Reading comprehension in nonfiction involves numerous thinking skills. Students require these skills to make sense of a text and become successful readers. This book offers practice in key skills needed to meet the Common Core State Standards in Reading/Language Arts for grade one. Each student page includes a short passage focusing on three of these essential comprehension skills.

**Comprehension Skills At-a-Glance**

Use the information that follows to introduce the reading comprehension skills covered in this book.

**Main Idea & Details**

Understanding the main or key idea of a paragraph is crucial for a reader. The main idea is what the paragraph is about. The other parts of the paragraph help to explain more about this key idea. Sometimes, the main idea is in the first sentence of a paragraph. The information that supports the main idea is usually referred to as the details. Details help a reader gain a fuller understanding of a paragraph.

**Sequence**

Readers need to understand that when several things happen in a paragraph or a story, they occur in sequence. Following the sequence of a selection helps readers recognize the time order of events or the order in which steps are taken. Students should become aware of common words or phrases which signal sequence, such as *first*, *then*, *next*, and *finally*.

**Context Clues**

Using context means determining an unfamiliar word’s meaning by studying the phrases, sentences, and overall text with which the word appears. Context clues help readers comprehend and enjoy a text and also read more smoothly and efficiently.

**Compare & Contrast**

Recognizing how events, characters, places, and facts are alike and different helps a reader gain a richer understanding of a text. Sometimes a reader can learn more about something by finding out what it is *not* like than what it is like. A comparison shows similarities, while a contrast shows differences.
Predict

Good readers take time to think about a text. One way they do this is by thinking ahead to determine what may happen next or how an event will unfold. Often, information a reader has come across in the text provides clues to what will happen next. In many cases readers also use what they already know when they make predictions.

Inference

Although most primary students don’t know what an inference is, many are most likely making inferences—both in their daily lives and when reading—without being aware of it. Students should understand that writers don’t include every detail in their writing; it is up to readers to supply some information. A reader makes a guess or inference by putting together what is in a text with what he or she already knows. Inferring makes a significant difference in how much a reader gains from a text.

Make Connections

Good readers learn that there are connections between characters, events, ideas, or pieces of information in a text. Recognizing these relationships is an important way for readers to deepen their understanding of a text.

Fact & Opinion

Readers who can identify and differentiate between statements of fact and opinion are better able to analyze and assess a text. Students should learn to recognize phrases such as I think and you should, that signal opinions.

Tips

★ Tell students to first read the passage and then answer the questions. Show them how to fill in the circles for bubble-test questions.

★ The comprehension skills targeted in the questions accompanying each passage are labeled at the bottom of the page.

★ Review the completed pages with students on a regular basis. Encourage them to explain their thinking for each correct answer.
Meeting the Common Core State Standards
