powd.; odorless; sol. in water; sl. sol. in alcohol; m.w. 174.18 (anhyd.), 228.23 (trihydrate); pH 8.5-9.6 (5%)

**Toxicology:** No known toxicity; nuisance dust

**Hazardous Decomp. Prods.:** Phosphorous oxides may be released in fire

**HMIS:** Health 1, Flammability 0, Reactivity 0

**Storage:** Deliq., hygroscopic; store @ R.T.

**Uses:** Buffer, sequestrant in pharmaceuticals, intramuscular injectables, orals; urinary acidifier; nutrient in antibiotic prod.

**Regulatory:** FDA 21CFR §73.85, 133.169, 133.173, 133.179, 175.105, 182.6285, GRAS; USDA 9CFR §318.7, 381.147; FDA approved for intramuscular injectables, orals; Canada DSL; Europe listed; UK approved; Japan approved

**Manuf./Distrib.:** AB R Lundberg

**†=pharmaceutical grade**
Potassium phosphate monobasic. See Potassium phosphate primary.

Potassium polyanunnuronate. See Potassium alginate

Potassium polymetaphosphate. See Potassium polyphosphate

Potassium propylparaben
CAS 84930-16-5; EINECS/ELINCS 284-597-5
Synonyms: Potassium propyl 4-oxidobenzoate; Propylparaben, potassium salt

Definition: Potassium salt of propylparaben
Empirical: C_{10}H_{12}O_{3} • K
Uses: Preservative for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.

Potassium sodium copper chlorophyllin. See Chlorophyllin-copper complex

Potassium sodium tartrate
CAS 304-59-6; EINECS/ELINCS 206-156-8
INS 337
Synonyms: 2,3-Dihydroxybutanedioic acid, monopotassium monosodium salt; Monopotassium monosodium tartrate; Potassium sodium L-(+)-tartrate; Potassium sodium tartrate anhydrous; Rochelle salt; Seignette salt; Sodium potassium tartrate
Classification: Organic salt
Definition: Sodium potassium salt of L-tartaric acid; avail. as the tetrahydrate
Empirical: C_{4}H_{4}KNaO_{6}
Formula: KNaC_{4}H_{4}O_{6}
Properties: Colorless cryst. or wh. cryst. powd., cooling saline taste; freely sol. in water; pract. insol. in alcohol; m.w. 210.16
Toxicology: TSCA listed
HMIS: Health 1, Flammability 1, Reactivity 0
Uses: Cathartic
Regulatory: BP, EP compliance; FDA 21 CFR §133.169, 133.173, 133.179, 150.141, 150.161, 184.1804; Europe listed; UK approved; Canada DSL
Chemical Component Cross-Reference

Potassium sodium L-(+)-tartrate; Potassium sodium tartrate anhydrous. See Potassium sodium tartrate

Potassium sodium tartrate tetrahydrate
CAS 6100-16-9; 6381-59-5; EINECS/ELINCS 205-698-2; 206-156-8

INS337
Synonyms: Monopotassium monosodium tartrate tetrahydrate; Rochelle salt; Seignette salt; Sodium potassium tartrate
Empirical: C₇H₂₆KO₆ • 4H₂O
Formula: KOOC(OH)CH(OH)COONa • 4H₂O
Properties: Colorless cryst. or wh. cryst. powd., cooling saline taste; sol. in 0.9 part water; almost insol. in alcohol; m.w. 282.23; dens. 1.79; m.p. 70-80 C; loses 3 H₂O @ 100 C, becomes anhyd. @ 130-140 C, dec. @ 220 C; pH 7-8
Precaution: Incomp. with acids, calcium or lead salts, magnesium sulfate, silver nitrate
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of K₂O
Storage: Light-sensitive
Uses: Cathartic in medicine
Regulatory: FDA 21CFR §133.118, 133.123, 133.124, 133.169, 133.173, 133.179, 133.187, 133.188, 150.141, 150.161, 166.110, 182.90, 182.3640, GRAS; USDA 9CFR §318.7; BATF 27CFR §240.1051; Canada DSL; FEMA GRAS, CIR approved; Japan approved with limitations; JSCI approved 0.5% max.; Europe listed 0.8% max.; FDA approved for orals, topicals; USP/NF, BP, EP compliance
Manuf./Distrib.: AAA Int'l.
http://www.aaainternational.com; AB R Lundberg
http://www.norfoods.se/lundberg; AD Int'l.

Empirical: C₆H₇O₂ • K
Formula: CH₃CH=CHCH=CHCOOK
Properties: Wh. cryst., powd., or pellets, char. odor; sol. 58.2% in water @ 20 C, 6.5% in alcohol @ 20 C; m.w. 150.23; dens. 1.363 (25/20 C); m.p. 270 C (dec.)
Toxicology: LD50 (oral, rat) 4920 mg/kg, (IP, mouse) 1300 mg/kg; mod. toxic by IP route; mildly toxic by ing.; skin irritant; mutagenic data; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of K₂O
Storage: Light-sensitive
Uses: Mold and yeast inhibitor in aq. sol'ns.; antimicrobial, preservative in pharmaceuticals, orals, topicals; hard/rigid gas-permeable lens prods.; OTC drug active
Regulatory: FDA 21CFR §133.118, 133.123, 133.124, 133.169, 133.173, 133.179, 133.187, 133.188, 150.141, 150.161, 166.110, 182.90, 182.3640, GRAS; USDA 9CFR §318.7; BATF 27CFR §240.1051; Canada DSL; FEMA GRAS, CIR approved; Japan approved with limitations; JSCI approved 0.5% max.; Europe listed 0.8% max.; FDA approved for orals, topicals; USP/NF, BP, EP compliance
Manuf./Distrib.: AAA Int'l.

Potassium (E,E)-sorbate. See Potassium sorbate

Potassium stearate
CAS 593-29-3; EINECS/ELINCS 209-786-1
INS470; E470a
Synonyms: Octadecanoic acid, potassium salt; Potassium octadecanoate; Stearic acid, potassium salt
Classification: Sat. aliphatic carboxylic acid salt
Definition: Potassium salt of stearic acid
Empirical: C_{18}H_{35}KO_{2}
**Chemical Component Cross-Reference**

**Formula:** CH₃(CH₂)₁₆COOK

**Properties:** Whh. powd., sl. fatty odor; readily sol. in hot water producing alkaline sol’ns.; sol. in diethyl ether, ethanol, chloroform, carbon disulfide; slowly sol. in cold water; m.w. 322.63

**Toxicology:** Essentially nontoxic; inh. of high concs. of dust may cause coughing, mild temporary irritation; sl. eye irritant; ing. may cause irritation, nausea, diarrhea; TSCA listed

**Precaution:** Probable combustible dust; may form explosive dust-air mixts.; incompat. with acids (reacts vigorously)

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Store in cool area away from ignition sources

**Uses:** Surfactant, emulsifier in pharmaceutical ointments

**Regulatory:** TSCA listed

**Potassium sulfate**

**CAS 7778-80-5; EINECS/ELINCS 231-915-9**

**INS515(i); E515**

**Synonyms:** Potassium sulfate (2:1); Sulfate of potash; Sulfuric acid, dipotassium salt

**Classification:** Inorganic salt

**Empirical:** K₂O₄S

**Formula:** K₂SO₄

**†=pharmaceutical grade**

**Properties:** Colorless to wh. cryst. or cryst. powd.; odorless; bitter saline taste; sol. in water; insol. in alcohol, acetone; m.w. 174.26; dens. 2.66; m.p. 1067 C; b.p. 1689 C

**Toxicology:** LD₅₀ (oral, rat) 6600 mg/kg; mod. toxic by subcut. route; mod. toxic to humans by ing.; ing. of large doses causes severe GI effects; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of K₂O and SOₓ

**Uses:** Medicine (cathartic)

**Regulatory:** BP, EP compliance; FDA 21CFR §73.85, 184.1643, GRAS; Europe listed; UK approved; Canada DSL

Potassium sulfate (2:1). See Potassium sulfate

Potassium sulfite
CAS 10117-38-1; EINECS/ELINCS 233-321-1
INS225

Synonyms: Sulfurous acid dipotassium salt; Sulfurous acid potassium salt
Classification: Inorganic salt
Empirical: O₃S • 2K
Formula: K₂SO₃
Properties: Wh. cryst. or gran. powd., odorless; sol. in water; sl. sol. in alcohol; m.w. 158.26
Toxicology: Harmful and irritating substance; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of K₂O and SO₃
Uses: Preservative in pharmaceuticals; medicine (cathartic)
Regulatory: FDA 21CFR §73.85, GRAS; Canada DSL

Potassium sulfocyanate. See Potassium thiocyanate

Potassium tartrate. See Potassium acid tartrate

Potassium thiocyanate
CAS 333-20-0; EINECS/ELINCS 206-370-1

Synonyms: Potassium isothiocyanate; Potassium rhodanate; Potassium rhodanide; Potassium sulfocyanate; Potassium thiocyanate; Rhodanide; Thiocyanic acid potassium salt
Classification: Inorganic salt
Empirical: CKNS
Formula: K₂C≡N
Properties: Colorless to wh. transparent cryst. powd., odorless; sol. in cold water, acetone, ethanol, amyl alcohol; m.w. 97.19; dens.

Potassium thiosulfate (2:1). See Potassium sulfite

Potassium thiosulfite
CAS 10117-38-1; EINECS/ELINCS 233-321-1
INS225

Synonyms: Sulfurous acid dipotassium salt; Sulfurous acid potassium salt
Classification: Inorganic salt
Empirical: O₃S • 2K
Formula: K₂SO₃
Properties: Wh. cryst. or gran. powd., odorless; sol. in water; sl. sol. in alcohol; m.w. 158.26
Toxicology: Harmful and irritating substance; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of K₂O and SO₃
Uses: Preservative in pharmaceuticals; medicine (cathartic)
Regulatory: FDA 21CFR §73.85, GRAS; Canada DSL

Potassium thiocyanate. See Potassium thiocyanate

†=pharmaceutical grade

1.886; m.p. 173 C; dec. 500 C; pH 5.3-8.7 (5%)

Toxicology: LD50 (oral, rat) 854 mg/kg; LDLo (subcut., rabbit) 55 mg/kg, (IV, rabbit) 150 mg/kg, (oral, human) 80 mg/kg (hallucinations, convulsions, muscle weakness); poison by IV route; mod. toxic by subcut. and ing.; human poison by ing.; lg. doses may cause skin eruptions, psychoses, collapse; experimental teratogen; TSCA listed

Precaution: Incompat. with calcium chlorite and perchloryl fluoride

Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of CN⁻, K₂O, SO₃, and NOₓ

Storage: Hygroscopic; deliq.; moisture-sensitive

Uses: Intermediate for pharmaceuticals; medicine (hypotensive)

Regulatory: Canada DSL

Trade Names Containing: Sebomine SB12
Chemical Component Cross-Reference

Potassium thiocyanide. See Potassium thiocyanate

Potassium undecylenoyl hydrolyzed animal protein. See Potassium undecylenoyl hydrolyzed collagen

Potassium undecylenoyl hydrolyzed collagen
CAS 68951-92-8
Synonyms: Potassium undecylenoyl hydrolyzed animal protein; Proteins, hydrolysates, reaction prods. with 10- undecenoyl chloride, potassium salts
Definition: Potassium salt of condensation prod. of undecylenic acid chloride and hydrolyzed collagen
Properties: Anionic
Toxicology: TSCA listed
Uses: Antifungal agent
Trade Names: Lamepon® UD

Potassuril. See Potassium D-glucosonate

Potato (Solanum tuberosum) starch
CAS 9005-25-8; 169105-05-9; 977000-07-9; EINECS/ELINCS 232-679-6
Synonyms: Solanum tuberosum
Definition: Natural substance obtained from potatoes, Solanum tuberosum, contg. amylose and amylopectin
Empirical: (C₆H₁₀O₅)n
Properties: Irreg. ovoid or spherical gran.; swells in hot water to form a gel on cooling
Toxicology: May cause allergic reactions and stuffy nose in hypersensitive persons; TSCA listed
Uses: Emollient in pharmaceuticals, used with glycerin to form a soothing protectant for eczema, skin rash, and chapped skin
Regulatory: FDA 21CFR §173.310, 175.105, 182.70; BP, EP compliance

PPG-9
CAS 25322-69-4 (generic)
Synonyms: Polyoxypolypropylene (9); Polypropylene glycol (9); PPG 400
Definition: Polymer of propylene oxide
Formula: H(OCH₂CHCH₃)nOH, avg. n = 9
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emollient, solvent in pharmaceuticals; intermediate yielding esters useful as lubricants, defoamers in pharmaceuticals
Features: Provides low odor, low irritation, low toxicity
Regulatory: FDA 21CFR §173.310, 175.105, 176.200, 176.210
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com
Trade Names: Jeffox® PPG-400

PPG-26
CAS 25322-69-4 (generic)
Synonyms: Polyoxypolypropylene (26); Polypropylene glycol (26); PPG 2000
Definition: Polymer of propylene oxide
Formula: H(OCH₂CHCH₃)nOH, avg. n = 26
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emollient, solvent in pharmaceuticals; intermediate yielding esters useful as lubricants, defoamers in pharmaceuticals
Features: Provides low odor, low irritation, low toxicity

Chemical Component Cross-Reference

PPG-8-ceteth-20
CAS 9087-53-0 (generic); 37311-01-6 (generic)
Synonyms: POE (20) POP (8) cetyl ether; POP (8) POE (20) cetyl ether
Definition: Polyoxypropylene, polyoxyethylene ether of cetyl alcohol
Formula: \( \text{CH}_3(\text{CH}_2)_{14}\text{CH}_2(\text{OCH}_3\text{CHCH}_2)_x(\text{OCH}_2\text{CH}_2)_y\text{O} \)
\( \text{H} \), avg. \( x = 8 \), avg. \( y = 20 \)
Properties: Nonionic
Toxicology: TSCA listed
Uses: Surfactant, emulsifier, solubilizer, dispersant for pharmaceuticals
Features: Hydrophilic
Trade Names: PBC-44

PPG-5-ceteth-10 phosphate
CAS 50643-20-4
Synonyms: POE (10) POP (5) cetyl ether phosphate; POP (5) POE (10) cetyl ether phosphate
Definition: Mixture of esters of phosphoric acid and the polyoxypropylene, polyoxyethylene ether of cetyl alcohol
Properties: Anionic
Uses: Surfactant, conditioner, emulsifier, gellant for topical pharmaceuticals; corrosion inhibitor and antigellant in aerosol antiperspirants

PPG-30 cetyl ether
CAS 9035-85-2 (generic)
Synonyms: POP (30) cetyl ether; PPG (30) cetyl ether
Definition: Polypropylene glycol ether of cetyl alcohol
Formula: \( \text{CH}_3(\text{CH}_2)_{14}\text{CH}_2(\text{OCH}_3\text{CHCH}_2)_n\text{OH} \), avg. \( n = 30 \)
Properties: Liq.; sol. in oils, alcohol; insol. in water; nonionic
Toxicology: No known toxicity; TSCA listed
Uses: Emollient, moisturizer, surfactant, coupling agent, cosolvent, plasticizer, wetting agent, spreading agent, penetrant, lubricant, superfatting agent in pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/

PPG (30) cetyl ether. See PPG-30 cetyl ether

PPG-20 lanolin alcohol ether
CAS 68439-53-2 (generic)
Synonyms: POP (20) lanolin ether; PPG (20) lanolin ether; PPG-20 lanolin ether
Definition: Polypropylene glycol ether of lanolin alcohol with avg. propoxylation value of 20
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, conditioner, spreading agent, dispersant, plasticizer for pharmaceuticals, dermatological vehicles
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/

PPG-10 lanolin alcohol ether
CAS 68439-53-2 (generic)
Synonyms: POP (10) lanolin ether; PPG (10) lanolin ether; PPG-10 lanolin ether
Definition: Polypropylene glycol ether of lanolin alcohol with avg. propoxylation value of 10
Properties: Liq.; sol. in isopropyl esters, veg. oils, ethanol; nonionic
Toxicology: TSCA listed
Uses: Spreading agent, dispersant, plasticizer, emollient for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/

PPG-20 lanolin alcohol ether
CAS 68439-53-2 (generic)
Synonyms: POP (20) lanolin ether; PPG (20) lanolin ether; PPG-20 lanolin ether
Definition: Polypropylene glycol ether of lanolin alcohol with avg. propoxylation value of 20
Properties: Nonionic
Toxicology: TSCA listed
Uses: Emulsifier, emollient, conditioner, spreading agent, dispersant, plasticizer for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/

PPG (2) lanolin ether; PPG-2 lanolin ether. See PPG-2 lanolin alcohol ether

PPG (5) lanolin ether; PPG-5 lanolin ether. See PPG-5 lanolin alcohol ether

PPG (10) lanolin ether; PPG-10 lanolin ether.
Chemical Component Cross-Reference

See PPG-10 lanolin alcohol ether
PPG (20) lanolin ether; PPG-20 lanolin ether.
See PPG-20 lanolin alcohol ether

PPG-5-laureth-5
CAS 68439-51-0 (generic)
Synonyms: POE (5) POP (5) lauryl ether; POP (5) POE (5) lauryl ether
Definition: Polyoxypropylene, polyoxyethylene ether of lauryl alcohol
Empirical: C_{37}H_{76}O_{11}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{10}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_x\text{(OCH}_2\text{CH}_2\text{)}_y\text{O} \), \( \text{avg. } x = 5, \text{avg. } y = 5 \)
Uses: Superfatting agent, emollient for pharmaceuticals, skin care prods.
Manuf./Distrib.: DeWolf Chem.
http://www.dewolfchem.com; Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PPG-3-laureth-9
CAS 9004-94-3
Synonyms: POE (9) POP (3) lauryl ether; POP (3) POE (9) lauryl ether
Definition: Polyoxypropylene, polyoxyethylene ether of lauryl alcohol
Empirical: C_{39}H_{80}O_{13}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{10}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_x\text{(OCH}_2\text{CH}_2\text{)}_y\text{O} \), \( \text{avg. } x = 3, \text{avg. } y = 9 \)
Properties: Nonionic
Uses: Surfactant, emulsifier, dispersant, solubilizer, visc. control agent for pharmaceuticals
Manuf./Distrib.: Somerset Cosmetic Co.
http://www.makingcosmetics.com/

PPG-10 methyl glucose ether
CAS 61849-72-7 (generic)
Synonyms: POP (10) methyl glucose ether
Definition: Polypropylene glycol ether of methyl glucose
Empirical: C_{37}H_{74}O_{16}
Formula: CH_3(CH_2)_{12}(CH_2O)(OCHCH_3CH_2)_nOH, \( \text{avg. } n = 10 \)
Properties: Nonionic
Uses: Solvent and solubilizer for topical pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucam® P-10

PPG-20 methyl glucose ether distearate
CAS 93821-74-0
Synonyms: POP (20) methyl glucose ether distearate; PPG-20 methyl glucoside distearate
Definition: Diester of PPG-20 methyl glucose ether and stearic acid
Uses: Humectant, moisturizer, conditioner, emollient for pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucam® P-20 Distearate

PPG-20 methyl glucoside distearate. See PPG-20 methyl glucose ether distearate

PPG-20 methyl glucoside
PPG (26) monoooleate. See PPG-26 olate

PPG-3 myristyl ether
CAS 63793-60-2 (generic)
Synonyms: POP (3) myristyl ether; Tripropylene glycol myristyl ether
Definition: Polypropylene glycol ether of myristyl alcohol
Empirical: C_{23}H_{48}O_{4}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{12}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_n\text{OH} \), \( \text{avg. } n = 3 \)
Properties: Liq.; insol. in water; sol. in alcohol, min. oil; nonionic
Uses: Emollient
Trade Names: Promyristyl PM-3

PPG-2 myristyl ether propionate
CAS 111497-87-1
Synonyms: Dipropylene glycol, myristyl ether, propionate; POP (2) myristyl ether propionate
Definition: Ester of propionic acid and the polypropylene glycol ether of myristyl alcohol
Empirical: C_{20}H_{52}O_{4}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{12}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_n\text{OH} \), \( \text{avg. } n = 3 \)
Properties: Nonionic
Uses: Solvent and solubilizer for topical pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucam® P-10

PPG-20 methyl glucose ether
CAS 61849-72-7 (generic)
Synonyms: POP (20) methyl glucose ether; PPG (20) methyl glucose ether

†=pharmaceutical grade

Definition: Polypropylene glycol ether of methyl glucose
Formula: CH_3(CH_2H_{10}O_5)(OCHCH_3CH_2)_nOH, \( \text{avg. } n = 20 \)
Properties: Nonionic
Uses: Solvent and solubilizer for topical pharmaceuticals
Trade Names: Glucam® P-20

PPG (20) methyl glucose ether. See PPG-20 methyl glucose ether

PPG-20 methyl glucose ether distearate
CAS 93821-74-0
Synonyms: POP (20) methyl glucose ether distearate; PPG-20 methyl glucoside distearate
Definition: Diester of PPG-20 methyl glucose ether and stearic acid
Uses: Humectant, moisturizer, conditioner, emollient for pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucam® P-20 Distearate

PPG-20 methyl glucoside distearate. See PPG-20 methyl glucose ether distearate

PPG (26) monoooleate. See PPG-26 olate

PPG (2) monosalicylate. See Dipropylene glycol salicylate

PPG-3 myristyl ether
CAS 63793-60-2 (generic)
Synonyms: POP (3) myristyl ether; Tripropylene glycol myristyl ether
Definition: Polypropylene glycol ether of myristyl alcohol
Empirical: C_{23}H_{48}O_{4}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{12}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_n\text{OH} \), \( \text{avg. } n = 3 \)
Properties: Liq.; insol. in water; sol. in alcohol, min. oil; nonionic
Uses: Emollient
Trade Names: Promyristyl PM-3

PPG-2 myristyl ether propionate
CAS 111497-87-1
Synonyms: Dipropylene glycol, myristyl ether, propionate; POP (2) myristyl ether propionate
Definition: Ester of propionic acid and the polypropylene glycol ether of myristyl alcohol
Empirical: C_{20}H_{52}O_{4}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{12}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_n\text{OH} \), \( \text{avg. } n = 3 \)
Properties: Nonionic
Uses: Solvent and solubilizer for topical pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucam® P-10

PPG-20 methyl glucose ether
CAS 61849-72-7 (generic)
Synonyms: POP (20) methyl glucose ether; PPG (20) methyl glucose ether

†=pharmaceutical grade

Definition: Polypropylene glycol ether of methyl glucose
Formula: CH_3(CH_2H_{10}O_5)(OCHCH_3CH_2)_nOH, \( \text{avg. } n = 20 \)
Properties: Nonionic
Uses: Solvent and solubilizer for topical pharmaceuticals
Trade Names: Glucam® P-20

PPG (20) methyl glucose ether. See PPG-20 methyl glucose ether

PPG-20 methyl glucose ether distearate
CAS 93821-74-0
Synonyms: POP (20) methyl glucose ether distearate; PPG-20 methyl glucoside distearate
Definition: Diester of PPG-20 methyl glucose ether and stearic acid
Uses: Humectant, moisturizer, conditioner, emollient for pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucam® P-20 Distearate

PPG-20 methyl glucoside distearate. See PPG-20 methyl glucose ether distearate

PPG (26) monoooleate. See PPG-26 olate

PPG (2) monosalicylate. See Dipropylene glycol salicylate

PPG-3 myristyl ether
CAS 63793-60-2 (generic)
Synonyms: POP (3) myristyl ether; Tripropylene glycol myristyl ether
Definition: Polypropylene glycol ether of myristyl alcohol
Empirical: C_{23}H_{48}O_{4}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{12}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_n\text{OH} \), \( \text{avg. } n = 3 \)
Properties: Liq.; insol. in water; sol. in alcohol, min. oil; nonionic
Uses: Emollient
Trade Names: Promyristyl PM-3

PPG-2 myristyl ether propionate
CAS 111497-87-1
Synonyms: Dipropylene glycol, myristyl ether, propionate; POP (2) myristyl ether propionate
Definition: Ester of propionic acid and the polypropylene glycol ether of myristyl alcohol
Empirical: C_{20}H_{52}O_{4}
Formula: \( \text{CH}_3\text{(CH}_2\text{)}_{12}\text{CH}_2\text{(OCH}_3\text{CH}_2\text{)}_n\text{OH} \), \( \text{avg. } n = 3 \)
Properties: Nonionic
Uses: Solvent and solubilizer for topical pharmaceuticals
Regulatory: Canada DSL
Trade Names: Glucam® P-10

PPG-20 methyl glucose ether
CAS 61849-72-7 (generic)
Synonyms: POP (20) methyl glucose ether; PPG (20) methyl glucose ether
PPG-26 oleate  
CAS 31394-71-5 (generic)  
Synonyms: POP (26) monooleate; PPG (26) monooleate  
Definition: Polypropylene glycol ester of oleic acid  
Formula: $\text{CH}_3(\text{CH}_2)_7\text{CH}=\text{CH}(\text{CH}_2)_7\text{CO(OCHCH}_3\text{CH}_2)_n\text{O}$  
H, avg. $n = 26$  
Properties: Nonionic  
Toxicology: TSCA listed  
Uses: Emollient, lubricant, defoamer, viscosity control agent, dispersant, spreading agent in pharmaceuticals, topicals  
Regulatory: FDA 21CFR §175.300, 176.210; FDA approved for topicals  
Trade Names: Crodamol PMP  
PPG-12-PEG-50 lanolin  
CAS 68458-88-8 (generic)  
Synonyms: POE (50) POP (12) lanolin; POP (12) POE (50) lanolin  
Definition: Polyoxypropylene, polyoxyethylene deriv. of lanolin  
Formula: $R(\text{OCHCH}_3\text{CH}_2)_x(\text{OCH}_2\text{CH}_2)_y\text{OH}, R$ rep. lanolin radicals, avg. $x = 12$, avg. $y = 50$  
Properties: Nonionic  
Toxicology: LD50 (oral, rat) 32 g/kg; TSCA listed  
Uses: O/w emulsifier, solubilizer, emollient, solubilizer for topical pharmaceuticals  
Regulatory: Canada DSL  
Trade Names: Laneto AWS; Lanexol AWS  
PPG-12-PEG-65 lanolin oil  
Synonyms: POE (65) POP (12) lanolin oil; POP (12) POE (65) lanolin oil  
Definition: Polyoxypropylene, polyoxyethylene deriv. of lanolin oil  
Formula: $R(\text{OCHCH}_3\text{CH}_2)_x(\text{OCH}_2\text{CH}_2)_y\text{OH}, R$ rep. lanolin radical, avg. $x = 12$, avg. $y = 65$  
Properties: Liq.; sol. in water and alcohol; nonionic  
Toxicology: LD50 (oral, rat) > 5 g/kg  
Uses: Emulsifier, emollient, penetrant, moisturizer for pharmaceuticals  
Trade Names: Fluiolan AWS; Ritalan® AWS; Vigilan™ AWS  
PPG-2 salicylate. See Dipropylene glycol salicylate  
PPG-15 stearyl ether  
CAS 25231-21-4 (generic)  
Synonyms: POP (15) stearyl ether; PPG (15) stearyl ether  
Definition: Polypropylene glycol ether of stearyl alcohol  
Formula: $\text{CH}_3(\text{CH}_2)_{16}\text{CH}_2(\text{OCHCH}_3\text{CH}_2)_n\text{OH}$, avg. $n = 15$  
Properties: Nonionic  
Toxicology: TSCA listed  
Uses: Surfactant, emulsifier, dispersant, solubilizer, visc. control agent, emollient, solvent, lubricant in pharmaceuticals, topicals  
Regulatory: FDA approved for topicals  
Manuf./Distrib.: ABITEC†  
Manuf./Distrib.: A&E Connock  
http://www.connock.co.uk  
Trade Names: Acconon E; Lipocol P-15  
PPG (15) stearyl ether. See PPG-15 stearyl ether  
1Ppropene-1,2,3-tricarboxylic acid ethyl ester. See Ethyl aconitate, mixed esters  
PPS. See Pentosan polysulfate sodium  
Precipitated barium sulfate. See Barium sulfate  
Precipitated calcium carbonate. See Calcium carbonate  
Precipitated calcium phosphate. See Calcium hydroxide phosphate; Calcium phosphate tribasic  
Precipitated calcium sulfate. See Calcium sulfate dihydrate  
Precipitated chalk. See Calcium carbonate  
Precipitated silica. See Silica, hydrated; Silica, amorphous  
Precipitated sulfur. See Sulfur  
Precirol. See Glycerol di/tristearate  
Pregelatinized starch. See Starch  
Prenol: Prenyl alcohol. See 3-Methyl-2-buten-1-ol  
Prepared chalk. See Calcium carbonate

Primary ammonium phosphate. See Ammonium phosphate  
Primary amyl acetate. See Amyl acetate  
Primary amyl alcohol. See n-Amyl alcohol  
Primary decyl alcohol. See Decyl alcohol  
Primary isoamyl alcohol. See Isoamyl alcohol  
Primary octyl alcohol. See Caprylic alcohol  
Primary sodium phosphate. See Sodium phosphate
**Chemical Component Cross-Reference**

**Pro.** See L-Proline

**Procaine**
CAS 59-46-1

**Synonyms:** 4-Aminobenzoic acid 2- (diethylamino) ethyl ester; p-Aminobenzoic acid diethylaminoethyl ester; p- Aminobenzoic acid-2-diethylaminoethyl ester; p-Aminobenzoic acid-2-diethylaminoethanol; 2-Diethylaminoethyl p-aminobenzoate; 4- (Diethylamino) ethyl 4-aminobenzoate; β- Diethylaminoethyl-4-aminobenzoate; Diethylaminoethyl-p-aminobenzoate; Novocaine

**Empirical:** C13H20N2O2

**Properties:** Solid; sol. in alcohol, ether, benzene, chloroform; when freshly precipitated, 1 g dissolves in 200 ml water; m.w. 236.32; m.p. 61-62 C

**Toxicology:** LD50 (oral, mouse) 350 mg/kg, (IP, mouse) 45 mg/kg; poison by ing., IP, IV, subcut. routes; human systemic effects by intramuscular route; potential adverse reactions incl. skin reactions, swelling, continuous asthma attacks, severe allergic reactions, anxiety, nervousness, respiratory arrest

**Hazardous Decomp. Prods.:** Heated to decomp., emits very toxic fumes of HCl and NOx

**Storage:** Hygroscopic

**Uses:** Local anesthetic; used in intramuscular injectables; penicillin adjunct

**Regulatory:** FDA approved for use in rectals, intramuscular injectables; BP, Ph.Eur. compliance

**Procaine hydrochloride**
CAS 51-05-8; EINECS/ELINCS 200-077-2

**Synonyms:** 4-Aminobenzoic acid 2- (diethylamino) ethyl ester hydrochloride; p- Aminobenzoic acid-2-diethylaminoethyl ester, hydrochloride; p- Aminobenzoyl diethylaminoethanol

**†=pharmaceutical grade**

hydrochloride; Anesthesol; Benzoic acid, 4- amino-, 2-(diethylamino) ethyl ester, monohydrochloride; Benzoic acid, p-amino-, 2-(diethylamino) ethyl ester, monohydrochloride; Diethylamino ethanol- 4-aminobenzoate hydrochloride; 2- (Diethylamino) ethyl 4-aminobenzoate hydrochloride; 2-Diethylaminoethyl-p- aminobenzoate hydrochloride; Ethyl-p- aminobenzoate hydrochloride

**Empirical:** C13H20N2O2 • ClH

**Properties:** Wh. cryst. powd., odorless, tasteless; sol. in dil. acids; less sol. in chloroform, ether, alcohol; very sl. sol. in water; m.w. 272.81; m.p. 88-92 C

**Toxicology:** LD50 (oral, rat) 200 mg/kg, (IP, rat) 160 mg/kg, (IV, rat) 38 mg/kg; poison by ing., subcut., IV, IP routes; systemic CNS excitation reported in adults; acne renal failure possible; possibly human reproductive effects; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits very toxic fumes of HCl and NOx

**HMIS:** Health 2, Flammability 1, Reactivity 0

**Storage:** Light/air sensitive

**Uses:** Local anesthetic in medicine, suntan preps., rectals, intramuscular injectables

**Regulatory:** FDA approved for use in rectals, intramuscular injectables; BP, Ph.Eur. compliance

Propane

CAS 74-98-6; EINECS/ELINCS 200-827-9
UN 1075 (DOT); UN 1978 (DOT); INS944; E944

Synonyms: Dimethylmethane; Liquefied petroleum gas; Petroleum gases, liquefied; n-Propane; Propane liquefied; Propyl hydride

Classification: Sat. aliphatic hydrocarbon

Empirical: C₃H₈

Formula: CH₃CH₂CH₃

Properties: Colorless gas, nat. gas odor; easily liquefied under pressure at R.T.; noncorrosive; sol. in ether, alcohol, chloroform, org. solvs.; sl. sol. in water, acetone; m.w. 44.09; sp.gr. 0.513 (0 C, as liq.), 1.56 (0 C, as vapor); f.p. -189.9 C; b.p. -42.5 C; flash pt. -104 C

Toxicology: OSHA PEL/TWA 1000 ppm; simple asphyxiant; narcotic in high concs.; overexposure may cause dizziness, disorientation, excitation; liq. propane may cause frostbite to skin and eyes; TSCA listed

Precaution: Flamm.; dangerous fire hazard exposed to heat, flame; explosive limits in air 2.4-9.5%; vigorously reactive with oxidizers; explosive as vapor exposed to heat or flame; explosive with ClO₂; violent exothermic reaction with barium peroxide, heat

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

NFPA: Health 1, Flammability 4, Reactivity 0

Storage: Store in cool, dry, well-ventilated area out of direct sunlight

Uses: Aerosol propellant in pharmaceuticals, topicals

Regulatory: FDA 21CFR §173.350, 184.1655, GRAS; FDA approved for topicals; USP/NF compliance; Canada DSL

### Propenylguaethol

- CAS: 94-86-0; EINECS/ELINCS 202-370-0
- FEMA: 2922

#### Synonyms:
- 6-Ethoxy-m-anol
- 1-(4-Ethoxy-3-hydroxyphenyl) propene
- 1-Ethoxy-2-hydroxy-4-propenylbenzene
- Ethoxy propenylphenol
- 2-Ethoxy-5-propenylphenol
- 2-Ethoxy-5-prop-1-enylphenol
- Hydroxymethyl anethol
- Hydroxymethyl anethole
- Isosafroegenol
- 2-Propenyl-6-ethoxyphenol

#### Classification:
- Aromatic alcohol

#### Definition:
- Commercial grades are mixt. of cis- and trans-isomers

#### Empirical:
- C_{11}H_{14}O_{2}

#### Formula:
- C_{2}H_{5}OC_{6}H_{3}(OH)(C_{3}H_{5})

#### Properties:
- Wh. cryst. powd., vanilla-like odor and taste; sol. in fixed oils, alcohol, hydrocarbon solvs.; insol. in water; m.w. 178.25; m.p. 35 °C (cis), 86 °C (trans); flash pt. > 212 °F

#### Toxicology:
- LD₅₀ (oral, rat) 2400 mg/kg; mod. toxic by ing.; TSCA listed

#### Precaution:
- Combustible liq.

#### Hazardous Decomp. Prods.:
- Heated to decomp, emits acrid smoke and fumes

#### Uses:
- Synthetic flavor for pharmaceuticals

#### Features:
- Sweet, artificial vanilla or medicinal flavor

#### Regulatory:
- FDA 21CFR §172.515; FEMA GRAS; Canada DSL

#### Manufacturer/Distributor:

Propyl alcohol  
CAS 71-23-8; EINECS/ELINCS 200-746-9  
UN 1274 (DOT); FEMA 2928  
Synonyms: Albacol; Alcohol C3; Ethyl carbinol; 1-Hydroxypropane; Normal propyl alcohol; Optal; 1-Propanol; Propanol-1; Propan-1-ol; n-Propanol; 1-Propyl alcohol; n-Propyl alcohol; Propyl alcohol  
Classification: Aliphatic alcohol  
Empirical: \( \text{C}_3\text{H}_8\text{O} \)  
Formula: \( \text{CH}_3\text{CH}_2\text{CH}_2\text{OH} \)  

Properties: Colorless clear liq., alcoholic and sl. stupefying odor; very sol. in benzene; sol. in water, ethyl alcohol, ether, acetone, propylene glycol; misc. with oxygenated solvs.; dissolves fat; m.w. 60.10; sp.gr. 0.804 (20/4 C); vapor pressure 10 mm Hg (14.7 C); m.p. -127 C; b.p. 97-98 C; flash pt. (TCC) 23 C; ref. index 1.385 (20 C)  

Toxicology: ACGIH TLV/TWA 200 ppm; STEL 250 ppm (skin); LD50 (oral, rat) 1.87 g/kg; (IP, rat) 2164 mg/kg, (IV, rat) 590 mg/kg; poison by subcut. route; mod. toxic by inh., ing., IP, IV routes; toxic by skin absorption; skin and severe eye irritant; drying effect on skin may lead to cracking, fissuring, and infections; mildly irritating to mucous membranes; questionable carcinogen; mutagenic data; TSCA listed  

Environmental: VOC; BOD5 1.50; COD 2.18; ThOD 2.40  

Precaution: Highly flamm.; dangerous fire hazard exposed to heat, flame, oxidizers; explosive limits in air 2-13%; incompat. with oxidizing agents (increases risk of fire and explosion); ignites on contact with potassium t-butoxide  

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes  

NFPA: Health 1, Flammability 3, Reactivity 0  
Storage: Store in tightly closed containers in cool, well-ventilated area separate from work place; limit quantities in use  
Uses: Solvent in pharmaceuticals, topicals, liniments; synthetic flavor for pharmaceuticals, mouthwashes, gargles; antiseptic  

Features: Sweet flavor  

Regulatory: FDA 21CFR §172.515, 175.105, 176.180, 176.210, 177.1200, 573.880; FEMA GRAS; FDA approved for topicals; Australia AICS; Canada DSL; Japan MITI

Chemical Component Cross-Reference

†=pharmaceutical grade

Propyl benzoate
CAS 2315-68-6; EINECS/ELINCS 219-020-8
FEMA 2931
Synonyms: Benzoic acid, n-propyl ester; n-Propyl benzoate
Definition: Ester of n-propyl alcohol and benzoic acid
Empirical: C_{10}H_{12}O
Properties: Colorless oily liq., balsamic nutty odor, sweet fruity nut-like taste; sol. in alcohol; insol. in water; m.w. 164.21; dens. 1.026; b.p. 230-231 C; m.p. -51 to -52 C; flash pt. 98 C; ref. index 1.5100
Uses: Synthetic flavor for pharmaceuticals
Use Level: 0.5% max. as benzoic acid in finished cosmetics
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com; Grau Aromatics http://www.grau-aromatics.de

Propyl butanoate.
See Propyl butyrate

Propyl butyrate
CAS 105-66-8; EINECS/ELINCS 203-320-0
FEMA 2934
Synonyms: Butanoic acid propyl ester; Butyric acid, propyl ester; Propyl butanoate; n-Propyl butyrate
Empirical: C_{7}H_{14}O
Formula: CH_{3}CH_{2}CH_{2}COOCH_{2}CH_{2}CH_{3}
Properties: Colorless liq.; sol. in oxygenated solvs.; misc. with alcohol, ether; sl. sol. in water; m.w. 130.19; dens. 0.87 (20/4 C); m.p. -95 C; b.p. 142-144 C; flash pt. 37 C; ref. index 1.400 (20 C)
Toxicology: LD50 (oral, rat) 15,000 mg/kg; sl. toxic by ing.; irritant to mucous membranes; narcotic in high concs.; TSCA listed
Precaution: Flamm.
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Synthetic flavor for pharmaceuticals
Features: Fruity sweet apricot pineapple rancid sweaty odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
n-Propyl butyrate. See Propyl butyrate
Propyl caproate. See Propyl hexanoate
Propyl carbinol. See Butyl alcohol

Propyl cinnamate
CAS 7778-83-8; EINECS/ELINCS 231-916-0
FEMA 2938
Synonyms: Cinnamic acid propyl ester; 3-Phenyl-2-propenoic acid propyl ester; N-Propyl beta-phenyl acrylate; N-Propyl cinnamate; Propyl 3-phenyl-2-propenoate; N-Propyl 3-phenyl propenoate

Empirical: C12H14O2
Properties: Colorless visc. liq.; sol. in alcohol; insol. in water; m.w. 190.24; sp. gr. 1.025; ref. index 1.551
Uses: Synthetic flavor for pharmaceuticals

Features: Musty vine amber odor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Degussa AG/Health & Nutrition

N-Propyl cinnamate. See Propyl cinnamate

1-Propyldisulfamylpropane. See Propyl disulfide

Propyl disulfide
CAS 629-19-6; EINECS/ELINCS 211-079-8
FEMA 3228
Synonyms: Dipropyl disulfide; 1-Propyldisulfamylpropane

Empirical: C6H14S2
Formula: CH3CH2CH2SSCH2CH2CH3
Properties: Garlic, onion odor; m.w. 150.31; dens. 0.957 (20/4 C); m.p. -86 C; b.p. 195 C; flash pt. 64 C; ref. index 1.498 (20 C)

Toxicology: TDLo (oral, rat) 4508 mg/kg; TSCA listed

Precaution: Combustible liq.; stench
Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA

Propylene aldehyde. See Acrolein

Propylene carbonate
CAS 108-32-7; EINECS/ELINCS 203-572-1
Synonyms: Carbonic acid, cyclic propylene ester; Carbonic acid, 1,2-propylene glycol ester; 1,3-Carbonyl dioxypropane; Cyclic methylethylene carbonate; Cyclic propylene carbonate; Cyclic 1,2-propylene carbonate; 1,3-Dioxolan-2-one, 4-methyl; Dipropylene carbonate; 4-Methyl-1,3-dioxolan-2-one; 1-Methyl ethylene carbonate; 1,2-Propanediol carbonate; 1,2-Propanediyl carbonate; Propylene glycol cyclic carbonate

Classification: Organic compd.; carbonic acid ester

Empirical: C4H6O3
Properties: Colorless clear liq.; odorless; very sol. in water; misc. with acetone, benzene, chloroform, ether, ethyl acetate; m.w. 102.10; dens. 1.2069 (20/20 C); vapor pressure 0.03 mm Hg (20 C); m.p. -48.8 C; b.p. 242.1 C; flash pt. (OC) 135 C; ref. index 1.422 (20 C); pH 8.8; can remain liq. (supercools) below its f.p.

Toxicology: LD50 (oral, rat) 29 g/kg, (skin, rabbit) 20 ml/kg; mildly toxic by ing.; human skin irritant; eye irritant; TSCA listed

Environmental: Biodeg.; VOC; ThOD 1.25

Precaution: Combustible exposed to heat or flame; incompat. with strong oxidizing agents (increases fire risk), acids, bases, reducing agents (decomp. can occur)

Hazardous Decomp. Prods.: May produce propylene oxide if an acid, base, or salt is present in an aq. sol'n. of propylene carbonate; heated to decomp., emits acrid smoke and irritating fumes

NFPA: Health 1, Flammability 1, Reactivity 0
### Chemical Component Cross-Reference

**Storage:** Store in cool, dry, well-ventilated area, out of direct sunlight; avoid generating mist  
**Uses:** Flavor for pharmaceuticals; topicals  
**Features:** Medicinal, minty flavor  
**Regulatory:** FDA 21CFR §175.105; FDA approved for topicals; NF compliance; Canada DSL

**Trade Names Containing:** Bentone Gel® EUG V; Miglyol® 840 Gel B; Miglyol® Gel B; Miglyol® Gel T; Softisan® Gel

1,2-Propylene carbonate. See Propylene carbonate

#### Propylene glycol

**CAS:** 57-55-6; 4254-15-3 (+); 4254-14-2 (-); 4254-16-4 (±); EINECS/ELINCS 200-338-0  
**FEMA:** 2940; INS: 1520; E1520  
**Synonyms:** 1,2-Dihydroxypropane; 2-Hydroxypropanol; Isopropylene glycol; Methyl ethylene glycol; Methyl ethyl glycol; Methyl glycol; Monopropylene glycol; PG; 1,2-Propanediol; Propane-1,2-diol; 1,2-Propylene glycol; α-Propylene glycol; Trimethyl glycol  
**Classification:** Aliphatic dihydric alcohol  
**Empirical:** C₃H₈O₂  
**Formula:** CH₃CHOHCH₂OH

#### Properties:
- Colorless clear visc. liq., odorless, sl. acid taste; sol. in water, essential oils, acetone, chloroform, ether, ethanol; misc. with oxygenated solvs.; m.w. 76.11; dens. 1.0362; vapor pressure 0.08 mm (20 C); m.p. -60 C; b.p. 188.2 C; flash pt. (OC) 99 C; autoignition temp. 510 C

#### Toxicology:
- LD₅₀ (oral, rat) 25 ml/kg, (IP, rat) 6660 mg/kg, (IV, rat) 6423 mg/kg, (skin, rabbit) 20,800 mg/kg; sl. toxic by ing., skin contact, IP, IV, subcut. routes; eye and human skin irritant; human systemic effects by ing. (anesthesia, convulsions, EEG changes); experimental teratogen, reproductive effector; mutagenic data; TSCA listed

#### Environmental:
- VOC; BOD₅ 1.08; COD 1.63; ThOD 1.68

#### Precaution:
- Combustible exposed to heat or flame; explosive as vapor exposed to heat or flames; explosive limits 2.6-12.6%; reactive with oxidizers; can increase risk of fire and explosion

#### Hazardous Decomp. Prods.:
- Heated to decomp., emits acrid smoke and irritating fumes

#### NFPA:
- Health 0, Flammability 1, Reactivity 0

#### Storage:
- Store in cool, dry area; hygroscopic

#### Uses:
- Solvent, emulsifier, vehicle, humectant, preservative, plasticizer in pharmaceuticals, orals, otics, parenterals, stabilizer in vitamin preps.; protectant in hemorrhoidal prods.

#### Use Level:
- 10-25% (oral sol'ns.), 10-80% (parenterals), 5-80% (topicals)

#### Regulatory:
- FDA 21CFR §73.30, 169.175, 169.176, 169.177, 169.178, 169.180, 169.181, 175.300, 175.320, 176.180, 176.210, 177.1390, 177.1680, 177.2420, 177.2600, 177.2800, 178.3300, 184.1666, 582.4666, GRAS; USDA 9CFR §318.7, 381.147; Canada DSL; BATF 27CFR §240.1051; EPA reg., approved for some drugs; Japan approved with limitations; Europe listed; FEMA GRAS; FDA approved for orals, parenterals, topicals; USP/NF, BP, EP, JP compliance

1,2-Propylene glycol; α-Propylene glycol. See Propylene glycol

Propylene glycol alginate
CAS 9005-37-2
FEMA 2941; INS405
Synonyms: Alginic acid, ester with 1,2-propanediol; Hydroxypropyl alginate; Propane-1,2-diol alginate
Definition: Mixture of propylene glycol esters of alginic acid
Empirical: C72H112O56
Formula: (C9H14O7)8
Properties: Wh. to ylsh. fibrous or gran. powd., pract. odorless and tasteless; sol. in water, dil. organic acids, hydroalcoholic mixts.; m.w. 1873.6; DE 0.75-0.85
Toxicology: LD50 (oral, rat) 7200 mg/kg; mildly toxic by ing.; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Flavoring adjuvant, suspending agent, thickener, gellant, film-former, emulsifier, formulation aid, stabilizer, solvent, defoamer, binder, visc. control agent in pharmaceuticals, orals
Features: Reactive with milk
Regulatory: FDA 21CFR §133.133, 133.134, 133.162, 133.178. 172.210, 172.820, 172.858, 173.340, 176.170, GRAS; FEMA GRAS; Japan approved (1% max.); Canada DSL; Europe listed; UK approved; FDA approved for orals; USP/NF compliance

Trade Names: KELCOLOID® HVF; KELCOLOID® LVF; KELCOLOID® O; KELCOLOID® S; MANUCOL® Ester ER/K TIC Pretested® Colloid 602 Powder

Propylene glycol caprylate
CAS 31565-12-5
Synonyms: Caprylic acid, monoester with 1,2-propanediol; Octanoic acid, 2-hydroxypropyl ester; Octanoic acid, monoester with 1,2-propanediol
Definition: Ester of caprylic acid and propylene glycol
Empirical: C11H22O3
Formula: CH3(CH2)6COOCH2CHCH3OH
Uses: Emollient, solubilizer, solvent for pharmaceuticals
Trade Names: Capryol® PGMC; Imwitor® 408
Trade Names Containing: Labrafac PC

Propylene glycol caprylate/caprate
Uses: Excipient, amphiphilic oil, permeation enhancer, coemulsifier for pharmaceuticals, creams, ointments, gels, and lotions
Trade Names: Labrafac PC

Propylene glycol, caprylate caprate diester. See Propylene glycol dicaprylate/dicaprate

Propylene glycol cyclic carbonate. See Propylene carbonate

Propylene glycol diacetate
CAS 623-84-7; EINECS/ELINCS 210-817-6
Synonyms: 1,2-Diacetoxypropane; α-Propylene glycol diacetate
Empirical: C7H13O4
Properties: Transparent liq., fruit-like odor; sol. in water; m.w. 160.19; dens. 1.040-1.060; m.p. ~ 31 C; b.p. 190.2 C; flash pt. 87 C; ref. index 1.413-1.415 (20 C); pH 4-6 (5%)
Toxicology: LD50 (oral, rat) 13,530 mg/kg, (oral, guinea pig) 3420 mg/kg; mod. toxic by ing.; primary irritant; eye and human skin irritant; experimental teratogen; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Emulsifier, solubilizer in pharmaceuticals, otics
Regulatory: FDA approved for otics; Canada DSL
α-Propylene glycol diacetate. See Propylene glycol diacetate

Propylene glycol dibenzoate
CAS 19224-26-1; EINECS/ELINCS 242-894-7
FEMA 3419
Synonyms: 1,2-Propanediol dibenzoate; Propane-1,2-diyl dibenzoate
Empirical: C_{17}H_{116}O_{4}
Properties: Colorless cl. liq.; sol. in alcohol; insol. in water; m.w. 284.31; sp.gr. 1.146; b.p. 232.00 °C @ 12.00 mm; acid no. 1.0 max.; flash pt. (COC) 199 °C; ref. index 1.544
Uses: Flavor for pharmaceuticals
Features: Mild ethereal odor
Regulatory: FDA 21CFR §175.105; FEMA GRAS; Canada DSL

Propylene glycol dicaprate
cas 56519-72-3; 53824-77-4; EINECS/ELINCS 258-814-9
Synonyms: Decanoic acid, 1-methyl-1,2-ethanediyl ester; n-Decanoic acid, 1,3-propanediyl ester; Propylene glycol didecanoate
Definition: Diester of propylene glycol and capric acid
Empirical: C_{23}H_{44}O_{4}
Formula: CH_{3}(CH_{2})_{8}COOCH_{2}CHCH_{3}OCO(CH_{2})_{8}CH_{3}
Properties: Colorless liq.; m.w. 384.60; low visc.; cloud pt. 0.6 °C
Toxicology: TSCA listed
Uses: Solubilizer, extender, carrier for pharmaceuticals
Regulatory: FDA 21CFR §172.856, 173.340, 175.300, 176.170, 176.210, 177.2800; Canada DSL

Propylene glycol dicaprylate/dicaprate
CAS 58748-27-9; 68583-51-7; 68988-72-7; EINECS/ELINCS 271-516-3
Synonyms: Caprylic, capric acid, propylene glycol diester; Decanoic acid, 1-methyl-1,2-ethanediyl ester mixed with 1-methyl-1,2-ethanediyl dioctanoate; Decanoic acid, mixed diesters with octanoic acid and propylene glycol; Octanoic acid, mixed diesters with decanoic acid and propylene glycol; Propylene glycol, caprylate caprate diester; Propylene glycol dicaprylate-caprate
Definition: Mixture of the propylene glycol diesters of caprylic and capric acids
Formula: C_{10}H_{20}O_{2} • C_{8}H_{16}O_{2} • C_{3}H_{8}O_{2}
Properties: Liq.; insol. in water; dens. 0.92 kg/l; pour pt. -40 °C; flash pt. (COC) 184 °C; nonionic
Toxicology: TSCA listed
Uses: Coupling agent, solvent, vehicle, diluent, carrier for flavors, fragrance oils, sol. colorants, vitamins, medicinals; emollient for pharmaceuticals, creams, lotions

Trade Names: Captex® 100

Propylene glycol dicaprate
CAS 7384-98-7; EINECS/ELINCS 230-962-9
Synonyms: Octanoic acid, 1-methyl-1,2-ethanediyl ester
Definition: Diester of propylene glycol and caprylic acid
Empirical: C_{19}H_{36}O_{4}
Formula: CH_{3}(CH_{2})_{8}COOCH_{2}CHCH_{3}OCO(CH_{2})_{6}CH_{3}
Properties: Colorless liq.; m.w. 328.491
Toxicology: TSCA listed
Uses: Emollient, visc. control agent, solvent, solubilizer for pharmaceuticals; solvent for sl. sol. act. substances
Features: Good compat. with oily materials

Trade Names: BGL™ 355; Captex® 200; Captex® 200P; Estol 1526; Lexol® PG-865
Propylene glycol didecanoate. See Propylene glycol dicaprate

Propylene glycol diethylhexanoate. See Propylene glycol dioctanoate

Propylene glycol dinonanoate. See Propylene glycol dipelargonate

Propylene glycol dioctanoate

CAS 56519-71-2; 93981-97-6; EINECS/ELINCS 301-185-3

Synonyms: 2-Ethylhexanoic acid, 1-methyl-1,2-ethanediyl ester; 1-Methylethylene 2-ethylhexanoate; Octanoic acid, 1,3-propanediyl ester; Propylene glycol diethylhexanoate

Definition: Diester of propylene glycol and 2-ethylhexanoic acid

Empirical: C_{19}H_{36}O_4

Formula:

\[\text{CH}_3(\text{CH}_2)_3\text{CHCH}_3\text{CH}_2\text{COOCH}_2\text{CHCH}_3\text{OCOC}_2(\text{CH}_2)_3\text{CH}_3\]

Properties: Sol. in alcohol, min. oil; sp.gr. 0.921; flash pt. (COC) 159 C; ref. index 1.4350

Uses: Emollient, moisturizer, lubricant, penetrant, carrier, vehicle, humectant in pharmaceuticals, dermatologicals, dry skin prods., suppositories; solvent, carrier, vehicle in flavors, fragrances, vitamins, antibiotics, medicinals; vehicle for nutritional prods.

Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Inolex
http://www.inolex.com

Trade Names: Captex® 800; Lexol® PG-800

Propylene glycol dipelargonate

CAS 41395-83-9; EINECS/ELINCS 255-350-9

Synonyms: Nonanoic acid, 1-methyl-1,2-ethanediyl ester; Propylene glycol dinonanoate

Definition: Diester of propylene glycol and pelargonic acid

Empirical: C_{21}H_{40}O_4

Formula:

\[\text{CH}_3(\text{CH}_2)_7\text{COOCH}_2\text{CHCH}_3\text{OCO}(\text{CH}_2)_7\text{CH}_3\]

Properties: Liq.; m.w. 356.55; dens. 0.896; m.p. -100 C; flash pt. (COC) 43 C

Toxicology: LD50 (oral, rat) 4400 mg/kg, (skin, rabbit) 8100 mg/kg; mildly toxic by ing. and skin contact; vapor irritating to eyes, nose, and throat; absorbed through skin, but health effects unlikely; mod. to severe eye irritant; probable lacrymator; low oral toxicity

Precaution: Combustible exposed to heat and flame; incompat. with oxidizing agents (increases fire/explosion hazard), strong acids (may cause decomp. of ethers)

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Storage: Store in cool, dry, well-ventilated area,
Propylene glycol isostearate

CAS: 68171-38-0; EINECS/ELINCS: 269-027-5

Synonyms: Isooctadecanoic acid, monoester with 1,2-propanediol; Propylene glycol monoisostearate

Definition: Ester of propylene glycol and isostearic acid

Empirical: C₂₁H₄₂O₃

Toxicology: TSCA listed

Uses: Emollient, emulsifier, superfatting agent in pharmaceuticals; solubilizer for fragrances in low alcohol or oil preps.

Regulatory: Canada DSL

Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV
http://www.mosselman.be

Propylene glycol laurate

CAS: 142-55-2; 10108-22-2; 27194-74-7; EINECS/ELINCS: 205-542-3

Synonyms: Dodecanoic acid, 2-hydroxypropyl ester; Dodecanoic acid, monoester with 1,2-propanediol; 2-Hydroxypropyl dodecanoate; 2-Hydroxypropyl laurate; Lauric acid, monoester with 1,2-propanediol; PGML; 1,2-Propanediol monododecanoate; Propylene glycol monolaurate

Definition: Ester of propylene glycol and lauric acid

Empirical: C₁₇H₃₄O₃

Formula: CH₃(CH₂)₁₀COOCH₂CH₃OH

Properties: Yel to pale amber oily liq.; m.w. 258.40; dens. 0.911; m.p. 0-12 C; HLB 4.5; flash pt. (COC) 188 C; nonionic

Toxicology: Nontoxic but can cause allergic reactions in hypersensitive persons; TSCA listed

Uses: Surfactant, emulsifier, coemulsifier, stabilizer, wetting agent, lubricant, plasticizer, emollient, solvent, excipient, permeation enhancer in pharmaceuticals

Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; ChemService
http://www.chemservice.com; Inolex
http://www.inolex.com; Lambent Tech.
http://www.lambentcorp.com; Ruger
http://www.rugerchemical.com
Stepan http://www.stepan.com; Velsicol
http://www.velsicol.com

Trade Names: Capmul® PG-12; Imwitor® 412; Lauroglycol® 90; Lauroglycol® FCC; Schercemol PGML

Propylene glycol laurate SE

Properties: Anionic

Uses: Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant in pharmaceuticals

Trade Names: Cithrol PGML S/E

Propylene glycol monoethyl ether. See Propylene glycol ethyl ether

Propylene glycol monoisostearate. See Propylene glycol isostearate

Propylene glycol monolaurate. See Propylene glycol laurate

Propylene glycol monomyristate. See Propylene glycol myristate

Propylene glycol monoricinoleate. See Propylene glycol ricinoleate

Propylene glycol monostearate. See Propylene glycol stearate

Propylene glycol myristate

CAS: 29059-24-3; EINECS/ELINCS: 249-395-3

Synonyms: Myristic acid, monoester with 1,2-propanediol; Propylene glycol monomyristate; Tetradecanoic acid, monoester with 1,2-propanediol

Definition: Ester of propylene glycol and myristic acid

Empirical: C₁₇H₃₄O₃

Formula: CH₃(CH₂)₁₂COOCH₂CH₃OH

Toxicology: TSCA listed

Uses: Wetting agent, lubricant, opacifier, dispersant, w/o emulsifier, detergent, defoamer, emollient in pharmaceuticals

Manuf./Distrib.: A&E Connock
http://www.connock.co.uk

Propylene glycol octadecanoate. See Propylene glycol stearate
Propylene glycol oleate

CAS: 1330-80-9; EINECS/ELINCS: 215-549-3

Synonyms: 9-Octadecenoic acid, monoester with 1,2-propanediol; Oleic acid, monoester with 1,2-propanediol

Definition: Ester of propylene glycol and oleic acid

Empirical: C_{21}H_{40}O_{3}

Formula: CH_{3}(CH_{2})_{7}CH=CH(CH_{2})_{7}COOCH_{2}CHCH_{3}OH

Properties: Nonionic

Toxicology: TSCA listed

Uses: Emollient, emulsifier, coemulsifier, stabilizer, wetting agent, lubricant in pharmaceuticals

Regulatory: FDA 21CFR §172.856, 173.340, 175.300, 176.210, 177.2800; Canada DSL

Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; A.P. Chems. Ltd
http://www.chemial.com; ChemService

Propylene glycol oleate SE

Definition: Self-emulsifying grade of propylene glycol oleate that contains some sodium and/or potassium oleate

Properties: Anionic

Uses: Emulsifier, emulsifier, coemulsifier, stabilizer, wetting agent, lubricant in pharmaceuticals

Trade Names: Cithrol PGMO S/E

Propylene glycol palmitate

Definition: Ester of propylene glycol and palmitic acid

Properties: Nonionic

Uses: Surfactant for pharmaceuticals

Propylene glycol palmito/stearate

Uses: Emulsifier, stabilizer in pharmaceuticals

Regulatory: BP, EP compliance

α-Propylene glycol 1-phenyl ether. See Phenoxyisopropanol

Propylene glycol ricinoleate

CAS: 26402-31-3; EINECS/ELINCS: 247-669-7

Synonyms: 12-Hydroxy-9-octadecenoic acid, monoester with 1,2-propanediol; (R)-12-Hydroxyoleic acid, monoester with 1,2-propanediol; Propylene glycol monoricinoleate

Definition: Ester of propylene glycol and ricinoleic acid

Empirical: C_{21}H_{40}O_{4}

Propylene glycol stearate

FEMA: 2942

Synonyms: Monostearin; Octadecanoic acid, monoester with 1,2-propanediol; PGMS; 1,2-Propanediol monostearate; Propylene glycol monostearate; Propylene glycol octadecanoate; Prostearin; Stearic acid, monoester with 1,2-propanediol

Definition: Ester of propylene glycol and stearic acid

Empirical: C_{21}H_{42}O_{3}

Formula: CH_{3}(CH_{2})_{16}COOCH_{2}CHCH_{3}OH

Properties: Wh. to cream flakes, bland typ. fatty odor and taste; sol. in min. oil, IPM, oleyl alcohol; insol. in water, glycerin, propylene glycol; m.w. 342.63; m.p. 35-38 C; HLB 3.4; acid no. 4 max.; iodine no. 3 max.; sapon. no. 155-165; hyd. no. 160-175; nonionic

Toxicology: LD50 (IP, mouse) 200 mg/kg; poison by IP route; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Surfactant, dispersant, emulsifier, solubilizer, lubricant, excipient, thickener, vehicle in pharmaceuticals, rectals, vaginals, creams and lotions; humectant in dry skin prods.

Propyylene glycol stearate SE
CAS 91031-35-5; EINECS/ELINCS 292-936-3

Definition: Self-emulsifying grade of propylene glycol stearate containing some sodium and/or potassium stearate

Properties: Anionic

Uses: Emulsifier, coemulsifier, stabilizer, wetting agent, lubricant, pearlescent, spreading agent in pharmaceuticals

Manuf./Distrib.: A&E Connock
http://www.connock.co.uk; Mosselman NV
http://www.mosselman.be; Ruger

Propyylene oxide homopolymer. See Polypropylene glycol

Propylene phenoxetyl; Propylene phenoxytol; Propylene phenoxytol. See Phenoxyisopropanol

Propylene polymer. See Polypropylene

2-Propyl ethanoate. See Isopropyl acetate

n-Propyl ethanoate. See Propyl acetate

Propyl formate
CAS 110-74-7; EINECS/ELINCS 203-798-0
UN 1281 (DOT); FEMA 2943

Synonyms: Formic acid propyl ester; n-Propyl formate; n-Propyl methanoate

Empirical: C₄H₈O₂
Formula: HCOC₃H₇

Properties: Colorless liq., pleasant odor, bittersweet flavor; sol. in 45 parts water; misc. with alcohol, ether; m.w. 88.10; dens. 0.901 (20 C); vapor pressure 100 mm (29.5 C); m.p. -93 C; b.p. 81-82 C; flash pt. (CC) -3 C; ref. index 1.3771 (20 C)

Toxicology: LD₅₀ (oral, rat) 3980 mg/kg, (oral, mouse) 3400 mg/kg; mod. toxic by ing.; skin, eyes, mucous membrane irritant; TSCA listed

Precaution: Flamm.; dangerous fire risk exposed to heat, flame, or oxidizers; lower explosion limit 2.3%; ignites on contact with potassium-t-butoxide; explosive as vapor exposed to heat or flame

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet berry-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Cargill Flavors & Fruit Systems USA

n-Propyl formate. See Propyl formate

Propylformic acid. See n-Butyric acid

Propyl 2-furanacrylate
CAS 623-22-3; EINECS/ELINCS 210-780-6
FEMA 2945
Synonyms: 3-(2-Furanyl)-2-furan acrylic acid propyl ester; n-Propyl-2-furanacrylate; Propyl 3-(2-furyl) acrylate; Propyl β-furylacrylate; Propyl-3-furylpipenoate
Definition: Ester of n-propanol and furanacrylic acid
Empirical: \( \text{C}_{10}\text{H}_{12}\text{O}_3 \)
Properties: Colorless liq., lt. strawberry apple/pear-like odor; sol. in alcohol; insol. in water; m.w. 180.21; dens. 1.0744; b.p. 236°C; ref. index 1.5229
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Degussa AG/Health & Nutrition

n-Propyl-2-furanacrylate; Propyl 3-(2-furyl) acrylate; Propyl β-furylacrylate; Propyl-3-furylpipenoate. See Propyl 2-furanacrylate

Propyl gallate
CAS 121-79-9; EINECS/ELINCS 204-498-2
FEMA 2947; INS310
Synonyms: Gallic acid propyl ester; PG; n-Propyl gallate; Propyl 3,4,5-trihydroxybenzoate; n-Propyl 3,4,5-trihydroxybenzoate; 3,4,5-Trihydroxybenzene-1-propylcarboxylate; 3,4,5-Trihydroxybenzoic acid propyl ester; 3,4,5-Trihydroxybenzoic acid, n-propyl ester
Classification: Aromatic ester
Definition: Aromatic ester of propyl alcohol and gallic acid
Empirical: \( \text{C}_{10}\text{H}_{12}\text{O}_5 \)
Formula: \((\text{HO})_3\text{C}_6\text{H}_2\text{COOCH}_2\text{CH}_2\text{CH}_3\)
Properties: Ivory fine powd. or crystals, odorless, sl. bitter taste; sol. in alcohol, ether, oils, oxygenated solvs.; sl. sol. in water, 2-butanol; m.w. 212.22; m.p. 147-149°C; b.p. dec. > 148°C
Toxicology: LD50 (oral, rat) 3.8 g/kg, (IP, rat) 0.38 g/kg; poison by ing. and IP routes; a sensitizer but not a primary irritant; questionable carcinogen; experimental tumorigen, teratogen, reproductive effects; mutagenic data; TSCA listed
Precaution: Combustible exposed to heat or flame; reactive with oxidizers; darkens in presence of iron and iron salts
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 2, Flammability 1, Reactivity 0
Uses: Antioxidant and preservative in pharmaceuticals, topicals, parenterals, intramuscular injectables
Use Level: 0.01-0.1%
Regulatory: FDA 21CFR §166.110, 172.615, 175.125, 175.300, 175.380, 175.390, 176.170, 177.1010, 177.1210, 177.1350, 181.22, 181.24 (0.005% migrating from food pkg.), 184.1660 (0.02% max. of fat or oil), 582.3660, GRAS; Canada DSL; USDA 9CFR §318.7, 381.147; FEMA GRAS; Japan approved (0.1 g/kg max.); Europe listed; UK approved; FDA approved for intramuscular injectables, topicals; USP/NF, BP, EP compliance
**Trade Names:** Progallin® P

**n-Propyl gallate.** See Propyl gallate

**Propyl heptanoate**

CAS 7778-87-2; EINECS/ELINCS 231-917-6
FEMA 2948

Empirical: C10H20O2
Formula: CH3(CH2)5CO2CH2CH2CH3

Properties: Colorless liq.; m.w. 172.27; dens. 0.869; m.p. -64 C; b.p. 208 C; flash pt. 170 F

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet ripe fruity apple pear pineapple grape strawberry wine green odor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Propyl hexanoate**

CAS 626-77-7; EINECS/ELINCS 210-963-0
FEMA 2949

Synonyms: Hexanoic acid propyl ester; Propyl caproate; n-Propyl hexanoate

Classification: Nonaromatic ester

Empirical: C9H18O2

Properties: Colorless liq.; fruity, ester-like, tropical odor; insol. in water; sol. in most org. solvs.; m.w. 158.24; dens. 0.867; vapor dens. 5.4; m.p. -96 C; b.p. 187 C; flash pt. 63 C; ref. index 1.4120

Toxicology: Skin, eye, respiratory system irritant; TSCA listed

Precaution: Flamm.; wear protective gloves, splash-proof goggles; incompat. with strong oxidizers

Storage: Keep away from heat, sparks, open flame; keep in original, tightly closed container

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Advanced Synthesis Tech.

### Additional Information

- **Propyl paraben**: CAS **94-13-3**; EINECS/ELINCS **202-307-7**; FEMA **2951**; INS216; E216
- **Synonyms**: 4-Hydroxybenzoic acid, propyl ester; p-Hydroxybenzoic acid, propyl ester; p-Hydroxypropyl benzoate; Propyl 4-hydroxybenzoate; n-Propyl p-hydroxybenzoate; Propyl p-hydroxybenzoate; Propyl parahydroxybenzoate; Propyl parasept
- **Classification**: Organic ester; aromatic alcohol
- **Definition**: Ester of n-propyl alcohol and p-hydroxybenzoic acid
- **Empirical**: C₁₀H₁₂O₃
- **Properties**: Colorless cryst. or wh. powd., sl. char. odor; sol. in alcohol, ether, acetone, oxygenated solvs.; sl. sol. in boiling water; m.w. 180.22; m.p. 95-98 C
- **Toxicology**: LD₅₀ (oral, mouse) 6332 mg/kg, (IP, mouse) 200 mg/kg, (subcut., mouse) 1650 mg/kg; poison by IP route; mod. toxic by subcut. route; mildly toxic by ing.; an allergen; inh. of powd. may cause respiratory irritation; may cause asthma, rashes, hyperactivity, eye and skin irritation, contact dermatitis; TSCA listed
- **Precaution**: Conc. dust may present an explosion hazard; incompat. with alkalis and strong oxidizing agents; burning may produce phenolic vapors and CO
- **Hazardous Decomp. Prods.**: Heated to decomp., emits acid smoke and fumes
- **HMIS**: Health 1, Flammability 0, Reactivity 0
- **Uses**: Antimicrobial, preservative, antifungal, antibacterial in pharmaceuticals, injectables, parenterals, intravenous, ophthalmics, orals, rectals, topicals,
Chemical Component Cross-Reference

vaginals; dental anesthetics

α-Propylenphenethyl alcohol
CAS 705-73-7; EINECS/ELINCS 211-887-0
FEMA 2953

Synonyms: Benzylbutyl alcohol; Benzylpropyl carbinol; Benzyl-n-propyl carbinol; 1-Phenyl-2-pentanol; DL-1-Phenylpentan-2-ol

Classification: aromatic alcohol

Empirical: C_{11}H_{16}O

Properties: Colorless oily liq., mild green sweet odor; sol. in alcohol; almost insol. in water; m.w. 164.25; dens. 0.98; b.p. 247 C; flash pt. 221 F

Uses: Synthetic flavor for pharmaceuticals

Features: Sweet flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Aldrich http://www.sigma-aldrich.com

4-Propylphenol
CAS 645-56-7
FEMA 3649

Synonyms: p-Propylphenol

Classification: aromatic alcohol

Empirical: C_{9}H_{12}O

Handbook of Pharmaceutical Additives, Third Edition 1975
Chemical Component Cross-Reference

†=pharmaceutical grade

Properties: Cryst.; sol. in alcohol; very sl. sol. in water; m.w. 136.19; dens. 0.983; m.p. 21-22 C; b.p. 232 C; flash pt. 232 F

Toxicology: LD50 (oral, rat) 500 mg/kg, (IP, mouse) 81 mg/kg, (skin, mammal) 2150 mg/kg; poison by ing. and IP routes; mod. toxic by skin contact; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FEMA GRAS; Canada DSL

Manuf./Distrib.: SAFC Specialties

http://www.safcspecialties.com

p-Propylphenol. See 4-Propylphenol

Propyl phenylacetate

CAS 4606-15-9; EINECS/ELINCS 225-012-5

FEMA 2955

Synonyms: n-Propyl thioacetate; n-Propyl-α-toluate

Definition: Ester of n-propanol and phenylacetic acid

Empirical: C11H14O2

Properties: Colorless liq., honey-like apricot-rose odor, sweet honey-like taste; sol. in alcohol; almost insol. in water; m.w. 178.23; dens. 0.990 (15.5 C); b.p. 253 C; flash pt. 106 C; ref. index 1.4955

Toxicology: TSCA listed

Uses: Synthetic flavor for pharmaceuticals

Features: Apricot, honey-like flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Manuf./Distrib.: Grau Aromatics

http://www.grau-aromatics.de; SAFC Specialties

Propyl 3-phenyl-2-propenoate; N-Propyl 3-phenyl propenoate. See Propyl cinnamate

Propyl propanoate. See Propyl propionate

Propyl propionate

CAS 106-36-5; EINECS/ELINCS 203-389-7

UN 3272 (DOT; UN IATA); FEMA 2958

Synonyms: Propanoic acid, propyl ester; Propionic acid, propyl ester; Propyl propanoate; n-Propyl propionate

Empirical: C6H12O2

Formula: CH3CH2COOCH2CH2CH3

Properties: Clear liq., complex fruity odor; sol. in 200 parts water; misc. with alcohol, ether; m.w. 116.16; dens. 0.881 (20/4 C); vapor pressure 10 mm Hg (19.4 C); m.p. -76 C; b.p. 120-122 C; flash pt. 22 C; ref. index 1.3935 (20 C)

Toxicology: LD50 (oral, rat) 10,331 mg/kg; LC50 (inh., unspecified mammal) 16,900 mg/m³; mod. toxic by ing.; very mildly toxic by inh.; skin irritant; TSCA listed

Precaution: Flamm. exposed to heat or flame; can react with oxidizers

Hazardous Decomp. Prods.: Heated to decomp., emits CO, CO2, acrid smoke and irritating fumes

Storage: 6 mos. when stored at 60 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, cold, air

Uses: Synthetic flavor for pharmaceuticals

Features: Fruity flavor

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Australia AICS; Canada DSL; Japan MITI

Protease
CAS 9014-01-1; 9074-09-3; 9074-07-1;
EINECS/ELINCS 232-752-2; 232-642-4
INS1101(i)
Synonyms: Alcalase; Bacillus subtilis
Carlsberg; Detergent enzyme; Maxatase;
Protease, bacterial, alkaline; Proteinase;
Proteolytic enzymes; Subtilisin; Subtilisin
Carlsberg; Subtilisins
Classification: Enzyme
Properties: Gran.; sol. in water; m.w. ≈ 27,000
Toxicology: TWA 0.00006 mg/m³; LD50 (oral,
rat) 3700 mg/kg; mod. toxic by ing.; primary
irritant to eyes, skin, respiratory
tract; sensitizer; TSCA listed
Hazardous Decomp. Prods.: Heated to
decom., emits toxic fumes of NOx
Storage: Hygroscopic; packaged under argon;
freeze
Uses: Enzyme for hydrolysis of proteins;
digestive aids; wound debriding agent;
blood typing aid
Regulatory: Canada, Japan approved

PVM/MA. See PVM/MA copolymer

PVM/MA copolymer

CAS 9011-16-9; 52229-50-2

Synonyms: 2,5-Furandione, polymer with methoxyethene; 2,5-Furandione, polymer with methoxyethylene; Methyl vinyl
ether/maleic anhydride copolymer; Poly (maleic anhydride-methyl vinyl ether); Poly (methyl vinyl ether-alt-maleic anhydride); Poly(methyl vinyl ether/maleic anhydride); Polyvinyl methyl ether-maleic anhydride; PVM/MA

**Definition:** Copolymer of methyl vinyl ether and maleic anhydride

**Empirical:** \((C_4H_2O_3 \cdot C_3H_6O)_x\)

**Formula:** \([–CH_2CHOCH_3CHCOOCOCH–]_n\)

**Properties:** Wh. powd.; sol. in water, oxygenated solvs.; m.w. 20,000-67,000; anionic

**Toxicology:** Toxic; cancer suspect agent; TSCA listed

**Uses:** Dispersant, coupling agent, stabilizer, thickener in pharmaceuticals; film-former in spray bandages; bioadhesives; complexing agent for sustained-release iron preps.; dentifrices; oral care agent

**Regulatory:** Canada DSL

**Manuf./Distrib.:** ABCR [http://www.abcr.de]

**Trade Names:** Gantrez® S-97; Luviform® FA 119; Luviform® FA 139

**Trade Names Containing:** Gantrez® AN-119; Gantrez® AN-139; Gantrez® AN-139 BF; Gantrez® AN-149; Gantrez® AN-169

**Hydrajel® VM; Lubrajel® Oil**

**PVM/MA copolymer, butyl ester**

**CAS** 54018-18-7; 54578-91-5; 53200-28-5

**Synonyms:** 2-Butenedioic acid, polymer with methoxyethene, butyl ester; 2-Butenedioic acid, polymer with methoxyethene, monobutyl ester; Butyl ester of PVM/MA copolymer (INCI); Methoxyethene, polymer with 2-butenedioic acid, monobutyl ester

**Definition:** Polymer consisting of partial butyl ester of the polycarboxylic acid formed from vinyl methyl ether and maleic anhydride

**Empirical:** \((C_{11}H_{18}O_5)_n\)

**Formula:** -

- \([CH_2CHOCH_3CHOHCHCOOC_4H_9]_n\) -

**Toxicology:** LD50 (oral, rat) > 25,600 mg/kg; TSCA listed

**Uses:** Binder, film-former in sustained- or controlled-release pharmaceutical tablet coatings

**PVOH. See Polyvinyl alcohol**

**PVP**

**CAS** 9003-39-8; EINECS/ELINCS 201-800-4

**INS1201; E1201**

PVP-I. See PVP-iodine

PVP/dimethiconylacrylate/polycarbamyl/polyglycol ester
Synonyms: PVP/dimethiconylacrylate/polyurethane

†=pharmaceutical grade

**Definition:** Copolymer of vinylpyrrolidone, acrylated dimethiconol, and polyurethane

**Uses:** Binder, film-former for pharmaceutical topical solutions

**Trade Names:** Pecogel® S-1120

**PVP/dimethiconylacrylate/polycarbamyl/polyglycol ester interpolymer. See**

**Definition:** Copolymer of vinylpyrrolidone, dimethylaminoethyl methacrylate, and polyurethane

**Uses:** Binder, emulsion stabilizer, film-former for pharmaceuticals, topical creams, lotions

**Features:** Humidity-resistant

**Regulatory:** Canada DSL

**Trade Names:** Pecogel® GC-310; Pecogel® GC-1110

**PVP/dimethylaminoethyl methacrylate copolymer**

**Synonyms:** Poly (1-vinylpyrrolidone-co-2-dimethylaminoethyl methacrylate); 2-Propenoic acid, 2-methyl-, 2-(dimethylamino)ethyl ester, polymer with 1-ethenyl-2-pyrrolidinone; Vinylpyrrolidone/dimethylaminoethyl methacrylate copolymer

**Definition:** Polymer from vinylpyrrolidone and dimethylaminoethylmethacrylate monomers

**Toxicology:** Irritant

**Uses:** Binder, emulsion stabilizer, film-former for pharmaceuticals, topical solutions

**Features:** Polymeric hydrogel

**Regulatory:** TSCA listed

**Trade Names:** Pecogel® GC-310; Pecogel® GC-1110

**PVP/eicosene copolymer**

**CAS:** 28211-18-9

**Synonyms:** 1-Eicosene, polymer with 1-ethenyl-2-pyrrolidinone; 1-Ethenyl-2-pyrrolidinone, polymer with 1-eicosene; 2-Pyrrolidinone, 1-ethyl-, polymer with 1-eicosene

**Definition:** Copolymer of PVP, dimethylaminoethylmethacrylate, and polyurethane

**Uses:** Binder, film-former in pharmaceutical topical solutions

**Features:** Polymeric hydrogel

**Regulatory:** TSCA listed

**Trade Names:** Pecogel® GC-310; Pecogel® GC-1110

**PVP/iodine**
Chemical Component Cross-Reference

Regulatory: Canada DSL
Trade Names: Ganex® V-220

PVP / Hexadecene copolymer. See 2-Pyrrolidinone, 1-ethenyl, hexadecyl homopolymer

PVP-iodine
CAS 25655-41-8
Synonyms: Betadine; 1-Ethenyl-2-pyrrolidinone homopolymer compd. with iodine; Poly (1-(2-oxo-1-pyrrolidinyl) ethylene) iodine complex; Polyvinylpyrrolidone-iodine complex; Povidone-iodine; PVP-I; 2-Pyrrolidinone, 1-ethenyl-, homopolymer, compd. with iodine; 1-Vinyl-2-pyrrolidone polymer, compd. with iodine
Definition: Complex of polyvinylpyrrolidone and iodine
Empirical: (C₆H₉NO)ₓ • xI
Properties: Ylsh. brn. amorphous powd., sl. char. odor; sol. in water forming acidic sol’ns.; sol. in alcohol; pract. insol. in chloroform, CCl₄, ether, hexane, acetone; m.p. 300 C (dec.)
Toxicology: LD₅₀ (oral, rat) > 8 g/kg, (IV, rat) 640 mg/kg, (subcut., rat) 3450 mg/kg; mod. toxic by subcut., and IV routes; mildly toxic by ing.; primary irritant; sensitizer; human systemic effects by skin contact (hemorrhage, dermatitis); human mutagenic data; target organs: thyroid, kidneys; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx and I⁻
HMIS: Health 1, Flammability 1, Reactivity 0
Storage: Moisture-sensitive
Uses: Microbicide in OTC drugs, gels, ointments, soaps, solutions, aerosols, antiseptics; medical disinfectant; antimicrobial in presurgical scrubs; topical anti-infective; OTC drug active
Regulatory: USP, BP, EP, JP compliance; Canada DSL

†=pharmaceutical grade

Trade Names: PVP-Iodine 30/06; PVP-Iodine 30/06 M10

PVPP. See Crospovidone; PVP

PVPP/polycarbamyl polyglycol ester
Synonyms: PVP/polyurethane interpolymer
Definition: Copolymer of PVP and polyurethane
Uses: Film-former for pharmaceutical topicals

Trade Names: Pecogel® H-12; Pecogel® H-115; Pecogel® H-1220

PVPP/polycarbamyl polyglycol ester
Synonyms: Acetic acid ethenyl ester, polymer with 1-ethenyl-2-pyrrolidinone; Copolyvidonum; 1-Ethenyl-2-pyrrolidinone, polymer with acetic acid ethenyl ester; Poly (1-vinylpyrrolidone-co-vinyl acetate); Polyvinylpyrrolidone/vinyl acetate copolymer; PVP/VA; Vinylpyrrolidone/vinyl acetate copolymer

Definition: Copolymer of vinyl acetate and vinylpyrrolidone monomers
Formula: (C₆H₉NO • C₄H₆O₂)ₓ
Properties: Powd.; m.w. ≈ 50,000 avg.
Toxicology: TSCA listed
Uses: Solubilizer, visc. modifier/stabilizer in pharmaceuticals; film-former for antiseptic/anesthetic spray bandages, antibiotic sprays, spray gloves/masks; tablet binder/coating agent

Manuf./Distrib.: Adept Sol’ns.†; Aldrich

Chemical Component Cross-Reference

Regulatory: Canada DSL
Trade Names: Ganex® V-220

PVP / Hexadecene copolymer. See 2-Pyrrolidinone, 1-ethenyl, hexadecyl homopolymer

PVP-iodine
CAS 25655-41-8

Pyridine
CAS 110-86-1; EINECS/ELINCS 203-809-9
UN 1282 (DOT); FEMA 2966
Synonyms: Azabenzene; Azine
Classification: Heterocyclic aromatic compd.
Empirical: C₅H₅N
Formula: NCHCHCHCH
Properties: Colorless to pale yel. liq., char.
disagreeable odor, sharp burning taste; sol. in
water, alcohol, ether, chloroform, petrol. ether,
oils, other org. liqs.; misc. with oxygenated and
aromatic solvs.; m.w. 79.10; dens. 0.98272
(20/4 C); vapor pressure 10 mm Hg (13.2 C);
m.p. -41.6 C; b.p. 115-116 C; flash pt. (CC) 20
C; ref. index 1.510 (20 C); pH 8.5 (0.2 molar
sol'n. in water)

Toxicology: ACGIH TLV/TWA 5 ppm; LD₅₀
(oral, rat) 1.58 g/kg, (skin, rabbit) 1121
mg/kg; poison by IP route; mod. toxic by
ing., IV, subcut.; may cause human CNS
depression, irritation of skin and
respiratory tract; may cause severe
corrosive damage to eyes; ing. may cause
mouth/throat irritation, nausea, vomiting,
diarrhea; large doses may produce GI
turbances, kidney/liver damage,
convulsions, unconsciousness, death;
mutagenic data; TSCA listed
Precaution: Highly flamm.; dangerous fire
hazard exposed to heat, flame, oxidizers;
volatile with steam; incompat. with
oxidizing materials, strong acids or bases,
formamide, iodine, maleic anhydride, silver
perchlorate, perchromates, etc.

Hierarchical Decomp. Prods.: Heated to
decomps., emits highly toxic fumes of NOₓ
NFPA: Health 2, Flammability 3, Reactivity 0
Storage: Store in cool, dry, well-ventilated area
out of direct sunlight
Uses: Solvent in pharmaceuticals; synthesis of
vitamins, drugs; synthetic flavor; sedative;
acid scavenger; chem. intermediate
Regulatory: FDA 21CFR §172.515, 177.1580,

o-Dihydroxybenzene; o-Dioxybenzene; o-Diphenol; o-Hydroquinone; 2-Hydroxyphenol; o-Hydroxyphenol; Oxynic acid; o-Phenylenediol; Pyrocatechin; Pyrocatecholin; Pyrocatechic acid; Pyrocatechuic acid

Classification:  Aromatic hydrocarbon; phenol
Empirical:  C₆H₆O₂
Formula:  C₆H₄(OH)₂

Properties:  Colorless monocl. leaflets; discolored by lit. and air; sol. in water, oxygenated solvs., chloroform, alcohol, benzene, ether; m.w. 110.11; dens. 1.371 (15 C); vapor pressure 10 mm (118.3 C); m.p. 105 C; b.p. 240 C; flash pt. 127 C

Toxicology:  LD50 (oral, rat) 260 mg/kg, (subcut., mouse) 247 mg/kg, (skin, rabbit) 800 mg/kg; toxic; poison by ing., subcut., IP, IV, parental routes; mod. toxic by skin contact; corrosive; skin irritant; allergen; readily absorbed thru skin; tumorigen; experimental reproductive effects; human mutagenic data; target organs: liver, kidneys, nerves; TSCA listed

Precaution:  Oxygen-sensitive; combustible exposed to heat or flame; can react vigorously with oxidizers; hypergolic reaction with conc. nitric acid

Hazardous Decomp. Prods.:  Heated to decomp., emits acrid smoke and irritating fumes

Storage:  Light- and air-sensitive; store under nitrogen
Uses:  Synthesis of pharmaceuticals; antiseptic
Regulatory:  SARA §313 reportable; HAP; Canada DSL
Manuf./Distrib.:  Aldrich  http://www.sigma-aldrich.com; Coalite Chems.

Chemical Component Cross-Reference

Pyrodextrin. See Dextrin
Pyrogallic acid. See Pyrogallol

Pyrogallol
CAS 87-66-1; EINECS/ELINCS 201-762-9
Synonyms: 1,2,3-Benzenetriol; CI 76515;
Pyrogallic acid; 1,2,3-Trihydroxybenzene
Classification: Phenol
Definition: An aromatic alcohol of pyrogallic acid
Empirical: C₆H₅O₃
Formula: C₆H₆O₃
Properties: Wh. lustrous cryst. solid; sol. in water, alcohol, ether, oxygenated solvs.; sl. sol. in benzene, chloroform; m.w. 126.12; dens. 1.453 (4/4 C); vapor pressure 10 mm Hg (167.7 C); m.p. 131-133 C; b.p. 309 C
Toxicology: LD₅₀ (oral, mouse) 300 mg/kg, (IP, mouse) 400 mg/kg, (subcut., mouse) 566 mg/kg; poison by ing., subcut., IV, IP routes; human poison by ing., subcut., routes; readily absorbed through skin; severe skin and eye irritant; ing. causes severe GI irritation, kidney/liver damage, convulsions, seizures, dyspnea, circulatory collapse, death; questionable carcinogen; experimental tumorigen, teratogen, reproductive effector; mutagenic data; TSCA listed
Precaution: Incompat. with alkalis, NH₃, antipyrine, phenol, iron and lead salts, iodine, KMnO₄
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 2, Flammability 1, Reactivity 0
Storage: Light-sensitive
Uses: Pharmaceutical intermediate; synthetic drugs; medicine; colorant (with ferric ammonium citrate) in plain or chromic catgut sutures; external antimicrobial; soothes irritated skin
Use Level: 3% max. total ferric ammonium citrate and pyrogallol (sutures)
Regulatory: FDA 21CFR §73.1025, 73.1375, permanently listed for use in medical devices; Canada DSL

Pyrogallinic acid: See Hydroquinone
Pyroguaic acid: See Guaiacol
2-Pyrol. See 2-Pyrolidone

Pyrogalline acid
CAS 8030-97-5; EINECS/ELINCS 232-450-0
FEMA 2967
Synonyms: Pyrogalline acid extract; Pyrogalline liquor; Pyrogalline vinegar; Wood vinegar
Definition: Mixt. of materials derived from wood distillation, contg. methanol, acetic acid, acetone, furfural, various tars, etc.
Properties: Yel. to red liq.; acetic acid and wood tar odor; misc. with water and alcohol; dens. 1.018-1.030
Toxicology: TSCA listed
Uses: Flavor for pharmaceuticals
Features: Smoke woody phenolic bacon odor
Regulatory: FDA 21CFR §101.22; FEMA GRAS; Canada DSL

Pyrogalline acid extract
CAS 8028-47-5; EINECS/ELINCS 232-432-2
FEMA 2968
Synonyms: 'Liquid smoke'; Pyrogalline acids extracts; Pyrogalline vinegar
Definition: Extract derived from pyrogalline acid which is the condensed volatile material obtained from the destructive distillation of
Chemical Component Cross-Reference

**wood**

*Properties*: Yel. to red liq., smoke odor; dens. 1.018-1.030

*Uses*: Synthetic flavor for pharmaceuticals

*Regulatory*: FDA 21 CFR §172.515; FEMA GRAS; Canada DSL

*Manuf./Distrib.*: Degussa AG/Health & Nutrition

**Pyroligneous acid extract**. See *Pyroligneous acid*

*CAS* 109-97-7; EINECS/ELINCS 203-724-7

*FEMA* 3386

*Synonyms*: 1-Aza-2,4-cyclopentadiene; Azole; Divinylengimine; Imidole; Monopyrrole

*Definition*: Constituent of coal tar and bone oil

*Empirical*: C₄H₅N

*Formula*: CH=CHNHCH=CH

*Properties*: Colorless to yel.-brn. oily liq.; chloroform-like odor; burning, pungent taste; sol. in alcohol, ether, dil. acids, fixed oils, benzene; insol. in water, dil. alkalis; m.w. 67.09; dens. 0.966 (20/4 C); f.p. -24 C; b.p. 129-131 C; flash pt. 36 C; ref. index 1.5091 (20 C)

*Toxicology*: LD50 (IP, mouse) 98 mg/kg, (subcut., mouse) 61 mg/kg; LDLo (oral, rabbit) 147 mg/kg; poison by ing., subcut., IP routes; toxic by inh.; harmful liq.; irritant; mutagen; TSCA listed

*Precaution*: Flamm.; mod. fire risk; readily polymerizes by action of light and turns brown; can react with oxidizers; violent reaction with 2-nitrobenzaldehyde

*Hazardous Decomp. Prods.*: Heated to decomp., emits highly toxic fumes of NOx

*Storage*: Photosensitive; protect from moisture; store under nitrogen; refrigerate

*Uses*: Flavor for pharmaceuticals; mfg. of pharmaceuticals

*Regulatory*: FEMA GRAS; Canada DSL

*Manuf./Distrib.*: Advanced Synthesis Tech.

*Trade Names*: Ganex® V-216

*See also* N-Methyl-2-pyrrolidone

2-Pyrrolidine carboxylic acid; Pyrrolidine-2-carboxylic acid. See L-Proline

Quartz
CAS 14808-60-7; EINECS/ELINCS 238-878-4

Synonyms: Agate; Amethyst; Chalcedony; Crystalline silica; Flint; Free crystalline silica; Onyx; Pure quartz; Quartz glass; Rose quartz; Sand; Sea sand; Silica; Silica,‡

†=pharmaceutical grade

crystalline quartz; Silica flour; Silica glass; Silica, quartz; Silicic anhydride; Silicon dioxide

Classification: Inorg. silicon compd.

Definition: Crystallized silicon dioxide

Empirical: O2Si

Formula: SiO2

Properties: Wh. to reddish cryst. solid; odorless; insol. in acids except HF; insol. in water; m.w. 60.08 dens. 2.65; m.p. 1713 C; b.p. 2230 C; hardness (Mohs) 7; stable below 8 C; noncombustible

Toxicology: ACGIH TLV/TWA 0.1 mg/m3 (respirable fraction); LDLo (IV, rat) 90 mg/kg; TDLo (IP, rat) 45 mg/kg; LCLo (inh., human, 10 yr., intermittent) 300 µg/m3; harmful dust; poison by intratracheal and IV routes; hazard by inh.; human systemic effects by inh. (cough, dyspnea, liver effects); can cause serious lung disease, death; irritating to eyes, respiratory system; confirmed carcinogen; experimental tumorigen, neoplastigenic data; TSCA listed

Precaution: Incompat. with OF2, vinyl acetate, strong oxidizing agents

Hazardous Decomp. Prods.: None

Storage: Store in sealed containers or enclosed areas; protect from damage; minimize airborne dust

Uses: Filtration in pharmaceuticals

Regulatory: Canada DSL; Korea ECL (no. 9212-5667); Japan ENCS (no. 1-548); Australia AICS; Philippines PICCS

Trade Names Containing: Sillitin Z 86 Puriss; Terra Alba; Veegum® D; Veegum® K

CAS 27479-28-3; EINECS/ELINCS 248-486-5
Synonyms: Dodecyl dimethyl ethylbenzyl ammonium chloride; Dodecyl (ethylbenzyl) dimethylammonium chloride; N-Dodecyl-ar-ethyl-N,N-dimethylbenzenemethanaminium chloride
Classification: Quaternary ammonium salt
Empirical: C_{23}H_{42}N • Cl
Properties: Water-sol.; cationic
Toxicology: Causes dermatitis; TSCA listed
Uses: Antimicrobial for pharmaceuticals
Features: Effective against bacteria but not yeast
Regulatory: FDA 21CFR §172.165, 173.320; Canada DSL
Trade Names Containing: SO/SAN® 30M
Quaternium-15
CAS 4080-31-3; 51229-78-8; EINECS/ELINCS 223-805-0
Synonyms: Chlorallyl methenamine chloride; N-(3-Chloroallyl) hexaminium chloride; 1-(3-Chloroallyl)-3,5,7-triaza-1-azoniaadamantane chloride; Methenamine 3-chloroallylochloride
Classification: Quaternary ammonium salt
Empirical: C_{9}H_{16}ClN_{4} • Cl
Formula: C_{6}H_{12}N_{4}(CH_{2}CHCHCl)Cl
Properties: Cationic
Toxicology: TSCA listed
Uses: Antimicrobial, preservative for pharmaceuticals, topicals, esp. water-sol. creams and lotions, eyewashes
Features: Formaldehyde-releasing
Use Level: 0.02-0.03%; 0.02% (topicals)
Regulatory: FDA 21CFR §175.105, 176.170, 177.1680; CIR approved; Europe listed; Japan not approved; FDA approved for topicals; Canada DSL
Manuf./Distrib.: Sigma http://www.sigma-aldrich.com/belgium
Quaternium-17. See Cetethyldimonium bromide
Quaternium-22
CAS 51812-80-7; 82970-95-4; EINECS/ELINCS 257-440-3
Synonyms: γ-Gluconamidopropyl dimethyl 2-hydroxyethyl ammonium chloride; 3-(D-Gluconoylamino)-N-(2-hydroxyethyl)-N,N-dimethyl-1-propanaminium chloride; 1-Propanaminium, 3-(D-gluconoylamino)-N-(2-hydroxyethyl)-N,N-dimethyl-, chloride
Classification: Quaternary ammonium salt
Empirical: C_{13}H_{29}N_{2}O_{7} • Cl
Properties: Lt. amber liq.; sol. in water, 70% ethanol, glycerin, propylene glycol; insol. in IPM, min. oil; sp.gr. 1.170-1.210; Cationic
Toxicology: Nonirritating to skin and eyes; TSCA listed
Uses: Antistat, film-former, emollient, humectant, conditioner in pharmaceuticals, skin care prods.
Regulatory: Canada DSL
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/

Quaternium-24
CAS 32426-11-2; EINECS/ELINCS 518-035-5
Synonyms: 1-Decanaminium, N,N-dimethyl-N-octyl, chloride; Decyl dimethyl octyl ammonium chloride; Octyl decyl dimethyl ammonium chloride
Classification: Quaternary ammonium salt
Empirical: C_{20}H_{44}N • Cl
Formula: [C_{17}H_{35}CONH(CH_{2})_{3}N(CH_{3})_{2}CH_{2}COOC_{14}H_{29}]^{+}Cl^{-}
Properties: Soft amber gel; m.p. 27-32 C; cationic
Toxicology: Mild eye irritant, sl. skin irritant
Uses: Emollient
Regulatory: Canada DSL
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/
Trade Names: Ceraphyl® 70

Quaternium-26
CAS 68921-83-5; EINECS/ELINCS 272-964-2
Synonyms: Stearamidopropyl dimethyl (myristyl acetate) ammonium chloride
Classification: Quaternary ammonium salt
Empirical: C_{39}H_{79}N_{2}O_{3} • Cl
Formula: [RCO–NH(CH_{2})_{3}N(CH_{3})_{2}CH_{2}COOC_{14}H_{29}]^{+}Cl^{-}
Properties: Cationic
Uses: Emollient
Regulatory: Canada DSL
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/
Trade Names: Finquat® CT

Quaternium-31. See Dicetylidonium chloride

Quaternium-61
CAS 111905-55-6
Synonyms: Dimer acid, bis[amidopropyl-N,N-dimethyl-N-ethyl ammonium ethosulfate]
Classification: Quaternary ammonium salt
Properties: Cationic
Uses: Conditioner for topical pharmaceuticals, skin care prods.
Trade Names: Schercoquat DAS

Quaternium-70
CAS 68921-83-5; EINECS/ELINCS 272-964-2
Synonyms: Stearamidopropyl dimethyl (myristyl acetate) ammonium chloride
Classification: Quaternary ammonium salt
Empirical: C_{39}H_{79}N_{2}O_{3} • Cl
Formula: [RCO–NH(CH_{2})_{3}N(CH_{3})_{2}CH_{2}COOC_{14}H_{29}]^{+}Cl^{-}
Properties: Soft amber gel; m.p. 27-32 C; cationic
Toxicology: LD50 (oral, rat) > 5 g/kg; mild eye irritant; sl. skin irritant
Uses: Emollient
Regulatory: Canada DSL
Manuf./Distrib.: Somerset Cosmetic Co. http://www.makingcosmetics.com/
Trade Names Containing: Ceraphyl® 70

Quaternium-75
Synonyms: Quaternary ammonium compds., ethyl (2-hydroxy-C14-C16-alkyl) bis [3-(ethyldimethylammonio) propyl]-, ethyl sulfates (salts) (1:3)
Classification: Quaternary ammonium compd.
Uses: Inged. in scalp treatments
Trade Names: Finquat® CT

Quaternium-80
CAS 134737-05-6
Classification: Quaternary ammonium salt
Properties: Cationic
Uses: Refatting agent for pharmaceuticals
Trade Names: Abil®-Quat 3272

Queen of the meadow extract. See Meadowsweet (Spiraea ulmaria) extract

CAS 68990-67-0; 977002-27-9; EINECS/ELINCS 273-620-4
FEMA 2973; INS999
Synonyms: China bark extract; Murillo bark extract; Panama bark; Panama bark extract; Panama wood extract; Quillaja; Quillaja; Quillaja bark; Quillaja saponaria; Soapbark
Definition: Plant material derived from the dried bark of Quillaja saponaria contg. sapotoxin, tannin, and quillaja
Properties: Lt. brn. to pink powd. or aq. sol'n.; bittersweet aromatic taste; sol. in water, alcoholic beverages
Uses: Natural flavor in pharmaceuticals
Regulatory: BP compliance; FDA 21CFR §172.510; FEMA GRAS; Japan approved

Quillaja saponaria. See Quillaja (Quillaja saponaria)

Quinaldine
CAS 91-63-4; EINECS/ELINCS 202-085-1
Synonyms: Chinaldine; 2-Methylquinoline; α-Methylquinoline
Empirical: C_{10}H_{8}N
Formula: C_{9}H_{6}NCH_{3}
Properties: Colorless oily liq.; turns reddish-brn. in air; quinoline odor; sol. in alcohol, ether, chloroform, oxygenated and chlorinated solvs.; insol. in water; m.w. 143.19; dens. 1.058; m.p. -2 C; b.p. 248 C; flash pt. 79 C; ref. index 1.6120
Toxicology: LD50 (oral, rat) 1230 mg/kg, (skin, rabbit) 1870 mg/kg; mod. toxic by ing. and intr.

Quine. See Quin (Pyrus cydonia) seed

Quine chloride. See Quin hydrochloride

Quine sulfate. See Quin hydrochloride

Quine sulfate. See Quin sulfate

Quin hydrochloride
CAS 130-89-2 (anhyd.); 6119-47-7 (dihydrate); EINECS/ELINCS 231-437-7
FEMA 2976
Synonyms: 6-Methoxycinchonan-9-ol monohydrochloride; Quinine chloride; Quinine monohydrochloride; Quinine muriate
Empirical: C_{20}H_{25}ClN_{2}O_{2}
Formula: C_{20}H_{25}N_{2}O_{2} • HCl (anhyd.);
Quinine sulfate dihydrate

**CAS 6119-70-6;** EINECS/ELINCS 212-359-2
UN 2811; FEMA 2977

**Synonyms:** Quinine sulfate (2:1) dihydrate

**Empirical:** C_{40}H_{50}N_{4}O_{8}S • 2H_{2}O

**Formula:** (C_{20}H_{24}N_{2}O_{2})_{2} • H_{2}SO_{4} • 2H_{2}O

**Properties:** Dull needles or rods; sl. sol. in chloroform and ether; m.w. 782.96; m.p. 233-235 C

**Toxicology:** LDLo (oral, mouse) 800 mg/kg; human poison and human systemic effects by ing. (blood agranulocytosis, fibrous hepatitis, flaccid paralysis without anesthesia, nausea, vomiting, tinnitus, visual changes); experimental reproductive effects; mutagenic data; TSCA listed

**Precaution:** Incompat. with ammonia, alkalis, limewater, tannic acid, iodine, iodides, acetates, citrates, tartrates, benzoates, salicylates

**Hazardous Decomp. Prods.:** Heated to decomp., emits very toxic fumes of SO_{x} and NO_{x}

**Storage:** Light sensitive; keep well closed, protect from light

**Uses:** Antimalarial drug; muscle relaxant

**Regulatory:** FDA 21CFR §172.575; FEMA GRAS; BP, Ph.Eur. compliance

Chemical Component Cross-Reference

Quinine sulfate (2:1) dihydrate. See Quinine sulfate dihydrate

Quinizarin green SS. See D&C Green No. 6; Solvent green 3

Quinol. See Hydroquinone

8-Quinol. See 8-Hydroxyquinoline

Quinol dimethyl ether. See p-Dimethoxybenzene

Quinoline

CAS 91-22-5; EINECS/ELINCS 202-051-6

UN 2656 (DOT); FEMA 3470

Synonyms: 1-Azanaphthalene; 1-Benzazine; 1-Benzine; Benzo[b]pyridine; Chinoleone; Chinolin; Chinoline; Leucol; Leucoline

Empirical: C9H7N

Formula: C9H8N=CHCH=CH

Properties: Colorless liq., penetrating unpleasant odor; sol. in hot water; misc. with alcohol, ether, CS2, oxygenated solvs.; difficultly sol. in cold water; m.w. 129.16; dens. 1.093 (20/4 C); vapor pressure 1 mm (59.7 C); m.p. -17 to -13 C; b.p. 236-238 C; flash pt. 92 C; ref. index 1.625 (20 C)

Toxicology: LD50 (oral, rat) 331 mg/kg, (skin, rabbit) 540 mg/kg; LDLo (IP, mouse) 64 mg/kg; toxic; poison by ing., subcut., IP routes; mod. toxic by skin contact; primary skin irritant; severe eye irritant; readily absorbed through skin; may cause retinitis; questionable carcinogen; experimental neoplastigen, tumorigen; mutagen; target organ: liver; TSCA listed

Precaution: Combustible exposed to heat or flames; explosive reaction possible with hydrogen peroxide; violent reaction with dinitrogen tetroxide, perchromates; incompat. with linseed oil + thionyl chloride; maleic anhydride; unpredictably violent

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx

Storage: Hygroscopic; photosensitive; protect from light and moisture

Uses: Synthetic flavor for pharmaceuticals; antimalarial

Regulatory: FEMA GRAS; HAP; Canada DSL

Rapeseed (Brassica campestris) oil
CAS 8002-13-9; 120962-03-0; EINECS/ELINCS 232-299-0

Synonyms: Brassica campestris oil; Brassica oleifera; Canola oil (low erucic acid rapeseed oil); Colza oil; HEAR; High-erucic acid rapeseed oil; LEAR; Low-erucic acid rapeseed oil; Rapeseed oil; Rapeseed oil, blown

Definition: Vegetable oil expressed from seeds of Brassica campestris

Properties: Brn. viscous liq., yel. when refined, noxious odor; sol. in chloroform, ether, CS₂; dens. 0.913-0.916; m.p. 17-22 C; solidifies at 0 C; iodine no. 97-105; sapon. no. 170-177 C; flash pt. 162 C; ref. index 1.4720-1.4752

Toxicology: Toxic; allergic potential; can cause acne-like skin eruptions

Precaution: Subject to spontaneous heating

NFPA: Health 0, Flammability 1, Reactivity 0

Uses: Excipient in pharmaceutical orals

Regulatory: FDA 21CFR §175.105, 176.210, 177.1200, 177.2800, 184.1555; Japan approved (extract); FDA approved for orals; BP, EP compliance (refined)

Rennet

**CAS:** [9001-98-3; 9042-08-4]

**Synonyms:** Bovine rennet; Chymosin; Rennase; Rennet, calf; Rennin; Rennin, calf

**Definition:** A dried extract containing rennin, the milk-clotting enzyme from calf stomach

**Properties:** Ylsh.-wh. powd., peculiar odor, sl. salty taste; partly sol. in water and dil. alcohol; m.w. = 31,000; strongly affected by UV light

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Storage:** Sl. hygroscopic

**Uses:** Binder, enzyme, extender, processing aid, stabilizer, thickener in pharmaceuticals; digestive enzyme

**Regulatory:** FDA 21CFR §131.160, 131.162, 133.102, 133.106, 133.108, 133.111, 133.113, 133.118, 133.127, 133.129, 133.133, 133.136, 133.138, 133.141, 133.144, 133.147, 133.149, 133.150, 133.152, 133.153, 133.155, 133.156, 133.162, 133.164, 133.165, 133.181, 133.182, 133.183, 133.184, 133.185, 133.187, 133.189, 184.1685, GRAS; USDA 9CFR §318.7 (rennet treated calcium reduced dried milk and calcium lactate, limitation 3.5% in sausages), 381.147; Canada, Japan approved

---

**Properties:** Aromatic alcohol; phenol

**Empirical:** C₆H₄(OH)₂

**Formula:** C₆H₄(OH)₂

**Properties:** Wh. cryst. solid; unpleasant sweet taste; discolors to pink in light and air; very sol. in alcohol, ether, glycerol, CCl₄, acetic acid, pyridine, amyl alcohol, liq. ammonia; sol. in water, acetone, dimethyl sulfoxide, oxygenated solvs.; sl. sol. in chloroform, benzene; m.w. 110.12; dens. 1.285 (15 C); vapor pressure 1 mm (108.4 C); m.p. 110 C; b.p. 280.5 C; flash pt. (CC) 127 C

**Toxicology:** ACGIH TLV/TWA 10 ppm; STEL 20 ppm; LD50 (oral, rat) 301 mg/kg, (IP, mouse) 215 mg/kg, (subcut., mouse) 213 mg/kg, (skin, rabbit) 3360 mg/kg; poison by ing., IP, parenteral, subcut. routes; mod. toxic by skin contact and IV route; human poison by ing.; skin and severe eye irritant; may cause hyperemia, dermatitis, edema, methemoglobinemia, cyanosis, convulsions, dyspnea, death; questionable carcinogen; experimental tumorigen; human mutagenic data; TSCA listed

**Precaution:** Flammable exposed to heat or flame; can react with oxidizers; potentially explosive with conc. nitric acid; incompat. with alkalis, ferric salts, spirit nitrous ether, etc.; keep away from food

**Hazardous Decomp. Prods.:** CO, CO₂, C; heated to decomp., emits acrid smoke and irritating fumes

**HMIS:** Health 3, Flammability 1, Reactivity 0

**Storage:** Hygroscopic; protect from light

**Uses:** Flavor for pharmaceuticals; antimicrobial in vaginal creams; topical antiseptic; keratolytic agent

**Regulatory:** BP, EP compliance; FDA 21CFR §177.1210; FEMA GRAS; Canada DSL

Retinol
CAS 86-26-8; 11103-57-4; EINECS/ELINCS 200-683-7; 234-328-2

Synonyms: Anti-infective vitamin; Antixerophthalmic vitamin; Axerophthol; 3,7-Dimethyl-9-(2,6,6-trimethyl-1-cyclohexen-1-yl)-2,4,6,8-nonatraen-1-ol; Oleovitamin A; all-trans-Retinol; Retrovitamin A; Vitamin A; Vitamin A Alcohol; all-trans-Vitamin A alcohol

Classification: Organic compd.

Empirical: C20H30O

Properties: Yel. prisms or cryst., nearly odorless or mild fishy odor; sol. in abs. alcohol, methanol, chloroform, ether, fats, oils; pract. insol. in water, glycerin; m.w. 286.46; m.p. 54-58 C; b.p. 137-138 C (0.000001 mm)

Toxicology: LD50 (oral, rat) 2000 mg/kg; mod. toxic by ing.; human teratogenic effects; experimental teratogen, reproductive effects; human mutagenic data; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Nutrient, dietary supplement in pharmaceuticals, orals, parenterals

Chemical Component Cross-Reference

Trade Names Containing: Retinol P 50
all-trans-Retinol. See Retinol
Retinol acetate. See Retinyl acetate
Retinol, hexadecanoate; Retinol palmitate. See Retinyl palmitate

Retinyl acetate
CAS 127-47-9; EINECS/ELINCS 204-844-2
Synonyms: Acetic acid, retinyl ester; Retinol acetate; all-trans-Retinyl acetate; Vitamin A acetate; trans-Vitamin A acetate; Vitamin A alcohol acetate
Definition: Ester of retinol and acetic acid
Empirical: C₁₂H₂₂O₂
Properties: Pale yel. prismatic cryst.; m.w. 328.54; m.p. 57-58 C
Toxicology: LD₅₀ (oral, mouse, 10 day) 4100 mg/kg; mod. toxic by ing.; questionable carcinogen; experimental neoplastigen, teratogen, reproductive effects; mutagenic data; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Nutrient, dietary supplement for vitamin reinforcement for feeds, infant formulas
Regulatory: FDA 21CFR §184.1930, GRAS; Canada DSL
Sigma http://www.sigma-aldrich.com/belgium

Trade Names: Vitamin A Palmitate USP, FCC Type P1.7

Trade Names Containing: Vitamin A and D-3 Blend; Vitamin A Palmitate 1.0 in Sunflower Oil; Vitamin A Palmitate 1.7 USP/EP/FCC; Vitamin A Palmitate 500; Vitamin A, C & E Liposomes

Rhamnose
CAS 3615-41-6
FEMA 3730
Synonyms: 6-Deoxy-L-mannose; Isodulcit; L-Mannomethylose; L-Rhamnose
Classification: Deoxyhexose monosaccharide
Empirical: C₆H₁₂O₅
Properties: Wh. cryst.; sweet taste; sol. in water, methanol; m.w. 164.16; m.p. 82-92 C
Toxicology: Harmful by ing.; irritating to skin, eyes, respiratory system
Hazardous Decomp. Prods.: CO, CO₂, acrid fumes
Storage: 6 mos. when stored at 40-70 F in tightly sealed original containers with minimum head space; avoid prolonged exposure to light, heat, air
Uses: Synthetic sweetener in pharmaceuticals
Regulatory: FEMA GRAS; Japan approved; Australia AICS; Canada DSL
Manuf./Distrib.: Adept Sol’ns.†; EMD Chems.† http://www.emdchemicals.com; Ferro

Rhodinyl formate
CAS 141-09-3; EINECS/ELINCS 205-456-6
FEMA 2984
Synonyms: 3,7-Dimethyl-7-octen-1-ol formate; 3,7-Dimethyl-6 or 7-octen-1-yl methanoate; Rhodinyl methanoate
Classification: floral ester
Empirical: C₁₁H₂₀O₂
Properties: Colorless to pale yel. liq.; sol. in alcohol and fixed oils; insol in water, glycerin, and propylene glycol; m.w. 184.28; sp. gr. 0.903-0.911; b.p. 220.00 C @ 760.00 mm; acid no. 1 max.; ref. index 1.45100 - 1.459
Uses: Synthetic flavor for pharmaceuticals
Features: Rose dried leaf odor
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: Fleurchem http://www.fleurchem.com

Rhodinyl isobutyrate
CAS 138-23-8; EINECS/ELINCS 205-318-5
FEMA 2983
Synonyms: 3,7-Dimethyl-6 or 7-octen-1-yl isobutyrate; 3,7-Dimethyl-6 or 7-octen-1-yl 2-methyl propanoate; Rhodinyl 2-methyl propanoate
Classification: floral ester
Empirical: C₁₄H₂₆O₂
Properties: Colorless oily liq.; sweet red rose spicy odor; sp.gr. 0.89; ref. index 1.448-1.453 (20 C)
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: City Chem. http://www.citychemical.com

Rhodinyl isopentanoate. See Rhodinyl isovalerate
Rhodinyl isovalerate

CAS 10486-14-3; EINECS/ELINCS 234-003-5
FEMA 2985
Synonyms: Acetic acid, phenyl-, 3,7-dimethyl-7-octenyl ester; Benzeneacetic acid, 3,7-dimethyl-7-octenyl ester, (S)-; 3,7-Dimethyl-7-octenyl phenylacetate; Phenylacetic acid 3,7-dimethyl-7-octenyl ester; Rhodinyl α-toluate
Classification: floral ester
Empirical: C₁₈H₂₆O₂
Properties: M.w. 274.44
Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; TSCA listed
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL
Manuf./Distrib.: City Chem. http://www.citychemical.com

Rhodinyl propionate
CAS 105-89-5; EINECS/ELINCS 203-343-6
FEMA 2986
Synonyms: Citronellyl propionate; 7-Octen-1-ol, 3,7-dimethyl-, propanoate; 7-Octen-1-ol, 3,7-dimethyl-, propionate
Classification: floral ester
Empirical: C₁₃H₂₄O₂
Properties: Colorless oily liq., sweet odor/flavor; sol. in alcohol; almost insol. in water; m.w. 212.37; b.p. 255 C; flash pt. 100 C; ref. index 1.4570
Toxicology: LD50 (oral, rat) > 5 g/kg, (skin, rabbit) > 5 g/kg; primary irritant
Uses: Synthetic flavor for pharmaceuticals
Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Rhus succedanea; Rhus succedanea cera; Rhus succedanea wax. See Japan (Rhus succedanea) wax
Riboflavin

CAS 83-88-5; EINECS/ELINCS 201-507-1

INS 101(i); E 101i

Synonyms:

Riboflavin; Vitamin B2; Riboflavin; Flavin; Riboflavin; Riboflavine; Vitamin B2; Vitamin B

Classification: Organic compd.

Empirical: C17H20N4O6

Properties: Orange to yel. cryst., sl. odor, bitter taste; sl. sol. in water, alcohol; insol. in ether, chloroform; m.w. 376.41; m.p. 282 C (dec.)

Toxicology: LD50 (IP, rat) 560 mg/kg, (subcut., rat) 5000 mg/kg; LDLo (IV, mouse) 365 mg/kg; poison by IV route; mod. toxic by IP and subcut. routes; mutagenic data; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits fumes of NOx

Uses: Dietary supplement, colorant in pharmaceuticals; medicine; principal growth-promoting factor of Vitamin B2 complex (functions as protein in tissue respiration, builds and maintains healthy human tissue); protects eyes from sensitivity to light

Regulatory: FDA 21CFR §73.450, 101.9, 107.100, 136.115, 137.165, 137.185, 137.260, 137.305, 139.115, 139.117, 139.122, 139.155, 184.1695, GRAS; Europe listed; Canada DSL 137.100, 136.115, 137.165, 137.185, 137.260, 184.1695, GRAS; Europe listed; UK, Japan approved; BP, EP compliance; Canada DSL 137.100, 136.115, 137.165, 137.185, 137.260, 184.1695, GRAS; Europe listed; UK, Japan approved; BP, EP compliance; Canada DSL

Manuf./Distrib.: AB R Lundberg

Trade Names: Riboflavin High Flow
Trade Names Containing: Descote® Riboflavin

†=pharmaceutical grade
Chemical Component Cross-Reference

33\(^1/3\)%; Descote® Thiamine Mononitrate
33\(^1/3\)%; Rocoat® Riboflavin 33\(^1/3\); Unipertan P-24; Unipertan P-2002

Riboflavine. See Riboflavin
Riboflavin monophosphate monosodium salt; Riboflavin 5´-monophosphate sodium salt dihydrate; Riboflavin 5´-phosphate ester monosodium salt. See Riboflavin-5´-phosphate sodium

Riboflavin-5´-phosphate sodium
CAS 130-40-5 (dihydrate); EINECS/ELINCS 204-988-6
INS101(ii); E101ii

Synonyms: Riboflavin monophosphate monosodium salt; Riboflavin 5´-monophosphate sodium salt dihydrate; Riboflavin 5´-phosphate ester monosodium salt; Sodium riboflavin phosphate (INCI); Vitamin B\(_2\) phosphate sodium

Definition: Ester of riboflavin and sodium phosphate

Empirical: C\(_{17}\)H\(_{20}\)N\(_4\)NaO\(_9\)P • 2H\(_2\)O

Properties: Yel. to orange-yel. cryst. powd., sl. odor; sol. in water; m.w. 514.36

Precaution: Dec. by light when in sol’n.

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NO\(_x\) and Na\(_2\)O

Storage: Hygroscopic; store frozen (-55 to -22 C); protect from light

Uses: Nutrient, dietary supplement in pharmaceuticals; enzyme cofactor vitamin

Regulatory: FDA 21CFR §184.1697, GRAS; Europe listed; UK, Japan approved; BP, EP compliance; Canada DSL

Manuf./Distrib.: AMRESCO
Functional Foods;†

†=pharmaceutical grade

Trade Names: Riboflavin-5´-Phosphate Sodium USP, FCC
Riboflavin 5´- (sodium hydrogen phosphate); Riboflavin sodium phosphate. See Riboflavin-5´-phosphate sodium

Rice bran oil. See Rice (Oryza sativa) bran oil
Rice bran wax. See Rice (Oryza sativa) wax
Rice oil. See Rice (Oryza sativa) bran oil

Rice (Oryza sativa) bran oil
CAS 68553-81-1; 84696-37-7; EINECS/ELINCS 271-397-8

Synonyms: Oils, rice bran; Oryza sativa; Rice bran oil; Rice oil

Definition: Oil expressed from rice bran, Oryza sativa

Properties: Golden yel. oil; misc. with hexane and other fat solvs.; negligible sol. in water; dens. 0.916-0.921; vapor pressure very low; cloud pt. < -7 C; acid no. < 2; iodine no. 92-115; sapon. no. 180-190; ref. index 1.470-1.473

Hazardous Decomp. Prods.: CO\(_2\) from combustion

Uses: Edible oil, emollient for pharmaceuticals; solvent for ointments

Regulatory: FDA 21CFR §175.105, 176.200, 176.210, 177.2260, 177.2800; Canada DSL

Manuf./Distrib.: Alzo
Rice (Oryza sativa) starch
CAS 9005-25-8; 53112-52-0; 75138-75-9; 977000-08-0
Synonyms: Oryza sativa; Oryza sativa starch; Rice starch
Definition: Starch obtained from rice, Oryza sativa
Empirical: (C6H10O5)n
Toxicology: LD50 (IP, mouse) 6600 mg/kg; primary irritant; may cause mechanical irritation by blocking pores and putrefying; may cause allergic reaction; TSCA listed
HMIS: Health 0, Flammability 1, Reactivity 0
Uses: Demulcent, emollient, film-former, binder for pharmaceuticals
Features: Forms a soothing and protective film
Regulatory: FDA 21CFR §175.105, 178.3520; BP, EP compliance
Manuf./Distrib.: Adept Sol'ns.; Aldrich

Rice (Oryza sativa) wax
CAS 8016-60-2; EINECS/ELINCS 232-409-7
INS908
Synonyms: Oryza sativa; Oryza sativa bran wax; Rice bran wax; Rice wax; Waxes, rice bran
Definition: Wax obtained from rice bran, the broken hulls of rice grains, Oryza sativa
Properties: Tan to brn. hard wax; sol. in chloroform, benzene; insol. in water; m.p. 75-80 C; iodine no. 20 max.; sapon. no. 75-120
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Wax for pharmaceuticals; coating for tablets
†=pharmaceutical grade
Regulatory: FDA 21CFR §172.615, 172.890, 178.3860 (limitation 1% in polymer); Japan approved; Canada DSL
Manuf./Distrib.: Freeman Ind.
http://www.freemanllc.com
Trade Names: Ricebran Wax SP 8000

Rice starch. See Rice (Oryza sativa) starch;
Rice starch

Rice syrup solids
Synonyms: RSS
Properties: Bland to mild caramel taste; sol. in water
Uses: Sweetener, humectant, carrier, bulking agent for pharmaceuticals
Manuf./Distrib.: Adept Sol'ns.; Alfa Chem
http://www.alfachem1.com; Spectrum Quality Prods.
http://www.spectrumchemical.com

Rice wax. See Rice (Oryza sativa) wax
Ricinoleic acid. See Ricinoleic acid
Ricini oleum. See Castor (Ricinus communis) oil

Ricinoleamidopropyl betaine
CAS 71850-81-2; 86089-12-5; EINECS/ELINCS 289-181-7
Synonyms: N-(Carboxymethyl)-N,N-dimethyl-3-[1-oxoricinoleyl] amino]-1-propanaminium hydroxide, inner salt; 1-Propanaminium, 3-amino-N-(carboxymethyl)-N,N-dimethyl-, N-caster-oil acyl derivs., hydroxides, inner salts; Ricinoleamidopropyl dimethyl glycine Classification: Zwitterion (inner salt)
Empirical: C25H48N2O4
Properties: Amphoteric
Uses: Antistat, surfactant, conditioner in medicated cleansers
Trade Names: Rewoteric® AM R40

N-Ricinoleamidopropyl-N,N-dimethylamine-N-ethyl ammonium ethyl sulfate. See Ricinoleamidopropyl ethyldimionium ethosulfate
Ricinoleamidopropyl dimethyl glycine. See Ricinoleamidopropyl betaine
Ricinoleamidopropyl ethyl dimethyl ammonium ethyl sulfate. See Ricinoleamidopropyl ethyldimionium ethosulfate
Ricinoleamidopropyl ethyldimionium ethosulfate
CAS 112324-16-0
Synonyms: N-Ethyl-N,N-dimethyl-3-[(1-
oxoricinoleyl) amino]-1-propanaminium ethosulfate; 1-Propanaminium, N-ethyl-N,N-dimethyl-3-[(1-oxoricinoleyl) amino]-ethyl sulfate; N-Ricinoleamidopropyl-N,N-dimethylamine-N-ethyl ammonium ethyl sulfate; Ricinoleamidopropyl ethyl dimethyl ammonium ethyl sulfate

Classification: Quaternary ammonium salt

Formula: C_{25}H_{51}N_{2}O_{2} \cdot C_{2}H_{5}O_{4}S

Uses: Conditioner, antistat, emollient, emulsifier, gloss aid, softener for pharmaceuticals, anhyd. systems, clear and opacified prods.

Regulatory: Canada DSL

Trade Names: Lipoquat R

Trade Names Containing: Lipowax ES-C

Ricinoleic acid

CAS 141-22-0; EINECS/ELINCS 205-470-2

Synonyms: Castor oil acid; 12-Hydroxy-9-octadecenoic acid; 12-Hydroxy-cis-9-octadecenoic acid; cis-12-Hydroxyoctadec-9-enoic acid; 12-Hydroxyoleic acid; 9-Octadecenoic acid, 12-hydroxy-; Oleic acid, 12-hydroxy-; Ricinoleic acid; Ricinolic acid

Classification: Unsaturated fatty acid

Empirical: C_{18}H_{34}O_{3}

Formula:

\[ \text{CH}_3(\text{CH}_2)_5\text{CH(OH)}\text{CH}_2\text{CH}=\text{CH}(\text{CH}_2)_7\text{COOH} \]

Properties: Colorless to pale yel. visc. liq.; sol. in alcohol, acetone, ether, chloroform, oxygenated solvs.; insol. in water; m.w. 298.45; dens. 0.940 (27.4/4 C); m.p. 5.5 C; b.p. 245 C (10 mm); ref. index 1.4716 (20 C)

Toxicology: TDL0 (subcut., rabbit, 17 wks intermittent) 390 mg/kg; questionable carcinogen; experimental tumorigen; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 1, Flammability 0, Reactivity 0

Uses: Acidifier in vaginal jellies to maintain or restore normal vaginal acidity

Regulatory: Canada DSL

Rose geranium (Pelargonium graveolens) oil  
CAS 977143-78-4  
FEMA 2508

Synonyms: Geranium, rose, oil; Pelargonium graveolens oil; Rose geranium oil

Definition: Oil derived from Pelargonium graveolens

Uses: Natural flavor for pharmaceuticals

Regular: FDA 21CFR §182.20, GRAS; FEMA GRAS

Manuf./Distrib.: SAFC Specialties
Rosemary (Rosmarinus officinalis) extract

CAS 84604-14-8; EINECS/ELINCS 283-291-9

Synonyms: Rosemary extract; Rosmarinus officinalis; Rosmarinus officinalis extract

Definition: Oleoresin extracted from rosemary leaves, Rosmarinus officinalis

Uses: Natural antioxidant for dermatologicals

Regulatory: BP, EP compliance; FDA 21CFR §182.20, GRAS

Manuf./Distrib.: Active Organics

Trade Names Containing: Crodamor Rosemary Oil forte

Rosemary (Rosmarinus officinalis) oil

CAS 8000-25-7; EINECS/ELINCS 283-291-9

FEMA 2992

†=pharmaceutical grade

Synonyms: Rosemary oil; Rosmarinus officinalis; Rosmarinus officinalis flower oil; Rosmarinus officinalis oil

Definition: Volatile oil obtained from flowering tops of Rosmarinus officinalis, contg. α-pinene, camphene, and cineole

Properties: Colorless to pale yel. liq., rosemary odor, camphoraceous taste; sol. in 10 vols 80% alcohol; pract. insol. in water; dens. 0.894-0.912 (25/25 C); ref. index 1.464-1.476 (20 C); tenacity 2 hrs. on blotter

Toxicology: LD50 (oral, rat) 5000 mg/kg, (skin, rabbit) > 10 g/kg; low toxicity by ing. and skin contact; skin irritant; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 1, Flammability 1, Reactivity 0

Storage: Keep cool, well closed; protect from light, heat

Uses: Natural flavor for pharmaceuticals; carminative; in perfumery, liniments

Regulatory: BP, EP compliance; FDA 21CFR §182.20, GRAS; 27CFR 21.65, 21.151; FEMA GRAS; Japan approved (rosemary); Europe listed, no restrictions; Australia; Canada DSL; Philippines PICCS

**Handbook of Pharmaceutical Additives, Third Edition**

2008
Chemical Component Cross-Reference

fruticosus extract.  See Blackberry (Rubus fruticosus) extract
Rubus villosus extract.  See Blackberry (Rubus villosus) extract

Rue
CAS 977051-88-9 (R. graveolens)
FEMA 2994
Definition:  Herb of Ruta montana, R. graveolens, R. bracteosa, or R. calepensis
Properties:  Yel. to amber liq., fatty odor; sol. in fixed oils, min. oil; insol. in glycerin, propylene glycol
Hazardous Decomp. Prods.:  Heated to decomp., emits acrid smoke and irritating fumes
Uses:  Natural flavor for pharmaceuticals
Regulatory:  FDA 21CFR §184.1698 (limitation 2 ppm), GRAS; FEMA GRAS
Manuf./Distrib.:  Degussa AG/Health & Nutrition

Rue ketone.  See 2-Undecanone
Rue oil.  See Rue (Ruta graveolens) oil

Rue (Ruta graveolens) oil
CAS 8014-29-7
FEMA 2995
Synonyms:  Rue oil; Ruta graveolens; Ruta graveolens herb oil; Ruta graveolens oil
Definition:  Volatile oil distilled from the herb of the rue, Ruta graveolens or other species, contg. about 90% methyl nonyl ketone, methyl anthranilate
Properties:  Pale yel. to amber liq., char. sharp fatty odor; sol. in fixed oils, min. oil. 3 vols 70% alcohol; pract. insol. in water; insol. in glycerin, propylene glycol; dens. 0.832-0.845 (15/15 C); solid. pt. 8-10 C; ref. index 1.430-1.440 (20 C)
Toxicology:  LD50 (oral, mouse) 2070 mg/kg, (skin, rabbit) > 5 g/kg; mod. toxic by ing.; skin irritant; frequent dermal contact produces erythema, vesication; ing. of large quantities causes epigastric pain, nausea, vomiting, confusion, convulsions, death; may cause abortion; TSCA listed
Hazardous Decomp. Prods.:  Heated to decomp., emits acrid smoke and irritating fumes
Storage:  Keep cool, well closed; protect from light
Uses:  Natural flavor for pharmaceuticals
Use Level:  0.78%max. in skin cosmetics exposed to sunlight
Regulatory:  FDA 21CFR §184.1699, GRAS; FEMA GRAS; Canada DSL

†=pharmaceutical grade

Run-by-the-Ground.  See Pennyroyal (Mentha pulegium) extract
Rusco extract; Ruscus aculeatus; Ruscus aculeatus extract.  See Butcherbroom (Ruscus aculeatus) extract
Ruta graveolens; Ruta graveolens herb oil; Ruta graveolens oil.  See Rue (Ruta graveolens) oil

SA.  See Salicylic acid
SAA.  See Succinic anhydride
Saccharated lime (INCI).  See Calcium saccharate
Saccharimide.  See Saccharin

Saccharin
CAS 81-07-2; EINECS/ELINCS 201-321-0 INS954
Synonyms:  Anhydro-o-sulfaminebenzoic acid; 1,2-Benzisothiazolin-3-one-1,1-dioxide; 3-Benzisothiazolinone-1,1-dioxide; o-Benzoic acid sulfinamide; o-Benzosulfinamide; 2,3-Dihydroxy-1,2-benzothiazolin-3-one-1,1-dioxide; 3-Oxo-2,3-dihydro-1,2-benzisothiazole-1,1-dioxide; Saccharimide; Saccharin acid; Saccharin acid form; Saccharin insoluble; Saccharum-o-Sulfobenzimide; o-Sulfobenzoic acid imide
Classification:  Organic compd.; o-toluene sulfonamide
Definition:  Sodium salt of orthosulfobenzimide; artificial sweetener, 300 times as sweet as natural sugar
Empirical:  C7H5NO3S
Properties:  Wh. cryst., odorless, bitter metallic aftertaste; sol. in boiling water, alcohol, benzene, amyl acetate, ethyl acetate; sl. sol. in ether, chloroform; m.w. 183.18; dens. 0.828; m.p. 226-230 C
Toxicology:  LD50 (oral, mouse) 17 g/kg; mild acute toxicity by ing.; may cause allergic reactions incl. urticaria, nausea, vomiting, diarrhea; has been linked to bladder cancer in test animals; not considered human carcinogen by recent findings; experimental teratogen, reproductive effects; mutation data reported:  TSCA listed
Hazardous Decomp. Prods.:  Heated to decomp., emits toxic NOx and SOx
HMIS:  Health 2, Flammability 1, Reactivity 0

Saccharin acid; Saccharin acid form. See Saccharin

Saccharin ammonium; Saccharinate ammonium. See Ammonium saccharin

Saccharin calcium. See Calcium saccharin

Saccharine soluble. See Saccharin sodium anhydrous

Saccharin insoluble. See Saccharin

Saccharin sodium. See Saccharin sodium anhydrous

Saccharin sodium anhydrous

CAS 128-44-9; EINECS/ELINCS 204-886-1

FEMA 2997; INS954

Synonyms: 1,2-Benzisothiazol-3(2H)-one 1,1-dioxide, sodium salt; 1,1-Dioxide-1,2-benzisothiazol-3(2H)-one sodium salt; Saccharine soluble; Saccharin sodium; Saccharin, sodium salt; Saccharin soluble; Sodium-1,2-benzisothiazolin-3-one-1,1-dioxide; Sodium benzosulfimide; Sodium o-benzosulfimide; Sodium 2,3-dihydro-1,2-benzisothiazolin-3-one-1,1-dioxide; Sodium saccharide; Sodium saccharin (INCI); Sodium saccharinate; Sodium saccharin; Soluble gluside; Soluble saccharin; o-Sulfonbenzoic acid imide sodium salt

Classification: Organic compd.

Definition: Sodium salt of saccharin; avail. commercially as the dihydrate

Empirical: C7H4NO3S • Na

Properties: Wh. cryst. or cryst. powd., odorless or faint aromatic odor, very sweet taste; very sol. in water, sl. sol. in alcohol; m.w. 205.17

Toxicology: LD50 (oral, rat) 1280 mg/kg, (IP, mouse) > 500 mg/kg; mod. toxic by ing. and IP routes; confirmed carcinogen; experimental neoplastigen, tumorigen, teratogen, reproductive effects; human mutagenic data; TSCA listed

Hazardous Decomp. Prods.: Heated to
Chemical Component Cross-Reference

Decomp., emits very toxic fumes of SO₃, Na₂O, and NO₂.

HMIS: Health 1, Flammability 0, Reactivity 0

Uses: Syn. nonnutritive sweetener in pharmaceuticals, buccals, dentals, parenterals, inhalants, orals, toothpaste

Regulatory: FDA 21CFR §145.116, 145.126, 145.131, 145.136, 145.171, 145.176, 145.181, 150.141, 150.161, 180.37, GRAS; USDA 9CFR §318.7; FEMA GRAS; Japan approved (0.1-2 g/kg residual); Canada DSL; FDA approved for buccals, dentals, parenterals, inhalants, orals, rectals, toothpaste; USP/NF, BP, EP compliance

Saccharin sodium dihydrate
CAS 6155-57-3; EINECS/ELINCS 204-886-1
FEMA 2997

Synonyms: Sodium o-benzosulfamide dihydrate; Sodium saccharin dihydrate

Classification: Organic compd.

Definition: Sodium salt of saccharin

Empirical: C₇H₄NNaO₃S • 2H₂O

Properties: Wh. cryst. powd. or gran.; odorless; intense sweet taste; sol. in water; m.w. 241.20

Toxicology: LD₅₀ (IP, mouse) 17,500 mg/kg, (IV, dog) 2500 mg/kg; tumorigen, reproductive effects; mutagenic data

Uses: Syn. nonnutritive sweetener in pharmaceuticals, buccals, dentals, parenterals, inhalants, orals, rectals, toothpaste

Regulatory: FEMA GRAS

Manuf./Distrib.: AMC Chems.†; Aceto†

Saccharin, sodium salt; Saccharin soluble.  
See Saccharin sodium anhydrous

Saccharomyces cerevisiae extract  
CAS 84604-16-0; EINECS/ELINCS 283-294-5
Synonyms: Yeast ferment extract
Uses: Ingred. in skin treatment
Manuf./Distrib.: Chemos GmbH  
http://www.chemos-group.com
Trade Names Containing: Eashave; Iricalmin

Saccharomyces lysate extract  
Definition: Extract of saccharomyces lysate
Uses: Moisturizer, anti-inflammatory, promoting wound healing in skin care prods.
Features: Live yeast cell deriv.
Trade Names: Biodynes® TRF

Saccharose. See Sucrose
Saccharose acetate isobutyrate. See Sucrose acetate isobutyrate

Saccharose distearate. See Sucrose distearate

Saccharose mono/distearate. See Sucrose polystearate

Saccharose palmitate. See Sucrose palmitate
Saccharosonic acid. See Erythorbic acid
Saccharum. See Saccharin; Sucrose
Saccharum lactis; Saccharar lactis. See Lactose

Safflower (Carthamus tinctorius) oil  
CAS 8001-23-8; EINECS/ELINCS 232-276-5
Synonyms: Carthamus tinctorious oil;  
Carthamus tinctorius; Safflower oil;  
Safflower oil (unhydrogenated); Safflower seed oil
Definition: Oily liq. obtained from seeds of Carthamus tinctorius consisting principally of triglycerides of linoleic acid
Properties: Lt. yel. oily liq.; sl. veg. odor; sol. in oil and fat solvs.; misc. with ether, chloroform; insol. in water; dens. 0.921-0.9215 (25/25 C); iodine no. 135-150; sapon. no. 188-194; ref. index 1.472-1.475
Toxicology: Human skin and eye irritant; ing. in large volumes produces vomiting; TSCA listed
Precaution: Combustible
Hazardous Decomp. Prods.: CO2 from combustion; heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 0, Flammability 1, Reactivity 0
Storage: Light-sensitive; becomes rancid on exposure to air

†=pharmaceutical grade

Uses: Emollient, vehicle, solvent for pharmaceuticals, orals, topicals, creams, lotions; medicine (laxative, diaphoretic)
Features: Oleaginous
Regulatory: FDA 21CFR §175.105, 175.300, 176.200, 176.210, GRAS; Japan approved (safflower); USP/NF, BP, EP compliance; Canada DSL

Safflower oil. See Safflower (Carthamus tinctorius) oil
Safflower oil, hybrid. See Hybrid safflower (Carthamus tinctorius) oil
Safflower oil (unhydrogenated); Safflower seed oil. See Safflower (Carthamus tinctorius) oil
Saffron. See Saffron (Crocus sativus)
Saffron (Crocus sativus)
CAS 977051-90-3
FEMA 2998; INS164
Synonyms: Crocus; Crocus sativus; Saffron
Definition: Dried stigmata of Crocus sativus, contg. glycoside picrocrocin, coloring principles crocin and crocetin
Empirical: C_44H_64O_26 (crocetin); C_20H_24O_4 (crocin)
Properties: Reddish-brn. or golden yel. odiferous powd., sl. bitter taste; Crocin: yel.-orange; sol. in hot water; sl. sol. in abs. alcohol, glycerin, propylene glycol; m.w. 1008.97; m.p. 186 C (dec.); Crocetin: brick-red rhomb.; m.w. 328.41; m.p. 285 C (dec.)
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §73.500, 101.22, 169.140, 169.150, 182.10, GRAS; USDA 9CFR §318.7; FEMA GRAS; Japan approved, restricted as color

Safrole, dihydrosafrole. See Dihydrosafrole

Sage oil, Spanish. See Sage (Salvia lavandulaefolia) oil

†=pharmaceutical grade

Sage (Salvia lavandulaefolia) oil
CAS 977125-77-1; 8016-65-7
FEMA 3003
Synonyms: Sage oil, Spanish; Salvia lavandulaefolia; Salvia lavandulaefolia oil; Spanish sage oil
Definition: Essential oil obtained from steam distillation of Salvia lavandulaefolia, contg. essential oil thujone, α-pinene, cineol, borneol, and d-camphor
Properties: Colorless to pale yel. oily liq.; sol. in alcohol, fixed oils, glycerin, min. oil, propylene glycol; insol. in water; dens. 0.909-0.932; ref. index 1.468 (20 C)
Toxicology: LD50 (oral, rat) 2600 mg/kg; mod. toxic by ing.; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
Uses: Natural flavor for pharmaceuticals
Regulatory: FDA 21CFR §182.20, GRAS; FEMA GRAS

Sage (Salvia officinalis)
CAS 977002-44-0
FEMA 3000
Synonyms: Garden sage; Red sage; Sage; Salvia; Salvia officinalis
Definition: Plant material derived from dried, crushed leaves of the sage, Salvia officinalis
Properties: Warm spicy odor, flavor
Toxicology: No known toxicity
Uses: Natural flavor for pharmaceuticals; aromatic; astringent; in gargles for throat, tonsils, for ulceration of mouth and throat
Regulatory: BP, EP compliance; FDA 21CFR §101.22, 182.10, GRAS; FEMA GRAS; Japan approved

Sage (Salvia officinalis) oil
CAS 8016-64-6; 8022-56-8; 84776-73-8
UN 2319; FEMA 3001
Chemical Component Cross-Reference

**Synonyms:** Dalmatian sage oil; Sage oil; Sage oil, Dalmatian; Sage oil, Dalmatian type; Salvia officinalis; Salvia officinalis oil; Salvia oil

**Definition:** Oil obtained from steam distillation of the herb of the sage, Salvia officinalis of the mint family; main constituents are α-thujone and camphor

**Properties:** Pale yel. liq., thujone odor and taste; sol. in alcohol, fixed oils, paraffin oil, min. oil; sl. sol. in propylene glycol; insol. in water, glycerin; dens. 0.903-0.925; flash pt. (TCC) 51.11 C; ref. index 1.457 (20 C)

**Toxicology:** LD50 (oral, rat) 2600 mg/kg; mod. toxic by ing.; human skin irritant; mutagenic data; TSCA listed

**Precaution:** Wear suitable clothing, gloves, face/eye protection

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**HMIS:** Health 2, Flammability 1, Reactivity 0

**Uses:** Natural flavor for pharmaceuticals

**Regulatory:** BP, EP compliance; FDA 21CFR §182.20, GRAS; FEMA GRAS

**Trade Names:** Custosense Sage

**Sago starch.** See Starch

**SAH.** See Salicylaldehyde

**SAIB.** See Sucrose acetate isobutyrate

**Saigon cinnamon.** See Cinnamon (Cinnamomum cassia) oil

**Saigon cinnamon leaf oil.** See Cinnamon (Cinnamomum zeylanicum) leaf oil

**Sal chalybis.** See Ferrous sulfate anhydrous

**Sal ethyl.** See Ethyl salicylate

**Salicylaldehyde.** See Salicylaldehyde

**Salicylaldehyde**

CAS 90-02-8; EINECS/ELINCS 201-961-0

**FEMA 3004**

**Synonyms:** 2-Formylphenol; o-Formylphenol; 2-Hydroxybenzaldehyde; o-Hydroxybenzaldehyde; SAH; Salicylal; Salicylic aldehyde

**Empirical:** C7H6O2

**Formula:** C6H4OHCHO

**Properties:** Colorless to straw-colored oily liq., bitter almond-like odor, burning taste; sol. in alcohol, ether, oxygenated and aromatic solvs.; sl. sol. in water; m.w. 122.12; dens. 1.166 (20/4 C); m.p. 1-5 C; b.p. 79-80 C (11 mm); flash pt. 77 C; ref. index 1.573 (20 C)

**Toxicology:** LD50 (oral, rat) 520 mg/kg, (IP, mouse) 231 mg/kg, (subcut., rat) 900 mg/kg, (skin, rabbit) 3000 mg/kg; mod. toxic by ing., skin contact, subcut. routes; skin irritant; readily absorbed through skin; experimental teratogen, reproductive effector; target organs: nerves, liver, kidneys; TSCA listed

**Precaution:** Flamm. exposed to heat or flame; can react with oxidizers

**Hazardous Decomp. Prods.:** Heated to decomp., emits acrid smoke and irritating fumes

**Uses:** Synthetic flavor for pharmaceuticals

**Regulatory:** FDA 21CFR §172.515; FEMA GRAS; Canada DSL

**Salicylaldehyde methyl ether.** See o-Methoxybenzaldehyde

**Salicylamide**

CAS 65-45-2; EINECS/ELINCS 200-609-3
**Chemical Component Cross-Reference**

**Synonyms:** Benzamide, 2-hydroxy-2-Hydroxybenzamide; o-Hydroxybenzamide  
**Classification:** Aromatic amide  
**Empirical:** C7H7NO2  
**Formula:** C6H4(OH)CONH2  
**Properties:** Wh. or lt. pink cryst. powd.; somewhat bitter taste; sol. in hot water, alcohol, ether, chloroform, oxygenated and chlorinated solvs.; sl. sol. in cold water, naphtha, CCl4; m.w. 137.14; m.p. 139-142 C; b.p. 270 C (dec.)  
**Toxicology:** LD50 (oral, rat) 980 mg/kg, (IP, rat) 600 mg/kg, (IV, mouse) 313 mg/kg; toxic; poison by ing., IV, IP routes; primary irritant; sensitiz.; can cause dizziness, drowsiness, nausea, vomiting, allergic reactions, blood dyscrasias; eye irritant; experimental teratogen, reproductive effector; TSCA listed  
**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of NOx  
**HMIS:** Health 1, Flammability 0, Reactivity 0  
**Uses:** Medicine (analgescic, antipyretic, anti-inflammatory agent)  
**Regulatory:** Canada DSL  
**Manuf./Distrib.:** Aceto†; http://www.aceto.com  
**Advanced Synthesis Tech.**

**Salicylic acid**  
**CAS:** 69-72-7; EINECS/ELINCS 200-712-3  
**FEMA:** 3985  
**Synonyms:** 2-Hydroxybenzoic acid; o-Hydroxybenzoic acid; Orthohydroxybenzoic acid; SA  
**Classification:** Aromatic acid  
**Empirical:** C7H6O3  
**Formula:** HOOC6H4COOH  
**Properties:** Wh. cryst. or cryst. powd., sweetish to acrid taste; discolored by light; sol. in alcohol, ether, oxygenated and chlorinated solvs.; sl. sol. in water, benzene, chloroform;

Chemical Component Cross-Reference

Sandalwood oil; Sandalwood, white, oil; Sandalwood, yellow, oil; Santal oil; α-Santalol; Santalum album; White sandalwood oil; Yellow sandalwood oil

Definition: Volatile oil obtained from heartwood of Santalum album

Empirical: C_{15}H_{24}O

Properties: Colorless to pale yel. visc. liq., char. sandalwood odor and taste; very sol. in fixed oils, propylene glycol; sol. in 5 vols 70% alcohol; very sl. sol. in water; insol. in water, glycerin; m.w. 220.39; dens. 0.965-0.980; b.p. 166-167°C (14 mm); flash pt > 212°F; ref. index 1.500-1.510 (20°C)

Toxicology: LD_50 (oral, rat) 5580 mg/kg, (skin, rabbit) > 5 g/kg; low toxicity by ing. and skin contact; primary skin irritant; sensitizer; TSCA listed

Precaution: Combustible liq.

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

HMIS: Health 1, Flammability 1, Reactivity 0

Storage: Keep cool, well closed; protect from light

Uses: Natural flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.510; FEMA GRAS; Canada DSL

Trade Names: Custosense Sandalwood

Sandalwood, white, oil; Sandalwood, yellow, "†=pharmaceutical grade oil; Santal oil. See Sandalwood (Santalum album) oil

Santalol

CAS 11031-45-1; 115-71-9 (α); 77-42-9 (β); EINECS/ELINCS 234-262-4; 204-102-8 (α); 201-027-2 (β)

FEMA 3006

Synonyms: Argeol; 5-(2,3-Dimethyltricyclo[2.2.1.0^{2,6}] hept-3-yl)-2-methylpent-2-en-1-ol; α-Santalol; β-Santalol; d-α-Santalol

Classification: Sesquiterpene alcohol

Empirical: C_{15}H_{24}O

Properties: Colorless liq., sweet sandalwood odor; sol. in 3 parts 70% alcohol; insol. in water; m.w. 220.34; dens. 0.971-0.973; b.p. 300°C; ref. index 1.504-1.508

Toxicology: α: LD_50 (oral, rat) 3800 mg/kg, (skin, rabbit) > 5 g/kg; primary irritant; TSCA listed

Precaution: Combustible

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

α-Santalol. See Santalol; Sandalwood (Santalum album) oil

β-Santalol; d-α-Santalol. See Santalol

α-Santalol, acetate; β-Santalol, acetate. See Santalyl acetate

Santalum album; Santalum album oil. See Sandalwood (Santalum album) oil

Santalyl acetate

CAS 1323-00-8; EINECS/ELINCS 215-349-6

FEMA 3007

Synonyms: 5-(2,3-Dimethyltricyclo[2.2.1.0^{2,6}] hept-3-yl)-2-methylpent-2-en-1-ol acetate; α-Santalol, acetate; β-Santalol, acetate

Definition: Mixt. of α- and β-isomers from acetylation of santalol

Properties: Colorless to yelsh. liq., sandalwood-like odor; sol. in most common org. solvs. incl. alcohol; insol. in water; m.w. 262.40; b.p. 20.8°C (3 mm); dens. 0.982-0.985; flash pt. 212°F; ref. index 1.4894-1.4901

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Degussa AG/Health & Nutrition; Penta Mfg.
Santalyl phenylacetate
CAS 1323-75-7; EINECS/ELINCS 215-358-5
FEMA 3008

Synonyms: Phenyl acetic acid santalyl ester; α-Santalyl phenyl acetate; β-Santalyl phenyl acetate; Santalyl α-toluate

Empirical: C_{23}H_{30}O_2

Properties: Colorless liq., sandalwood-like odor; sl. sol. in alcohol; m.w. 338.49; acid no. 1 max.

Uses: Synthetic flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

Manuf./Distrib.: Degussa AG/Health & Nutrition

α-Santalyl phenyl acetate; β-Santalyl phenyl acetate; Santalyl α-toluate. See Santalyl phenylacetate

Sarcosine
CAS 107-97-1; EINECS/ELINCS 203-538-6

Synonyms: Methylaminocetic acid; N-Methylglycine; Methyl glycocoll

Empirical: C_{3}H_{7}NO_2

Formula: CH_{3}NHCH_{2}COOH

Properties: Wh. cryst. solid; sweet taste; sol. in water; m.w. 89.09; m.p. 208°C (dec.)

Toxicology: No known toxicity; mutagen; TSCA listed

Precaution: Combustible

Storage: Hygroscopic, deliq.

Uses: Synthesis of foaming anti-enzyme comps. for pharmaceuticals, toothpaste

Regulatory: Canada DSL

Trade Names Containing: Sepicontrol A5

Sarsaparilla

Synonyms: Sarsaparilla root

Definition: Dried root of Smilax spp.

Uses: Vehicle, flavor in medicaments, herbal and homeopathic preps.

Features: Usually as decoction or extract

Regulatory: JP compliance (S. glabra)

Manuf./Distrib.: Frutarom http://www.frutarom.com

Sassafras (Sassafras officinale) extract
CAS 84787-72-4; EINECS/ELINCS 284-113-2

FEMA 3010

Synonyms: Sassafras albidum; Sassafras officinale; Sassafras officinale extract

Definition: Extract of bark and roots of Sassafras officinale or S. albidum

Properties: Spicy aromatic odor, flavor

Uses: Natural flavor for pharmaceuticals

Regulatory: FDA 21CFR §172.580, must be aq. extract, saffrole-free; FEMA GRAS; Japan approved (sassafras)

SD alcohol 3-A
CAS 97702-59-2
Classification: Specially denatured alcohol
Definition: Ethyl alcohol (100 gal) denatured with methyl alcohol (5 gal)
Toxicology: Methanol may modify and increase toxic symptoms caused by ing. and exposure to fumes
Uses: Solvent in pharmaceutical tablet coatings; astringent; diluent
Regulatory: FDA 21CFR §73.1, 27CFR §20.11, 21.35
Manuf./Distrib.: Eastman
http://www.eastman.com

SD alcohol 12-A
Classification: Specially denatured alcohol
Definition: Ethyl alcohol (100 gal) denatured with benzene (5 gal) or toluene (5 gal)
Uses: Solvent for mfg. of pharmaceuticals
Regulatory: FDA 27CFR §20.11, 21.74
Manuf./Distrib.: Eastman
http://www.eastman.com

SD alcohol 23-H
Classification: Specially denatured alcohol
Definition: Ethyl alcohol (100 gal) denatured with acetone USP (8 gal) and MIBK (1.5 gal)
Uses: Solvent for mfg. of pharmaceuticals
Regulatory: FDA 27CFR §20.11, 21.49
Trade Names: SDA-23H

SD alcohol 29-8
Classification: Specially denatured alcohol
Definition: Ethyl alcohol denatured with ethyl acrylate
Uses: Solvent for mfg. of pharmaceuticals
Trade Names: SDA-29-8

SD alcohol 35-A
Classification: Specially denatured alcohol
Definition: Ethyl alcohol (100 gal) denatured with ethyl acetate 100% ester content (4.25 gal) or

arro
teq

†=pharmaceutical grade

Uses: Solvent for mfg. of pharmaceuticals
Regulatory: FDA 27CFR §21.82

SD alcohol 40
Classification: Specially denatured alcohol
Definition: Ethyl alcohol (100 gal) denatured with t-butyl alcohol (1/8 gal) and 1.5 oz of either brucine alkaloid, brucine sulfate NF, quassin, or combination thereof
Uses: Solvent, astringent, diluent, thickener, solidifier, liquefier in pharmaceuticals
Regulatory: FDA 27CFR §20.11, 21.76
Manuf./Distrib.: Eastman
http://www.eastman.com

\[\text{tartrate tetrahydrate; Potassium sodium} \]
\[\text{tartrate}\]
Selacholeic acid.  See Nervonic acid
Selenium monosulfide.  See Selenium sulfide

Selenium sulfide
CAS 7446-34-6
UN 2811
Synonyms: Selenium monosulfide; Selsun sulfide; Sulfur selenide
Empirical: SSe
Formula: SeS
Properties: Orange-yel. tablets or powd.; faint odor; sol. in CS\(_2\); sol. < 1 mg/ml in water, DMSO, 95% ethanol, methanol, acetone, toluene; pract. insol. in most other org. solvs.; m.w. 111.02: dens. 3.056 g/ml (0 C); m.p. 111.03 C; b.p. dec. @ 118-119 C
Toxicology: ACGIH TLV/TWA 0.2 mg(Se)/m\(^3\); LD50 (oral, rat) 38 mg/kg; poison by ing.; toxic by inh.; danger of cumulative effects; may cause vomiting, anorexia, anemia, fatty degeneration of liver, garlic odor of breath, metallic taste, weakness, tremors, sweating, irritability, sensitization, eye irritation/keratitis/conjunctivitis/injuries, skin burns, dermatitis, nose/throat irritation, etc.; repeated use may cause loss of hair; may damage liver, nervous system; experimental carcinogen
Precaution: Probably combustible; ignition takes place when ground with silver oxide
Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of SO\(_x\) and selenium
Storage: Store under ambient temps.
Uses: Antifungal and antiseborrhoeic used with detergent as a dandruff shampoo and for treatment of seborrhoeic blepharitis; veterinary medicine (topical treatment for eczema and dermatomycoses)
Regulatory: BP, EP compliance; Canada DSL
Manuf./Distrib.: Spectrum Quality Prods.† http://www.spectrumchemical.com; Voigt Global Distrib.† http://www.vgdllc.com

Senna (Cassia obovata) extract
CAS 85085-71-8; EINECS/ELINCS 285-393-9
Synonyms: Cassia obovata; Cassia obovata extract; Senna leaf extract
Definition: Extract of leaves of Cassia obovata
Uses: Natural flavor for pharmaceuticals; cathartic, laxative; stimulant in laxative prods.

Sesamol

CAS 533-31-3; EINECS/ELINCS 208-561-5

Synonyms: 1,3-Benzodioxol-5-ol; 5-Hydroxy-1,3-benzodioxole; 3,4-

Methylenedioxyphenol; Methylene ether of oxyquinone; Phenol, 3,4-(methylenedioxy); 1,2,4-Trihydroxybenzene-1,2-methylene ether

Definition: Natural component of sesame seed oil

Empirical: C7H6O3

Properties: Colorless to brn. cryst. solid; may be sol. in water, ethanol, MEK; m.p. 63-65 C

Toxicology: LD50 (IP, mouse) 470 mg/kg; may be harmful by inh., ing., or skin absorp.; irritating to eyes, skin, mucous membranes, upper respiratory tract; prolonged contact can cause eye damage, severe irritation or burns; was found to reduce activity in the hexobarbital sleeping time assay; TSCA listed

Precaution: Incompat. with strong oxidizing agents

Hazardous Decomp. Prods.: Toxic fumes of CO, CO2; emits toxic fumes under fire conditions

Storage: Store in cool, dry place; keep tightly closed

Uses: Solvent and vehicle for fat-sol. substances in pharmaceuticals, liniments, ointments

Trade Names: Lipovol SES; Super Refined® Sesame NF

Sesamum indicum; Sesamum indicum oil

See Sesame (Sesamum indicum) oil

Seychelles cinnamon leaf oil. See Cinnamon (Cinnamomum zeylanicum) leaf oil

Shark liver oil
CAS 68990-63-6; EINECS/ELINCS 273-616-2
Definition: Oil expressed from fresh livers of sharks and other Elasmobranchii species
Properties: Yel. to red-brown liq., strong odor; sol. in ether, chloroform, benzene, carbon disulfide, oxygenated and chlorinated solvs.; dens. 0.917-0.928; iodine no. 125-155; sapon. no. 170-187; ref. index 1.4784 (20 C)
Uses: Emollient, topical protectant, for skin care and hemorrhoidal preps.; nutrient; vitamin A source
Regulatory: FDA 21CFR §175.105, 176.210, 177.2800
Trade Names: Fancol™ Karite Butter; Kelisema Shea Butter; Lipex 102; Lipex 205; Shea Butter
Trade Names Containing: SheAloe™

Shea butter (Butyrospermum parkii) extract
CAS 68424-59-9
Synonyms: Butyrospermum parkii; Shea butter extract
Definition: Extract of shea butter, Butyrospermum parkii
Uses: Emollient, spreading agent for ointments, suppositories
Regulatory: Canada DSL
Manuf./Distrib.: Aarhus Karlshamn A/S† http://www.aak.com/
Trade Names: Fancol™ Karite Extract
Trade Names Containing: Fancol™ VB; Stimu-Tex® AS

Shea butter (Butyrospermum parkii) unsaponifiables
Synonyms: Butyrospermum parkii; Butyrospermum parkii unsaponifiables; Shea butter unsaponifiables; Unsaponifiable shea butter
Classification: Fatty acids
Definition: Fraction of shea butter which is not saponified during processing
Uses: Emollient
Trade Names: Shea Unsaponifiable

Shea butter. See Shea butter (Butyrospermum parkii) extract
Shea butter fruit. See Shea butter (Butyrospermum parkii) extract

CAS 68424-60-2; 977026-99-5; EINECS/ELINCS 293-515-7
Synonyms: Butyrospermum parkii; Butyrospermum parkii butter; Butyrospermum parkii fruit; Galam butter; Karite butter; Shea butter; Shea butter fruit
Definition: Natural fat obtained from fruit of the Karite tree, Butyrospermum parkii
Properties: Gray-wh. solid; dens. 0.9175; iodine no. 53-65; sapon. no. 178-190
Uses: Emollient, consistency agent, lubricant, moisturizer, vehicle, carrier, visc. modifier, skin protectant, fatting agent for pharmaceutical dermatologicals,
Shea butter unsaponifiables. See Shea butter (Butyrospermum parkii) unsaponifiables

Shellac
CAS 9000-59-3; EINECS/ELINCS 232-549-9
INS904; E904
Synonyms: Bleached shellac; Button lac; Garnet lac; Gum lac; Lac; Lacca; Lac resin; Shellac gum; Shellac orange S-40; Stick lac; White shellac
Classification: Fatty acid
Definition: Purified and bleached lac, the resinous secretion of the insect Laccifer (Tachardia) lacca
Properties: Off-wh. to brn. amorphous gran. solid, very little odor; slowly sol. in alcohol; sl. sol. in acetone, ether, benzene, petrol. ether; insol. in water; dens. ≈ 1.15 kg/l; m.p. 115-120 C; acid no. 73-89 (reg.), 75-91 (refined)
Toxicology: Nonallergenic; may cause contact dermatitis
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating fumes
HMIS: Health 1, Flammability 2, Reactivity 0
Uses: Enteric coating agent, stabilizer for pharmaceuticals, slow-release tablets, in solid oral dosage forms, microencapsulation preps., dental impression comps.
Features: Improves tablet stability
Regulatory: FDA 21CFR §73.1, 175.105, 175.300, 175.380, 175.390, 182.99; 27CFR §21.126, 212.61, 212.90; 40CFR §180.1001; Japan approved; Europe listed; UK approved; FDA approved for orals; USP/NF, BP, EP compliance; Canada DSL; JP compliance (purified shellac and white shellac)

Chemical Component Cross-Reference

Diphenyl dichlorosilane

Silanediol salicylate

Uses: Anti-inflammatory, moisturizer, tissue regenerator, anti-free radical agent for health prods.

Trade Names: D.S.B. C

Trade Names Containing: Capillisil®

Silane, oxybis (trimethyl)-. See Hexamethyldisiloxane

Silane, phenyltrichloro-; Silane, trichlorophenyl-. See Phenyltrichlorosilane

Silane, trimethyl (octadeoxylo)-. See Stearoxytrimethylsilane

Silica

EINECS/ELINCS 231-545-4
INS551; E551

Synonyms: Silicic anhydride; Silicium dioxide; Silicon dioxide

Classification: Inorganic oxide

Definition: Occurs in nature as agate, amethyst, chalcedony, cristobalite, flint, quartz, sand, tridymite, diatomite. The designation silica (silicon dioxide) incl. cryst., amorphous forms which are hydrated or hydroxylated

Empirical: O₂Si

Formula: SiO₂

Properties: Transparent crystals or amorphous very fine powd.; prac. insol. in water, alcohol, and acids except hydrofluoric; m.w. 60.09; dens. 2.2 (amorphous), 2.65 (quartz, 0 C); vapor pressure 10 mm Hg (1732 C); m.p. 1710 C; b.p. 2230 C; lowest coeff. of heat expansion; melts to a glass; pH 3.5-4.4

Toxicology: LD₅₀ (oral, rat) 3160 mg/kg; poison by IP, IV, intratracheal routes; mod. toxic by ing.; prolonged inh. of dust can cause silicosis; suspected human carcinogen; TSCA listed

Precaution: Reacts violently with CIF₃, MNF₃, OF₂

HMIS: Health 1, Flammability 0, Reactivity 0

Storage: Hygroscopic

Uses: Thickener, glidant, carrier, suspending agent, anticaaking agent, desiccant in pharmaceuticals, orals, rectals, vaginals; tablet binder/disintegrant, oil adsorbent, stabilizer; carrier in water-sol. drugs

Regulatory: FDA 21CFR §73.1, 172.230, 172.480 (limitation 2%), 173.340, 175.105, 175.300, 176.170, 176.200, 176.210, 177.1200, 177.1460, 177.2420, 177.2600, 178.3297, 182.90, 182.1711, GRAS; USDA 9CFR §318.7; Japan approved (2% max. as anticaking), other restrictions; Europe listed; UK approved; FDA approved for orals, rectals, vaginals; USP/NF, BP, EP compliance

**Silica, amorphous**

CAS: 112926-00-8; EINECS/ELINCS: 231-545-4

**Synonyms:**

- Amorphous silica gel;
- Polyethyleneimine-silica; Precipitated silica;
- Silica, amorphous precipitated; Silica,
- amorphous, precipitated and gel; Silica gel
dessicant

**Classification:**

Mineral

**Properties:**

- Sp.gr. 2-2.3; oil absorp. 28; GE
- brightness 90-94; ref. index 1.45; hardness
- (Mohs) 5-6

**Toxicology:**

- ACGIH TLV/TWA 10 mg/m³ (total
dust); hazardous dust; avoid inh.

**Storage:**

Hygroscopic

**Uses:**

Carrier, moisture control agent,
- anticaking agent in pharmaceuticals

**Regulatory:**

Canada DSL

**Silica, amorphous hydrated**

CAS: 7631-86-9; EINECS/ELINCS: 231-545-4

**Synonyms:**

- Amorphous silica; Hydrated amorphous silica; Silica, amorphous; Silica
dioxide

**Empirical:** O₂Si

**Properties:**

Transparent cryt. or amorphous powd.; tasteless; sol. in HF; sl. sol. in water;
- m.w. 60.09; dens. 2.2; m.p. 1716-1736 C; b.p.
- 2230 C; ref. index 1.46; melts to glass at
- ordinary temps.; chem. resist. to most reagents

**Toxicology:**

- ACGIH TLV/TWA 10 mg/m³ (total
dust), when toxic impurities absent;
- nuisance particulate; transient dermatitis
- which causes skin dehydration and loss of
- skin oils

**HMIS:**

Health 2, Flammability 0, Reactivity 0

**Uses:**

Visc. control agent

**Regulatory:**

Canada DSL

Silica, amorphous precipitated; Silica, amorphous, precipitated and gel. See Silica, amorphous; Silica acid (polynorhto). See Silica, hydrated

Silica, colloidal

EINECS/ELINCS 231-545-4

Synonyms: Colloidal silica; Colloidal silicon dioxide; Silica sol; Silicon dioxide colloidal

Definition: A stable dispersion of discrete, colloid-size particles of amorphous silica in aq. sol’n.

Uses: Excipient, glidant, anticaking agent, suspending agent, visc. builder in pharmaceuticals

Regulatory: USP/NF, BP, EP compliance

Trade Names Containing: Kollidon® SR

See also Silica; Silica, amorphous

Silica, crystalline quartz. See Quartz

Silica dimethyl silylate

CAS 60842-32-2; 68611-44-9; EINECS/ELINCS 271-893-4

Synonyms: Silane, dichlorodimethyl-, reaction prods. with silica

Definition: Silica deriv. in which the surface of the fumed silica has been modified by the addition of dimethyl silyl groups

Uses: Adsorbent, suspending agent in pharmaceuticals

Trade Names: Aerosil® R974

Silica dioxide. See Silica, amorphous hydrated

Silica flour. See Quartz

Silica, fumed

CAS 112945-52-5; EINECS/ELINCS 231-545-4

Synonyms: Amorphous silica dust; CI 77711; Colloidal silica; Colloidal silicon dioxide; Fossil flour; Fumed silica; Fumed silicon dioxide; Pigment white 27; Silica, amorphous; Silica, amorphous fumed; Silica, pyrogenic; Silicic anhydride; Silicon dioxide

Definition: High surface area aggregate particles of silica, with min. 89.5% SiO2 content

Empirical: O2Si

Formula: SiO2

Properties: Wh. to gray fine dusty powd.; odorless; sol. in hydrofluoric acid; insol. in water; m.w. 60.09; sp.gr. 2.1; dens. ≈ 2 lb/ft3 (unpacked); BET surf. area 200-300 m2/g; m.p. 1600 C; ref. index 1.46; hydrophilic

Toxicology: ACGIH TLV 10 mg/m3; nuisance dust; LD50 (oral, rat) 3160 mg/kg, (IV, rat) 15 mg/kg; LDLo (IP, rat) 50 mg/kg; poison by IP, IV, and intratracheal routes; mod. toxic by ing.; hazard by inh.; silica fume may cause drying of skin after prolonged exposure; contact lenses should not be worn for handling material; much less toxic than crystalline forms; does not cause silicosis; questionable carcinogen; mutagenic data; tumorigen

Precaution: Incompat. with strong oxidizers, fluorine, oxygen difluoride, chlorine trifluoride

Storage: Hygroscopic

Uses: Thickener, thixotrope, reinforcing agent, excipient, flow aid, anticaking agent, stabilizer, adsorbent, glidant, suspending agent, antisetttling agent for pharmaceuticals (toothpaste, tablets, powds., aerosols, suspensions, ointments,

Silica, hydrated

| CAS | 1343-98-2; EINECS/ELINCS 215-683-2 |
| Synonyms: | Hydrated silica (INCI); Hydrosilicic acid; Polyorthosilicic acid; Polysilicic acid; Precipitated silica; Silica acid; Silic acid (polortho); Silica hydrate; Silica, precipitated; Silic acid; Silicious acid hydrated; Silicon hydroxide |
| Classification: | Inorganic oxide |
| Definition: | Occurs in nature as opal; jelly-like precipitate obtained when sodium silicate sol'n. is acidified |
| Empirical: | ≈ H2O3Si |
| Formula: | SiO2 • xH2O, x varies with method of precipitation and extent of drying |
| Properties: | Wh. amorphous powd. or lumps; sol. in hot fixed alkaline hydroxide sol'n.; insol. in water or acids except hydrofluoric; m.w. 60.08 + water |
| Toxicology: | TLV/TWA 10 mg/m3 (total dust); eye irritant; poison by IV route; TSCA listed |
| Uses: | Adsorbent, carrier, filler, rheology control agent, flow aid, thickener in pharmaceuticals, skin protectants; abrasive, thickener in dentifrices |
Silica, hydrophobic
CAS 68611-44-9; EINECS/ELINCS 271-893-4
Synonyms: Silane, dichlorodimethyl-, reaction products with silica
Formula: (SiO2)n(CH3)x
Properties: Inert
Environmental: Environmentally friendly
Uses: Excipient, glidant, visc. adjuster in pharmaceuticals, vitamins, and nutraceuticals
Regulatory: USP/NF, EP compliance
Trade Names: Sideron® 8; Sideron® 9; Sideron® 10; Sipernat® 22LS; Sipernat® 22S

Silicic acid, magnesium salt (1:2). See Magnesium trisilicate
Silicic anhydride; Silicium dioxide. See Silica
Siloxane; Siloxanes

Classification: Organosilicon compd.; thermosetting siloxane polymer

Definition: Family of syn. polymers contg. a repeating silicon-oxygen backbone with organo side groups attached via carbon-silicon bonds; classified as fluids, resins, and elastomers

Formula: [—OSiR₂—]ₙ, R not equal to H

Properties: Liq., semisolid, or solid; cis 1 to >1,000,000 cs; water repellent; sol. in most organic solvents

Toxicology: Silicone-related diseases can occur, e.g., siloxane-induced synovitis and lymphadenopathy, acute and chronic pneumonitis from 'bleeding' from ruptured bag-gel breast implants, pulmonary lesions, granulomatous reactions

Precaution: Unhalogenated types combustible

Uses: Biomaterial for medicine (implants, prosthetic devices); defoamer

Features: Thermal and oxidative stability; chemically inert; good dielec. str.; low surf. tens.

Regulatory: FDA 21 CFR §175.300

**Siloxanes and silicones, dimethyl, reaction prods. with silica**: CAS 67762-90-7

**Synonyms**: Dimethyl silicones and siloxanes, reaction prods. with silica; Methylated silica

**Uses**: Rheology control agent, reinforcing agent, free-flow agent

**Regulatory**: Canada DSL

**Trade Names Containing**: Sag 471

**Siloxanes and silicones, α-D-mannopyranuronoyl-oxy methyl, hydroxy-terminated**: See Methylsilanol mannuronate

**Silver**: CAS 7440-22-4; EINECS/ELINCS 231-131-3

**UN 3089; INS 174; E174**

**Synonyms**: Argentum; Cl 77820; Shell silver; Silver atom; Silver, colloidal

**Classification**: Metallic element

**Empirical**: Ag

**Properties**: Soft ductile malleable lustrous wh. metal; sol. in fused alkali hydroxides in presence of air, in fused alkali peroxides; insol. in water; not attacked by water or atmospheric oxygen; inert to most acids; at wt. 107.868; dens. 10.50 (15 C); m.p. 961.93 C; b.p. 2212 C; exc. conductor of heat and electricity

**Toxicology**: ACGIH TLV/TWA 0.1 mg/m³ (metal), 0.01 mg/m³ (sol. compds. as Ag); STEL (15 min) 0.3 mg/m³; TCLo (inh., human) 1 mg/m³; nontoxic but prolonged absorption of compds. can cause grayish discoloration of skin (argyria); human systemic effects (skin effects) on inh.; overexposure may cause nasal septum, skin irritation, ulceration, GI upset; questionable carcinogen; experimental tumorigen; TSCA listed

**Precaution**: DOT: Flamm. solid; flamm. in dust form when exposed to flame or by chem. reaction with C₂H₂, NH₃, bromoazide, CIF₃, ethylene imine, H₂O₂, oxalic acid, H₂SO₄, tartaric acid; incomp. with acetylene, carboxylic acids, etc.

**Uses**: Antibacterial in pharmaceuticals; ingred. in dental alloys; surgical cements; colloidal silver as nucleating agent in medicine

**Regulatory**: FDA 21CFR §73.2500; Canada DSL

**Silver atom; Silver, colloidal**: See Silver

**Silver matt powder**: See Tin

**Silver nitrate**: CAS 7761-88-8; EINECS/ELINCS 231-853-9

**UN 1493 (DOT)**

**Synonyms**: Nitric acid silver (1+) salt; Silver (1+) nitrate; Silver (I) nitrate (1:1)

**Empirical**: AgNO₃

**Properties**: Colorless or wh. cryst.; becomes gray or grayish blk. on exposure to light in presence of org. matter; very sol. in water, ammonia; sol. in boiling alcohol; sparingly sol. in alcohol; sl. sol. in ether; m.w.169.88; dens. 4.352 (19 C); m.p. 212 C; b.p. 444 C (dec.); pH 5.5 (sol'n.)

**Toxicology**: ACGIH TLV/TWA 0.01 mg(Ag)/m³; LD₅₀ (IP, mouse) 23,783 µg/kg; LDLo (oral,
Chemical Component Cross-Reference

rabbit) 800 mg/kg, (IV, rabbit) 8800 µg/kg; poison by ing., IV, subcut., IP routes; human poison; ing. can cause severe or fatal gastroenteritis; irritating to eyes (severe), skin, and respiratory tract; chronic exposure causes argyria; questionable carcinogen; experimental tumorigen, reproductive effector; human mutagenic data; TSCA listed

Precaution: Strong oxidizer that reacts dangerously with many acids and phosphorus derivs.; incompat. with alkalis, Al, antimony salts, arsenic, bromides, C, carbonates, chlorides, copper, ethanol, ferrous salts, oils, phosphates, sulfur, etc.

Hazardous Decomp. Prods.: Heated to decomp., emits toxic Ag and fumes of NOx

HMIS: Health 3, Flammability 1, Reactivity 3

Storage: Store @ R.T.

Uses: Antiseptic; in ophthalmic sol’ns.

Regulatory: FDA 21CFR §176.300; BP, EP compliance; Canada DSL

†=pharmaceutical grade

Silver (1+) nitrate; Silver (I) nitrate (1:1). See Silver nitrate

Silybum marianum; Silybum marianum extract. See Lady’s thistle (Silybum marianum) extract

Simaldrate. See Magnesium aluminometasilicate

Simethicone

CAS 8050-81-5

Synonyms: α-(Trimethylsilyl)-ω-methylpoly[oxy(dimethylsilylene)], mixt. with silicon dioxide

Definition: Mixture of dimethicone with an avg. chain length of 200-350 dimethylsiloxane units and hydrated silica gel

Formula: (CH₃)₃SiO[Si(CH₂)₂O]ₙSi(CH₃)₃, n = 200-350

Properties: Hazy translucent visc. fluid; sol. in chloroform, ether; insol. in water and alcohol; dens. 0.965-0.970; ref. index ≈ 1.404; nonionic

Toxicology: LD₅₀ (IV, dog) 900 mg/kg

HMIS: Health 0, Flammability 1, Reactivity 0

Uses: Antifoam, water repellent for pharmaceuticals, fermentation; coating agent in orals, rectals, topicals, emulsions, oral suspensions, capsules; ointment base; anti-flatulence oral dosages

Regulatory: Europe listed; UK approved; FDA approved for orals, rectals, topicals; USP/NF compliance

Chemical Component Cross-Reference

- Beta-sitosterol (INCI)

- Sine adipe lac. See Nonfat dry milk

- β-Sitosterol

- CAS 83-46-5; EINECS/ELINCS 201-480-6

- Synonyms: Beta-sitosterol (INCI); (3β)-Stigmaster-5-en-3-ol

- Classification: Sterol

- Empirical: C29H50O

- Properties: Wh. to tan powd.; characteristic odor; m.w. 414.69; m.p. 138.5 C

- Toxicology: LD50 (oral, mouse) >25000 mg/kg; skin and eye irritant; nontoxic

- Precaution: Keep away from heat and ignition sources; do not breathe dust or ingest; avoid strong oxidizing agents; wear splash goggles, dust respirator, lab coat, and protective gloves

- HMIS: Health 2, Flammability 1, Reactivity 0

- Storage: Store in a tightly closed container in a cool, well-ventilated area @≤ 24 C

- Uses: Ingred. for treatment of diaper rash

- Regulatory: Canada DSL

†=pharmaceutical grade

Skatol. See Skatole

Skatole

- CAS 83-34-1; EINECS/ELINCS 201-471-7

- FEMA 3019

- Synonyms: 3-Methyldindole; 3-Methyl-1H-indole; β-Methyldindole; 3-MI; Skatole; Skatol

- Classification: 5-Membered fused aromatic heterocyclic

- Empirical: C9H9N

- Properties: Wh. scales or powd.; browns on aging; fecal odor; sol. in water, alcohol, chloroform, ether, benzene; sol. 1 g/10 ml methanol; m.w. 131.18; m.p. 95-97 C; b.p. 265-266 C; flash pt. 132 C

- Toxicology: LD50 (oral, rat) 175 mg/kg; poison by ing., IV, and IP routes; mod. toxic by subcut. route; TSCA listed

- Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of NOx

- Storage: Protect from light; keep tightly closed

- Uses: Synthetic flavor for pharmaceuticals

- Regulatory: FDA 21CFR §172.515; FEMA GRAS; Canada DSL

- Slaked lime. See Calcium hydroxide

- Sloe berries. See Blackthorn berries (Prunus spinososa)

- SLS. See Sodium lauryl sulfate

- Smallage oil. See Lovage (Levisticum officinale) oil

Smectite

- CAS 53320-86-8; EINECS/ELINCS 258-476-2

- Synonyms: Hydrous sodium lithium magnesium silicate; Lithium magnesium sodium silicate (INCI); Magnesium lithium sodium silicate; Silicic acid, lithium, magnesium, sodium salt; Sodium lithium
magnesium silicate

Definition: Synthetic silicate clay consisting mainly of lithium, magnesium, and sodium silicates

Properties: Wh. powd.
Uses: Thickener, thixotrope

Regulatory: Canada DSL
Manuf./Distrib.: Southern Clay Prods. 
http://www.scprod.com

Trade Names: Laponite® D; Optigel® CG

Smellage oil. See Lovage (Levisticum officinale) oil

SMFP. See Sodium fluorophosphate

Soda chlorate. See Sodium chlorate

Soda lime
CAS 8006-28-8; EINECS/ELINCS 287-539-7
UN 1907 (DOT)

Synonyms: Calcaria absorbens; Cal sodada; Calx sodica

Definition: Mixt. of calcium hydroxide and sodium and/or potassium hydroxide

Properties: Wh. or grayish wh. gran.; partly sol. in water; almost completely sol. in 1M acetic acid; rapidly deteriorates on exposure to air

Toxicology: Toxic by ing., inh.; corrosive irritant to skin, eyes, mucous membranes

Precaution: Incompat. with trichloroethylene which is decomposed by warm alkali to produce a toxic end prod.; absorbs CO₂ from air

Storage: Air- and moisture-sensitive; must be stored in airtight containers

Uses: Sorbent for carbon dioxide for pharmaceuticals, in closed-circuit anesthetic apparatus, determining basal metabolic rate

Regulatory: USP/NF, BP compliance
Manuf./Distrib.: Aldrich† http://www.sigma-aldrich.com; Fluka http://www.sigma-aldrich.com; Sigma http://www.sigma-aldrich.com/belgium

Soda lye. See Sodium hydroxide

†= pharmaceutical grade

Soda mint. See Sodium bicarbonate

Soda niter; Soda nitre. See Sodium nitrate

Sodium acetate (INCI). See Sodium acetate anhydrous

Sodium acetate anhydrous
CAS 127-09-3; 977127-84-6; EINECS/ELINCS 204-823-8
FEMA 3024; INS262(i); E262

Synonyms: Acetic acid sodium salt anhydrous; Sodium acetate (INCI)

Classification: Saturated aliphatic carboxylic acid salt

Empirical: C₂H₃NaO₂

Formula: CH₃COONa

Properties: Colorless to wh. cryst., gran. powd., or flakes, odorless or faint acetous odor, sl. bitter saline taste; sol. in water, alcohol; m.w. 82.04; sp.gr. 1.53; m.p. 324 C; pH 7.5-9.2 (3%)

Toxicology: LD₅₀ (oral, rat) 3530 mg/kg, (subcut., mouse) 8000 mg/kg, (IV, mouse) 335 mg/kg, (skin, rabbit) > 10 g/kg; poison by IV route; mod. toxic by ing.; skin and eye irritant; migrates to food from pkg. material; TSCA listed

Precaution: Combustible dust; may form explosive dust-air mixts.; violent reactions with F₂, KNO₃, diketene

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Na₂O

HMIS: Health 1, Flammability 0, Reactivity 0

Storage: Hygroscopic; store @ R.T.

Uses: Buffer, alkalizer in pharmaceuticals, parenterals, ophthalmics, orals, topicals, eyewashes; diuretic to reduce body water; in kidney dialysis

Regulatory: FDA 21CFR §150.141, 150.161, 173.310, 182.70, 184.1721, GRAS; FEMA GRAS; Japan approved; Europe listed; UK approved; FDA approved for parenterals, ophthalmics, orals, topicals; USP/NF, BP, EP compliance; Canada DSL

Sodium acetate trihydrate

CAS 6131-90-4; EINECS/ELINCS 204-823-8

†=pharmaceutical grade

Synonyms: Acetic acid sodium salt trihydrate
Classification: Aliphatic organic compd.
Empirical: C₂H₃NaO₂ • 3H₂O
Formula: CH₃COONa • 3H₂O
Properties: Wh. cryst. or gran. solid; sol. in water forming sl. alkaline sol'n.; sol. in alcohol; m.w. 136.08; pH 7.5-9.2 (3%); loses water of cryst. above 120 C
Toxicology: Irritant; mutagen; TSCA listed
HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Store @ R.T.
Uses: Flavor, adjuvant, pH control agent in pharmaceuticals, orals, parenterals
Regulatory: BP, EP compliance; FDA 21CFR §184.1721, GRAS; FDA approved for parenterals, orals, injectables

Chemical Component Cross-Reference

Empirical: \( \text{C}_7\text{H}_{13}\text{NO}_4\text{S} \cdot \text{Na} \)

Properties: M.w. 230.23

Uses: Protective colloid

Regulatory: Canada DSL

Trade Names: AMPS® 2403 Monomer

Sodium alginate: See Algin

Sodium alkylbenzene sulfonate, branched. See Sodium dodecylbenzenesulfonate

Sodium alkyl sulfate
CAS 8036-54-2

Properties: HLB 40.0; anionic

Uses: Pharmaceutical dentals, topicals

Regulatory: FDA approved for dentals, topicals

Sodium aluminosilicate. See Sodium silicoaluminate

Sodium aluminum chlorohydroxy lactate
CAS 8038-93-5; 97660-24-7; EINECS/ELINCS 307-534-6

Synonyms: Aluminum, chlorohydroxy lactate sodium complexes

Definition: Sodium salt of a complex of lactic acid and aluminum chlorohydrate

Uses: Deodorant

Regulatory: Canada DSL

Sodium aluminosilicate. See Sodium silicoaluminate

Sodium aminobenzoate
CAS 555-06-6

Synonyms: Aminobenzoate sodium; 4-Aminobenzoic acid, monosodium salt; p-Aminobenzoic acid sodium salt; PAB; Sodium 4-aminobenzoate; Sodium p-aminobenzoate

Empirical: \( \text{C}_7\text{H}_6\text{NNaO}_2 \)

Properties: Wh. to yel. cryst. or cryst. powd., odorless; sol. in water with gradual air oxidation; very sl. sol. in alcohol; insol. in chloroform, ether; m.w. 198.11; dec. 218 C; pH 7-8 (10%); relatively stable in air

Toxicology: Human mutagenic data; TSCA listed

Precaution: Combustible

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of \( \text{Na}_2\text{O} \)

HMIS: Health 1, Flammability 1, Reactivity 0

Storage: Light-sensitive; darkens on exposure to light

Uses: Nutrient, dietary supplement, antioxidant, preservative in pharmaceuticals, parenterals

Regulatory: FDA 21 CFR §155.200, 182.3731, GRAS; USDA 9 CFR §318.7; Japan approved; Europe listed; UK approved; FDA approved for parenterals; USP/NF, BP, EP compliance; Canada DSL

Sodium benzoate

CAS 532-32-1; EINECS/ELINCS 208-534-8
FEMA 3025; INS211; E211

Synonyms: Benzoate of soda; Benzoate sodium; Benzoic acid sodium salt; Sodium benzoic acid

Classification: Aromatic carboxylic acid salt

Definition: Sodium salt of benzoic acid

Empirical: C7H5NaO2

Formula: C6H5COONa

Properties: Wh. gran. or cryst. powd., odorless, sweetish astringent taste; very sol. in water; sparingly sol. in alcohol; m.w. 144.11; m.p. > 300 C; pH ≈ 8; stable in air

Toxicology: LD50 (oral, rat) 4.07 g/kg, (IV, rat) 1714 µg/kg, (intramuscular, mouse) 2306 mg/kg; poison by subcut., IV routes; mod. toxic by ing., IP, intramuscular routes; may cause human intolerance reaction, asthma, rashes, hyperactivity, nausea, vomiting; experimental teratogen, reproductive effects; mutagenic data; TSCA listed

Precaution: Combustible when exposed to heat or flame; incompat. with acids, ferric salts

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Na2O

HMIS: Health 1, Flammability 0, Reactivity 0

Storage: Hygroscopic

Uses: Antimicrobial, preservative, antifungal in pharmaceuticals, orals, parenterals, dentifrices, injectables, topicals, dentals; clinical reagent (bilirubin assay); lubricant for pharmaceutical tablets; antiseptic; medicine (treatment for rheumatoid arthritis, cystitis, acute tonsillitis); liver function test reagent

Features: Rec. esp. in sl. acidic media

Use Level: 0.1% (parenterals), 0.08% (dentifrices), 4.75-5% (injectables), 0.02-0.5% (orals); 0.5% max. (as benzoic acid in finished cosmetics)

Regulatory: FDA 21CFR §146.152, 146.154, 150.141, 150.161, 166.40, 166.110, 181.22, 181.23, 184.1733; GRAS; USDA 9CFR §318.7; BATF 27CFR §240.1051; EPA reg.; Canada DSL; FEMA GRAS; Japan approved with limitations; Europe listed 0.5% as acid; FDA approved for dentals, orals, rectals, topicals; USP/NF, BP, EP compliance

Manufacturers/Distributors: AAA Int'l.†

Trade Names: Optigel® CMO

Sodium L-ascorbate. See Sodium ascorbate

Sodium benzonite

Uses: Suspending agent, gellant, binder for pharmaceuticals

Manufacturers/Distributors: Am. Colloid†

Trade Names: Optigel® CMO

Sodium-1,2-benzisothiazolin-3-one-1,1-

Chemical Component Cross-Reference

Trade Names: Sodium Benzoate, Powder FCC Food Grade/E211/EP Grade
Trade Names Containing: DSS Granular; Nipacomin A; Vitamin B12 0.1% SD

Sodium benzoic acid. See Sodium benzoate
Sodium o-benzosulfamide dihydrate. See Saccharin sodium dihydrate
Sodium benzosulfimide; Sodium o-benzosulfimide. See Saccharin sodium anhydrous
Sodium diborate decahydrate. See Sodium borate decahydrate
Sodium bicarbonate
CAS 144-55-8; EINECS/ELINCS 205-633-8
INS500(ii); E500

Synonyms: Baking soda; Bicarbonate of soda; Carbonic acid monosodium salt; Monosodium carbonate; Soda mint; Sodium acid carbonate; Sodium hydrogen carbonate

Classification: Inorganic salt
Empirical: CHNaO₃
Formula: NaHCO₃
Properties: Wh. powd. or cryst. lumps, sl. alkaline taste; sol. in water; sl. sol. in ethanol; m.w. 84.01; dens. 2.159; stable in dry air, slowly dec. in moist air; pH 8.3 (0.1M sol'n.)

Toxicology: LD₅₀ (oral, rat) 4220 mg/kg; low toxicity by ing.; irritant; harmless to the skin; leaves an alkaline residue that may cause irritation; nuisance dust; human systemic effects (potassium/sodium level changes, inc. urine volume, metabolic acidosis; nausea, vomiting, respiratory changes); excessive ing. of sodium may be detrimental to certain persons; experimental teratogen; mutagen; TSCA listed

HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Moisture-sensitive; store in cool, dry place; keep containers sealed

Uses: Alkalizer, pH adjuster in pharmaceuticals, effervescent tablets, injectables, parenterals, ophthalmics, orals; antibiotic mgf.; antacid; abrasive in dentifrices; mouthwash; OTC drug active

Regulatory: FDA 21CFR §73.85, 137.180, 137.270, 155.191, 163.110, 163.111, 163.112, 173.385, 178.1010, 182.1736, 184.1736,

UN 1821 (solid) (DOT); UN 2837 (sol’n.) (DOT);

INS514(ii); E514
Synonyms: Acid sodium sulfate; Nitre cake;
Sodium acid sulfate; Sodium acid sulfate
solid; Sodium bisulfate, fused; Sodium
bisulfate solid; Sodium hydrogen sulfate;
Sodium pyrosulfate; Sulfuric acid
monosodium salt

Empirical: HNaO₄S
Formula: NaHSO₄

Properties: Colorless cryst. or wh. fused lumps;
odorless; sol. in water; dec. by ethanol; m.w.
120.07; dens. 2.435 (13 C); m.p. > 315 C
dec.

Toxicology: Corrosive irritant to respiratory
system, mucous membranes, skin, and
eyes; causes burns; mutagenic data; TSCA
listed

Precaution: Corrosive; reacts with moisture to
form sulfuric acid; incompat. with calcium
hypochlorite

Hazardous Decomp. Prods.: Heated to
decom., emits toxic fumes of SO₃ and
Na₂O

Storage: Hygroscopic; keep well closed

Uses: Pharmaceuticals (inhalants, ophthalmics,
orals)

Regulatory: FDA 21CFR §175.105, 182.3739,
GRAS (not for use in meats, vitamin B₁
sources, raw fruits and vegetables); FDA
approved for inhalants, ophthalmics, orals;
Canada DSL

### Sodium bisulfate, fused; Sodium bisulfate solid

**See Sodium bisulfate**

### Sodium bisulfite

**CAS** 7631-90-5; **EINECS/ELINCS** 231-548-0

**UN 2693 (sol’n.) (DOT); UN 2949; INS222; E222**

**Synonyms:** Acid sodium sulfite; Hydrogen sulfite sodium; Sodium acid sulfite; Sodium bisulfite (1:1); Sodium bisulfite, solid; Sodium bisulfite, solution; Sodium hydrogen sulfite; Sodium sulfhydrate; Sulfurous acid monosodium salt

**Classification:** Inorganic salt

**Empirical:** HO₃S • Na

**Formula:** NaHSO₃

**Properties:** Wh. cryst. powd., SO₂ odor, disagreeable taste; very sol. in hot or cold water; sl. sol. in alcohol; m.w. 104.06; dens. 1.48; m.p. 315 C

**Toxicology:** ACGIH TLV/TWA 5 mg/m³; LD₅₀ (oral, rat) 2000 mg/kg, (IP, rat) 475 mg/kg, (IV, rat) 115 mg/kg; poison by IV and IP routes; mod. toxic by ing.; corrosive irritant to skin, eyes, mucous membranes; allergen; mutagenic data; TSCA listed

**Precaution:** Corrosive

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of SO₃ and Na₂O

**HMIS:** Health 1, Flammability 0, Reactivity 0

**Uses:** Pharmaceutical aid; antioxidant, stabilizer in pharmaceuticals, parenterals, inhalants, ophthalmics, orals, topicals; antiseptic; used primarily in sympathomimetic and aminoglycoside medications

**Use Level:** 0.3-0.75%

(sympathomimetic/aminoglycoside medications)

**Regulatory:** FDA 21 CFR §161.173, 173.310, 177.1200, 182.3739, GRAS; Europe listed; FDA approved for parenterals, inhalants, ophthalmics, orals, topicals; SARA reportable; Canada DSL

### Sodium borate

**CAS** 1330-43-4 (anhyd.); 1332-28-1; **EINECS/ELINCS** 215-540-4

**E285**

**Synonyms:** Borates, tetra, sodium salt, anhydrous; Borax, fused; Sodium borate anhydrous; Sodium pyroborate anhydrous; Sodium tetraborate anhydrous

**Classification:** Borate/sodium salt

**Empirical:** B₄Na₂O₇
Formula: Na$_2$B$_4$O$_7$

Properties: Colorless to wh. cryst. or powd., odorless; mod. sol. in water, glycerol; insol. in alcohol; m.w. 201.22; dens. 1.730; m.p. 741 C; b.p. 1575 C (dec.)

Toxicology: ACGIH TLV/TWA 1 mg/m$^3$; TDLo (oral, male, 30 days) 16,750 µg/kg; harmful solid; inh. hazard; irritant; experimental reproductive effects; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Na$_2$O, boron

Storage: Hygroscopic; keep tightly closed

Uses: Alkalizer, preservative, emulsifier in pharmaceuticals, ophthalmics, foot preps., scalp lotions

Regulatory: FDA 21CFR §175.105, 175.210, 176.180, 177.2800, 181.22, 181.30; FDA approved for ophthalmics; USP/NF, BP, EP compliance; Canada DSL

Sodium borate anhydrous. See Sodium borate
Chemical Component Cross-Reference

Handbook of Pharmaceutical Additives, Third Edition

2043
Sodium C12-18 alcohols sulfate. See Sodium C12-18 alkyl sulfate

Sodium C12-15 alkyl sulfate
Synonyms: Sodium C12-15 alcohols sulfate
Definition: Sodium salt of the sulfate of C12-15 alcohols
Properties: Anionic
Uses: Surfactant, emulsifier in pharmaceuticals, creams, lotions, ointments

Sodium C12-18 alkyl sulfate
Synonyms: Sodium C12-18 alcohols sulfate
Definition: Sodium salt of the sulfate of a mixture of synthetic fatty alcohols with 12-18 carbons in alkyl chain
Properties: Anionic
Uses: Surfactant, emulsifier for pharmaceuticals, creams, lotions, ointments, liniments

Trade Names Containing: Galenol® 1618 KS

Sodium caprylate
CAS 1984-06-1; EINECS/ELINCS 217-850-5
INS470; E470a
Synonyms: Caprylic acid sodium salt; Octanoic acid sodium salt; Sodium octanoate; Sodium n-octanoate
Classification: Nonaromatic acid salt
Empirical: C8H15NaO2
Formula: CH3(CH2)6COONa
Properties: Clear; sol. in water; m.w. 166.20; m.p. ≈ 245 C
Toxicology: Mutagen; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits acrid smoke and irritating vapors
Uses: Excipient in pharmaceutical ointments
Regulatory: FDA 21CFR§172.863; BP, EP compliance; Canada DSL
Napp Tech.† http://www.napptech.com; Parchem Trading† http://www.parchem.com; Penta Mfg.† http://www.pentamfg.com; RTD Hallstar†

†=pharmaceutical grade

Sodium caprylate sulfate. See Sodium octyl sulfate

Sodium carbomer
Synonyms: Carbomer, sodium salt
Classification: Sodium polyacrylic acid polymer
Definition: Sodium salt of carbomer
Uses: Visc. control agent
Trade Names: Pionier® NP 37 G

Sodium carbonate
CAS 497-19-8 (anhyd.); 5968-11-6 (monohydrate); 6132-02-1 (decahydrate); EINECS/ELINCS 207-838-8
INS500(i); E500
Synonyms: Bisodium carbonate; Calcined soda; Carbonic acid disodium salt; Crystol carbonate; Disodium carbonate; Natron; Sal soda; Soda ash; Soda calcined; Sodium carbonate (2:1); Washing soda
Classification: Inorganic salt
Empirical: CO3 • 2Na
Formula: Na2CO3
Properties: Colorless to wh. cryst. or cryst. powd., odorless, alkaline taste; sol. in water, glycerol; insol. in alcohol; m.w. 105.99 (anhyd.), 124.00 (monohydrate); dens. 2.509 (0 C); m.p. 109 C (loses water 851 C); b.p. dec., does not form vapor; pH 11.5 (1% aq.)
Toxicology: LD50 (oral, rat) 4090 mg/kg, (IP, mouse) 117 mg/kg, (subcut., mouse) 2210 mg/kg; LC50 (inh., rat, 2 h) 2300 mg/m3; poison by IP route; mod. toxic by inh. and subcut. routes; mildly toxic by ing.; skin and eye irritant; experimental reproductive effects; migrates to food from pkg. materials; TSCA listed
Precaution: Violent reactions with Al, P2O5, H2SO4, F2, Li, 2,4,6-trinitrotoluene
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Na2O
HMIS: Health 1, Flammability 0, Reactivity 0
Storage: Hygroscopic
Uses: Alkalizer, antacid, reagent in pharmaceuticals, injectables, parenterals,
Chemical Component Cross-Reference

ophthalmics, orals, rectals, mouthwashes, foot preps., vaginal douches

Regulatory: FDA 21CFR §73.85, 163.110, 163.111, 163.112, 172.824, 173.310, 184.1742, GRAS; USDA 9CFR §318.7, 381.147; Canada DSL; Japan approved; Europe listed; FDA approved for injectables, parenterals, ophthalmics, orals, rectals; USP/NF, BP, EP, JP compliance; BP, EP compliance (decahydrate)

Sodium carbonate (2:1). See Sodium carbonate

Sodium 2-(1-carboxyethoxy)-1-methyl-2-oxoethyl octadecanoate. See Sodium stearyl lactylate

Sodium carboxymethylcellulose. See Carboxymethylcellulose sodium

Sodium carboxymethyl hydroxyethyl cellulose. See Carboxymethyl hydroxyethyl cellulose

Sodium carboxymethyl tallow polypropylamine

Synonyms:
- Tallowamphopolycarboxyglycinate

Classification: Organic compd.

Formula: R[NCH2CH2CH2CH2COONa]nNCH2COONaC2H2COONa, R rep. tallow alkyl groups, n = 1-4

Properties: Amphoteric

Uses: Anti-irritant

Trade Names: Ampholak® 7TX; Ampholak® 7TX/C

Sodium carrageenan

CAS 9061-82-9; 60616-95-7

INS407

Synonyms: Carrageenan, sodium salt; Sodium carrageenate; Sodium carragenate

Definition: Sodium salt of carrageenan; mixt. of highly sulfated polygalactosides extracted from seaweed

Toxicology: LD50 (oral, rat) 5650 mg/kg, (oral, mouse) 8730 mg/kg; mildly toxic by ing.; TSCA listed

Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of SOx and Na2O

Uses: Emulsifier, stabilizer, thicker in pharmaceuticals, orals

Sodium carrageenate; Sodium carragenate.
See Sodium carrageenan

Sodium caseinate
CAS 9004-36-3; 9005-46-3
Synonyms: Casein-sodium; Casein-sodium complex; Casein sodium salt; Caseins, sodium complexes
Definition: Sodium salt of casein
Properties: Wh. coarse powd., odorless, tasteless; insol. in water, alcohol
Toxicology: TLDo (subcut., mouse, 15 days intermittent) 45 g/kg; questionable carcinogen; experimental tumorigen; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Na2O
Uses: Bacteriological media ingred.
Regulatory: FDA 21CFR §135.110, 135.140, 166.110, 182.1748, GRAS; USDA 9CFR §318.7, 381.147; BATF 27CFR §240.1051, GRAS; Japan approved
Trade Names: Sodium Caseinate Spray F&P

Sodium cellulose glycolate. See Carboxymethylcellulose sodium

Sodium cetyl sulfate
CAS 59186-41-3
Synonyms: Sodium cetearyl sulfate; Sodium cetyl/stearyl sulfate
Definition: Sodium salt of a mixture of cetyl and stearyl sulfate
Empirical: C18H38O4S • C16H34O4S • 2Na
Formula: CH3(CH2)nCH2OSO3Na, n = 14 and 16
Properties: M.w. 719.16; anionic
Toxicology: LD50 (oral, rat) 1200 mg/kg, (IP, mouse) 596 mg/kg; mod. toxic by ing. and IP routes; human poison by unspecified routes; human systemic effects by ing.: blood hemolysis, pulmonary changes; damages red blood corpuscles (humans); skin, eye, and mucous membrane irritant; mutagenic data; TSCA listed
Precaution: DOT: Oxidizer; dangerous fire risk; contact with organic materials may cause fire; corrosive; may react explosively with agric. materials, ammonium salts, grease, leather, powd. metals, nonmetals, etc.; violent reactions or ignition possible
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of Cl– and Na2O
Uses: Astringent; pharmaceutical injectables
Regulatory: FDA 21CFR §175.105, 178.3120; FDA approved for injectables; Canada DSL

**Sodium chlorate, aqueous sol'n. See Sodium chlorate**

**Sodium chloride**

CAS 7647-14-5; EINECS/ELINCS 231-598-3

**Synonyms:** Brine; Common salt; Halite; Rock salt; Saline; Salt; Sea salt; Sodium chloride, natural; Sodium chloride, refined; Table salt; White crystal

**Classification:** Inorganic salt

**Definition:** Occurs in nature as the mineral halite

**Empirical:** ClNa

**Formula:** NaCl

**Properties:** Colorless transparent cryst. or wh. cryst. powd., saline taste; sol. 1 g/2.8 ml water; sol. in glycerin; very sl. sol. in alcohol; m.w. 58.45; dens. 2.17; m.p. 804 °C; f.p. -20.5 °C (23% aq.); pH 6.7-7.3

**Toxicology:** LD50 (oral, rat) 3.75 g/kg, (IP, rat) 6614 mg/kg, (IV, mouse) 645 mg/kg; poison by IP and intracervical routes; mod. toxic by ing., IV, subcut. routes; human systemic effects (blood pressure increase); skin/eye irritant; ing. of lg. amts. can irritate stomach; terminates human pregnancy by intraplacental route; experimental teratogen; human mutagenic data; TSCA listed

**Precaution:** Explosive reaction possible with dichloromaleic anhydride + urea; reaction with burning lithium forms dangerously reactive Na; molten salt reacts explosively with water @ 1100 °C; violent reaction with BrF3

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of Cl– and Na2O

HMIS: Health 1, Flammability 0, Reactivity 0

**Storage:** Hygroscopic; store @ R.T.

**Uses:** Preservative, flavor, tonicity agent in pharmaceuticals, injectables, dentals, parenterals, inhalants, ophthalmics, orals, rectals, topicals; nutrient; topical anti-inflammatory; emetic

CAS 68919-41-5; 93820-52-1; 94114-06-4;
EINECS/ELINCS 296-632-7; 302-643-5

Synonyms: Cocoamphopropionate; Coconut fatty acid amidoethyl-N-2-hydroxyethylaminopropionate; Imidazolium compds., 1-(2-carboxyethyl)-4,5-dihydro-3-(hydroxyethyl)-2-norcoco alkyl, hydroxides, monosodium salts

Classification: Amphoteric organic compd.

Formula: RCO–

Properties: Amphoteric

Uses: Surfactant

Features: Suitable for electrolyte sensitive formulations

Trade Names: Mackam™ CSF-CG

Sodium cocoate

CAS 61789-31-9; EINECS/ELINCS 263-050-4

Synonyms: Coconut fatty acid, sodium salt; Coconut oil fatty acids, sodium salt; Fatty acids, coconut oil, sodium salts; Fatty acids, coco, sodium salts; Sodium cocoate; Sodium coconut oil soap

Definition: Sodium salt of coconut acid

Properties: Anionic

Toxicology: May cause allergic skin rash; TSCA listed
### Sodium cocoyl methyl taurate

**See Sodium methyl cocoyl taurate**

### Sodium cocomonomoglyceride sulfonate

**Synonyms:** Fatty acids, coco, 2-hydroxy-3-sulfopropyl esters, sodium salts; Sodium coconut monoglyceride sulfonate

**Definition:** A synthetic compound derived from fatty acids obtained from coconut oil

**Formula:** \( \text{RCO-OCH}_2\text{CHOHCH}_2\text{SO}_3\text{Na} \), \( \text{RCO-} \) rep. fatty acids from coconut oil

**Uses:** Pharmaceuticals (dentals)

**Regulatory:** FDA approved for dentals

**Sodium coconate. See Sodium cocoate**

**Sodium coconut monoglyceride sulfonate. See Sodium cocomonomoglyceride sulfonate**

**Sodium coconut oil soap. See Sodium cocoate**

### Sodium cocoyl glutamate

**CAS 68187-32-6; EINECS/ELINCS 269-087-2**

**Synonyms:** L-Glutamic acid, N-coco acyl derivs., monosodium salts; Monosodium N-cocoyl-L-glutamate; Sodium N-cocoyl-L-glutamate

**Definition:** Sodium salt of the coconut acid amide of glutamic acid

**Formula:** \( \text{HOOCCH}_2\text{CH}_2\text{CHNHCROCOONa} \), \( \text{RCO-} \) rep. fatty acids from coconut oil

**Properties:** Anionic

**Toxicology:** TSCA listed

**Uses:** Surfactant

**Trade Names:** Amisoft CS-22

**Sodium N-cocoyl-L-glutamate. See Sodium cocoyl glutamate**

### Sodium cocoyl isethionate

**CAS 61789-32-0; 58969-27-0; EINECS/ELINCS 263-052-5**

**Synonyms:** Cocoyl sodium isethionate; Fatty acids, coconut oil, sulfoethyl esters, sodium salts; Fatty acids, coco, 2-sulfoethyl esters, sodium salts

**Definition:** Sodium salt of the coconut fatty acid ester of isethionic acid

**Formula:** \( \text{CH}_3(\text{CH}_2)_n\text{CH}_2\text{COOC}_2\text{H}_4\text{SO}_3\text{Na} \)

**Properties:** Wh. to off-wh. powd. or flake; ≈ 344; sol. in water; pH 4.5 - 6 (10% sol'n.); anionic

**Toxicology:** LD50 (oral, rat) 5,000mg/kg; TSCA listed

**Uses:** Surfactant, dispersant, foaming agent, conditioner for pharmaceuticals, topicals, dentifrices

**Regulatory:** Approved for topicals; Canada DSL

**Manuf./Distrib.:** Chemos GmbH

**Trade Names Containing:** BIO-TERGE® AS-40; BIO-TERGE® AS-90 Beads

### Sodium copper chlorophyllin

**See Chlorophyllin-copper complex**

### Sodium C12-15 pareth-15 sulfonate

**CAS 121546-77-8**

**Definition:** Sodium sulfonate of an ethoxylated synthetic fatty alcohol

**Formula:** \( \text{R(OCH}_2\text{CH}_2)_n\text{SO}_3\text{Na} \), \( \text{R rep.} \) C12-15 fatty alcohols, avg. \( n = 15 \)

**Properties:** Anionic

**Uses:** Surfactant

**Trade Names:** Avanel® S 150 CG; Avanel® S 150 CG N

### Sodium cumenesulfonate

**CAS 32073-22-6; EINECS/ELINCS 250-913-5; 248-938-7**
Chemical Component Cross-Reference

†=pharmaceutical grade

Sodium dehydroacetate
CAS 4418-26-2; EINECS/ELINCS 224-580-1
INS266
Synonyms: Dehydroacetic acid sodium salt; DHA-Na; 4-Hexenoic acid, 2-acetyl-5-hydroxy-3-oxo-\(\Delta^1\)-lactone, sodium deriv.; 3-(1-Hydroxyethylidene)-6-methyl-2H-pyran-2,4(3H)-dione sodium salt; 2H-Pyran-2,4(3H)-dione, 3-acetyl-6-methyl-, monosodium salt; Sodium dehydroacetic acid; Sodium dehydroxyacetate; Sodium 1-(3,4-dihydro-6-methyl-2,4-dioxo-2H-pyran-3-ylidene) ethanolate
Classification: Heterocyclic compd.
Empirical: \(\text{C}_8\text{H}_7\text{O}_4\cdot\text{Na}\)
Formula: \(\text{C}_8\text{H}_7\text{NO}_3\text{Na}\)
Properties: Wh. powd., odorless, sl. char. taste; sol. in water, propylene glycol, glycerin; insol. in most org. solvs.; heat stable to 120°C; m.w. 190.14; m.p. 109-111°C
Toxicology: LD50 (oral, rat) 15.25 g/kg, (IP, rat) 1350 mg/kg, (IV, rat) 3500 mg/kg; mod. toxic by IV and IP routes; mildly toxic by ing.; suspect carcinogen; experimental reproductive effecter, neoplastigen, tumorigen, teratogen; human mutagenic data; TSCA listed
Hazardous Decomp. Prods.: Heated to decomp., emits very toxic fumes of Na2O, SOx, and NOx
Uses: Nonnutritive sweetener in pharmaceuticals
Regulatory: FDA 21CFR §100.130, 189.135; prohibited in foods; BP, EP compliance; Canada DSL
Manuf./Distrib.: AB R Lundberg

Sodium dehydroacetic acid; Sodium dehydroxyacetate. See Sodium dehydroacetate
Sodium deoxycholate; Sodium deoxycholic acid. See Sodium deoxycholate

Sodium deoxycholate
CAS 302-95-4; EINECS/ELINCS 206-132-7
Synonyms: Deoxycholy acid sodium; Deoxycholic acid sodium salt; 7-Deoxycholic acid sodium salt; (3-α,5-β,12-α)-3,12-Dihydroxy-cholan-24-oic acid monosodium salt; 3-α,12-α-Dihydroxy-5-β-cholan-24-oic acid sodium salt; Sodium deoxycholate; Sodium deoxyacetate

Empirical: C24H39NaO4
Properties: Sol. > 333 g/l in water (15 C); m.w. 414.56
Toxicology: LD50 (oral, rat) 1370 mg/kg, (IP, rat) 123 mg/kg, (subcut., rat) 2430 mg/kg, (IV, rat) 150 mg/kg; poisons by IP and IV routes; mod. toxic by ing. and subcut. routes; experimental reproductive effector; mutagenic data; TSCA listed

Hazardous Decomp. Prods.: Heated to decom., emits toxic fumes of Na2O
Storage: Hygroscopic; store @ R.T.
Uses: Pharmaceuticals (parenterals)
Regulatory: FDA approved for parenterals; Canada DSL

Sodium di (2-ethylhexyl) sulfosuccinate. See Dioctyl sodium sulfosuccinate.
Sodium 2,3-dihydro-1,2-benzisothiazolin-3-one-1,1-dioxide. See Saccharin sodium
Sodium dihydrogen citrate. See Sodium citrate
Sodium dihydrogen phosphate; Sodium dihydrogen phosphate (1:2:1). See Sodium phosphate
Sodium 1-(3,4-dihydro-6-methyl-2,4-dioxo-2H-pyran-3-ylidene) ethanolate. See Sodium dehydroacetate
Sodium dimethylbenzenesulfonate. See Sodium xylenesulfonate
Sodium 1,2-dimyristoyl-sn-glycero (3) phosphatidylcholine
CAS 116870-30-5
Synonyms: 1,2-Dimyristoyl-sn-glycero(3)phosphoglycerol sodium salt
Uses: Emulsifier, solubilizer for dermatology, mfg. of liposomes and mixed micelles for pharmaceuticals
Manuf./Distrib.: Akaal Organics
http://www.akaalorganics.com/

Sodium dioctyl sulfosuccinate. See Dioctyl sodium sulfosuccinate
Sodium dioleth-8 phosphate
Definition: Sodium salt of a complex mixture of phosphate diesters of oleth-8
Properties: Anionic
Uses: Emulsifier in pharmaceuticals; solubilizer for perfumes
Trade Names: DOP-8N

Sodium dioxide. See Sodium peroxide
Sodium 1,2-dipalmitoyl-sn-glycero (3) phosphatidylcholine
CAS 116870-31-6
Synonyms: L-α-1,2-Dipalmitoyl-sn-phosphatidylglycerol sodium salt
Uses: Emulsifier, solubilizer for dermatology, mfg. of liposomes and mixed micelles for pharmaceuticals
Manuf./Distrib.: Akaal Organics
http://www.akaalorganics.com/

Sodium diphosphate. See Tetrasodium pyrophosphate
Sodium 1,2-distearoyl-sn-glycero (3) phosphatidylcholine
Synonyms: 1,2-Distearoyl-sn-glycero(3)phosphoglycerol sodium salt
Chemical Component Cross-Reference

**Classification:** Phosphoglycerol

**Uses:** Emulsifier, solubilizer for dermatology, mfg. of liposomes and mixed micelles for pharmaceuticals

**Sodium dithionate; Sodium dithionite. See Sodium hydrosulfite**

**Sodium-N-dodecanoyl-N-methylglycinate. See Sodium lauroyl sarcosinate**

**Sodium dodecybenzenesulfonate**

CAS 25155-30-0; 68081-81-2; 68608-89-9; 85117-50-6; EINECS/ELINCS 246-680-4

**Synonyms:** Benzenesulfonic acid, dodecyl-, sodium salt; Dodecylbenzene sodium sulfate; Dodecylbenzenesulfonate, sodium salt; Dodecylbenzenesulfonic acid sodium salt; NaDBS; SDBS; Sodium alkylbenzene sulfonate, branched; Sodium laurel benzene sulfonate

**Classification:** Substituted aromatic compd.

**Empirical:** C_{18}H_{29}O_{3}S • Na

**Properties:** Wh. to lt. yel. flakes, granules, or powd.; m.w. 348.52; anionic

**Toxicology:** LD_{50} (oral, rat) 438 mg/kg, (oral, mouse) 1330 mg/kg, (IV, mouse) 105 mg/kg; poison by IV route; mod. toxic by ing.; skin and eye irritant; ing. can cause vomiting; TSCA listed

**Precaution:** Combustible

**Hazardous Decomp. Prods.:** Heated to decomp., emits toxic fumes of Na_{2}O

**Uses:** Surfactant in pharmaceuticals, topicals

**Regulatory:** FDA 21CFR §172.210, 173.315, 175.105, 175.300, 176.210, 177.1010, 177.1200, 177.1630, 177.2600, 177.2800, 178.1010, 178.3120, 178.3130, 178.3400; USDA 9CFR §318.7, 381.147; FDA approved for topicals; Canada DSL

†=pharmaceutical grade

**Sodium 2-(dodecylxyloxy)-2-oxoethane-1-sulfonate. See Sodium lauryl sulfoacetate**

**Sodium dodecyl sulfate; Sodium n-dodecyl sulfate. See Sodium lauryl sulfate**

**Sodium DTPA. See Pentasodium pentetate**

**Sodium etasulfate. See Sodium 2-ethylhexyl sulfate**

**Sodium 4-ethoxycarbonylphenoxonide. See Sodium ethylparaben**

**Sodium ethylenediaminetetraacetate. See Tetrasodium EDTA**

**Sodium (2-ethylhexyl) alcohol sulfate. See Sodium 2-ethylhexyl sulfate**

**Sodium 2-ethylhexyl sulfate**

CAS 126-92-1; EINECS/ELINCS 204-812-8

**Synonyms:** 2-Ethyl-1-hexanol, hydrogen sulfate, sodium salt; 2-Ethyl-1-hexanol sulfate sodium salt; 2-Ethylhexyl sodium sulfate; Mono (2-ethylhexyl) sulfate sodium salt; Sodium etasulfate; Sodium (2-ethylhexyl) alcohol sulfate; Sulfuric acid, mono (2-ethylhexyl) ester sodium salt

**Definition:** Sodium salt of 2-ethylhexyl sulfate

**Empirical:** C_{8}H_{17}O_{4}S • Na

**Properties:** M.w. 232.28; anionic

**Toxicology:** LD_{50} (oral, rat) 4 g/kg, (oral, mouse) 1550 mg/kg; poison by IP route; mod. toxic by ing., skin contact; skin and eye irritant; TSCA listed

**Hazardous Decomp. Prods.:** Heated to decomp., emits very toxic fumes of SO_{x} and Na_{2}O

**Uses:** Detergent, wetting agent, emulsifier, penetrant, stablizer for pharmaceuticals

**Features:** Low-foaming

**Regulatory:** FDA 21CFR §173.315, 175.105, 176.170; Canada DSL

Chemical Component Cross-Reference

ethyl p-hydroxybenzoate. See Sodium ethylparaben
Sodium ethylmercuric thiosalicylate; Sodium-o-(ethylmercurithio) benzoate; Sodium ethylmercurithiosalicylate; Sodium ethylmercury thiosalicylate. See Thimerosal

Sodium ethylparaben
CAS 35285-68-8; EINECS/ELINCS 252-487-6
INS 215; E215
Synonyms: Ethylparaben, sodium salt; 4-Hydroxybenzoic acid, ethyl ester, sodium salt; Sodium 4-ethoxycarbonylphenoxide; Sodium ethyl 4-hydroxybenzoate; Sodium ethyl p-hydroxybenzoate
Definition: Sodium salt of ethylparaben
Empirical: C9H10O3 • Na
Toxicology: May cause asthma, rashes, hyperactivity
Uses: Antimicrobial, preservative in pharmaceuticals, orals
Regulatory: FDA approved for orals; Canada DSL
Manuf./Distrib.: AB R Lundberg
Trade Names: Nipagin A Sodium
Trade Names Containing: Nipacombin A; Nipasept Sodium®

Sodium feldspar. See Sodium silicoaluminate

Sodium ferric EDTA
CAS 15708-41-5; EINECS/ELINCS 239-802-2
Synonyms: Acetic acid, (ethylenedinitrilo) tetra-, sodium salt; Edathamyl monosodium ferric salt; Ethylenediaminetetraacetic acid, ferric-sodium salt; Ethylenediaminetetraacetic acid, sodium ferric salt; ((Ethylene dinitrilo) tetraacetato)-ferate (1-), sodium; Ferisan; Ferric sodium edetate; Ferric sodium EDTA; Sodium feredetate; Sodium iron EDTA
Definition: Commercial prod. is the trihydrate
Empirical: C10H12FeN2O8 • Na
Properties: Greenish-yel. cryst.; m.w. 367.08
Toxicology: LD50 (oral, rat) 5 g/kg; mildly toxic by ing.; TSCA listed
Environmental: Biodegrad.; LC50 (fish, 96 h) 2592 mg/l
Precaution: Heated to decomp., emits toxic fumes of NOx, Na2O
Uses: Micronutrient
Regulatory: FDA 21CFR §175.105; Canada DSL
Trade Names: Dissolvine® E-FE-13

Sodium ferrocyanide
CAS 13601-19-9; 14434-22-1 (decahydrate); EINECS/ELINCS 237-081-9
INS 5535
Synonyms: Sodium ferrocyanide decahydrate; Sodium hexacyanoferrate; Sodium hexacyanoferrate (II); Yellow prussiate of soda
Definition: Avail. as the decahydrate
Empirical: C6FeN6Na4 • 10H2O
Formula: Na4Fe(CN)6 • 10H2O
Properties: Yel. cryst. or cryst. powd.; sol. in water; pract. insol. in most org. solvs.; m.w. 303.92 (anhyd.), 484.06 (decahydrate); dens. 1.458; dec. 435 C; loses water on heating above 50 C
Precaution: Do not mix with hot or conc. acids; protect from sunlight to avoid generation of hydrogen cyanide
Hazardous Decomp. Prods.: Heated to decomp., emits toxic fumes of CN–
Storage: Protect from sunlight
Uses: Pigment in pharmaceuticals
Regulatory: FDA 21CFR §172.490 (13 ppm max.), 573.1020, GRAS; BATF 27CFR §240.1051 (1 ppm max. residue in finished wine); Europe listed; UK approved; Canada DSL
Manuf./Distrib.: ABCR http://www.abcr.de; ADA Int'l.
Degussa Ltd; Fluka http://www.sigma-aldrich.com; Rit-Chem
http://www.spectrumchemical.com
Trade Names Containing: Star Flake® Dendritic Salt

Sodium fluoroacetate. See Sodium ferrocyanide

Sodium fluophosphate. See Sodium fluorophosphate
